This book is designed to teach anybody how to work with cement; how to mix mortars of all kinds for all concrete purposes; how to make building blocks; how to build walls, floors, ceilings, walks, posts, cisterns, troughs, tanks, etc. It gives estimates of the cost of all kinds of mortars and concretes and all methods of house construction. It is a cloth-bound book of 100 pages and covers more than fifty most important subjects on cement and its uses and construction. This is a diamond of a book for wide-awake farmers.

For Sixty Cents we will credit one-year's subscription to The National Farmer and Stock Grower and send a copy of the **Cement Workers' Handbook.** Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Soil Fertility Problems Vary.

The problem of how to maintain the fertility of soil cannot be solved in one place for another place. This has been illustrated over and over again.

Just now a well-known American agricultural writer is home from China and is telling how the Chinese have gotten along for some thousands of years without the use of commercial fertilizers and have still kept up their farms. Some of our American farmers are saying that this is a blow to the doctrine that our soil needs commercial fertilizers.

The result in China proves nothing here. The method of the Chinese is well known. It consists in collecting all the manure made in country and city and carrying it back to the farms. It must be remembered that Chinese cities are not sewered, and therefore the great mass of sewage is not washed away but carted back to farms.

Another factor with the Chinese farmer is that the crops from the country are not largely exported but are consumed by the Chinese themselves. Thus, the fertility remains in the country and gets back to the land.

But the citizens of civilized countries refuse to live in that way. They erect great sewage systems, and through those systems the sewage is sent into the rivers, the lakes and the seas. Millions of dollars' worth of fertility are thus lost annually, and this must be replaced by some fertility from another source.

If we think for a moment of the hundreds of millions of bushels of grain sent abroad from this country every year we can but recognize the fact that the amount of fertility thus carried away is very great. And this is going on every year. A mighty stream of corn, wheat, barley, oats and rye is pouring out of the country perpetually, summer and winter, day and night, and has been pouring out for fifty years in an ever-increasing volume. In addition we are sending out of the country a great stream of flour. In addition to that is the great stream of cattle, horses, sheep and swine which is also going out, carrying away great quantities of all the fertilizing elements and especially the phosphorus.

Isn't it nonsense to talk about not buying commercial fertilizers because the Chinese do not buy them? Our case is different from theirs.

Besides, it is fair to assume that if the Chinese were in the habit of using commercial fertilizers they would have escaped most of the terrible famines that have swept off millions of people.

When it is said that the fertility of the Chinese farms has been kept up for thousands of years, we are constrained to ask: "Kept up to what degree of fertility?" During the Russian-Japanese war a newspaper correspondent said that the yield of corn in China was about twelve bushels to the acre. Did he know or not? If he was correct, it shows that their farms are far less productive, in some localities at lesat, than even some of our so-called worn-out farms.

But we are not likely to adopt the Chinese way of keeping up the fertility of our farms.

Curing Alfalfa.

"A grower in Southern Kansas who harvests about one thousand tons of alfalfa per year, and is working with it nearly every day from the second week in May until November 10, insists that alfalfa, under the same conditions of rainfall, is much easier to save in fair feeding condition than red clover. He finds the side-delivery rake especially excellent for turning over the green or wet windrows to the sun and air with the least loss of leaves, and cured thus, after being wet, the natural color is better preserved. That alfalfa hay has a higher feeding value than almost any other, even when saved under the most unfavorable circumstances, should be impressed upon the inexperienced."—From Coburn's "The Book of Alfalfa."

KANSAS CITY VETERINARY COLLEGE
Thorough and complete course. Great Demand for Graduates as Practitioners, Teachers, Investigators, Sanitary Officers, Army Veterinarians, U. S. Inspectors. Catalog and other information sent on application

FRAZIER'S DISTEMPER CURE
COUGHS IN SUMMER MONTHS
Caused by dusty roads, or bad hay, can be cured with one bottle of FRAZIER'S DISTEMPER CURE. This remedy is guaranteed to cure and prevent all cases of Distemper, Influenza, Pink-Eye, and all Nose and Throat Diseases. $1.00 bottle holds three 50c. bottles. Send for our free 32-page horse booklet. "FRAZIER'S" is sold by all first-class druggists or sent prepaid.
BINKLEY MEDICAL CO., Dept. H, NAPPANEE, IND.

Practical Barn Plans.

This is the name of the best book out. Every farmer needs it. It contains drawings, pictures, plans, specifications and everything necessary and up-to-date for a barn, stock shed, wagon shed, corn barn, smoke house, ice house, silo, dairy barn or any other conceivable outbuilding on the farm. Not only one plan of each, but many of each are shown with all the latest inventions and contrivances for saving time, money and labor.

Each and every plan in the book is accompanied by a lengthy written description, explaining and giving the details of the drawings, and so worded and arranged, numbered and indexed, that it must be readily understood by anyone who reads it.

The price of this book is One Dollar, and we include one-year's subscription to The National Farmer and Stock Grower. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

The International Show.

Keep your mind steadily upon the International Live Stock Show of 1910. This is the clearing-house of all live stock shows of the country.

It is decided to hold the International Horse Show from November 22d to 26th, and the International Live Stock Exposition is to cover the usual period, November 26th to December 3d, 1910.

This is about the time of year for the management to issue the preliminary classification. All stockmen are interested in it. Write to the Secretary, Mr. B. H. Heide, Union Stock Yards, Chicago, Ill.

Iceless Refrigeration.

The Allwin Iceless Refrigerator is a subject worth considering. It is on the basis of the temperature of the earth. These refrigerators are sent out on thirty-days' free trial. Write for catalogue. Address, Iceless Refrigerator Co., 140 North Baird avenue, Chicago, Ill.

Distributing Insecticides.

Leggett's Champion Duster is for distributing insecticides in dust form on tobacco, corn or potatoes. By the hand machine this is done as fast as you walk. The horse-power machine do considerably more. Write to Leggett & Bro., 301 Pearl street, New York, and ask for spray calendar and special cotton circular.

Milk Producers' Association.

No meeting was held in June, and none is called for July.

The Milk Committee reports a abundance of milk and dealers are disposed to pay low prices. Some milk producers who are not members of the association are reported as shipping at any price and lowering the market.

There will be a meeting called for August 22d.

The Truth About the German Potash Law.

Among Germany's most important natural resources there are about seventy mines that furnish the world's supply of potash. At present these mines can supply more potash than the world is using, but not more than the world can use profitably, and not more than the world would be using if farmers could buy potash as readily as they can buy other things. Under these conditions there is a tendency for some of the mines to try to get more than their share of the trade.

In the past the mines have entered into short-term arrangements to sell their products through a single company, organized and owned by the mines. Each mine has agreed to furnish a certain fraction of the world's demand to the selling company. This fraction was known as the quota of the mine. As new mines were developed these were usually assigned a fair quota, but occasionally a new mine declined to sell in this way and sought to secure more than its fair share of the potash trade by selling independently and usually at slightly lower prices.

When the last selling agreement expired, three or four mines undertook to get contracts to supply the entire American potash trade, which is a little over one-fourth of the total potash trade of the world. Had they succeeded in filling their contracts they would, of course, have had much more than their fair share of business.

Most of the mines are owned by private stock companies, but a few of them are owned by the Prussian and other German States, not by the Royal Family, as has been erroneously stated in some American newspapers. Owing to the action of a few mines in trying to get more than their fair share of the business, the German Government passed a law regulating the fraction or quota of the world's supply that each mine might sell, and providing that each mine should have a share in both the export and the home trade.

The law provides for a commission to enforce the law and lays a trifling tax on all the products of the mines, whether exported or used at home, to pay for the expenses of the commission. About half of this tax is to be used for publicity work to increase the potash trade, and the remainder is to be applied to meet the ordinary expenses of administration. This tax is not greater than the usual State fertilizer taxes in America, which range from ten to fifty cents per ton, without regard to the value of the fertilizer. The German tax is fairer, however, in that it takes into account the amount of plant food in the different grades of potash compounds. The tax ranges from sixteen cents per ton on kainit containing twelve and one-half per cent. potash, to sixty-five cents on muriate of potash. As one-half of this goes back for advertising expenses previously met by the mines, the only additional expense imposed by the new law is the trifling sum of from eight to thirty-three cents per ton. The tax is in no sense an export tax, but is paid on every pound of potash, whether used in Germany or sent to other countries. There's in fact no discrimination against America or any other country.

When we recall that the ocean freight rate on potash salts may vary as much as one dollar per ton in a single month without any increase in the cost of the potash to the consumer, it is at once evident that this trifling tax for administration purposes will have no more to do with potash prices than the state tax on fertilizers in the United States has to do with the selling price of our common fertilizers.

The law, contrary to the general belief, does not require the formation of a selling company or syndicate. Each mine is free to sell its share of export and domestic as it sees fit, but it must not sell for export at a less price than is charged to German buyers. There is certainly nothing in this to give the American farmer who buys potash any cause for alarm. Why, then, has our State Department been urged to protest so vigorously against the passage of this law? Why have we been told that the law means we must pay twenty dollars more per ton for all our potash salts? The law provides that if any mine shall sell more than its assigned fair share it must pay on the excess over its lawful share a much higher tax, ranging from about two dollars and seventy cents to nineteen dollars and a half per ton. This will, of course, serve to restrict the mines to the legal quota of each. But there is no intention of restricting the total production of potash. On the other hand, the publicity provisions are intended to increase the consumption.

The American fertilizer companies sought to get control of all the potash coming to America. They failed to do it. They never intended that the farmer should get Potash salts direct from them and they insisted that the Germans should sell only to these companies, and that the German Kali Works, which is the American Company representing the potash mines, should cease to sell mixers, dealers and farmers.

The German Kali Works was organized for the purpose of getting potash to the farmers, local dealers and mixers, at fair prices. It is a matter of indifference to them whether they sell it direct to these three classes or whether their offers cause the fertilizer manufacturers to sell it to them at fair prices. The fertilizer manufacturers do not want the farmers to secure potash except in the form of mixed goods containing about 98 pounds of phosphate and filler to 2 pounds of potash salts. Home mixing gives the fertilizer manufacturer nervous chills. It means the farmer may buy raw material, compound his filler-free fertilizer at a marked saving, and, worst of all, he will begin to figure on the money he has been paying out for filler and freight on it, not a penny of which was of any value in increasing his crop.

The American fertilizer manufacturers have claimed for years that they sought uniform prices for potash rather than low prices. The new law gives every buyer the same price. But their strenuous objections prove what many already knew, that the large manufacturer does not want the mixer, local dealer or farmer to buy potash at all except in the form of filler-loaded mixtures which place the cost of plant food much higher than it can be sold for in raw materials.

THE HORSE FAIR—BY ROSA BONHEUR.

Great Combination Subscription Offer.

Four Leading Papers One Year and Beautiful Picture of the Horse Fair All For One Dollar.

The National Swine Magazine is a splendid publication, issued monthly, finely illustrated and highly instructive. **The Reliable Poultry Journal** is just as reliable as its name implies, elegantly printed, edited by men who know how to help the beginner. **The National Farmer and Stock Grower** is a highly serviceable paper and fits in finely with the requirements of the stock farmer, dairyman, etc. **The National Fruit Grower** is a splendid monthly up-to-date paper; wastes no words; collects useful information, illustrates it and puts it before the people in a way that all may understand. **For One Dollar** we will send these four papers for one year, and we will send as a premium supplement the splendid 16x20-inch picture in grand colors entitled **"The Horse Fair."** This is a reproduction of the greatest horse painting in the world by the French female artist, Rosa Bonheur. The original cost fifty thousand dollars and was presented by Cornelius Vanderbilt to the Metropolitan Art Gallery. The picture that we are sending our subscribers is a pure lithograph, and there is a border round it in imitation of a frame of gilded oak. The picture can be tacked on the wall without framing and will remain in good condition for many years. Address, **The Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

CENTURY MFG. CO.,
Dept. 844, East St. Louis, Ills.

Per Cent. of Grade.

A one per cent. grade on a road means a rise of one foot for each hundred feet of distance traveled up the hill. A ten per cent. grade means ten feet rise in each hundred feet so traveled. A one per cent. grade, then, means that in traveling up hill one mile an ascent is made of 52.8 feet, while a ten per cent. grade means a rise in altitude of 528 feet in a mile. Accurate tests have shown the Minneapolis Experiment Station that a horse which can pull 1,000 pounds on a level road can pull only 810 pounds on a rise of one foot in fifty, and on a rise of one foot in ten he can pull only 250 pounds. These facts show that the greatest load that can be hauled over a road is the load which can be taken up the steepest hill on that road, or through the deepest mud hole. It is therefore advised that all highways traveled by heavily-loaded vehicles should be kept within a three or four per cent. grade, if practicable. To do this may require a change of location to get around hills, always keeping in mind that the lower the grade the larger the load may be hauled and the cost of haulage kept at the lowest point.

Sulphate of Iron as a Weed Destroyer.

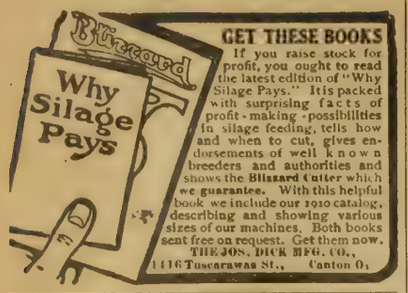
Since the discovery of Prof. Bolly, of the North Carolina Experiment Station, that sulphate of iron will destroy many of the noxious weeds that farmers have to combat, experiments have been tried at this station with varying results. On the whole, the sulphate of iron spray is proving valuable as a check, at least, to seed development of weeds, and in many instances results in killing them. According to these experiments, the weed most susceptible to the influences of the spray is wild mustard. The experiments were conducted on bright days, just before the blossoming of the weed with killing effect. The effect on the leaves of grain was slight, with no injury to the crop.—W. L. Oswald, Minnesota Experiment Station.

Money For the Grafter.

We have been importing millions of dollars' worth of [illegible] products every year, but this country has now established at Concord [illegible] variety orchard of the best commercial culture in the world and it is probable that the "millions of dollars' worth" will soon figure on the export side instead of the import side. For the success in horticulture at Concord there is an annual prize of [illegible] dollars for the best grafter.

Mr. Lewis W. Parker, of Greenville, S. C., testified at Washington that in order to conduct his cotton mill he sold the cotton seed [illegible] and in order to make [illegible] market would not pay him to [illegible] tracting it on the cotton market.

DON'T BUY GASOLINE ENGINES UNTIL YOU INVESTIGATE "THE MASTER WORKMAN," a two-cylinder gasoline [illegible] alcohol engine, superior to any one-cylinder engine, [illegible] Less to Buy. Less to Run. Quickly, easily started. Vibration practically overcome. Compactly mounted on skids. [illegible] engine. SEND FOR CATALOGUE. THE TEMPLE ENGINE MFG. CO., 466 West 15th St., Chicago. THIS IS OUR FIFTY-SIXTH YEAR.



GET THESE BOOKS

If you raise stock for profit, you ought to read the latest edition of "Why Silage Pays." It is packed with surprising facts of profit-making possibilities in silage feeding, tells how and when to cut, gives endorsements of well known breeders and authorities and shows the **Blizzard Cutter** which we guarantee. With this helpful book we include our 1910 catalog, describing and showing various sizes of our machines. Both books sent free on request. Get them now.

We build all sizes. Hopper jacket or water tank cooling. Inducements to introduce in new localities. Write stating size and style wanted.

WITTE IRON WORKS CO.
653 Oakland Ave., Kansas City, Mo.

The Gentleman Pig.

"The boar of eight months or older will do better if kept by himself; at least, he should not be where sows or gilts may arouse him. He should be kept in a comfortable pen, with a lot of pasture adjoining, and supplied with a variety of nutritious food, which means something more than dry corn with an occasional drink of diluted dishwater. The permanent quarters should be provided with a view to furnish sunlight, exercise, dry warmth and cleanliness. These should be so located that the sows may be conveniently brought to him for service. A large pen is not needed—ten feet square will do—but a yard and pasture should each be adjacent. The yard will be needed for service and for his exercise in the breeding season, and the pasture, which may be an acre, or less, should afford him water, shade, grass, alfalfa, or other succulent food."—From Coburn's "Swine in America."

Substitute For Cotton.

Now comes a reputed discovery whereby cotton is to be made from the pulp of spruce trees. The invention has just been explained before the National Association of Cotton Manufacturers by the inventor, James Hope, of Rouen, France. The product of this invention is called "La Soyeuse." The wood is first reduced to cellulose and it is pressed through holes into threads which can be wound on spools or drums. It takes dyes very well. What it will amount to in the end remains to be proven. Probably the product will be inferior to cotton and cost more.

The Wheat Prospect.

Last year the United States wheat crop was practically 737,189,000 bushels. The government estimate for the present season is 644,000,000, and the estimate of the Board of Trade is 603,000,000 bushels. On the government basis, wheat growers should consider the market strong and take no cheap prices. On the basis of the Board of Trade, wheat ought to sell from $1.25 to $1.50 per bushel.

The First Car of Wheat.

The first car of Missouri wheat of the crop of 1910 marketed at St. Louis was received and sold June 30th. It was raised near Bertrand, and was of excellent quality. It graded No. 1 red and tested 61 pounds to the bushel. The wheat was sold by sample at auction at the Merchants' Exchange, and brought $1.06 per bushel. Bertrand is in Mississippi county, on the Iron Mountain Route, between Cairo and Poplar Bluff. The consignment was received by the Wahl Commission Company and sold to Fred Young, of the Mound City Elevator and Grain Company.

Clay, Robinson & Co. at St. Louis.

It is now over a year since Clay, Robinson & Co. opened their house at the St. Louis National Stock Yards, and ever since the first day the firm has made gains upon the market. It is a most thorough and successful organization, earnestly working to the end that the service to the shipper shall be the best that it is possible to render. Messrs. Clay, Robinson & Co. are strictly live stock commission agents, receiving consignments and selling them to the best advantage upon any of the markets on which the firm is established. See page 7.

St. Louis Root Quotoations.

Medicinal roots are sold by the pound. On June 30th the following were quotations: Golden Seal, $1.60 to $1.65; Ginseng, grown wild, $5.75 to $6.00, and cultivated, $5.50 to $5.75; Lady Slipper, 15c.; Seneca, 32c.; Pink, 18c.; Black (dry), 6c.; May Apple, 4¼c.; Snake, 36c.—dirty, leafy and stemmy, 15c. to 22c.; Kansas Black Snake root, 20c.; Angelica, 5c.; Wahoo—Bark of root, 14 to 16c.; bark of tree, 4c.; Blood, 4½ to 5c.; Blueflag, 5c.; Sassafras—Bark of root, 5c.; bark of tree valueless; Wild Ginger, 10c.; Spikenard, 3c.; Skullcap, 7c. These prices were paid on the market for country consignments.

"Do drummers really get business by telling funny stories?"

"Depends altogether upon the customer," replied the traveling salesman. "Sometimes I tell funny stories and sometimes I abuse the trusts."—Exchange.

"Out to luncheon—Back in five minutes," read the sign on the door.

"Are you sure he will get back that soon?" asked the anxious caller.

"Yes'm," said the wise office boy. "He ain't got the price of a ten-minute lunch in his clothes."

"Whether the whale swallowed Jonah or Jonah the whale doesn't matter half so much as to whether you are doing your work the best you know how and treating your fellowman on the square."—Springfield Republican.

St. Louis Wool Market.

Trade is on a considerably lower basis than it was a year ago. The best grades of domestic wools sell at 22 to 23 cents; the Texas wools are quoted from 17 to 22 cents; Northwest, 13 to 22½ cents. The St. Louis market is one of the best in the country and responds quickly to any favorable conditions. Anyone desiring up-to-date information concerning the wool market should state what he has to ship and address A. J. Child & Sons, Wool Commission Agents, 511 North Main street, St. Louis, Mo., and mention this paper.

The Corn Situation.

Corn closed slightly higher on June 30th than on May 31st. This indicates good demand in the face of an estimate that the corn crop of 1910 will exceed by 100,000,000 bushels the 2,772,376,000-bushel crop of 1909. On June 30th, No. 2 cash corn sold in St. Louis at 60½ cents a bushel. The future quotations we take from Chicago: July corn closed there at 57⅞ cents a bushel; September corn at 59¾ cents; and December corn at 58¼ cents. Considering that farmers are not supposed to know what their crops will bring, this is a good line of information, although changes will be made from day to day. It looks like a fair range of values under existing circumstances.

The Oats Market.

Last year the United States crop of oats was the largest on record. At St. Louis, on June 30th, No. 2 white oats sold at 42½ cents, and inferior grades down to 36 cents. The Chicago Board of Trade quoted July oats at 38¼ cents; September, 38⅛ cents; and December, 35⅞ cents. These are low figures. They are too low. The oats estimate is, that the crop will be larger this year than last. At the price oats are selling for and at the prices quoted for the future, there is a serious problem for the farmer who has relied on selling oats in bulk. It looks as though the man who can feed the oats to stock will do better than to sell oats on the market.

Self-Feed 3-Stroke Eli Baling Press

Latest addition to the great "Eli" family. Three strokes with automatic self-feed makes the gang hustle. Built on lines that make horse presses really valuable. Greatest leverage when pressure is hardest. Low Step-over, Full Circle, Block Signals, etc. A little giant in strength. We've always led as hay press builders—18 different styles, horse and belt powers. All in one catalog and it's free. Write for it.

His Memory Only Half Good.

There were introductions all around. The big man stared in a puzzled way at the club guest. "You look like a man I've seen somewhere, Mr. Blinker," he said. "Your face seems familiar. I fancy you have a double. And a funny thing about it is that I remember I formed a strong prejudice against the man who looks like you—although I'm quite sure we never met."

The little guest softly laughed. "I'm the man," he answered, "and I know why you formed the prejudice. I passed the contribution plate for two years in the church you attended.'

United States Vice Consul A. D. Jackson, of Madras, submits the following concerning East Indian cotton production: Crop of 1908-9 was produced on 19,999,000 acres and was 3,691,000 bales. The crop of 1909-10 is estimated to be planted on 20,227,000 acres, and the estimated production is 4,502,000 bales.

Last report from Elgin butter quotation, July 2d, 27½ cents, against 27½ cents the week before, 25½ cents a year ago, 22 cents two years ago, and 24½ cents three years ago.

SUBSCRIPTION PREMIUM — A POCKET COMPASS.

This is a true 1¾-inch Pocket Compass purchased from a reliable house. It is a fancy, nickel-plated, open-face, watch-shape Compass, with a silvered dial, and it weighs less than one ounce. Growing Importance of Refrigeration.

Refrigeration as a farm factor is slowly gaining in popularity. It is, however, astonishing to note how many farmers still look upon ice and other means of refrigeration as luxuries and not necessities.

To say the least of refrigeration, it is a great agent of comfort, both summer and winter, and in all zones of the world.

Moreover, nature has been liberal in providing us with the elements from which to secure concentrated cold. Even in the tropical countries, the tops of the mountains are covered with ice and snow, inviting the enterprise of man to convey them to the hot plains below. In countries like Switzerland are great glaciers containing enough ice to give comfort to a nation. It is only recently that some enterprising individuals have begun to cut ice from Swiss glaciers to use in Paris.

The time will come when ships will bring to Southern Pacific ports the ice of the Alaskan glaciers that drop immense cubes of frigidity into the sea, just as for fifty years the ships of Maine and Nova Scotia have been carrying ship-loads of ice to the ports of the Gulf States, Cuba and other localities in the summer lands. Even now it has become the custom for all ships passing through the channels at the southern extremity of South America to take on a supply of ice from the icebergs that have just fallen into the sea from the glaciers in that part of the world.

But at the present time, the problem that presents itself to the American in the northern half of the temperate zone is to secure an ice supply from the ponds and rivers which every year are chained in ice. Many a farmer now has on his farm a good ice house, and in it is an abundance of the cold crystal that will bring comfort to the farmer's family all through the warm season.

The wonder is that so many farmers are still getting along without a supply of ice, which would prove not only a greact comfort but also a great convenience in the keeping of their meats, milk, butter, eggs and fish. The amount of food that annually spoils because of the lack of cooling facilities runs into the millions of dollars in value, even in the part of the United States where the winters are cold enough to give a bountiful supply of ice.

The summer time is the period when preparations must be made for the securing of an ice supply the ensuing winter. Now is not too soon to begin to plan for the construction of the ice house that is to be put into service next winter. The delay in doing this in the summer time is what has caused thousands of farmers to get along without ice.

The importance of refrigeration is growing, because foods are advancing in value, while ice and artificial cold cost little more than previously. On the farm an ice supply now costs about the same as it always has, the mere cost of labor in hauling it to the ice house and storing it.

Misbranding of Oats.

From Philadelphia, Pa., a miller shipped to the state of Florida a consignment called "fancy clipped white oats." The Department of Agriculture found that the bags contained a mixture of white oats, barley and other grains. The consequence was that a decree of condemnation and forfeiture was entered against them.

Horticultural Notes.

At the meeting of the American Nurserymen's Association held recently at Denver, Colo., resolutions were adopted denouncing state laws which place root knot and crown gall on the list of contagious and injurious diseases of trees.

At the annual meeting held at Denver, Colo., W. P. Stark, the veteran nurseryman of Louisiana, Mo., was elected President of the American Association of Nurserymen. Mr. John Hall was re-elected Secretary; and Mr. C. L. Yates, Treasurer. St. Louis was chosen by the convention for next year's meeting place.

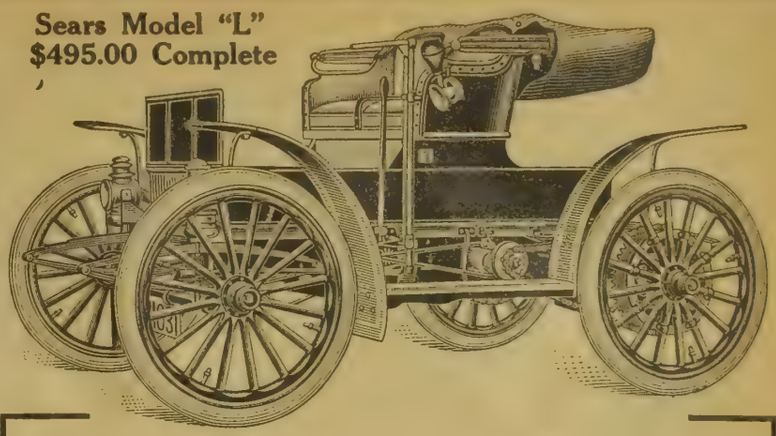
A Strawberry Center.

The strawberry center of Missouri is in the Southwest, below Joplin, with Jasper county already famous for its annual production of zinc ore as one of the leading producing counties for shipping purposes. Out of Sarcoxie, in that county, alone, 1,904,000 pounds of strawberries, filling 112 cars, were shipped in 1909. This immense crop amounted to about 58,240 crates, and, at $1.98 a crate, sold for $112,402. Of course there were the large consuming cities of Joplin, Webb City and Carthage to be supplied first, but this was easily done, and then came the rush of the berries, car-load after car-load, to outside points.—From Red Book of State Labor Bureau.

Twenty-eight per cent of the corn in Missouri was replanted. Condition, June 1st, 1910, 67.2 of a full crop, condition of wheat, 69; condition of oats, 91.2.

"Character must stand behind and back up everything—the sermon, the poem, the picture, the play. None of them is worth a straw without it."—J. G. Holland.

Sears Model "L" $495.00 Complete



Sears Automobiles

Doctors, Farmers, Ranchmen, Bankers, Salesmen, Solicitors, Agents, Mail Carriers and Business Men in every state of the Union are concentrating their attention on the SEARS.

FROM starting crank to tail lamp the Sears is the economic-reliability automobile. The Sears is built in our own Chicago factory in six distinct models, and the broad, absolute guarantee of Sears, Roebuck and Co. affords the individual buyer his positive individual protection. Inside prices ranging from $370.00 up show but one phase of Sears economy—low cost of up-keep is another.

The new Sears Automobile Catalog fully illustrated is just fresh from the press—it tells the whole Sears Story in an interesting way and is not weighted down with questionable scientific and mechanical terms. Our Booklet "What Sears Owners Say" contains many real human documents—letters right from the people who drive and enjoy the Sears. We want you to have one of these catalogs whether you intend buying an automobile or not—we want you to learn for your personal information of the most remarkable automobile proposition that ever appeared in print.

Write today for the Booklet and Automobile Catalog No. 66N44.

Sales of Sheep.

At the St. Louis National Stock Yards, during the last week in June, the better class of mutton sheep were selling at $4.35 to $4.50 per 100 pounds; good breeding ewes sold to farmers at $4.50 to $5.00; inferior to good stock sheep sold from $1.35 to $4.00 per 100 pounds; good Tennessee lambs sold at $8.25 to $8.40; good fat native lambs, $7.75 to $8.10; medium grade killing lambs, $7.00 to $7.65; and culls from $4.50 to $6.00—all quotations being at the price stated per 100 pounds.

Chicago reports that hogs average 224 pounds during the first six months of 1910, compared with 209 pounds thus far in 1909. In June, 1910, the average weight of hogs marketed was 242 pounds, against 219 pounds in June, 1909.

WESTERN
Range Horse Sales
will be conducted by
Campbell & Reid and Western Sale Stables Co.,
NATIONAL STOCK YARDS, ILL.,
As usual, during the season of 1910.
The July Sales will take place on
THURSDAY, JULY 14 and 28,
And every two weeks thereafter until the close of the season. We will be glad to hear from Ranchmen having Horses for sale. The demand is sure to be good, especially for well-bred Mares and Geldings in good condition.

Please address
J. J. SEARCY, Sale Manager,
NATIONAL STOCK YARDS, ILL.

A Valuable Horse Book.

A new book is entitled "The Gait of the American Trotter and Pacer," by R. Jordan, Jr. This is the most notable study of the trotting and pacing gaits ever published. It clears up the question of balance by a simple inquiry into cause and effect. It gives an exact analysis of the motion, action and extension of the two gaits, and with numerous illustrations points the way to the proper adjustment of hoof and shoe for a square gait. It sets forth many important facts by a new and practical method of fixing the origin of a faulty gait. Its investigations for the rational development of speed by means of a corrected gait make it a valuable aid to every owner and trainer. The size of the book is 6¼x9½. There are 324 pages, with 217 illustrations, including eleven full pages and frontispiece in color. Every lover of the harness horse should read this book. It is published by Wm. R. Jenkins Co., 851 Sixth Avenue, New York City, N. Y., and the price is $3.50 per copy.

Directum, 2:05¼, Mounted.

Directum, 2:05¼, although dead, has just made a new world's record. The "Black Demon," as the famous stallion was known on the country's race courses, was in a class by himself when alive, and his owner has made him unique in death by having his body mounted. He will still occupy a prominent place at his home on M. W. Savage's breeding farm near Minneapolis.

As a race horse Directum was always great. His name is written large in turf annals. For years he held the world's four-year-old trotting record, and as a sire he has left his impress upon the harness horse world.

Directum died last November. Mr. Savage determined to give future generations of breeders and horse enthusiasts a chance to see and study the stallion as he was in life. He turned the body over to a Minneapolis taxidermist. It was an experiment, but it has proved very successful and may become a precedent for other owners of great horses.

Western Range Horses.

The season is on for the great sales of Western range horses and mules conducted at the St. Louis National Stock Yards by Campbell & Reid and Western Sale Stables Company. The sales take place every two weeks, and always on Thursday. Two sales have been held this season, and the next two are scheduled for Thursday, July 14th, and Thursday, July 28th. The horses at these sales range from colts and fillies to mares and geldings. The range of prices is in accordance with the quality and condition of the offerings. They are sold fairly at auction in bunches and car-loads. The numbers at each sale range from 800 to 2,000 head. Further particulars can be had by addressing J. J. Searcy, Manager, National Stock Yards, Ill.

The Hog Prices.

On June 30th, at St. Louis, the best hogs, light-weights, sold at $9.65 per 100 pounds. They only weighed 147 pounds average. The bulk of the hogs sold at $9.35 to $9.50 per 100 pounds. Butcher hogs, 180 to 200 pounds, sold at $9.45 to $9.55, and heavy packing hogs at $9.30 to $9.35. Large numbers of shipping hogs sold at $9.45 to $9.55.

A First-class Commission House.

In consigning live stock for sale at the St. Louis National Stock Yards, remember the Evans-Montague Live Stock Commission Company. It is a successful firm, highly competent and persevering in the interest of their customers. The Evans-Montague Commission Company solicit consignments of cattle, hogs and sheep for sale on the market, and desire stockmen to take notice that the company has special buyers who select and buy stock and feeding cattle for their patrons. Address, Evans-Montague Commission Company, Box 68, National Stock Yards, Illinois.

The Great Horse Firm.

Holland, Nugent & Maxwell Bros. hold auctions of horses every Monday and Tuesday at the St. Louis National Stock Yards. These auctions are always well supplied with every commercial class of horses known to the trade. Buyers are able to fill their orders and sellers are sure to get the benefit of all the competition of the most active market. The firm is very careful in giving advice to shippers of horses, the kind to buy and ship in and the kind to leave alone. Shippers who wish to try the best service will find it to their advantage to address Holland, Nugent & Maxwell Bros., National Stock Yards, Ill.

Misbranding of Roquefort Cheese.

On or about January 2, 1909, the McLaren Imperial Cheese Company, of Detroit, Mich., shipped from the state of Michigan to the state of Illinois twenty-five cases, each case being labeled: "Two Dozen Small Jars McLaren's Roquefort Cheese," each jar labeled "McLaren's Roquefort," and containing the picture of a goat between the words, and below the word "Roquefort," in exceedingly small type, "Manufactured and Blended in the United States." Analyses of samples of this shipment showed that the product was misbranded within the meaning of the Food and Drugs Act of June 30, 1906. In due course a libel was filed against the said twenty-five cases of cheese, charging that the product was misbranded, in that the said cases and jars of cheese contained therein bore a label which would lead the purchaser to believe that the product consisted of a pure Roquefort cheese, imported from Roquefort, France, and made wholly from goats' milk, whereas, in truth and in fact, an analysis of the sample showed that the product did not consist of pure imported Roquefort cheese; that it was not made in France, and that it did not have the character or properties of Roquefort cheese.

On March 4, 1909, the McLaren Imperial Cheese Company filed an answer to the aforesaid libel, and, the case coming on for hearing, the court rendered its decree of condemnation and forfeiture, and ordered that the goods be released on payment of costs and the filing of a bond conditioned that the said goods should not be disposed of contrary to the laws of the United States.

The Mule Trade.

Holland, Nugent & Maxwell Bros. report a summer quietness in the general mule trade, but large mules are wanted, and miners also. For first-class mules the prices were never higher. Address the firm at National Stock Yards, Ill.

Sorghum cane seed is selling at $1.45 per 100 pounds at St. Louis.

Evans-Montague Commission Company

THE MEASURE OF SUCCESS attained by a SHIPPER OF LIVE STOCK depends largely upon THE COMMISSION HOUSE to which he consigns his CATTLE, HOGS AND SHEEP.

If you wish to receive TRUSTWORTHY AND RELIABLE SERVICE and have your consignments SOLD BY CAPABLE AND CONSCIENTIOUS SALESMEN, you cannot do better THAN PATRONIZE OUR HOUSE.

The Shippers' Interests ARE OUR INTERESTS, and our rapidly increasing business IS THE STRONGEST TESTIMONIAL of our ability TO PLEASE OUR CUSTOMERS.

Evans-Montague Commission Company
Box 68,
NATIONAL STOCK YARDS, ILL.

According to the officials of the Boston Work Horse Parade Association, the horse is the most economical motor for local city delivery, and the automobile is a clever competitor of railway suburban freight service on long runs.

Dairy cattle should be protected from flies. See page 10.

At St. Louis, sunflower seed is offered at $4.25 per 100 pounds.

Dept. 845,
East St. Louis • Illinois

Farm Shop Equipment.

Many hundreds of hours of valuable time are now being lost by the farmers who are compelled to drive to town for the purpose of having minor repairs made upon the farm machinery. By the timely expenditure of a few dollars this trouble might have been eliminated. The lack of a farm shop often marks the dividing line between success and failure on ranches which lie a great ways from the blacksmith shop.

It is not necessary to expend a great deal of money in order to have a very fine farm shop. After the building is chosen, the next thing of importance is the forge. Do not buy a cheap, unreliable forge, for when the forge is out of order a large part of the shop is disabled.

The small anvil is also desirable, although some heavy casting or a piece of railroad iron may be made to do the work. Cast-iron anvils, with steel faces, are now being made which are very suitable for farm work.

The next thing in line is the set of stock and dies. Always be sure to select stock and dies which cut threads of the same pitch that are found on commercial bolts. Too many farmers buy cheap dies that cut a special thread not suitable for farm work.

Every shop should have a strong vise. A combination pipe and machinist's vise, which may be detachable from the bench, makes an excellent article for the farm shop. It may be taken from the bench and used on any machine which cannot be taken into the shop.

Some form of light drill press should also be found in the shop, and if this is light and detachable it is more valuable, as holes may be drilled into different parts of the farm machine without the removal of the parts.

A strong monkey wrench, preferably a combination of wrench and pipe wrench, should also be found in the shop. Numerous punches and chisels are also essential. These should be bought with a view to getting the best and not the cheapest.

Several pairs of tongs should be provided, as the average amateur blacksmith needs special tongs for handling iron which an experienced blacksmith could handle with almost any pair of tongs in his shop.

One or two good blacksmith hammers are a necessity in the farm shop. Don't try to blacksmith with a hatchet or claw hammer.

In order to facilitate the work, some blacksmith stock must be kept on hand. The first thing to be considered is the coal. It is good economy to buy blacksmith's coal, rather than try to use soft coal, which oftentimes causes the amateur blacksmith to "fall down" on his work.

Where no welds are necessary, mild steel will probably be the better stock; while Norway iron should be used where it is necessary to make welds.

In the purchase of bolts, it is well to provide the shop with long bolts, as these may be cut off and rethreaded to the proper length on short notice.

It is not advisable for the average farmer to establish a shop and leave the field whenever one of his neighbors desires a little work done. The neighbor should have his own shop.—I. B. Bonebright, Colorado Agricultural College, Fort Collins.

At the current price for oats, farmers can make more money feeding cattle than by selling the grain. This is the time to keep oats on the farm.

The National Farmer and Stock Grower.

(Title Registered in U. S. Patent Office.)

Published monthly by The Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Subscription Price, 50 cents a year, or $1.00 for three years.

Entered at Postoffice at St. Louis, Mo., as second-class matter in January, 1901.

The reason so many young people leave the farm is because city life looks so much easier. It requires more brains and ability to make a living farming than it does to act as a clerk in a grocery store.

Uncle James Wilson, Secretary of Agriculture, is quoted as saying that a good teacher and a good farmer don't always appear in the same man. Hence teachers of farming are scarce.

The principal interest the cities have in the farmer is to get his crops at a price below the cost of production.

The Rocky Mountain Husbandman says: "With four million acres under irrigation, which is to be the figure at the close of 1910, Montana will be able to show a yield that will astonish the world."

Potash For Farmers.

Attention is invited to the article entitled "The Truth About the German Potash Law." This statement is in accord with the report of the American Consul in Germany. The German government controls the output in a way fair to all. The German Kali Works sells potash at wholesale direct to the farmer. It is the best possible condition of affairs.

According to the Census Bureau, the cotton crop of 1909 was fully equal in grade to that of 1908, but not so good in body and staple. On the other hand, it is the most valuable ever grown, considering its yarn-producing quality and the financial results to the growers. The average value of cotton seed for the crop of 1909 was $27.73 per ton, compared with $15.65 for 1908, $17.63 for 1907 and $13.76 for 1906.

According to a statement by the Census Bureau, the average production of cotton per acre in 1909 was 154.6 pounds, compared with 195.3 pounds in 1908. This don't look like an average of a third of a bale to the acre.

The United States crop of cotton in 1909 was 10,315,382 bales; the crop of the balance of the world was 6,242,618 bales. These are figures of the Census Bureau.

On the basis of the cotton crop of Marlboro county, S. C., the crop of the United States could be increased to 80,000,000 bales in a year without increase in acreage. Marlboro county produced 132 bales per square mile. This statement is from the Census Bureau.

We desire to apologize for issuing a sixteen-page paper in the month of July. The August edition and all editions thereafter will be thirty-two pages or more.

Cost of Living Not High.

Four college girls of Miss Shepperd's senior class in domestic science gave the last of the class dinners, of the college year, recently, in the Domestic Science Building, at the Experiment Station, at St. Anthony Park, Minn. Six guests were present. Following is the menu: First course—Tomato soup, croutons; second, stuffed heart, potato puff, lima beans, Parker House rolls, mint ice; third, Waldorf salad, pastry sticks; fourth, rhubarb pie, cream meringue, coffee, cream, sugar. The cost was 99½ cents, or a little over 16 cents for each person. In the college dining hall the meals cost each student at this season of the year 15 cents, but the actual cost of the food eaten is about 8 cents.

Agricultural Blue Book.

This is our own publication, and is a work of great merit and convenience. It is called "The Agricultural Blue Book and Live Stock Breeders' Directory." It is designed to be useful to farmers and to business men in all sections of the country.

The Agricultural Blue Book contains thirty-two pages devoted to a list of firms who do business with agricultural people. This list is arranged alphabetically by states. It gives the name, address, occupation and class of manufacture, etc. A general farmer, stock raiser, dairyman, poultry keeper, ranchman, fruit grower, will find this book to be valuable and interesting.

The Agricultural Blue Book contains 128 pages devoted to names and addresses of live stock breeders, experimental and general farmers, dairymen, horticulturists, etc. This farm list numbers 150 to 180 to the page—about 20,000 in all. All the names and adresses have been carefully verified. In each instance the principal occupation is stated. It is fully up-to-date and represents the owners of about twelve millions of acres of land, who conduct their own farming operations. In various lines of business the value of this Agricultural Blue Book cannot be overestimated. By the time this paper is fully distributed the Agricultural Blue Book will be ready for delivery. The size is 6x9½ inches, elegantly bound in blue cloth with gilt title. The price is $2.50 per copy. Business firms in good standing can order the book subject to inspection. Address, Hale Publishing Co., 3550 Ave., St. Louis, Mo.

Postal Savings Banks.

The postal savings bank bill passed by Congress and signed by the President is very much the bill advocated by The National Farmer and Stock Grower. We were opposed to the government taking the money from the people and hiding it, but we were in favor of the government taking the money and re-investing it. Banks are institutions for the purpose of loaning money, that people may have means to create and develop the resources of the country, and government banks that did not loan out the money would be a detriment instead of a blessing. The postal savings banks will furnish the desired safety for small savings—pay all that the money is worth in the shape of interest, and will loan out the bulk of the money, through local banks, that business enterprises may be conducted as heretofore.

The American Postal Savings Bank law is an improvement over the British system. There the money that is deposited is not available for business enterprises. Here it will be.

The Universal Exposition.

The city of St. Louis will revive the Great St. Louis Fair which was opened in 1856 and finally closed in 1903. The city of St. Louis will revive the St. Louis Exposition and Music Hall, which used to be open forty days and forty nights in the fall season every year. The city of St. Louis will restore the Louisiana Purchase Exposition, the grandest of all World's Fairs. The citizens of St. Louis will recreate these three enterprises under one management by the name or title of the Universal Exposition of St. Louis.

The National Farmer and Stock Grower has advocated this movement ever since the World's Fair opened and the St. Louis Fair closed. We are glad to see the enterprise revived. The people of St. Louis are slow to make a movement, but when it is once determined upon, nothing will stop them.

The resolution to establish the Universal Exposition at St. Louis and to keep it open at least six months in the year was adopted July 1st, 1910, by an association known as the Committee of Twenty-one, appointed three months ago by the different business organizations of the city. This committee is now acting as an Exposition Committee and will soon be enlarged to one hundred of the leading citizens, who will act as a Board of Directors.

The Universal Exposition Company will be capitalized at $500,000.00. It is expected to pay regular dividends and have a surplus remaining each year to improve the property.

Many of our readers were exhibitors at the St. Louis World's Fair and at the St. Louis Fair. They can help this movement if they are willing to do so by writing to Mr.C.F. Blanke, Chairman Universal Exposition Committee, St. Louis, Mo., and encouraging the work. Mr. Blanke needs no encouragement, but some of the others may need it. A few words at the right time will help to bring back the great live stock arena contests, for which St. Louis was famous. It will help to consolidate some of the wandering exhibitions which badly need a home; it will help to restore an amount of activity to the exhibition circuit which it now has need of. The Universal Exposition will be an immense enterprise conducted for the honor of St. Louis and the benefit of mankind. An encouraging word in proper season will hasten the movement.

Again the oats crop bids fair to be the largest on record.

A bulletin issued by the Mississippi Agricultural College concludes by saying: "It is a safe business proposition and likely to be a more remunerative transaction to make beef during the summer months by feeding cotton-seed meal on pasture than by feeding with hulls in winter."

If there is real merit in the new methods of meat preservation, every village will have its packing house, and there will be one on each of the large farms and ranches.

The Agricultural Colleges and Experiment Stations will be great and beneficial institutions when they are self-supporting.

A Lesson in Free Trade.

Congress has taken the duty off hides, and foreign hides which are imported pay nothing to support this government. In order to make up the loss in revenue, an additional tax has been put on American-grown tobacco. This is a lesson in free trade. They let in foreign goods free of duty and then as the revenue becomes less and less add taxes on our own products for the purpose of supporting the government. The next Congress will probably take off the duties from imported wool, and to make up for it will probably tax wool of our own raising. If not, they will tax something else. Farmers who advocate free trade will get it.

The Price of Wheat.

On June 30th, at St. Louis, old wheat, No. 2, closed at $1.07 per bushel, and a car of new wheat sold at $1.06. This is the soft red wheat which is used largely in Southern mills. The Chicago quotations for hard wheat were: July, 97 cents; September, 97½ cents; and December, 98⅞ cetns.

The Hay Market.

At St. Louis and East St. Louis recent sales of hay were on the following basis: No-grade hay, $6.00 to $7.50 per ton; clover mixed, $13 to $14; prairie hay, $10 to $14; alfalfa, heated and inferior, $9.00 to $14; No. 1, $15 to $16.50; timothy, No. 3, $13; No. 2, $13.50 to $16; No. 1, $16 to $18 per ton.

The Harvester World of June, 1910, contains an illustration of the stone anvil upon which the first reaper was wrought in 1831. It looks as though we have progressed greatly in eighty years.

FARM AND RANCH LANDS.

MISSISSIPPI. — Extraordinary Bargain 446 acres of rich Mississippi Delta Land located near railroad and good town. Some improvements. Certainly a bargain. Write **D. H. Balfour & Co.**, Warren, Ark.

MISSOURI.—3,280-acre farm, the best in the state, $25.00 per acre. Also smaller properties in the richest districts. **J. H. Lipscomb** 910 Fidelity Trust Bldg., Kansas City, Mo.

CHEAP TEXAS, OKLAHOMA LANDS RANCHES. Railroad now building will triple values. Excellent land, water, climate. First-year's crop pays for land. **Jarvis Land Company**, Optima, Okla.

TENNESSEE.—Send for booklet on farming and full description and prices of lands for sale in the valley of East Tennessee, the healthiest climate and best lands in the country. Address, **East Tennessee Real Estate Company**, Morristown, Tenn.

TEXAS RANCH FOR SALE: 68,000 acres 25 per cent. of which is first-class agricultural, the remainder is rolling and good grazing land, divided into fourteen pastures watered by thirty-two wells, equipped with windmills, three large tanks and permanent running water, situated within five miles of the town of Del Rio, in the counties of Valverde and Kinney, bordered on the south for five miles by the Southern Pacific Railroad, with a large warehouse and loading pens in the ranch on the railroad. The Orient Railroad is building from San Angelo to Del Rio, and will run almost through the center of this ranch. There are adequate improvements for a first-class ranch. Price $5.00 per acre; $100,000.00 cash, and good time on the deferred payments at 6 per cent., interest payable annually. Address **T. B. Jones**, Box 27, Del Rio, Texas.

TEXAS.—2,600 acres, 11 miles from Sabinal, Uvalde county; about half agricultural, balance excellent grazing. Price, $7.00 per acre; half cash; deferred payments to suit the purchaser. Address, **Albert D. Evans**, North Fort Worth, Texas.

TEXAS.—A Great Bargain.—1,650 acres, 95 per cent. agricultural, in northeast corner of Red River county; 400 acres in cultivation and under hog-proof fence; 200 acres in Bermuda grass; eight houses and plenty of good water. Situated 11 miles north of Avery, on the T. & P. Railroad. Price $25,000; one-third cash; deferred payments to suit purchaser. Address and mention this paper, **A. J. Martin**, Harris Ferry, Texas.

CASH FOR YOUR FARM OR BUSINESS

No matter where you live. Write me today if you want to buy or sell any kind of Real Estate or business. **FRANK P. CLEVELAND**, 7910 Adams Express Building, Chicago, Ill.

We can sell your property; send description. Northwestern Business Agency, Minneapolis.

FARMS WANTED! We can turn a quick sale for you, as we are in close touch with buyers everywhere. Let us show you how to save agents' commissions. Or if you want to buy property of any kind, anywhere, write us. **AMERICAN INVESTMENT ASSOCIATION, Minneapolis, Minn.**

Don't Have a Blind One

"VISIO"

Wonderful Discovery

DISEASES of the EYE successfully treated with this NEW REMEDY.

AN ABSOLUTE CURE

for Moon Blindness, (Ophthalmia), Conjunctivitis and Cataract, Shying horses all suffer from diseased eyes. A trial will convince any horse owner that this remedy absolutely cures defects of the eye, irrespective of the length of time the animal has been afflicted. No matter how many doctors have tried and failed, use "VISIO," use it under our GUARANTEE; your money refunded if under directions it does not effect a cure. "YOU PAY FOR RESULTS ONLY." $2.00 per bottle, postpaid on receipt of price. Visio Remedy Ass'n., Dept. C, 1933 Wabash Ave., Chicago, Ill.

THE SEWING AWL.

A Most Useful Premium For Subscribers to The National Farmer and Stock Grower.

A farm on which there is not a sewing awl is in difficulties when work is most pressing. It is surprising how useful this little implement is. It is the Myers Famous Lock Stitch Sewing Awl. It is the only sewing awl made with a groove running the full length of the needle and has what is known as a diamond point. In order to sew leather or any heavy, thick material without breaking or cutting the thread it requires a needle with the groove running the full length of the needle. You might just as well have no groove in the needle as to have it only part of the way. With the Myers Awl you can sew old or new harness, saddles, carpets, canvas, tents, rugs, quilts, shoes, grain bags, and many other things. You can use any kind of thread in the Myers Awl, and it makes a lock stitch same as a sewing machine. It is very simple; a woman can use it as well as a man. It is one of the most practical devices ever invented. They are put up with two needles; one is straight and one curved, with a small screw-driver and wrench combined. Also a reel of waxed thread with each awl ready for use. Every teamster and farmer should own a Myers Lock Stitch Sewing Awl, as there is use for one in almost every household. The Myers Awl is nicely finished, the metal parts are nickel-plated, the needles and wrench are kept in the hollow handle, which has a screw top.

Anyone who will send One Dollar cash to pay in advance for two-years' subscription to The National Farmer and Stock Grower can select one of Myers' Lock Stitch Sewing Awls, which we will send by mail, postage paid, as a free premium. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Promiscuous Breeding.

Mr. J. E. Payne, Field Agent of the Colorado Agricultural Experiment Station, says that during his fourteen-years' experience in Eastern Colorado he has seen many horse ranches, and usually found several types of stallions running on the same range or in the same pasture. One ranchman in particular had black Percheron, Coach and Clydesdale stallions. These stallions were all good of their kind, but they were used indiscriminately. The result was that after eight years of such breeding it was impossible to find a team of perfectly matched horses among a herd of 250 head. Had matched stallions of either of the breeds been used and the others cut out, many matched teams could have been found, and the profits have been materially increased.

He finds that ranchmen owning cattle have done better. Their young stock match well. A cut off of fifty head represents the entire herd, and in a general way the cattle raisers are consistent breeders, sticking to one type and gaining their point of improved animals that are worth more and sell for more than the original stock.

Horse and Mule Notes.

On a government breeding horse farm in Trakehnen, Germany, it requires a population of 2,600 people to take care of 1,747 head of horses. The estate occupies 10,855 acres of land, and in addition to geldings for military service turns out seventy stallions a year.

The Drovers' Journal says: "Among the recent developments at the Chicago market was the purchase of forty-four horses for export to Gautemala, Central America. There were several high-class carriage horses in the lot costing $800 to $1,400, the consignment representing the best carriage and draft horses in the market. The coach horses were well-mannered pairs purchased from the coach horse stables of Samuel Cozzens and comprised the best city-mannered harness horses sold at this market the current year. It was a trial shipment, and if it proves a financial success other purchases will follow in the near future."

A recent contract on the part of the United States Army was let at $213 per head for artillery horses, and cavalry horses at $183 to $197. A year ago the average price was $171. At Fort Reno, Okla., and Fort Keogh, Mont., young horses are bought at an average cost of $131, and they are trained for two years.

The Chicago Horseman says: "An eighth in 12½ seconds is at the rate of a mile in 1:40. It is announced that the California gelding, Chiquito, by Diablo (p), 2:09¼, performed that trick recently and paced a quarter in 27½ seconds, a 1:50 clip."

Percheron Horse Sale.

H. G. McMillan & Sons, of the Lakewood Farm at Rock Rapids, Iowa, held their sixteenth annual Percheron horse sale in the sale pavilion at Sioux City, Iowa, on June 28th, selling fifty head—twenty head of yearling and two-year-old stallions and thirty head of mares and fillies from one to six years old, mostly yearlings and two-year-olds. The sale was fairly well attended by buyers from South Dakota, Nebraska, Minnesota, Illinois and Iowa, and the prices, although not high, were fairly good, considering the number of yearlings that were in the offering. The twenty stallions, all one and two years old, brought $6,615, or $337.50 average; the thirty mares, mostly yearlings and two-year-olds, brought $11,750, or $391.60 per head. The total fifty head sold for $18,365, or an average of $367.30, which is not so bad for a summer sale. The horses were of good quality and were in good shape for coming right off from pasture.

A Record Parade.

The New York Herald says: "The twelve hundred giant draft horses in the recent annual parade of the Street Cleaning Department made a showing for the Fiss, Doerr & Carroll Horse Company which probably no other concern in the world ever equaled. Few persons who admired this great army of fine-looking cart horses were aware that one firm of dealers in the New York market had supplied them all, yet such was the case. Through all the changes of administration and officials for fifteen years or more Fiss, Doerr & Carroll have underbid all competitors for furnishing draft horses to the city, and practically every one of the fourteen hundred animals now working in the Street Cleaning Department in the various boroughs was bought from the firm.

Canada's Invitation.

Canada is extending an invitation to United States farmers to visit that country now. This is the time to see the crops. All over Western Canada there are government agents to extend courtesies. For particulars, write to Superintendent of Immigration, Ottawa, Canada, or to the Canadian agents, J. S. Crawford, 125 West Ninth street, Kansas City, Mo., and C. J. Broughton, 412 Merchants Loan and Trust Company Building, Chicago, Ill.

New Era Grader Catalogue.

The catalogue of earth-handling, rock-crushing, street-cleaning and road-building machinery issued by the Austin Manufacturing Company is a perfect revelation. Every kind of grader, elevator, scraper, roller for road making and grading is there, large enough to fully understand the purpose and capacity. All who are interested should write for a copy, addressing Austin Mfg. Co., Manhattan Bldg., Chicago, Ill.

General Farm Notes.

Norway is going largely into the business of manufacturing what is called dry milk or milk meal. They are using American machinery. The analysis of the dry milk by the Christiania National Laboratory gives the following percentage results: Water, 2.46; fat, 26.66; albumen, 26.37; milk sugar, 37.68; mineral matter, 5.85.

The Argentine Ministry of Agriculture is offering prizes to cotton growers. It is estimated that 150,000,000 acres of land in Argentine are suitable for cotton growing, although only 4,300 acres are under cultivation.

The Mexican cotton crop was 170,000 bales in 1906-7; was 75,000 bales in each of the two seasons following. This year the estimate is 300,000 bales. Nearly all the cotton in Mexico is raised in the Laguna district, of which Torreon is the principal city.

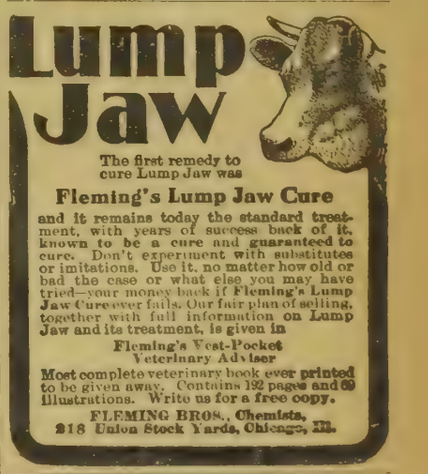
The Eighteenth National Irrigation Congress meets in Pueblo, Colo., September 26th to 30th, 1910. Its work in connection with irrigation, drainage, forestry, deep waterways and home building is of national importance. Mr. Arthur Hooker is Secretary, and his address is Pueblo, Colo.

The production of tobacco in the state of Missouri increased from 1,237,500 pounds in 1907 to 4,433,850 pounds in 1909. The disturbances in Kentucky and Tennessee are credited with causing the Missouri farmers to return to an industry which they formerly allowed to decline.

Mr. Daniel L. Keheher, of Orion, Ill., informed the committee investigating the high cost of living that he had sold dressed pork as low as $1.25 per 100 pounds, oats at 6 cents a bushel, corn at 10 cents a bushel, and wheat at 30 cents. His experience went back fifty-six years.

The first new Missouri timothy, crop of 1910, sold at St. Louis, came from Audrain county, and sold for $16.50 a ton.

Every Medicine Shelf
Should have the famous
KENDALL'S SPAVIN CURE
Kendall's Spavin Cure
The great emergency remedy. Cures Spavin, Ringbone, Curb, Splint, Sprains, Lameness. All druggists sell it at $1 a Bottle; 6 for $5. Book, "Treatise on the Horse," free
DR. B. J. KENDALL CO., Enosburg Falls, Vt.



Lump Jaw
The first remedy to cure Lump Jaw was
Fleming's Lump Jaw Cure
and it remains today the standard treatment, with years of success back of it, known to be a cure and guaranteed to cure. Don't experiment with substitutes or imitations. Use it, no matter how old or bad the case or what else you may have tried—your money back if Fleming's Lump Jaw Cure ever fails. Our fair plan of selling, together with full information on Lump Jaw and its treatment, is given in
Fleming's Vest-Pocket Veterinary Adviser
Most complete veterinary book ever printed to be given away. Contains 192 pages and 69 Illustrations. Write us for a free copy.

Weighing the Milk.

This is the only sure way to determine the difference between the good and inferior cow. Weighing and testing daily is only a business proposition. It is the only safe way of determining what price to ask for a cow in selling her, or of what to pay for her when buying. No intelligent farmer will sell a cow for $30 that will make him a net profit of $40 or $50 a year. Neither will he keep a cow that doesn't pay him a profit if he knows it. Test and weigh the milk is the way to know.—Minnesota University Farm News.

On June 1st the Missouri State Board of Agriculture reported the condition of crops as follows: Corn, 67.2; wheat, 69; oats, 91.2; cotton, 73.9; pasturage, 81.4; tobacco, 77.5; old colver, 73;6; new clover, 83.6; alfalfa, 84.6; timothy, 79.7; and flax, 86.4.

MAGNIFICENT SUBSCRIPTION PREMIUM.

The National Farmer Hat.

The sizes are from 6⅝ to 7½. They are hats suitable for men or boys. They are of good material, well made and stylish. These hats are sent direct from the manufacturer to the subscriber in a tube and sent by mail prepaid. These hats are black and steel gray. We send black unless gray is called for. These hats wear as well and last as long as any $2.00 to $3.00 hats on this market. They will give entire satisfaction. The subscription price of The National Farmer and Stock Grower is One Dollar for three years. We cut out one year, and in place of the third year we include the hat. Therefore, send us One Dollar to pay for two-years' subscription to The National Farmer and Stock Grower, and we will send you by mail one of these fine National Farmer hats as a premium. Be sure to mention the size and color.

SUBSCRIPTION BLANK — To be Filled Out if Order is Given.

Poor Milk.

There is no article of food so generally used from the cradle to the grave as milk. In this we are all agreed that it may be good, bad, or indifferent, and the meagre intelligence, or shall we say instinct, of the infant is equal to the task of differentiating one quality of milk from another. But the children of a larger growth are generally ignorant of the conditions which enter into one phase of the production of inferior milk.

What I refer to is the common mistake in believing that the quality of milk is determined largely by the nature of the food that the cow eats.

One of the stock arguments used in Denver against the feeding of brewers' malts to dairy cows was that it produced a poor quality of milk. The same argument has been used in the case of beet pulp. This is a mistake. Each cow is a physiological unit in the production of milk constituents, when in a healthy condition. The quantity of milk varies greatly according to the kind and amount of food consumed, but the quality remains uniform with remarkable persistency.

If the cow is sick or starved, and the body functions abnormal, then it may be different. It is a fact of much interest, as well as of economic importance, that the cow under all sorts of adverse conditions will persistently adhere to her standard in the relative proportion of milk constituents.

The flavor of milk will vary according to the feed and other things. The milk may be red or blue in color, and the cream may be ropy; it may sour quickly and many things may happen to it because of the presence of bacteria—when cans and bottles are not sterilized, and the milker is careless; but the same amount of cream, casein, milk sugar and other constituents are there, quart for quart, providing the cow is healthy and the milkman has not skimmed it down to three per cent.—or more.

There is a great difference in the quality of milk in individual cows, as well as in breeds. Samples of milk from a certain cow were brought to the Veterinary Department of the Colorado Agricultural College for analysis. The complaint was that there was no cream on the milk. Analysis of each sample revealed about two per cent. butter-fat. The cow had been examined and found healthy. The feed has been changed, but the milk remains poor. She is that kind of a cow.—Geo. H. Glover, Colorado Agricultural College, Fort Collins.

Germs Play a Big Part in the Dairy.

There are many known germs and many more that are unknown. The scientists are constantly studying them and constantly adding to the number of those germs that have names. As they are studied it becomes more and more apparent that they are at the bottom of some of the usual things that occur in dairies and on farms. The milk will sometimes take on an unusual appearance and the cow be charged with being sick or of having received the wrong kind of food. Many theories have been built up on such cases, which theories we now know to have had nothing in them.

Many people will remember the agitation some years ago concerning the "fishy" taste in butter. We first heard of it from Australia, and it was believed to be a trouble confined to that part of the world. But soon the experts began to find it in this country. It was suspected that it was due to a germ in the water in which the butter was washed; and the experiment was made of washing some of the butter in water taken from deep artesian wells known to be germless. Butter so washed was devoid of the objectionable flavor. A further investigation revealed the individuality of the germ that was responsible for the fishy flavor.

It not infrequently happens that a particular farm will be overrun with a germ of a particular kind. The said germ will be found in the pasture, in the brook from which the cows drink, and even in the well water. From the presence of such a germ will often come stringy milk, which was formerly supposed to represent the out-of-condition state of the cows. Also bitter milk generally comes from a harmless germ taken by the cows in their food and drink or perhaps blowing into the pail when the cow is being milked. Sometimes the germs cause the discoloration of milk, which would give the impression that the udder of the cow had been internally injured.

One of the very frequent tricks of a particular germ is the coagulation of milk while it is still sweet. There is nothing the matter with such milk beyond the fact that a few thousands of germs have fallen into the milk or gotten in by some means, and that these have multiplied with astonishing rapidity till they have made the whole body of milk coagulated before the lactic acid germs could get in their work of souring the milk.

In this connection it is interesting to note a German investigation of some milk that creamed abnormally. The cream separated from the milk very quickly. The butter made from the cream was also abnormal and developed rancidity in a very quick time. The milk was put under a microscope in the hands of an expert bacteriologist. He found the milk and butter to be teeming with multitudes of a peculiar alkaline bacilli. The well water on the farm was found to contain it as well as all other places on the farm. It was the cause of the abnormal action of the milk, cream and butter. Yet without doubt the bacillus was harmless to human beings or other living creatures.

Holstein Cattle Records.

At the annual meeting of the Holstein-Friesian Association the following was given as the combined record of the females admitted to the Advanced Register:

"This herd of 3,124 animals, of which nearly one-half were heifers with first or second calves, produced within a period of seven consecutive days 1,248,006.1 pounds of milk, containing 43,695.365 pounds of butter-fat, thus showing an average of 3.50 per cent. fat. The average seven-day production for each animal was 399.5 pounds of milk, containing 13.987 pounds of butter-fat, equivalent to 57.1 pounds, or over 27 quarts of milk per cow per day, and 16½ pounds of the best of commercial butter per cow per week."

Wisdom From Denmark.

Dr. Boeggild, an eminent dairy authority from Denmark, attributes much of the success of dairying there to the use of roots as food for cows. The great value of roots as a food for cows was emphasized by Dr. Boeggild. No silage is used in Denmark, owing to the fact that corn cannot be produced in abundance. Cows are now kept in stables most of the time, he says, and are pastured less than formerly, an intensive feeding method being practiced. He outlined the plan of the co-operative cow-testing associations, which have resulted in great improvement in the production of cows, and emphasized the fact that the greatest benefit came from the aid given by traveling instructors, who are able to show the dairy farmer how to improve conditions. The scoring exhibitions, which have resulted in a uniform high grade of butter, have also been a great factor in giving Danish butter an enviable reputation in the English markets.

Dr. Boeggild also pointed out the fact that the olemargarine problem no longer offers serious difficulties, since oleo is sold at a much lower price than butter, and special oleo inspectors are employed, who have no difficulty in controlling its production. The use of oleo by farmers in their homes rather benefits the butter trade.

DAISY FLY KILLER placed anywhere, attracts and kills all flies. Neat, clean, ornamental, convenient, cheap. Lasts all season. Made of metal, cannot spill or tip over; will not soil or injure anything. Guaranteed effective. Of all dealers, or sent prepaid for 20 cents.
HAROLD SOMERS,
150 DeKalb Ave., - Brooklyn, N. Y.

Shoo-Fly THE ANIMALS' FRIEND
KILLS EVERY FLY
It strikes when our gravity sprayer is used. Keeps insect pests off animals in pasture longer than any imitation. Used since 1885. Thousands of dairymen duplicate 10 to 50 gallons annually after testing imitations. Absolutely harmless; cures all sores.
30 cents worth saves $10
worth of milk and flesh on each cow during fly season. No Lice in Poultry House or any place it is sprayed. If dealer offers substitute, send us his name and $1 for 3-tube gravity Sprayer and enough SHOO-FLY to protect 200 cows. Name express office. $1 returned if animals not protected. Free booklet. Special terms to agents.
Shoo-Fly Mfg. Co., N. 10th St., Phila., Pa.
Editor knows from experience that Shoo-Fly is O. K.

Dairy Notes.

The Fifth National Dairy Show will be held in the Chicago Coliseum, October 20th to 29th, 1910. Prof. H. E. Van Norman is Secretary and Manager. His postoffice address is State College, Pa.

In the Wisconsin Butter Test, a two-year-old heifer, Cedar Lawn De Kol Johanna, a Holstein, produced 88.8 pounds of butter-fat in thirty days. This heifer is owned by C. A. Schroeder, of West Bend, Wis. She beats the former record by eleven pounds of butter-fat.

At Syracuse, N. Y., June 2d, 171 head of Holstein cattle sold at auction for a total of $61,415, an average of $360 per head. Thirty-one of the highest-priced animals averaged $739. One heifer topped the sale at $2,600.

An Indiana creamery shipped 160 boxes of butter of its own make into the state of Ohio. This was labeled "Elgin creamery butter," and being misbranded under the Food and Drugs Act, was condemned and forfeited. On giving bond that the goods be not sold in violation of the law the butter was finally released.

Another Dairy Record.

It is announced by the Holstein-Friesian Association that in Chenango county, New York, the cow De Kol Queen La Polka, 2d, owned by Clayton Sisson, of Sheburne, N. Y., has surpassed the thirty-day record of Colantha, 4ths, Johanna. The new cow's butter record for seven days is 35.34 pounds; fat record, thirty days, 116.08 pounds; butter record, thirty days, 145.10 pounds; milk record, one day, 124.00 pounds; milk record, eight days, 841.8 pounds; and milk record, thirty days, 3,376.9 pounds; average per cent. fat, 3.43.

LIVE STOCK BREEDERS.

POLAND-CHINAS.

"Kirby's got the best." Not what we say but what our customers in nine different states say. Write for prices.
KIRBY STOCK FARM,
Marmaduke, Ark.

POLAND-CHINA HOGS.

Home of Royal Meddler (50,111) and Hutchison Sensation (53,000), two of the greatest sires in the Southwest. Hutchinson Sensation (53,000) was Grand Champion at Missouri State Fair, 1909. Weighs 750 at eighteen months old. I have a nice lot of Gilts bred to these

and Boars that I am offering at a bargain; also a fine lot of Pigs that will please you. Write for catalogue—it is free.
JOHN McLAUGHLIN,
R. F. D. No. 1, Marmaduke, Ark.

GREAT, BIG, FINE, SMOOTH POLAND-CHINA PIGS, sired by Best Corrector, out of Perfection and Spellbinder Dams, at $10.00 each. Send in your order and get the best blood in the world. Address,

One registered Bull Calf nine months old.
One registered Bull Calf two months old. These Calves will not last long. If you want one, write
ALBERT S. ENNIS,
712-21 Missouri Trust Bldg., St. Louis, Mo.

REGISTERED SHROPSHIRE SHEEP.

Rams, Ewes and Ram Lambs of the best breeding. Ram at head of flock sired by an imported English Ram out of a Canadian Ewe. Have used Rams from the best flocks in the United States and Canada. These sheep are bred for wool and mutton. Prices reasonable.

J. SMITH & SONS, R.F.D. 4, Greenville, Ill.

The Rat in the Hog Pen.

Rats are a nuisance in the hog pen and about the hog yard. The amount of food they steal is considerable, but that is the least of the objectionable features connected with them.

Perhaps the greatest damage they do is in the way of making holes in bags and boxes containing feed or grain for other purposes than feed.

But it is considered certain that they are often the conveyers of the germs of hog cholera and swine plague. Many a mysterious outbreak of disease might be charged to them with a good deal of certainty.

But to destroy them is certain to help check that most feared of all swine diseases—trichinosis.

Trichinosis is caused by the presence in the flesh of the hog of minute insects called trichinae. These trichinae live in the flesh of the hog and also in the flesh of such animals as rats. The insects in the flesh of the rat can get into the flesh of the hog only by the hog eating the flesh of the rat. The trichinae in the flesh of the rat are in little prisons made out of carbonate of lime. The prisoners cannot get out so long as their prison is intact. But the digestive juices in the stomach of the hog destroy the prisons, or cysts, as the prisons are called, and the insects are liberated in the stomach.

Thence they penetrate the flesh of the hog, and when the hog is killed and eaten by human beings, the trichinae get into the stomachs of the eaters and from thence into the muscles, often causing death.

Therefore, to kill the rat is one important step in the process of destroying the disease itself.

Where old, rotten boards are the rule, rats will persist in spite of all that can be done against them. The use of cement is the best means of keeping rats away. We know of hog quarters where cement is the basis of all construction, both in the hog house and in the hog yard.

One farmer was pestered with rats for years. They had honeycombed the ground under the hog-house floor and had established themselves in what appeared to be permanent quarters. When the farmer finally decided that he would have to use cement, the old floors were torn out and the rat colonies exposed and attacked. But the earth had to be dug up for several feet below the surface before the bottom of the last rat-hole was reached. A deep foundation of cement was laid, and cement was used everywhere at considerable expense. Even the feeding floor in the hog yard was made of cement. The rat was banished forever, for he could thereafter find there no hiding place.

It is far better to so build that the rats will be excluded than to have to place poisons about the yards and pens. Deadly poisons are always dangerous, for some accident is likely to happen to domestic animals or even to human beings. Traps are largely non-effective, and it is seldom that rats can be entirely cleaned out by the use of traps. Prevention is the proper factor to use in fighting the rat.

Jersey Calves Cheap.

Probably most everyone has heard of the plan of the Missouri Jersey Breeders' Association to distribute desirable, full-blooded bull calves to dairymen and farmers in the state at the nominal price of $10.00. This plan has now been in operation going onto two years and a great many calves have been sent out.

Last fall we received applications from fifty or sixty more people than we had calves available at the time to supply, and quite a number of inquiries have been coming in since. However, by making no further mention of the matter through the agricultural papers we have gradually caught up with the demand until we are now in position to fill some eight or ten orders very quickly upon receipt of them.

We have some splendidly bred calves on the list now from some of the best herds in the state, and any dairyman or farmer who is interested in improving a common, scrub or grade herd of milch cows simply cannot afford to let this opportunity go by.

These calves are primarily for distribution in this state, but we have on several occasions sent calves to other states when it seemed a good deed would be done to someone in need of a good bull and without the means to pay a high price. Also, breeders from one or two other states have joined with us in this movement and have given considerable assistance, especially the state of Illinois.

If any of the readers of The National Farmer and Stock Grower are interested and want one of these calves, kindly address the undersigned. ALBERT S. ENNIS,
712-21 Missouri Trust Building, St. Louis, Mo.

Sheep and Wool Notes.

According to the Missouri crop report, the average wool clip is placed at 6.6 pounds of unwashed wool per grown sheep. This is a light clip. The lack of warm weather to bring out the grease is given as the reason for it. The percentage of lambs raised as compared with ewes in the flock is 85.6.

Kentucky Fairs are always interesting. The Hopkins County Fair is at Madisonville; opens July 19th and closes on the 23d. Every day is a Big Day. The officers are Jas. A. Franceway, President; Gordon B. Hall, Secretary; and C. C. Givens, General Manager. The Henderson County Fair opens at Henderson, Ky., on July 26th and continues to the 30th. We acknowledge invitation to both Fairs.

Bicknell & Gemmell had on the Chicago market on June 21st a string of yearlings and wethers from their range in Baker county, Oregon. Clay, Robinson & Co. handled the entire shipment and secured three different tops for them by selling 581 yearlings of 82 pounds average at $5.75 per 100 pounds; 236 feeding yearlings of 75 pounds average at $5.50 per 100 pounds; and 506 wethers of 101 pounds average at $5.25 per 100 pounds.

During the year 1910 the firm of Clay, Robinson & Co. received and sold or bought for their customers the magnificent total of 2,678,957 sheep and lambs. The firm solicits consignments and is well established at Chicago, South Omaha, Kansas City, South St. Paul, Denver, East Buffalo, East St. Louis, Sioux City, South St. Joseph and Fort Worth. The reason for this immense business is full equipment and first-class service in every detail.

Blooded Stock.

The attention of our readers is invited to the card of Mr. John McLaughlin, of Marmaduke, Ark., breeder of Poland-China hogs. He has sold a good number of pigs by his advertising in The National Farmer and Stock Grower, and we have received letters from his customers who state that they are highly pleased with the pigs bought of him. We have also received a letter from the Poland China Record Association stating that Mr. McLaughlin is entitled to our recommendation.

FOR SALE: FIFTY O. I. C. PIGS.

June farrow. They are all the good kind. For prices write ALVEY BROS.,
Meriden, Kansas.

Mill Creek Stock Farm,

The home of the noted Starlight family of Jacks and Jennets for the past thirty years, is located seven miles southeast of Nashville, Tenn., on the N. C. & St. L. R. R., at Asylum Station, and has on hand at all times a nice lot of Jacks, Jennets and Stallions, all of the best blood, from six months to six years old, for sale at reasonable prices. Write for catalogue. Also Jersey Cattle.

THOS. H. EZELL, Prop.,
(son and successor to the late H. C. Ezell),
Nashville, Tenn., Sta. B, R. F. D. No. 7.

RECORD LOAD OF CORN HAULED.

Walter Converse, a farmer of Madison county, Ohio, is the champion corn hauler of his section. Mr. Converse made a six-mile haul of 238 bushels of corn, which, with the wagon, weighed 18,520 pounds, or six and a quarter tons, in winter time, in two and a half hours. This load was hauled part of the way by two mares, both heavy with foal. For this reason he put on four horses for the greater part of the haul. The load was fifteen feet long, five feet ten inches wide and six feet two inches high.

Sheep With the Golden Hoof.

The American Stockman says: "Thirty-six pounds of sheep manure are equal as a fertilizer to 100 pounds of ordinary farm-yard manure. In the face of such conclusive and indisputable evidence, why will farmers neglect to keep a few sheep?"

The American Shropshire Record Association desires to dispose of the supply of volumes of record now in storage, each copy of which, from No. 1 to No. 22, will be sold for $1.00 to September 1, 1910. Such books will be sent by express, collect. After that date all unsold books, except such as the association reserves for its own use, will be destroyed. Address, The American Shropshire Registry Association, Lafayette, Indiana.

"The sheep man must remember that there are poor feeding sheep just as there are poor feeding cattle. Sheep with a prominent backbone never make the best of feeders under any conditions."—American Stockman.

CURES MOON BLINDNESS.

Did you ever go to the stable in the morning and discover your favorite horse was moon blind? The Visio Remedy Association, 1933 Wabash Avenue, Chicago, Ill., guarantees to cure him, thus saving you from loss financially and the necessity often of replacing him. Under their guarantee you pay for results only, thereby taking no chance, with everything to gain.

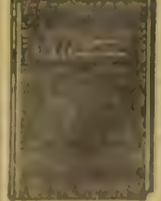
THE DOMESTIC SHEEP.

There is one modern writer on Sheep industry who has made his mark. It is Dr. Henry Stewart. He has written a book entitled **The Domestic Sheep.**

It is up-to-date in every particular. There are 384 pages, and besides going into the subject in a practical way there are illustrations of every breed and every subject belonging to the industry. For $1.50 we will send **The National Farmer and Stock Grower** for one year and one copy of **The Domestic Sheep.** This is the time to study the sheep business. There is money in it. Address
HALE PUBLISHING CO.,
3550 Vista avenue, St. Louis, Mo.

FARM BLACKSMITHING.

Here is a book for the farmer. The book was written by A. J. Drew. It is a complete treatise on blacksmithing from the farm standpoint. This book teaches how to profitably spend stormy days. Many thousands of farmers will find it to their interest to own a copy. There are 160 pages. It is plain and clear. Illustrations and [illegible] We accept [illegible] to The National Farmer and Stock Grower and [illegible] copy. [illegible]



[illegible] Address [illegible]

The Reliable Bicycle.

Our readers should remember the [illegible] the truly reliable traveler. The [illegible] cheaper than ever and can be purchased on easy terms. See page 14.

MAY MANTON PATTERNS.

Very Elegant Pattern Service, With Full Instructions For Ordering and Making.

This is the very best pattern service, and we are very much pleased to obtain it for our friends and patrons. Each pattern is new and original.

Tucked Blouse.

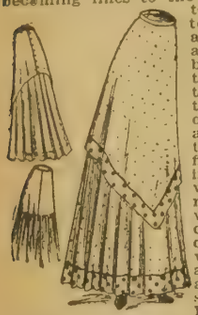
No. 6647.—The simple tucked blouse is always a dainty and attractive one. This model can be made from any material that is adapted to lingerie treatment, and that means the thin silks and light-weight wools as well as muslins. It can be made with high or square neck, and the square neck can be finished with banding or with a frill or in any way to suit the fancy. Mercerized batiste with banding of lace is the material illustrated, but muslins include embroidered and open-work sorts and all kinds of fancy effects, while silks that are adapted to such a model mean foulards, India silk and a variety of silk and cotton mixtures. The blouse suits the odd waist and the gown equally well.

The waist is made with front and backs. It is tucked to form a yoke and closed invisibly at the back. The sleeves are in one piece each, gathered into cuffs, and these cuffs can be made deeper or shorter, according to the length of sleeves desired. When high neck is used, a stock collar is attached to the edge.

The Pattern 6647 is cut in sizes for a 32, 34, 36, 38, 40 and 42-inch bust measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Pointed Tunic Skirt.

No. 6646.—Every variation of the tunic skirt is fashionable, but this pointed one is peculiarly smart and attractive. It gives becoming lines to the figure and is adapted to a great many materials. Bordered foulard makes this one, and the border has been cut off and stitched to the lower edge of the tunic, but any trimming can be used, or the tunic can be of a material to match the blouse, while the flounce is of something in contrast. Foulards with messalines are much used in this way, while wool material is combined with silk and checked and striped with plain, and there are, indeed, innumerable attractive effects of the sort that are in vogue.



If washable material is used, the flounce can be gathered, as that treatment renders laundering somewhat simpler. Small buttons are much liked this season, and the row at the back of the tunic gives a distinctive touch; but it is not obligatory, for any preferred finish can be used.

The skirt consists of the five-gored upper portion, flounce and tunic. The flounce is straight and can be either gathered or plaited. The tunic is made in one piece and is fitted by means of darts over the hips.

The Pattern 6646 is cut in sizes for a 22, 24, 26, 28 and 30-inch waist measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Plaited Blouse or Shirt Waist.

No. 6661.—Shirt waists that are made with moderate fullness are much in vogue just now and are very generally becoming. This one is laid in a succession of plaits, but all except the outermost are stitched for full length, so that there is only a limited amount of fullness. The middy collar on the neck is a novelty, and the slightly open neck makes a feature of the season. The blouse is adapted both to the odd waist and the entire gown and to almost all the simpler seasonable materials, linen, madras, pongee, cotton poplin, and also the thinner lawns and batistes, for waists of this kind are made from all. White linen makes this one, however, and is trimmed with bands of rose color, while the tie is made to match. If three-quarter sleeves are not liked, long ones in regulation shirt-waist style can be substituted.

The waist consists of fronts and back. The collar is joined to the neck edge and the closing is made at the center front, where there is a wide box plait. The elbow sleeves are gathered into bands and finished with rolled-over cuffs, but the long ones are finished with over-laps and straight cuffs in shirt-waist style.

The Pattern 6661 is cut in sizes for a 32, 34, 36, 38, 40 and 42-inch bust measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Closed Circular Drawers.

No. 6645.—Circular drawers that are wide and ample are much liked by many women. They mean smooth fit over the hips and perfect freedom about the knees. These are made of batiste with frills of embroidery, but all materials that are used for under garments are equally appropriate. Cross-barred muslins are much liked as well as plain and lace, either wide enough for the frill or taking the form of insertion to be used with plain material, makes a pretty finish. The drawers are absolutely simple, involving very little time and very little labor in their making. They are especially well liked for motoring and for travel.

The drawers consist of leg portions that are wide at their lower edges. They are joined, and the closing can be made either at front or back, as preferred. The width at the lower edge is a special feature.

The Pattern 6645 is cut in sizes for a 22, 24, 26, 28, 30 and 32-inch waist measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Please be sure to give the size of pattern ordered and write your own name and address plainly that no mistake can be made to cause delay.

Kindly address all pattern orders to **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Concerning Protection.

Those who take fright at the word protection as applied to American industries do not consider that protection (or self-preservation) is the first law of nature. If man did not have to protect himself from the elements he would have been born with an overcoat and shoes on.

Amongst the first live stock protective regulations was an English law to encourage horse raising in England. It prevented any one exporting mares valued at over a certain low price. In order to insure compliance with the law the exporter was obliged to sell the mare at the seaport to any one who would bid above the price at which mares were allowed to be exported. This was an effectual protection of home industry, and it is one reason why England is exporting fine horses to-day.

One of the early protective laws in this country was in the year 1610, when the penalty of death was prescribed for killing cattle in Virginia. The early settlers had great difficulty in raising live stock. The imported hogs scattered on them, the sheep were devoured by wolves and the cattle died for want of feed. It was to save and protect a new importation that the penalty was so severe.

There were other protective laws. The Turks did not permit Angora goats to be exported. South Africa has the same kind of a law now. The Spaniards were forbidden to export sheep and so became a great sheep-growing nation.

These are examples of protective enactments as much so as the laws that impose duties on foreign imports to give the home productions the first chance at the home market.

We are most decidedly in favor of foreign productions paying duty for the support of our government fully equal to the taxes paid directly and indirectly by ourselves.

The Free Trader is in favor of taxing home productions and letting in foreign goods free and untaxed.

Argentine is shipping flour to the Barbado Islands and filling up a market heretofore supplied by the United States.

At St. Louis, stock peas are quoted at $3.45 per bushel for New Era and $4.00 for Whippoorwill. These quotations look pretty high.

FREE TO YOU—MY SISTER

Free to You and Every Sister Suffering from Woman's Ailments.

I am a woman.
I know woman's sufferings.
I have found the cure.

I will mail, free of any charge, my home treatment with full instructions to any sufferer from woman's ailments. I want to tell all women about this cure—you, my reader, for yourself, your daughter, your mother, or your sister. I want to tell you how to cure yourselves at home without the help of a doctor. Men cannot understand women's sufferings. What we women know from experience, we know better than any doctor. I know that my home treatment is safe and sure cure for Leucorrhoea or Whitish discharges, Ulceration, Displacement or Falling of the Womb, Profuse, Scanty or Painful Periods, Uterine or Ovarian Tumors, or Growths; also pains in head, back and bowels, bearing down feelings, nervousness, creeping feeling up the spine, melancholy, desire to cry, hot flashes, weariness, kidney and bladder troubles where caused by weaknesses peculiar to our sex.

I want to send you a complete ten day's treatment entirely free to prove to you that you can cure yourself at home, easily, quickly and surely. Remember, that it will cost you nothing to give the treatment a complete trial; and if you wish to continue, it will cost you only about 12 cents a week or less than two cents a day. It will not interfere with your work or occupation. Just send me your name and address, tell me how you suffer if you wish, and I will send you the treatment for your case, entirely free, in plain wrapper, by return mail. I will also send you free of cost, my book—"WOMAN'S OWN MEDICAL ADVISER" with explanatory illustrations showing why women suffer, and how they can easily cure themselves at home. Every woman should have it, and learn to think for herself. Then when the doctor says—"You must have an operation," you can decide for yourself. Thousands of women have cured themselves with my home remedy. It cures all old or young. To Mothers of Daughters, I will explain a simple home treatment which speedily and effectually cures Leucorrhoea, Green Sickness and Painful or Irregular Menstruation in young Ladies, Plumpness and health always results from its use.

Wherever you live, I can refer you to ladies of your own locality who know and will gladly tell any sufferer that this Home Treatment really cures all women's diseases, and makes women well, strong, plump and robust. Just send me your address, and the free ten day's treatment is yours, also the book. Write to-day, as you may not see this offer again. Address

Have Been Cured by Magnetic Shields
In Hundreds of Cases Where Other Treatment Failed

We Prove It To You

WE prove every statement we make by the voluntary enthusiastic testimonials from multitudes who say they have been cured by Magnetic Shields, which have stood the hardest tests for nearly thirty years.

Take hope and write us fully. Let us pay the postage, FREE, on our complete Illustrated Book, which shows how we have cured not only hundreds but multitudes of cases after all medicine had failed. We can refer you to many cases where they had been given up to die.

Thacher Magnetic Shield BOOK FREE

You will be fully satisfied by our unquestionable proof that nothing else can take the place of Magnetic Shields and do as much as they can do. They supply the scientific life principle to the system and make the blood circulate properly.

PROOF FREE

We want to send you the grateful, voluntary testimonials of hundreds, telling how they have been cured by Magnetic Shields, which keep the body bathed and saturated in a stream of Magnetism, which floods the system with life and energy, making the blood circulate more vigorously.

This shows how the body is enveloped in lines of Magnetic force from the Vest.

ADVICE FREE

We want to advise you to the best of our ability after nearly thirty years of the most successful use of Magnetism as a curative agent. Then you can use your own judgment as to whether or not you want to use Magnetic Shields to strengthen your system.

Write us today describing your case fully and we will advise you what in our opinion can be done for you, and will send you free our new book on Magnetism.

Thacher Magnetic Shield Co., Suite 6, 169 Wabash Ave., Chicago.

THE BEST POULTRY PAPER.

We are often asked which is the best poultry paper published in the United States, and the answer is, The Reliable Poultry Journal. There are other good papers, but this is the best. The subscription price of The Reliable Poultry Journal is 50 cents a year, and the subscription price of the Universal Magazine is 25 cents a year. We have made arrangements whereby we can send the Universal Magazine and The Reliable Poultry Journal, both papers, one year, for 50 cents. Address, HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

Postal Savings Banks.

Under the terms of the Postal Savings Bank bill a Board of Trustees is created, consisting of the Postmaster-general, the Secretary of the Treasury and the Attorney-general, who shall declare what postoffices shall become postal savings banks. Deposits in these banks made by any one person shall not be more than $100 a month or exceed a total of $500. An account may be opened with $1.00, but stamps of 10 cents each will be issued for those desiring to accumulate money to be deposited. On deposits 2 per cent. interest per annum is to be paid.

Any depositor so desiring can exchange his deposits for government bonds to be issued in denominations of $20, $40, $60, $80, $100 or $500, to bear interest at 2½ per cent. per annum. The money accumulated in the postal savings bank is to be deposited in both national and state banks in the vicinity of the postoffices in which the money is deposited by the people, such banks to pay 2¼ per cent. interest.

Five per cent. of the total deposits is to be retained by the Secretary of the Treasury as a cash reserve. Not more than 30 per cent. of these deposits may be withdrawn by the government at any one time for investment in bonds of the United States, the remaining 65 per cent. to remain on deposit in banks.

The banks are required to give as security for the deposits they receive "public bonds or other securities supported by the taxing power," which restricts such securities to some form of national, state, municipal or other such bonds approved by the Board of Trustees in charge of the postal savings banks.

Economy in Table Linen.

If one must economize closely, it is wise to get the unbleached linen of good quality, and the ordinary washing and boiling will soon make the linen as white as desired.

By watching for special sales a good grade of linen may often be bought at a very moderate price, and the short lengths of linen can be made into serviceable tray and carving cloths; and if small patterns, such as snowdrops or clover leaf, are selected, they are handsome articles when finished.

An under cover of double-faced Canton flannel not only adds to the appearance of the table, but it also preserves the linen, preventing its wearing around the edges, where even the neatest darning is so noticeable.

It is a good plan to place a piece of white oil-cloth under each child's plate with a piece of white linen over it to save the tablecloth, and the best parts of old tablecloths cut by a thread and neatly hemmed make nice small cloths for every-day use.

It is the best economy to have a generous supply of table linen in order to change frequently, thus preventing too constant wear on a few pieces, and the table linen may be kept beautifully white with very little rubbing by putting the pieces to soak over night in warm Pearline suds and then adding hot water to the suds in the morning and washing them out by rubbing between the hands. The pieces will need no boiling unless they were very soiled, and too much boiling will turn the linen yellow.

That a "stitch in time saves nine" is never more true than when applied to filling in with neat darning the first tiny breaks in table linen, and it is best done in an embroidery hoop to keep the linen in place.

The fewer creases that are ironed into pieces of table linen the longer they will last, and a round piece of wood covered with flannel, around which pieces of linen or tablecloth may be smoothly rolled will be found invaluable as a means of keeping the linen in good order, as the small cloths can be rolled without any creases and the tablecloths will only need one crease through the center. —A. M. H.

Lard as a Remedy.

If you have some pure, fresh lard you have the foundation for many excellent remedies, and they are quickly and easily prepared and at almost no expense.

It is well to keep on hand a mixture of a tablespoonful each of lard and turpentine, and for a cold in the chest rub over the lungs and between the shoulders with this mixture and cover with flannel.

One of the best healing salves is made by mixing dry calomel with lard, and if lard is rubbed over a bump or bruise it will often prevent discoloration of the skin.

There is nothing better for sore throat than kerosene oil mixed with lard and rubbed over the throat and then a soft cloth bound around.

A good remedy to remove dandruff from the scalp is made by beating well together three tablespoons of lard with the white of one egg, and the more this is beaten the better it is, and this should be kept in a small salve jar ready for use.

An excellent remedy for pimples or blackheads is made by mixing together one teaspoonful of lard and flour of sulphur. At night wash the face in warm suds in which a little borax is dissolved, as the borax softens the water, cleans perfectly and opens the pores of the skin. After washing with the borax suds, rinse with clear warm water and apply the lard salve; but one must be very careful not to get it in the eyes, as it is very painful.

To clean much-soiled hands, first rub them with lard, then wash in the warm borax suds after wiping the lard off with a soft, dry cloth, and when borax is used in the water it helps to keep the skin firm, so it will not get rough and red so easily.

Tar or wheel grease can be removed from goods of any kind by first rubbing with lard and then washing; and grass stains can be removed by rubbing with the lard and then rubbing through alcohol or camphor.

If a window is hard to raise up and down, try pouring a little melted lard on the rollers or the sides of the window; and to prevent a new butter bowl from splitting, rub both inside and outside with hot lard before the bowl has ever been used.—Martha.

Ropp's Commercial Calculator.

This is a standard book and a revised, enlarged and improved edition. There are millions in use. Ropp's Commercial Calculator is specially valuable to farmers. By its regular use many hard problems become easy. It will prevent mistakes, relieve the mind, save labor, time and money, and do your figuring in the twinkling of an eye. As handy as a watch, always ready and reliable. Anyone who will send Fifty Cents for one-year's subscription to this paper, The National Farmer and Stock Grower, can select one copy of Ropp's Commercial Calculator as a free premium. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

The Whitman Agricultural Company of St. Louis has just sold two lots of baling presses, which represent record-breaking sales.

Farmers' peanuts continue to sell at St. Louis at 3 to 3½ cents a pound.

Lyon & Healy

PIANO

Pure in Tone

IT'S A WONDERFUL STORY—the determination of Lyon & Healy, the world's largest music house, which had already conquered the world with the Lyon & Healy Harp, to produce in their own factories a piano that would fittingly represent them:

FIRST—Came the rearrangement of the great Lyon & Healy factory, opposite Union Park, Chicago.

SECOND—Came a long series of private tests of the new model Lyon & Healy Pianos.

THIRD—Came the public introduction of the new scale Lyon & Healy Piano.

Such a triumph!

Here is a piano on which the cost of labor is double that of an ordinary piano; the cost of materials is 50% more than on ordinary pianos. Here is a piano that 180 dealers in all parts of the world secured the representation of in less than one year, a record without a parallel.

There is really nothing like the Lyon & Healy Piano.

It bears a world-standard name.

It represents the experience gained in conducting for 46 years the world's largest music house. It is sold like all Lyon & Healy products, at such a small margin that it practically sells itself. It bears the strongest guarantee written.

Prices of the Lyon & Healy Piano—

$350, $375, $400 AND UP

Write today for a superb Piano Catalog

Coupon to be filled out.

Poultry Keeping a Part of Mixed Agriculture.

Poultry keeping is often spoken of as a side issue on the farm. In fact, it is not a side issue, but is a part of the combination of farm enterprises that are known when taken together as "mixed farming."

It is being recognized more fully every year that the production of poultry and its care is a most important factor in the total work of the farm. It is no longer being allowed to look after itself, but is receiving more and more attention from even the farmers that are raising grain and live stock.

A dozen Experiment Stations are now carrying on experiments that shed a great deal of light on the business of poultry culture and make profits more uniformly possible. Hitherto many farmers have taken little interest in poultry culture because attempts to make the business a big one have often proved failures. But now that the failures have been studied and conclusions drawn, it is being demonstrated that on any farm the poultry business can be made a large one without inviting disaster.

The first step a person should take when he plans to expand a little poultry business into a big one is to place himself in communication with the various Experiment Stations in the United States that have poultry experiments. He should write to them, asking for all the bulletins they have published on poultry science. Most people do not know that they can secure the bulletins from other states than the ones in which they reside. It is the policy of the stations to be liberal in this matter. The only reservation they make is to supply first the requests from the state in which the Experiment Station exists. One reason for this readiness to send bulletins into other states is that the stations are in large part supported by national money rather than state money. So one need not have a fear of asking too much when bulletins are desired from many states.

The reading of the bulletins will place the reader in possession of a great fund of information on poultry topics and will help eliminate the misinformation that is the cause of so many large losses in poultry operations.

Poultry culture is a difficult kind of culture simply because it deals with so many different lives, each life having its own set of conditions. Each fowl is a subject of study, but each study of this kind can be placed in a class and dealt with as part of a class, and so numerous diverse operations be thereby saved.

That poultry culture is to become a far more important part of mixed agriculture than it is at present is certain. This is proven by the great popularity of all poultry products and their tendency to advance in price. This is a sheet anchor that will hold in any financial storm. It is therefore the part of wisdom for every farmer that has a poultry establishment to make the most of it and develop it to the point where it will become a more important part in the list of mixed farming operations.

FREE DEAFNESS TREATMENT.

A remarkable offer made by one of the leading specialists who offers **FREE TRIAL MEDICINES** to all applying at once. His new treatment has cured scores of chronic cases of deafness, catarrh, head noises and asthma in their homes, after other treatments failed to benefit. Send no money. Address G. M. Branaman, M. D., 2 Gumbel Bldg., Kansas City, Mo.

Australian Winnings.

In the Eighth Australian Egg-laying Contest eighteen pens out of sixty lay 200 eggs per hen per year or better. The highest average was 232 eggs per hen per year for a pen of six. Fifteen of the leading pens were White Leghorns out of thirty-four pens exhibited; seven Brown Leghorns, only one exhibited; one Silver Wyandotte out of eight pens exhibited; and one Black Orpington out of ten pens exhibited.

Gapes in Chicks.

"Concerning gapes in chicks, I can say that this disease is due to little worms in the windpipe, which come from the chicks eating earth-worms. If they are never allowed on the ground where there are earth-worms, they will not get the gapes. For example, if you can keep them on the barn floor, or on soil well covered with lime or ashes, they will be free from this disease; but, of course, they do much better if allowed to run out, especially during nice weather.

"Within the earth-worm the little gape worm in encysted, just as the parasitic worm causing the human disease known as Trichinosis is encysted in the flesh of pork and develops when eaten by a person. In the same way does this little gape worm remain in the earth-worm until eaten by the fowl or chick, when it develops into the gape worm, causing the disease which indicates its presence.

"One simple remedy which I have seen successfully used this spring is common kerosene or lamp oil applied by dipping the tip of a feather into it and inserting it into the windpipe of the chick. The shank of the feather should be stripped of its side barbs and only the tip remain to act as a soft-feather brush. By opening the mouth of the chick and pulling the tongue slightly, the opening in the windpipe is to be seen, and the feather can be inserted. This apparently does not cause much pain, and the operation is soon finished. It appears that one touch of the oil against the gape worm is enough to kill it, even though it is not removed with the feather at the time of treatment. I saw a large number of chicks so treated this spring and everyone recovered after treatment. This appears to me to be more certain, and even more humane, than to attempt to remove with a horse-hair loop, which is commonly used, inserted in the windpipe."—Prof. H. A. Surface, State Zoologist of Pennsylvania.

Poultry on the Farm.

It is not a new idea in poultry raising that pullets lay more eggs than grown hens; neither is it a new idea that for breeding pens eggs should not be laid by pullets.

A good rule for farmers in keeping poultry is never to let a cockerel pass the first winter, and never let the pullet pass the second. This latter is a hard rule to enforce, but it is worth money on the farm to do so.

Ten years ago most of the poultry editors and nearly all the farmers believed that the old hens lay more eggs than pullets.

The Thirty-fifth Annual Meeting of the American Poultry Association will be held at St. Louis, Mo., during the second week in August. St. Louis was selected by a vote of 642 out a total of 949.

"For lice on little chicks I recommend a drop of grease on the head and under the wing. Fresh lard, without salt, is the best. Do not use much. Only a slight drop or touch is enough, and put a little under the wings of the mother hen."—H. A. Surface, State Zoologist of Pennsylvania.

At Petaluma, Cal., which is a great poultry center, a hatchery is being constructed that will have a capacity of 40,000 eggs.

At the Agricultural College of Ontario, Canada, they have compared the results of having chicken houses hold fifty and one hundred birds; each hen was allowed the same floor space. They are inclined to favor the two flocks of fifty each.

He Did the Shaking.

"Shake before taking," read the fever-and-ague victim from the label on the bottle of medicine.

"Talk about your sarcasm," he said to himself, "that is sure the real thing."

Adulteration of Ice.

At Washington, D. C., an ice company was fined $150 for selling ice that contained an added poisonous and deleterious ingredient and consisted wholly or in part of a filthy, decomposed and putrid animal and vegetable substance. Let us hope that hereafter the iceman will make his ice of pure water.

"What is the first business of one who studies philosophy? To part with self-conceit. For it is impossible for any one to begin to learn what he thinks he already knows."—Epictetus.

ENGLAND'S BOY ARMY.

In the issue of Harper's Weekly for March 26th, Sydney Brooks writes of the Boy Scouts of England, the remarkable organization of juvenile soldiers which has enrolled 150,000 members within the last year or two. The Scout Law is comprised in nine articles, says the author. A scout's honor is to be trusted; a scout is loyal to his king; he is to be useful and to help others; he is a friend to all, and a brother to every other scout; a scout is courteous; he is a friend to animals; he obeys orders; smiles and whistles under all circumstances; and he is thrifty. He must have twelve cents in the bank before he can become a second-class scout, while twice that sum is required before he can become a first-class scout. In addition there are the stalker's badge, the signaller's badge, the cyclist's badge, and many other badges to be obtained by proficiency in certain duties.

A poultry company of Pennsylvania having ninety-seven incubators in use, reports 93 per cent. of live chicks from fertile eggs as the best result of the season.

The Standard, a poultry paper, says that there is an Egyptian Pyramid erected four thousand years ago that has a picture on it representing a man feeding geese; that is, stuffing geese by hand.

"Christianity began in a very small way—a baby lying in a manger, with some plain, simple-minded shepherds coming in the night to look upon him. But the heavenly influence which started in the world that night has spread into all nations."—Wellspring.

JUST AS GOOD.

When you call for Frazier's Distemper Cure from your druggist, and he offers to you "just as good" as Frazier's, is this not an implied acknowledgment that Frazier's is the best? It is the scientific compound for contagion among horses—which others try to imitate. Take no chances with "just as good," but use only "the best." Insist upon Frazier's. Your money back if not satisfactory in all cases of distemper, epizootic, coughs and colds. $1.00 size holds three times the quantity of the 50c. size, at all good druggists. Send for thirty-two-page horse booklet. It's free. Binkley Medical Co., manufacturers, Dept. H, Nappanee, Ind.

The Odd Number Kings.

They tell in London a story of an elderly American lady who, while sight-seeing, visited Westminster Abbey. After going about for some time with an air of eager curiosity, she approached a verger. "I wonder if you can help me?" she asked, hopefully. "I am looking for the grave of King Edward II."

"Sorry, ma'am," said the verger, apologetically, "but we 'aven't got Edward II."

"But," protested the visitor, "I understood that the Abbey was the burial-place of kings."

"So it is, ma'am, in a way," returned the verger, "but we only 'ave the odd numbers 'ere."—Harper's Weekly.

Consumption Book FREE

This valuable medical book tells in plain, simple language how Consumption can be cured in your own home. If you know of any one suffering from Consumption, Catarrh, Bronchitis, Asthma or any throat or lung trouble, or are yourself afflicted, this book will help you to a cure. Even if you are in the advanced stage of the disease and feel there is no hope, this book will show you how others have cured themselves after all remedies they had tried failed, and they believed their case hopeless.

Write at once to the Yonkerman Consumption Remedy Co., 4201 Water Street, Kalamazoo, Mich., and they will gladly send you the book by return mail free and also a generous supply of the New Treatment, absolutely free, for they want every sufferer to have this wonderful remedy before it is too late. Don't wait—write today. It may mean the saving of your life.

GALL STONES or any LIVER DISEASE. Write me ALL about it. Will tell of a cure FREE. Address ED.C.COVEY, R.F.D., Lansing, Mich.

RUPTURE FREE CURE

No operation, pain, danger or detention from work. No return of rupture or further use for trusses; a radical cure in every case, old or young. Trial treatment free to all. It will cost you nothing to try this famous method. Don't wait, write today. Dr. W. S. RICE, 6 Main Street, Adams, N. Y.

MEAD CYCLE CO., Dept. G 138 Chicago

The Standard says: "If you want strong, healthy chickens with hard, seasoned muscles and good fighters, give them lots of food and let them have lots of exercise. If you want chickens for the table that will please your friends or customers, confine them in crates where their muscles cannot be strengthened and feed them on foods that are easily digested and are used at once in making flesh of fine flavor and grain."

THE HORSE'S COUGH.

The chilly rains of early summer and those cool evenings that come suddenly give the horses of all ages a cough unless favorable conditions prevent. Few people observe all the favorable conditions that make up good care when the horse is liable to be in the pasture when it should be in the barn. The best regulator of good conditions for the horse or colt is a dose every week of Craft's Distemper and Cough Cure as a prevention. It is guaranteed a sure cure. Druggists should supply it. If they will not, order direct from the makers, Wells Medicine Co., 17 Third street, Lafayette, Ind.

POULTRY HOUSES, COOPS, ETC.

This is an up-to-date poultry book, written by H. A. Nourse, editor of the Poultry Herald. It was prepared during the past year and is the result of many years' study and experience. It is a book of the newest plans for building poultry houses, with description of coops, fixtures and poultry utensils for the farm, village or suburban poultry keeper. It is a book of 100 pages, and is finely illustrated. It is worth its weight in gold. We are sending The National Farmer and Stock Grower for one year and the book Poultry Houses for 60 cents. Address, Hall Publishing Co., 3550 Vista Ave., St Louis, Mo.

Fadeless Brown

Think of the satisfaction of having a brown cotton dress that will not fade!

Simpson-Eddystone Fast Hazel Brown Prints

are the fastest and most beautiful shade of brown printed on the highest quality of cloth. The designs are new, artistic, and stylish; and the fast color grows brighter with washing.

If your dealer hasn't Simpson-Eddystone Prints write us his name. We'll help him supply you.

The Eddystone Mfg. Co., Phila., Pa.
Established by Wm. Simpson, Sr.

OF DEATH.

Why should I fear that ultimate thing
The great release of clown and king?

Why should I dread to take my way
Through the same shadowed path as they?

But can it be a shadowy road
Whereon both youth and genius strode?

Can it be dark, since Shakespeare trod
Its unknown length, to meet our God!

Since Shelley, with his valiant youth,
Fared forth to learn the final truth;

Since Milton in his blindness went
With wisdom and a high content;

And Angelo lit with white flame
The pathway when God called his name;

And Dante, seeking Beatrice,
Marched fearless down the deep abyss?

Where Homer went, and Socrates,
Browning and Keats, and such as these;

Lincoln, and Sappho with her song
That echoes still for the vast throng;

Nero and strong Napoleon,
And calm, courageous Washington;

Great Alexander, Plutarch—names
That swept the world with deathless flames—

I need not fear that I shall fall
When the Lord God's great voice shall call;

For I shall find the roadway bright
When I go forth some quiet night;

Bright with their stars' reflected glow,
Brighter, since Christ, too, dared to go!
—Charles Hanson Towne, in the Bookman.

A FOOL'S WISDOM.

"Now, prithee, tell me, Silver Hair,
The Fool to Merlin said one day,
"How can I be a sage like thee,
And cast my cap and bells away?"

And Merlin mused—a cynic he,
Embittered by his years of strife—
And answered: "Jester, thou must know
The meaning of this wretched life.

"A bubble on the sea of Time,
A cup brimful of toil and pain;
A moment while you drain the cup,
And then the bubble's gone again."

But Motley, interrupting, said:
"Nay, is it true that all is strife;
That there is naught but toil and pain,
That there's no good or joy in life?"

"No mellow fire, no merry song,
To cheer the dreariest winter night?
No cup of wine, no wassail bowl,
To make the heaviest-hearted light?

"No hands to clasp? No friend to love?
No lips to kiss? No maids to woo?
No tinkling lutes? No twining dance?
No fields of green? No skies of blue?

"Ah, Silver Hair, and must I say,
If I myself a sage would call,
This good old world in which we live
Is not a fair world after all?"

Then Merlin answered with a frown:
"Not all your tears, not all your wit,
Nor all the babble of a Fool,
Can change a single word of it."

And Motley bit his silly thumb,
And twined his legs around his stool;
Then laughed and shook his giddy bells,
And said: "Why, then, I'll stay a Fool."
—William F. McCormick.

DISCONTENT.

The mail is full of letters,
And the soup is full of peas;
There's sugar in the coffee,
And the yard is full of trees;
The fields are full of stubble,
And there's grass upon the ground—
But the world is full of trouble
If we only look around.

The corn is full of kernels,
There are lilies in the brooks;
The towns are full of people,
There are stories in the books;
The orchard's full of apples,
And the meadow's full of hay—
But what troubles we discover,
If we're only built that way.

The lilac's full of blossoms,
And the trees are full of leaves;
The meadow's full of clover,
And the fields are full of sheaves;
The bread is full of flour,
And the rain is damp and wet—
But how much there is to fret us,
If we really want to fret.

The bees are full of honey,
And the apples full of juice.
The banks are full of money.
But—be happy? What's the use?
The beach is full of pebbles,
There is water in the creek—
But nothing really suits us,
If we really want to kick.
—J. W. Foley, in Farm and Real Estate Journal.

AN OPEN SECRET.

What makes the farmer's smile so bright,
His step so firm, his heart so light?
What makes his fields so fair a sight?
Why, POTASH!

What makes him watch with twinkling eye
His oats and barley, wheat and rye,
While they go climbing toward the sky?
It's POTASH!

What gives him credit everywhere;
Good books to read; good clothes to wear,
And wins the sweepstakes at the Fair?
Why, POTASH!

What keeps his funds from running low?
What makes him rich and goes to show
That debts alone refuse to grow?
It's POTASH!
—N. P. Jones.

WHY THE HEN?

I saw a hen go 'cross the street,
With slow and stately tread;
She seemed to have an end in view,
And never turned her head.
"Why goes that hen across the street?"
Inquired a passerby;
"I know she does it ev'ry day,
But not the reason why."

"You speak the truth," I made reply.
"She crosses ev'ry day,
And yet the garden over here
Is equal ev'ry way.
She will not stay where she belongs,
Though land she has to spare;
She must go on the other side
To see what's over there.

"Alas! My friend, it's just the same
With all the human race;
The hen won't stay where she belongs,
Though she's a better place;
'Tis naught for which she is to blame,
She's learned it from the men;
Tell me why men go 'crost the street
And I'll explain the hen."

THE OPEN ROAD.

A footpath journeyer here am I,
Bearing my little load;
But on beyond the bend of the lane
Spreads out the Open Road.
I whistle and loiter along the path,
Make use of an idle day,
To mend the lane, lest some groping foot
Should stumble on its way.
A worker in small and trivial things,
With neither creed nor code.
Save to love and to work and to sing the while,
And dream of the Open Road.
Useless you think my gipsy songs?
Perhaps, but who shall say
How useless the plain-knit song of a bird
That makes musical one glad day?
Year followed by casual year,
Filled with its pleasure and pain,
Shall find me at last with feeble step,
Down at the bend of the lane.
May I be strong to keep pace with those
My partner, earthly steeds!
May I be strong to keep pace with those
Who have reached the Open Road.
—Frances Chapman.

CHEERFUL PETE.

"Ho, ho!" laughed Pete as the sun shone out,
"My heart it is light as a feather.
It matters little if clouds hide the sun,
In my heart I'll be sunny weather."
"Ha, ha!" laughed Pete as the clouds grew dark,
"The weather's just right for me;
Just the day to plow, just the day to sow,
Right glad of this day I should be."
"Ho, ho!" laughed Pete as the black night frowned
On a parched and drying earth
"The night comes down for us all to rest,
All hearts should be filled with mirth."
"Ha, ha!" laughed Pete as the rain came down
In a shower so full and free.
"How the grass will grow, and the seedlets sweet
Like the birds, I'm full of glee."

From Bakery to Farm

Soda crackers are a long time on the road to the country store, and from there to the country home. But

Uneeda Biscuit

—no matter how far they journey, never become travel worn. As you open their moisture proof protecting package you always find them not only store fresh, but bakery fresh—clean, crisp and whole.

A package costs 5c.

(Never Sold in Bulk)

NATIONAL BISCUIT COMPANY

"Ho, ho!" laughed Pete when sickness came,
"I'll now have a chance to rest,
While the sun shines out and crops grow fast,
Yes, everything's all for the best."

So in all kinds of weather did cheerful Pete
Keep his heart so merry and free,
'Twas a lesson to young, and a lesson to old,
That sunny each day they should be.
—Josephine S. Brooks.

THE GIRL WHO LAUGHS.

The girl who laughs—glad bless her!
[illegible]
Is a thing worth
The man who values a smile.
The girl who laughs [illegible]
Its burden of woe
Of rainbow tints
There is never an hour so sad
But wakes and thrills
To the rippling trills

AN OLD-FASHIONED LOVE SONG.

I sent a question to my dear
Each morning by the lark,
And every night the nightingale
Brings answer ere the dark.

The question needs no other words,
And this is the reply:
"I'll love thee dearest while I live,
And bless thee till I die."

I send a message by the rose,
It says: "Thou breathing grace,
[illegible]

THE HEN AS A HUSTLER.

20th CENTURY R. R. WATCH

AMERICAN JEWELRY CO., Dept. 108, CHICA

New Cement Block Machine.

The Department of Commerce and Labor mentions a new Swiss machine with revolving molds for shaping building blocks.

Brick clay, various mixtures of cement, sand, gravel, slag, sawdust, cork, etc., may be readily pressed into compact blocks with exact measurements, sharp lines and edges. All kinds of mixtures have been experimented with, the machine molding them into blocks which have successfully withstood the severest tests. Several different sizes of bricks or blocks may be turned out at the same time, and in series of ten of uniform size, every half revolution of the press producing five blocks. It may be operated either by hand or motor power, without special skill and by one person. It is unlike any machine on the market, cheap in price, operates without the sudden jars usually incident to such machines, and is durable. It occupies small space, is easily adjusted and portable. In making bricks this machine dispenses with frames for drying, the process of molding hardening them. In this country machines will be manufactured in Ohio.

Pure Insecticides.

Congress passed the Pure Insecticide and Fungicide Bill which is known as the Insecticide Act of 1910. This naturally controls the interstate trade in such goods, and, like the National Food Law, should be adopted wherever there appears to be a necessity for state laws. Indeed, the national law is so far-reaching in effect there appears to be little need of further legislation.

Credit Subscriptions.

We desire to invite attention to our blank form at the end of this item, which can be filled out for subscriptions on credit. This is an invention of Uncle Piper, our subscription editor, who has guaranteed that every one of them will be paid when they are due. The subscription price of this paper is $1.00 for three years, and the bill for the subscription is sent to the subscriber at the end of the first year. When the bill goes out Uncle Piper generally slips in a list of handy premiums for the subscriber to select one, providing he pays the bill promptly, and the general result is that the bill is soon paid. When it comes to getting subscriptions from intelligent, high-class farmers, Uncle Piper is at the head of the class.

Uncle Piper.

SUBSCRIPTION BLANK.

To the Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Gentlemen: — You are hereby authorized to enter my name as a subscriber to The National Farmer and Stock Grower for three years. At the end of the first year I will pay One Dollar for the three-year period. This order is given with the understanding that I am at liberty to stop the paper at any time by paying the subscription to that date.

New Methods of Refrigeration.

The Linley process of chilling beef instead of freezing it enables Australian shippers to land beef in London, England, in excellent condition after sixty-four to seventy-days' transit. It enabled Australian beef to sell at equal money in London with the best Argentine refrigerated beef.

By the Linley process the meat is chilled at thirty to thirty-one degrees and is sterilized, whereas frozen meat is reduced to temperatures of ten to fifteen degrees and has to be thawed out after the journey before it is marketable. The Linley process may not be new to the Argentine trade on a voyage of twenty-five days, but until last November it had not been used in the longer journey between Australia and England.

There is also a dry-air process of meat preservation being tested in Australia. The inventor claims that for a cost of $100 a stock raiser can put up a plant and treat sheep on his own ranch at a cost of one cent a carcass, and after being treated the meat will keep good and sweet for a week in any ordinary place or atmosphere. The period of treatment is about fourteen hours. Some mutton shipped from Sydney, Australia, arrived at Wellington, New Zealand, and was in good condition after a seven-day journey, although shipped in an open crate on the deck of the vessel.

These interesting items reach us by the Weekly Consular and Trade Reports, issued by the Department of Commerce and Labor.

Speculation in Cotton.

Mr. James A. Patten, who has been called a speculator and other bad names, has retired from business. One of his last reported transactions was that he contracted to deliver and did deliver 25,000 bales of cotton at Bremen, Germany, and 25,000 bales at Havre, in France. This is reported as the largest individual transaction in cotton on record, and a bona-fide purchase and delivery involving a total of $3,500,000. This is one of the transactions which is of the greatest value to the cotton grower and to the commerce of the world. It pays the grower for his cotton, clears his market, furnishes occupation for railroads and steamships, and will keep the mills going in two great manufacturing centers. Without such transactions the whole world would stagnate and people die of poverty. And yet Mr. Patten dealt in futures when he agreed to deliver the goods, he speculated when he bought the cotton, and it is what many people call gambling. We would like to have some one tell us how to do business without speculation. The National Farmer and Stock Grower once entered into a contract for a five-years' supply of paper, to be delivered in car-load lots as desired. We are looking for another contract just like it. As before stated, without speculation business stagnates; without contracts for future delivery supplies are almost valueless in the hands of the seller, and the works are idle because the fuel and raw material give out. Commerce without speculation is as a wagon-bed full of truck without wheels to roll and the team to haul it.

The Science of Deduction.

"Yo' isn't never stopped at de Palace Hotel befo', is you', Boss?" inquired the colored man who was piloting a just-arrived traveler from the railway station to the hostelry.

"No. But what makes you so sure of it?"

"Uh-kase yo' gwine dar now, sah." —Puck.

In Effigy.

"When they came to New York everybody was saying of them that they would hang the expense."

"I remember."

"But now it turns out that her wonderful diamonds are only paste."

"Hanging the expense in effigy, so to speak."—Puck.

To Wash Rugs.

Tack the rug on a bit of bare floor, the back porch being as good a place as any. Scrub throughout with warm clean waters until the soap is removed. Allow the rug to dry on the floor without removing the tacks, then take it up and it will not shrink, roll or pull out of shape.

A preparation for washing carpets and rugs is made of four ounces of any good soap dissolved in four ounces of boiling water; when cold, add five ounces of ammonia, two and one-half ounces of alcohol, two and one-half ounces of glycerin and two and one-half ounces of chloroform. Bottle this and cork tightly.

To clean a carpet, add a teaspoonful of the preparation to a pail of tepid water. The same preparation is also useful for cleaning men's clothing.—Drovers' Journal.

95 cents Post Paid

$15.00 for 95 Cents

Cut this out and send it to us with your name and address and 95 cts. to pay for postage, packing and cost of this advertisement, and we will send to you by return mail postpaid this elegant Watch and Mdse. Certificates worth $15.00. Certificates can be used at any time in purchase of goods from our catalogue (total value of watch and certificates $15.00), all for 95 cents. The watch is regular gentlemen's size, open face, solid nickel silver plated dust-proof case, with genuine American lever movement, stem wind & set & fully guaranteed. This offer is made to introduce our watch & jewelry catalogue, and only one watch & certificates will be sent to each person ordering. Send 95 cents TODAY as this advertisement may not appear again. A SAMPLE OF HIGH-QUALITY, LIGHT-WEIGHT MARKET CATTLE —These were sold on June 28th at the St. Louis National Stock Yards by Clay, Robinson & Co., live stock commission agents. They were steers and heifers, and two loads, forty-eight head, sold for $7.50 per 100 pounds. They were shipped by Darby Bros. & Draffen, of Boonville, Mo. Although they were not as fat as they might have been, they outsold any other carload, and some cattle of greater weight, not so good in quality, sold a dollar less per 100 pounds.

Small Packing Houses.

The idea that it requires millions of dollars to construct a packing plant is set aside by the number of smaller plants which are now in operation; in fact, it is surprising how many are to be found throughout the country. There is a new development in cold storage and perfection in refrigeration unheard of a few years ago that permits constructon at reasonable cost and operation at a minimum of expense. In future there will be an alliance between the commercial cold-storage plant, the creamery and the packing house. We will be glad to hear from any of our patrons who are interested in local enterprises of this character. Address, Philip H Hale, Editor, 3550 Vista Ave., St. Louis, Mo.

and Stock GROWER

City Boys and Crop Work.

I firmly believe that crop production opens up to city boys one of the surest and greatest fields of work today. The possibility of making two blades of grass grow where only one grew before is enough to arouse and quicken the energies of even easy-going, practical farmers. Put the proposition straight to a bright, capable young fellow from the city, and it at once opens up to him a new world of possibilities.

I have watched many city boys who have taken up this work during the last five years. I have not found one "quitter." They are enthusiastic, ambitious and doggedly persistent. They have the patience to await for big results, because they have absolute faith in the work they are doing. They are keen observers, and they have the rare faculty of getting at the essentials of things. I have these good words to say of some city-bred young fellows, because I have seen them tried, and they are making good.

I have just received a letter from one who is on a farm this summer, preparatory to a four-year course at an Agricultural College. The letter is chock full of practical thought, and the way this young fellow talks of rock phosphate in the production of oats, and the interest he takes in the factors which produce bigger crops, show that he has the right stuff in him. I am doing my utmost to push these capable, sensible city boys into this crop-production work.—L. C. Brown.

Variation in Crops.

During the last six weeks I have inspected many thousand acres of grain and have observed very carefully the methods of those who usually get the biggest yields. In most all neighborhoods there are one or more farmers whose work and crops stand out conspicuously above their neighbors'. Not infrequently have I seen one of these farms adjoining that of another farmer, whose methods, to say the least, were open to suspicion. Here is one farm which produces from two to three tons of clover per acre, thirty-five to forty bushels of wheat per acre, fifty to eighty bushels of oats per acre, and sixty to eighty bushels of corn per acre. These yields are away above the average, but they were produced under conditions which are possible on all farms in the same region. Directly over the fence is one of those farms which is a type of the farms which are responsible for the low state average of crops in Illinois. Here is a field which has never been sown to clover, and which has produced alternate crops of corn and oats for over twenty years. Yields are low, consequently the income from this type of farms is small and owners have no surplus, above actual living and running expenses, to bring in fresh, vigorous seed again or to supply badly-needed fertilizers. The ground loses heart, and the owner loses heart, and after a time drifts away from the land.

There is no secret about this wide variation of crops. It is simply the natural result of the wide variation of methods, and the man who sets about to abstract from his fields every bushel of grain possible, without supplying fresh those elements required in the production of his crops, will find his fields dwindling in fertility and capacity to produce.

Study the good farms in your region. Study the methods of those who get the biggest yields, and then act. Don't do like a big farmer in Kane county, Illinois, who recently heard Prof. Hopkins lecture on "soil fertility." Prof. Hopkins told the farmers in this region that their lands needed phosphorus. This big farmer, who operated 600 acres of land, said that he was convinced that his land needed something. But it would take some of the year's profit to buy rock phosphate. That was the rub, and the result is that land will not get phosphorus or any other kind of fertilizer until it sinks below the profit line in production.

Look the proposition squarely in the face. Fertilizers for wheat ground will pay; and don't forget that meadows and pastures need manure or some other kind of fertilizers as much as cultivated crops.—L. C. Brown.

Early Oats This Season.

Never have I seen so favorable weather for oats as we had the six weeks following seeding. Ground was in the pink of condition, the oats started with ample moisture and the temperature was right to promote quick growth. But by the time the early varieties commenced to head, untoward weather came and conditions began to grow worse.

Early oats carry short, light straw, and the straw is much shorter this season than usual. They have stood up remarkably well, and outside of a few reports of smut I have heard of nothing against them this season. Both the "Sixty-day and "Khearson" are turning out equal to the heavier sorts, and in some instances they are outyielding the big sorts by from ten to fifteen bushels per acre. A test field of the "Sixty-day" oats in Putnam county, Illinois, yielded at the rate of seventy-five bushels per acre.

The great superiority of these early, light-straw varieties over heavier ones, when seeded with clover, has been again shown this season. July has been a hard month on clover. Oats which were not harvested until towards the last of the month have pretty nearly choked out the young clover. The early oats which were cut during the fore part of the month have left the young clover in much better condition, although the ground was very dry and at this time really needs rain to save the clover.

Later in the season I shall give complete threshing returns of oats and wheat which have been under field trial this season.—L. C. Brown.

To Insure Honest Records.

The Percheron Society of America has endeavored to induce the federal authorities to furnish promptly a list of the names and numbers of all horses imported, so as to provide the Secretary with a check list with which to compare foreign certificates sent in for record. On June 16, 1910, the Board went still further and urged that the federal government provide an inspector at ports of entry to see whether the horses and foreign certificates agreed, he to submit a report on same immediately to the Secretary of the association. The government has indicated a willingness to do this, but has so far failed to carry out such a plan, and the situation is now such that the society has found it necessary to make such inspection for identification at its own expense. This will be confined entirely to seeing whether the horses and pedigrees correspond and will be made at the port of entry by a competent inspector employed by the association, and will start at once.

The society regrets the necessity of undertaking work which the federal government might very properly do to help the breeders and importers, but until the federal authorities will take charge of this the society must protect itself. In cases when the horses and foreign certificates do not agree, registration will be withheld until the importer straightens matters out. If he cannot, no American certificate will be issued and the federal government will collect duty on the animal in question.

The establishment of such inspection at port of entry will preclude any possibility of mistake or fraud and will materially increase promptness and accuracy in the work of the association. It will also within a short time enable the society to clear most of the imported horses as soon as they land, to simplify application blanks and to cut out some of the "red tape" incident to all registration work.

The Percheron Society of America has 2,726 members, including 91 per cent. of the breeders of registered Percheron horses.

Swine in America.

Coburn's new work on Swine Husbandry is a 650-page book; each page being 6x9 inches, and the price is $2.50 per copy. It is bound in fine silk cloth, with gold side and back stamping, making a most handsome and attractive book. Mr. Coburn is Secretary of the Kansas Department of Agriculture, and has a world-wide reputation. His book is the standard of the world, and covers everything, from the history, the breeding, raising, feeding, marketing, and the final pork packing. We cannot sell the book for less than the publisher's price, but we can include two-years' subscription to The National Farmer and Stock Grower. Address, **Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

During the electric and rain storm at Montgomery City, Mo., July 29th, lightning was unusually destructive. Milton Kinfpel, a farmer of Audrain county, was killed and the German Methodist church of Big Springs was struck, the roof torn off and otherwise damaged. A horse owned by Charles Blackmore and three mules were killed.

A valuable catalogue sent free

IT is valuable to you because it tells facts about gasoline engines you should know.

Breeders' Letter Heads.

Very few stockmen have good letter paper and envelopes, but every farmer or live stock breeder ought to be in style. It costs very little to have well-printed envelopes and letter heads.

Any farmer, breeder, stock raiser, dairyman or poultry fancier who will send us a dollar to pay for same will be credited with one-year's subscription to The National Farmer and Stock Grower. We will also have set up in type his name, address, class of stock raised, with one cut of cattle, hogs, horses, sheep or any breed of poultry, and we will have an electrotype made of same from which he can have any number of envelopes and letter heads printed in his own town at a very low price. The electrotype will last a lifetime and his printer will always be able to furnish a supply of letter heads and envelopes on short notice. We will send the electrotype properly mounted and ready for use.

ABERDEEN-ANGUS CATTLE.

INDIAN LAWN HERD

J. W. WHEATLEY,

Proprietor,

Rural Route 5, Kempton, Ind.

This display explains what we mean. We have set up a sample card. The electrotype will do from which to print the letter head and envelope also. We will try to do as well for any farmer or live stock breeder. Send in one dollar and your full name, rural route, the class of stock raised, name of farm and correct postoffice address and we will try to please you. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Treatment of Smut in Grain.

Every farmer knows what smut in oats or wheat means. He knows how a field of wheat which gives promise of twenty bushels per acre of grain will produce, infected with smut, only fifteen bushels or less, and inferior smutted grain at that. Every farmer ought to know that such smutted grain, if not treated before seeding, will again produce smut—more smut than before. Every farmer ought to know that even if his seed looks clean, it may still have smut on it, unless he is sure that it comes from a field without smut and that it has not been contaminated with smut in the separator, in the bin, sacks or seeder. Finally, every farmer ought to know that by a simple, inexpensive seed treatment he can be absolutely sure that he will have a clean crop—he can buy insurance against smut at a very low cost by treating his seed.

Several methods can be used on the farm—only one of these will be described. It can be recommended to any farmer for cheapness, efficiency and simplicity.

Buy from a reliable druggist standard "formalin" of a guaranteed strength (namely of 40 per cent. solution of formaldehyde). Mix one pound (one pint) to forty-five gallons of water in an ordinary wooden barrel and stir it. Two ways of applying this solution to the grain can be used:

1. Dipping Method: Put the grain in clean sacks that have been first placed in boiling water for a few minutes; take each sack of grain and dip it in the solution in the barrel—raise it and lower until each seed is wet; set the sack on a clean floor and let it stand over night. The grain can then be dumped out on a clean floor or left in the sacks until it dries enough to let it run through the drill. (A floor is clean when it is washed with boiling hot water). Be sure not to let the swollen grain stand so long that it will sprout. If it cannot be sown immediately, it should be thoroughly dried and may then be kept indefinitely. When dry enough to run through the drill, sow it. Be sure the drill is clean. Sow more seed per acre if the grain is swollen.

2. Sprinkling Method: Make the solution the same as in the dipping method. Put the grain on a clean floor, spread it out and with a sprinkling can sprinkle the solution on it. Shovel the grain and sprinkle again. Repeat until each kernel is moist but not too wet. Shovel into a pile and cover with sacks or canvas over night. Then spread it out and shovel occasionally until dry enough to sow. Follow the precautions for drying and sowing given under the dipping method.

This treatment will prevent the following common smuts:

Oat smut.

Stinking smut (or common smut) of wheat (but not the loose smut or "black head").

Covered smut of barley (but not the early or loose smut).

Grain smut (or common smut) of sorghum (or "cane").

If it does not prevent these smuts you have not followed directions. It must be remembered that this treatment will not prevent corn smut, "black heads" (early smut) of wheat, nor the early or loose smut (one of the common smuts of barley).

Handling Peanuts.

The National Farmer and Stock Grower, St. Louis, Mo.: Gentlemen: We notice your article on peanuts in your May issue. The question of the difference in price the farmer gets for the peanuts and the price the consumer has to pay at fruit stands has been dwelt upon by ourselves, who take an active interest in peanuts. We handle about 400,000 to 500,000 bushels every season ourselves, and sell to the factory at from three to four cents a pound. It is unreasonable that the retailer should sell at twenty-five cents a pound, which is the case as you state, but the trouble of the whole matter is—which we have called attention to—this method of distribution. We would be glad if you would call more attention to this matter. The way, and the proper way, to distribute the peanut crop is to have retail stores buy them in the raw state and sell them by the pound, same as other nuts. Any retail store could buy today at four and one-half to five and one-half cents a pound, and could sell them at a better profit than most of the other commodities they may handle. We are glad to note that this is already being done, especially in the West, and as soon as it becomes general the consumer will be able to obtain peanuts at a fair price. Very Truly Yours, Holmes & Dawson.

Norfolk, Va., July 19th, 1910.

Winter Wheat Acreage.

It is idle to suppose that he acreage of winter wheat will be less in 1911 than in 1910. It would be a grave mistake for our readers to plant fewer acres this year than they did last. This being the case, a good many of our farmers are going to buy a grain drill this fall. Now, what drill will they buy? There are a great many drills on the market, and it is essential to act wisely. Therefore, we urge our readers to investigate the Buckeye, a drill that has given the best of satisfaction for more than fifty years. This drill has positive force feed for both grain and fertilizer. Any style furrow openers can be had—single or double discs, hoes or shoes in plain grain and combined grain and fertilizer styles. Send for a Buckeye catalogue to The American Seeding-Machine Co., Incorporated, Springfield, Ohio, and then go to your nearest implement dealer and ask to see the Buckeye. Our readers are assured that the drill will do all the makers claim for it, because it is sold under one of the strongest guarantees possible to make—a warranty that absolutely protects the buyer.

Great Show in Iowa.

The second great Fair to open the doors in August is the Iowa StateFair at Des Moines, Iowa. Mr.J.C.Simpson is Secretary. This magnificent Fair opens on Thursday, August 25th, and continues until Friday, September 2d. The Iowa State Fair is distinguished for the variety, extent and quality of all agricultural and live stock exhibits. The Iowa Fair never disappoints in entertainment or educational features.

Stock Sheep Worth the Money.

When sheep stockers and feeders are high in market the farmers make a grand rush for them and boost the price until they are too high either to stock a farm with or to feed for the purpose of selling them as fat sheep. Just at this time, however, it will pay a farmer who intends to raise or feed sheep to see if he cannot buy some that are worth the money.

Attractive Hamline.

The State Fair of Minnesota opens at Hamline, September 5th to 10th. It is one that attracts people from all the surrounding country. Happily situated between the twin cities of St. Paul and Minneapolis, it has no state rival as an Exposition center. Mr. C. N. Cosgrove is the Secretary, who piles up the attractions so that to stay away is an irreparable loss.

RUBBER ROOFING

WARRANTED FOR TWENTY-FIVE YEARS

Direct from factory to consumer at factory prices. Order from us and save the jobber's and the dealer's profit. Made of the finest quality of wool felts and imported asphalts. Is indestructible by weather; either heat, cold, snow or rain. Anybody can lay it.

1-ply weighs about 35 lbs., only $ .90 per square.
2-ply weighs about 45 lbs., only 1.10 per square.
3-ply weighs about 55 lbs., only 1.30 per square.

Terms cash. Prices only hold good if orders reach us at once. Nails and cement for laps, also directions for applying, inside roll. We refer to Southern Illinois National Bank, East St. Louis, Ills.

The Middleman's Charges.

Prof. L. H. Bailey, eminent as an educator in agriculture, appears to have made a misleading statement if he is quoted aright in regard to middlemens' charges and the share they take of the farmers' products. Before the Sangerfield Club of New York state he is quoted as saying:

"But the farmer, speaking briefly, does not get his share of the proceeds of his labor, notwithstanding the increase in the price of farm products. A merchant in a small city may want as high as twenty per cent. commission to sell produce, and then retain the privilege of returning to the grower all the product that spoils on his hands or that he is unable to sell. He invests little capital, takes no risk, and makes more than the man who buys his land, prepares the crop months in advance and assumes every risk, from seedtime to dinner table."

This statement refers to consignments to small cities, where business may not be well regulated; but at regularly-constituted markets the charges are considerably less than twenty per cent.

The commission charged for selling grain is one cent a bushel; the commission charge for selling cattle is fifty cents a head; the commission charge for selling hogs in car-loads is eight cents a head; the commission charge for selling sheep in car-loads is five cents a head; the commission charge for selling horses is $2.00 per head; the commission charge for selling mules in car lot is $1.00 per head. The commission charge for selling butter, cheese, eggs, etc., is five per cent. The commission for selling cotton is two and one-half per cent. The commission for selling hay is fifty cents per ton. The commission charged for selling wool is one cent a pound; the commission charged for selling hides is five per cent. These are St. Louis charges, and the productions mentioned include ninety per cent. of what the farmer sells in market.

These commissions may be high; these commissions may be reasonable; but they are not twenty per cent. Commission for selling farmers' products usually range from one to five per cent. There are some differences in charges at other markets.

Then come fruits and vegetables, and the regular selling charge is 10 per cent. This is on small lots and occasional shipments. California fruit growers attend to their own selling. Vegetable specialists have their own shipping and selling and distributing organizations. They are up-to-date in handling their business. It is only the small grower, the isolated orchard, the irregular shipper, that pays the ten per cent. The others average about five per cent.

Much of the fruit and vegetable trade is retail and troublesome business handling uncommercial packages Large growers not associated often sell to professional buyers, who receive the fruit on trees. Even in fruits and vegetables there is not often such a charge as twenty per cent.

The item of farm produce which is nearly at the mercy of the buyers is milk. This unfortunately cannot well be sold on commission, neither can it well be distributed in big cities by the producers. They have tried it and they usually give it up and contract their product to the distributing companies. Selling a half pint of milk to one family and a pint to another has no charm for the farmers, especially as a dairy distributing wagon service costs money, and the farmer who is distributing milk has to be out bright and early. We would like to see milk and cream sold to better advantage in the interest of the farmers, but the dairy farmer himself is perfectly willing to sell at wholesale if he can get a fair price.

It would be a good idea for the Agricultural Department to put a few experts at work to compile the selling charges at all markets for all farmers' products. It would put an end to guesswork statements and show the facts in the case. It seems to us that Professor Bailey is just as far away as Mr. Coburn, of Kansas, was in dealing with the same problem. They are both eminent in agriculture, but neither of them appear to be posted on the market facts.

Spring Wheat vs. Oats.

A DeKalb county, Illinois, correspondent writes: "For ten years I have been growing oats and corn, with only an occasional small patch of wheat. Last spring I cut out the oats and sowed spring wheat. I have just threshed and got thirty-three bushels of wheat per acre. That beats oats, and I have about made up my mind to change about and hereafter grow only enough oats for my own feeding."

Wheat in Northern Illinois is turning out surprising yields this season, but one should not take it for granted that such favorable growing conditions for wheat as we have had this season are to be permanent.

True, oats have been going wrong on many farms. Yields have repeatedly fallen below the cost of production, but instead of setting about to overcome the trouble, we have merely kept on with the same old system which has been customary for twenty years, or even longer. We all remember that it was only a few years back that wheat growing in this region was almost abandoned. Time and the cultivation of other crops have brought fresh and different soil conditions until both fall and spring-sown wheat are now considered safe crops in Northern Illinois.

We have not reached the point where we should be ready to abandon oats. Rather we should abandon obsolete practices and pay some heed to the methods which do bring results. We hear that land becomes "clover sick." I believe that land becomes "sick" of any particular crop which is grown too long without break, and that all crops prosper when grown under concordant rotations. The oat crop must have a permanent and conspicuous place in crop production in Illinois. There is no call for abandoning the oat crop on any farm in this region, but the thing to do is to setabout to correct conditions. The thing which proves to me that poor oat crops are due to unsuitable conditions is the persitent good crops grown on some farms. While our DeKlab county correspondent complains about his poor crop, the same mail brings me a report from a farmer near Durand, Winnebago county, who has just threshed 100 bushels of oats per acre, and I can refer to many fields which have made fifty to seventy bushels per acre this season. I have watched the methods of those who do get good oat crops, and invariably these big crops are the result of good ground, good mechanical condition of soil and good seed. So instead of throwing up our hands and abandoning oats, pay more attention to the seed-bed, sow on stronger ground and sow the best it is possible to get.

St. Louis Grain Prices.

The following is a report of the St. Louis grain market, the last day of July, 1910. This is for actual grain delivered:

Wheat—Soft, one to three cents lower; slow demand; hard, ½ to 2½ cents off. No. 2 red, $1.02 to $1.05; No. 3 red, 96½ cents to $1.01½ (mainly 99 cents to $1.01; No. 4 red, 92 to 98 cents; No. 2 hard Nebraska, $1.01½ to $1.05 (mainly $1.01½ to $1.03½); Turkey, $1.05 $1.06½, nominal; No. 3 hard, 99 cents to $1.00, nominal; No. 4 hard, 90 to 97 cents, nominal.

Corn—Mixed and yellow strong and in demand; white lower and dull. No. 2, 65 to 65½c.; No. 3, 64½ cents, nominal; No. 2 yellow, 66 cents; No. 3 yellow, 65 cents; No. 2 white, 65½ to 67 cents; No. 3 white, 65 to 65½ cents.

Oats—White about steady on selections but lower on doped; mixed, 1¾ to 2 cents lower; demand slow; No. 2 white, new, 41 to 41½ cents; standard, new, 40 to 40½ cents; No. 4 white, new, 38 cents; old, 35 to 38 cents; No. 2, new, 35c.; No. 3, new, 34 cents; sample grade, 30 to 36½ cents.

Cantaloupe Prices at St. Louis.

The following were quotations, early in August: Texas recipts, good stock, $1.25 to $1.50 for standard crates; poor stock, 75 cents to $1.00; barrels, $2.00 to $3.00; Arkansas bushel crates from 25 to 50 cents for fair to 75 cents to $1.00 for choice; flat crates, 25 to 50 cents for common to 75 cents for pink meat; standard crates, 75 cents to $1.00 for choice; Missouri, 75 cents to $1.00 per crate; 10 to 35 cents per basket; Southern Illinois, 20 to 35 cents per basket; 40 to 50 cents per crate.

St. Louis Hay Quotations.

Early in August hay was sold on the following basis: Timothy—Choice, $20 to $20.50; No. 1, $18.50 to $19; No. 2, $15.50 to $18; new timothy sold at, choice, $18; No. 1, $16 to $17; low grade, $12 to $15. Prairie dull; choice, $13 to $13.50; No. 1, $11 to $12; No. 2, $8.00 to $10.50. Good alfalfa quiet but firm at $16 to $16.50 for choice; No. 1, $16 to $16.50; low grade, $7.00 to $11; choice new, $12 to $13; low grades not wanted. Clover, mixed, old, $13 to $18.50; new, $16 to $17.

St. Louis Root Quotations.

Early in August, country consignments of roots were selling as follows—quote by the pound: Golden Seal, $1.65; Ginseng—Wild, $5.75 to $6.00, and cultivated $5.50 to $5.75—damp less; Lady Slipper, 15c.; Seneca, 32c.; Pink, 18c.; Black (dry), 18c.; May Apple, 3¼c.; Snake, 31c.; — dirty, leafy, and stemmy, 15 to 22c.; Kansas Black Snake root, 20c.; Angelica, 5c.; Wahoo—Bark of root, 14 to 16c.; bark of tree, 4c.; Blood, 4¼ to 5c.; Blueflag, 5c.; Sassafras,—Bark of root, 5c.; bark of tree, valueless; Wild Ginger, 10c.; Spikenard, 3c.

Fresh Fish at St. Louis.

The following were wholesale quotations for fish at St. Louis, early in August: Black bass, 11 to 12c. per pound for large and 14 to 17c. for order size—top rate for Missouri and Arkansas; crappie at 9c. per pound for medium and 12c. for large; dressed cat with collar bones off, 11c.; collar bones on, 10c.; gross do., 6c.; spoonbill cat, 7c. for large, 6c. for small; dressed bullheads with collar bones off, 10c.; collar bones on, 9c.; buffalo—large, gross, 4c.; medium, gross, 2½c.; large dressed, 6c.; medium dressed, 4½c.; German carp—Large dressed, 4½c.; small dressed, 3c.; large, gross, 2c.; small, gross, 1½c.; sunfish, 4c. for small to 5c. for large; white perch, 3c.; large striped bass, 7c.; eels, 7c.; turtles — soft-shell, dressed, 6c.; snapping, 2½c.; turtle meat, 8c.

The Market For Oats.

Oats is a crop in which there is less speculation than in other grains and it invariably sells too low to repay the farmer. At Chicago, the July option, which was quoted at 38¼ cents, was sold out at 40 cents on July 30th. The September quotation on July 30th was 37⅜ cents; the December quotation 38⅝ cents. The May quotation of 1911 was traded in at 41 cents. If we had our way, not one bushel of oats should go to market with a Chicago quotation less than 50 cents. In view of the fact that to accumulate a crop is not the best way to sell it, we are slow to advise anyone to hold it. We believe, however, that farmers should feed all the oats they can do so profitably on their own farms and ship corn to market, if grain must be sold.

The Wheat Market.

Visions of a shortage in the wheat crop indicate an interesting market. At Chicago, June 30th, July wheat closed at 97 cents bushel, and on July 30th the option was closed out at $1.05½. The September option on June 30th closed at 97½ cents, and on July 30th at $1.03¼. December wheat closed at 98⅞ cents on June 30th and closed at $1.04⅝ on July 30th. It will be remembered that the May option of 1910 closed at 94¼ cents, whereas the May option for 1911 was traded in July 30th and closed at $1.08¾. Appearances seem to favor a very irregular speculative market, but with an advance in prospect over last year's prices.

The Market For Corn.

There is some satisfaction in the corn market. At Chicago the July option was closed out at 62 cents a bushel, which is an advance of 4⅛ cents a bushel during the month of July. The September option, which was quoted at 59¾ cents, June 30th, had advanced to 64⅛ cents by the close of July 30th. The December option quoted at 58¼ cents on June 30th, closed July 30th at 62 cents. This being a monthly paper, we can only refer to the market from month to month. There is some belief that this year's crop of corn will be the largest on record, therefore there is some comfort in a quotation for next May delivery of 62 cents. The commercial price of corn ought, under present conditions, to look good to farmers.

The International Show.

Keep your mind steadily upon the Chicago International Live Stock Show of 1910. This is the clearing-house of all live stock shows of the country, and the greatest of them all.

It is decided to hold the International Horse Show from November 22d to 26th, and the International Live Stock Exposition is to cover the usual period, November 26th to December 3d, 1910. New premiums and classes are added every year.

This is about the time of year for the management to issue the preliminary classification. All stockmen are interested in it. Write to the Secretary, Mr. B. H. Heide, Union Stock Yards, Chicago, Ill., and ask for list of awards.

I WANT MY SCALE ON EVERY FARM.

I will send to the farmer who knows the profit in buying, feeding by weight, one of my steel frame Pitless Farm Scales have just patented, at the **Introductory Price** and **Entirely on This 5 ton scale has new compound beam and beam box, free,** the first man to offer a reliable high grade scale at a fair price I every American farmer is under to me, because my fight against the trust put the price of a first class scale within his reach. BINKLEY MEDICAL CO., Dept. H, NAPPANEE, IND.

REMINDER OF THE GREAT ST. LOUIS FAIR, established in the year 1856 and closed after the show of 1903. It is the intention to revive this Fair as the Universal Exposition and invite displays from every country in the world. The scene depicted is a New York herd of Ayrshire cattle that has won the championship of the breed.

Curculio-stung Fruit.

The owner of a plum orchard at Dover, in York county, wrote to Prof. Surface, State Zoologist of Pennsylvania, in regard to a beetle which he stated had stung the fruit. He wanted to know whether a strong disinfectant put at different places in the tree would keep the beetle away. The Professor replied:

"The insect stinging your plum is the curculio. This injures all the stone fruits, or the plums, peaches and cherries. It is now too late to do anything toward protecting this year's crop. If, shortly before the blossoms fell, you had sprayed with two pounds of arsenate of lead in each fifty gallons of water, you would have protected the fruit. I do not think there is anything that will repel the beetle by its odors; and, besides, the fruits are now injured, and there is nothing to do but to pull off those that are damaged and destroy them. Be very sure that all fallen fruits are destroyed promptly by burning or feeding to pigs. This is the best means of helping to insure freedom from injury to next year's crop. Prepare to spray next year either with arsenate of lead or Paris green, shortly after the blossoms fall, and again in about three weeks from that date."

Lands Withdrawn in Mexico.

Consul-General Arnold Shanklin, of Mexico City, reports to the Department of Commerce that a decree was issued by the Mexican government, in December, 1909, to the effect that no more public or government lands would be disposed of for the present. In view of the fact that companies were able to secure large tracts of such lands in the past, for colonizing purposes, at very low prices, and that many inquiries are still being made concerning the same, the announcement of their withdrawal from the market will save much useless correspondence.

The Famous Columbus Clock.

This is a subscription premium. Send us $1.50 and we will credit you with three-years' subscription to The National Farmer and Stock Grower; or, send us $1.50 to pay for a club of three one-year subscribers at 50 cents each and we will send as a free premium one Columbus Clock by mail, postpaid, safe delivery guaranteed.

This clock is turned from thoroughly-seasoned maple wood and finished in mahogany, natural wood color. The clock is three inches in diameter by one and one-half inches thick. The movement is made the same as a good American watch. The pinions are made of steel and cut on automatic pinion cutters, the same as watch pinions are made. The wheels are cut on automatic machines, and are as perfect as watch wheels. Each piece is interchangeable. The balance wheel is poised so that the hairspring will have perfect control of same, no matter what position the clock is in. The factory uses the highest grade of imported mainspring steel for clock springs. It has a beveled glass and celluloid dial. Each clock is carefully examined, inspected and regulated before it leaves the factory. They are guaranteed for one year, and with proper care these clocks will last twenty or twenty-five years, and keep good, reliable time.

Remember, we send you this clock as a subscription premium. This clock was selected for its lightness, elegance, durability. It stands on four legs as solid as a rock.

Send us $1.50 and we will credit you with three-years' subscription to The National Farmer and Stock Grower; or, send us $1.50 for a club of three single one-year subscriptions and we will send you one Columbus Clock as described by mail, postpaid, safe delivery guaranteed. Address, **Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

FALL FERTILIZERS.

The Profitable Kinds and How to Make Them.

The German Kali Works have placed potash within reach of the farmer. The result is that the importation of potash in its various forms has increased from 364,179,000 pounds during eleven months ending May, 1909, to 502,656,493 pounds in the same period in 1910. Formerly it was difficult to obtain potash to mix with other ingredients to compound a complete fertilizer, for the reason that the manufacturers preferred to do the mixing in their own interest. Furthermore, farmers were content to buy the complete fertilizers, because they did not understand mixing. A little booklet entitled "Fall Fertilizers" has just been issued. It contains the information how to obtain the profitable kinds and how to make them. It contains comparisons and formulas which people understand and it gives the composition of all fertilizers. This booklet is invaluable to any farmer who wishes to obtain high-grade, effective fertilizer at the lowest possible cost. Write to the German Kali Works, Continental Bldg., Baltimore, Md., and ask for a copy of "Fall Fertilizers." It will do no harm to mention this paper.

Ropp's Commercial Calculator.

This is a standard book and a revised, enlarged and improved edition. There are millions in use. Ropp's Commercial Calculator is especially valuable to farmers. By

its regular use many hard problems become easy. It will prevent mistakes, relieve the mind, save labor, time and money, and do your figuring in the twinkling of an eye. As handy as a watch, always ready and reliable. Anyone who will send 50 cents for one-year's subscription to this paper, The National Farmer and Stock Grower, can select one copy of Ropp's Commercial Calculator as a free premium. Address, **Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

Time to be Careful.

Stockmen should again give great attention to the cost of production. The live stock market is in a continued strain, and every large run of cattle, hogs or sheep furnishes the opportunity for reduced prices. The business situation in cities is not good, and there is much diccontent fostered by agitators who blame everybody, including the retailer, the wholesaler, the commission man and the producer. All this would amount to nothing if there was general activity in trade. The increased importation of foreign goods on account of the reduced customs duties is a bad sign. We cannot keep American industries active and strong by sending money abroad to buy hides and other materials, which should be kept at home to buy our own productions. The stock farmer's best study is how to make marketable animals at the least cost. It is not a very inviting study, but it is necessary.

Imports of Fruits.

According to the Department of Commerce and Labor, of foreign fruits consumed in the United States, bananas supply about one-third. The imported bananas come chiefly from Costa Rica, Honduras and Panama, in Central America, the British West Indies and Cuba. Italy supplies practically all the lemons imported into the country. Of currants, the Xante variety, produced in Greece, supplies most of the imports. Raisins, formerly coming in at the rate of two million dollars per annum, chiefly from Spain and Turkey in Asia, have practically disappeared as an article of importation and are now becoming an important article of export.

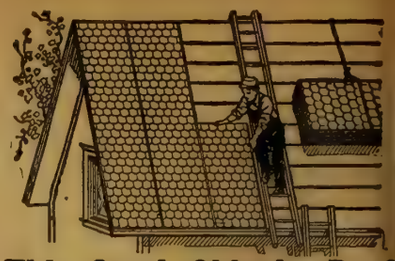
Pecans in the South.

The Nut Grower says: "Through the Southern States no fruit or nut tree is better adapted for general planting or more worthy of careful cultivation than the pecan. It is to the South what the apple is to the North—worthy of a place in every fruit garden, on every lawn, and the most important tree from the standpoint of the orchardist. The pecan fits well into the general farming of the regions to which it is adapted. It must be planted farther apart than other fruit trees, leaving ample space for the cultivation of general farm crops. These crops may be grown advantageously, with benefit to the trees, and will more than cover the cost of maintenance, until they commence to bear."

Transportation of Eggs.

The next movement in regard to transportation of eggs will be a requirement on the part of the railroads that all charges be prepaid or guaranteed; also that the road be reimbursed for any loss or damage caused by hauling them.

A railroad agent at Philadelphia was arrested for selling eggs which the party to whom they were consigned had refused to receive. The railroad had to lose the freight bill on the goods or realize on the goods, and to do this the agent of the railroad and the commission man selling the eggs were both arrested. That is the modern way to find out if eggs are fit or unfit for food. The result will be freight payments in advance.



This Steel Shingle Roof Outwears All

An Edwards "Reo" Steel Shingle Roof will outwear four wood roofs and six composition or tar roofs. It will save from four to five times its cost. Furthermore, it is fireproof and reduces insurance rates from 10 to 20 per cent.

Edwards "REO" Steel Shingles

require no soldering. You can lay it yourself. Need only hammer and nails. Comes in stamped sheets of finest Bessemer Steel, 5, 6, 7, 8, 9 and 10 feet long, covering width 24 inches. Furnished painted or galvanized.

Factory Prices – Freight Prepaid. We are the largest makers of iron and steel roofing and pay the freight on all Steel Shingles; Plain, Corrugated, V-Crimp Roofing; Imitation Brick Siding, etc. Write for free catalog No. 847 and ask about our $10,000 Guarantee Bond Against Lightning. (14)

THE GREATEST **Money Saver**

Cheapest to install, least attention, fewest repairs, highest efficiency and economical and dependable under every condition of service is the

"American" Centrifugal Pump

There is not a valve or other get-out-of-order feature about it — just the easiest possible curved flow-lines without a sudden change of direction in passage through the pump, enabling water to be raised with less power than with any other pump in existence. It's the modern way in pumping. There's 41 years of manufacturing experience behind it. All gold medals given to centrifugals at the Alaska-Yukon-Pacific Exposition at Seattle in 1909 were awarded to this pump.

Made in both horizontal and vertical types, in any size, in any number of stages and equipped with any power. Let us tell you of other saving features of this pump.

Plant Pests.

The window garden rarely escapes them in some form without eternal vigilance. One of the most common is the red spider, which is so small that to the uninitiated it seems but dust, but by the use of the hand lens the source of the tiny webs visible to the naked eye become at once apparent. It abhors moisture and propagates rapidly in the dry air of the ordinary living room. Spray with cold water and it will soon leave. A bent neck sprayer, that will force the water on the under side of the leaves, is a great convenience.

The scale is another persistent pest not so easily managed. Though immovable, it increases rapidly, preferring the stems and midribs of woody plants like the orange and oleander, but not disdaining the tender leaves and stems of the calla. If not removed, it will soon cover the stems and lower side of the leaves, sucking the juices and literally sapping the life out of a plant. Soap suds and a little kerosene will loosen the scales so that they can be easily sponged off. Follow by a bath in clear, tepid water.

If you see what look like tufts of cotton on a plant you may know that you have about the most invincible of plant insects with which to contend, for the white down or mealy bug prevents emulsions or ordinary insecticides from penetrating to harm it. The best remedy is to touch each with a drop of alcohol applied with a toothpick. Follow up every day until there are no more signs of it, for it propagates very rapidly, and only persistent efforts can hope to win.

White worms are a common pest, especially in soil enriched with barnyard manure and not baked; liquid fertilizer seems also to breed them. Their presence in the soil may be detected by small black flies frequenting the pots, noticeable especially when a pot that has been allowed to become quite dry is suddenly jarred. Lime water is an effective remedy, but must be used in sufficient quantity to thoroughly drench the soil. A teaspoonful of saltpetre to a quart of water will also rout them. Sprinkle black pepper over the top of any pot where the flies are seen; every time the plant is watered some of this will sink into the earth and destroy the worms, while its presence on the surface seems to deter the flies from entering their breeding grounds.

Using ammonia or prepared plant food instead of liquid fertilizer is a good preventive. As to baking the soil, if it is obtained from the barnyard, it may be well to heat as a safeguard against insects; but hard baking destroys much of its life-giving fertility. Leaf mould is much less liable to be infested with insects and should be given the preference as potting soil.

Green lice or aphis are frequent on all classes of plants and for their removal kerosene emulsion, water at 125 degrees and fir-tree oil are all standard remedies. If the aphis appear, do not wage war upon them; they are attracted by the honey dew deposited by the aphides; get rid of the latter and the ants will disappear. —Bessie L. Putnam.

The Hay Crop.

Bulletin No. 134, issued by the Massachusetts Agricultural Experiment Station, Amherst, Mass., is by Prof. Wm. P. Brooks, Director of the Station, and we have no doubt that he will furnish a copy to any of our readers who may write for it. It is divided into three sections—"The Hay Crop in general and in Massachusetts in particular;" "The Management of Mowings;" and "Clovers; their value, characteristics of varieties and methods of production."

It is a booklet of sixty-eight pages; therefore we cannot reproduce it. Prof. Brooks remarks that the hay crop occupies three-fourths of the total improved acreage of the country, this not including the lands especially used for pasturage. He says that the average hay crop of the country is the same as in Massachusetts—1.1 tons per acre. He mentions the exceptional yields obtained by Mr. Geo. M. Clark, of Higganum, Conn., whose intensive methods have been mentioned in this paper and who claimed to produce five to six tons per acre annually in two crops. The Massachusetts Agricultural College has seventy-five acres in hay, including thirty acres permanently in grass, and averages two and one-half tons to the acre without much labor or cost for fertilizers. The bulletin is splendidly prepared in a practical way to assist any farmer who is considering how he can improve his hay crop. Although we are not all in the New England States, the article is interesting and instructive to any farmer in any state who will study it carefully.

Secretary Wilson's Views.

"We cannot afford to buy food from foreign countries," said Secretary Wilson. "We must see to it that our Western farms produce enough. It costs more to get anything done in our country than in most others. Production does not increase as fast as population. The farmer gets big prices now, but it costs him twice as much to grow things as it did before.

"Most of our people in the East are being fed from the Mississippi Valley. For the last half century the young people from the farms have been educated to leave them. Ignorance has permitted the soil to become unproductive, and the highest intelligence is required to bring back fertility. Generally speaking, our farms are managed with too little capital, or the farm is too large for the means of the operator.

"The cheap food of the past has been one of the great advantages the manufacturer has had. He has it no longer. Neglect of the soil will soon impress itself on all classes. If the American we know to-day is to continue, we must look to the soil and its power of production. Other nations prosper by commerce and manufacturing, but their working classes are not as comfortable as ours.

"Every state should organize to preserve the utility of the soil."

General Farm Notes.

In the eleven months ending May, 1910, this country imported 27,853,633 gallons of molasses.

The first car of red wheat from Oklahoma reached the market June 23d. It was grown by Harris Bros., owners of farms at Wagoner, Okla. We acknowledge receipt of an interesting post card showing the harvesting and threshing scene.

The chief factor in nut exportation from the country is peanuts. In the past five years the exports have amounted to about 30,000,000 pounds, valued at $1,333,000. Our information is from the Department of Commerce and Labor.

This country is now exporting oranges to the value of two millions of dollars a year.

On July 12, at St. Joseph, Mo., Clay, Robinson & Co. sold for C. D. Buhrman, of Princeton, Neb., a load of Nebraska-fed beef steers, 1,267 pounds average, at 8.00 per 100 pounds. These cattle topped the market by 50 cents per 100 pounds on the day of sale.

Watch Your Wheat

while it is ripening and at harvest.

Is the yield what it ought to be? Is the grain plump and heavy? Does it run to straw? Does it lodge? Is there rust or smut in it?

Wheat and the ground it grows on are now worth so much that better yields are imperative. How can they be had? By giving the plants the right kinds and amounts of food. Are the right amounts contained in 1-7-1, the 2-8-2 or the 0-10-2 mixtures? Far from it.

These goods may give the best profit to the manufacturer, but how about the farmer? Can he not get more plant-food in better proportions and FREE FROM FILLER by paying attention to the subject now, so that there will be plenty of time to buy his plant-food direct or through the local dealer, especially his

POTASH

Send for New Pamphlet on FALL FERTILIZERS

showing how to make balanced filler-free fertilizers from standard materials that your local dealer can buy by the carload, if you tell him about it in time.

In the past you have had trouble in buying potash. We are now ready to sell anyone for cash, a cargo, a carload, or a ton of potash. We are arranging distributing points in the wheat belt to save you freight on small lots. Ask your local dealer to arrange to buy a car. If that is not possible, write for prices on what amount you want. You will not have to write nine letters before you get potash prices from us. It will pay you to get them, for

Potash Pays

GERMAN KALI WORKS, Continental Building, Baltimore, Md.

The National Farmer and Stock Grower.

(Title Registered in U. S. Patent Office.)

Published monthly by The Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Subscription Price, 50 cents a year, or $1.00 for three years.

Entered at Postoffice at St. Louis, Mo., as second-class matter in January, 1904.

We are all in favor of good roads provided the burden and cost of making them is fairly distributed. A good road is a special delight, providing the farmer does not have to mortgage the farm to pay for it.

Selling bread by weight is right and proper. It should be the law in every state that bread be sold by the pound. If the loaf is less than the quantity called for, it can be made good by a piece cut from another loaf. This is the custom in England, and has been so for nearly a hundred years.

It is better to keep spoiled eggs at home than to pay freight on them to market, especially so as there is no market for spoiled eggs.

Quite a number of peach growers have found out this year that there is as much money to be made in canning and drying peaches as there is in shipping fresh fruit to market.

There are less disappointments and more regular marketings on a live stock and grain farm than upon any other agricultural combination.

In the year 1909 the United States produced 20 per cent. of the world's wheat crop, 77 per cent. of the corn crop and 25 per cent. of the world's oats crop.

Last year Iowa raised 116,000,000 bushels of oats and Illinois 159,064,000 bushels. These are the great states for oats.

Thirty-two cotton mills are combining under one management. Under no circumstances should this corporation do business in thirty-two different names.

Free Trade in Lemons.

The Tariff Reform League has issued an article in favor of taking the duty off lemons. Foreign-raised lemons imported pay a duty (or tax) for the support of the United States government of 1½ cents a pound. This about equals the county, state and national taxes paid by United States growers of lemons and does not place the imported lemons at any disadvantage in the American market. It is a square deal all round. But the Tariff Reform League, working in the interest of the foreign lemon grower, wishes to give him an advantage over our own citizens by depriving the United States government what little revenue may be derived from this duty on foreign lemons and to have our home-grown, taxed-raised product to compete with the foreign lemons that they wish to come in free and untaxed. The Tariff Reform League idea is to fill up this country with foreign productions and to injure our own industries and then abuse everybody and everything that may be prosperous. Lemon raising is a farm industry that is protected by a tariff of 1½ cents a pound. If farmers wish this duty removed, they ought to say so for themselves.

The Blue Grass Fair at Lexington, Ky., Jouett Shouse, Secretary, will open Monday, August 8th, and close on August 13th. This is the earliest of the great Fairs of 1910, and it will pay stockmen to travel across the continent to attend it. There was a time when there were but two great Agricultural Fairs on this continent. One was at Lexington, Kentueky, and the other at St. Louis.

Cotton Situation.

The general condition of cotton, July 25th, was 75.5, against a ten-year average of 79.4. Of the cotton states Oklahoma averages 87; Texas, 82; Virginia, 80; Tennessee, 76; Arkansas, 73; Missouri, 72; Alabama, Mississippi and North Carolina, 71; South Carolina, Georgia and Florida, 70; and Louisiana, 69.

THE UNIVERSAL EXPOSITION.

St. Louis to the Front.

In the July edition of The National Farmer and Stock Grower it was stated that a movement was on foot to revive the Great St. Louis Fair, also the St. Louis Exposition, and create anew an institution to be a practical and worthy successor to the Louisana Purchase Exposition. This is a grand programme and one that will require large means, considerable skill and much perseverance.

The Lost Fair.

St. Louis once enjoyed the ownership of the grandest Fair on the continent. The Great St. Louis Fair was opened in 1856. It was at once an educational factor in agricultural and mechanical pursuits. There was no Department of Agriculture of any consequence. St. Louis had the only Fair that was visited by the Prince of Wales, afterward the King of England, in 1860, simply because there were no other Fairs or Expositions in those days of sufficient importance to attract attention.

The greatest contests in the history of stock raising were held in the arena of the St. Louis Fair. In the year 1870 there was a contest of Shorthorn cattle herds such as the world had never seen. There were herds from all over the United States. There were individual animals from Canada and England, and all the great herds of Indiana, Illinois, Missouri and Kentucky competed. The great herd prize, the most coveted award, went to a magnificent herd from Minnesota. In Shorthorn cattle, the historical record of the breed, the report of the event concludes by saying: "It was a famous victory; a magnificent herd and a royal celebration; an event which will be recalled as long as show-yard battles retain their interest as probably the most remarkable event, in some of its features at least, in the annals of cattle competitions in America."

Such was the St. Louis Fair forty years ago. It taught the farmer how to grow hogs that would sell high in market. It first told the world that Missouri raised apples. It collected together the finest rings of saddle horses, and nearly all the implements now used in agriculture were first demonstrated on its grounds. The Fair lasted until the year 1903. In the meantime the stock, which paid no dividends, was bought by speculators, and finally the bare land was sold to the city for ten times more money than the original Fair cost. It was the greatest help in making St. Louis a large city.

The St. Louis Exposition, on Olive street, and the Louisiana Purchase Exposition have also gone into the past. Each served its purpose, but there they end. St. Louis, that was the leader and the great attraction and brought people from across the continent, has not now enough exhibition attraction to induce a visitor to cross the Mississippi river. The successful Expositions are at Chicago, Kansas City, Springfield, Columbus, Sedalia, Indianapolis, Des Moines, Oklahoma and Texas. At Hamline, Minnesota, last year enough money was made in one week to pay 15 per cent. interest on all the money necessary to re-establish the St. Louis Fair and to conduct it permanently.

The Present Movement.

The present movement originated as follows: A committee was appointed by different business associations to consider a proposition leading to the establishment of a permanent National Fair and Exposition. The proposition was carefully considered, and for good and sufficient reasons was declined. It developed, however, that last year an attempt was made by private subscription to revive the St. Louis Fair. It also developed that previously there had been advocated and a prospectus printed with a view to establish a permanent enterprise under the name of the Universal Exposition of St. Louis, and that is the name which has been adopted for the new enterprise.

The official duties of the committee appointed by the business organizations were ended when they declined the original proposition, but the members were not satisfied to leave the subject there. They believed, and had good reasons to believe, that the people of St. Louis were willing once more to claim the prerogative as the leading Exposition center of the continent.

The Action Taken.

Several meetings were held by the committee, and resolutions adopted. Recognizing that a suitable tract of land was necessary for the purpose, a real estate committee was selected. They have industriously looked over many sites; they are in need of 250 acres of land accessible and to be obtained at a reasonable price. What is done by them is not yet available for publication, and until the land is selected and secured very little will be heard concerning the Universal Exposition.

It is the intention to acquire by purchase a suitable body of land, to beautify it, and for large gatherings, aviation meets and other outdoor events to bring it into immediate use; to establish a club for the people of St. Louis, and finally to erect a magnificent array of Exposition buildings of the highest character and merit and conduct the enterprise at least six months in the year.

Recognizing that the Great St. Louis Fair was taken out of the hands of the original owners because the stock was not dividend-paying, it is the intention to conduct the new enterprise as a dividend-paying proposition, but to devote all surplus earnings to improvements. It will also be conducted in the interest of the city of St. Louis, to attract people and entertain them. Under the present order of things from May 1st to November 1st of each year, practically each cheap railroad rate leads from St. Louis instead of into the city. This can be readily remedied by providing events of sufficient magnitude that will induce railroads not only to give a round-trip rate for one fare within a radius of one hundred miles and excursion rates from distant points, but will also cause them to advertise St. Louis through all their literature. This alone would justify the establishment of the Exposition.

When the land question is settled there will be further publicity in regard to the movement. The daily press of St. Louis is willing and anxious to place any direct, clear, responsible proposition before the people, and will be advised of all developments in that direction. Sufficient means are available for all immediate purposes. There is at present very little more to be said. The Universal Exposition of St. Louis as now proposed originated in the columns of this paper in an article by the editor in the year 1905. At that time all interested in St. Louis Exposition were exhausted. The programme was just as good then as it is now, but it was the right thing proposed at the wrong time. The present is considered the accepted time. The Chairman of the Organization Committee of the Universal Exposition of St. Louis is Mr. C. F. Blanke, Seventh and Clark avenue, St. Louis, Mo. The Secretary is Mr. Philip H. Hale, Editor of The National Farmer and Stock Grower, 3550 Vista avenue, St. Louis Mo. The Chairman of the Real Estate Committee is Mr. A. O. Rule, 713 Chestnut street, St. Louis, Mo.

The Beef Situation.

Notwithstanding all that is said in regard to the future price of beef, it is very well understood by those who are most interested in market conditions that there will be no surplus of beef for some time to come.

The reduction in price of cattle from the highest point is not due to increased supplies of beef, but to the decreased demand and consumption.

In their annual report, Swift & Company, whose trade dealings are of the widest extent, place the decrease at six to eight per cent., as compared with ordinary demands under far more favorable circumstances.

At the same time the buying interest looks with some anxiety to the Western country, which is decreasing in beef production.

The Western ranges are not carrying the cattle that they did formerly, and we will soon have the question asked: "Why don't you stock raisers get down to business and hold your position?"

For twenty-five years the Eastern seaboard markets, New York, Boston, Philadelphia and Baltimore, have received a total of about a million cattle a year, and no one expects any increase there.

The great Western markets, however, which supply the Eastern deficiencies, require eight to ten millions of cattle a year to keep all interests moving.

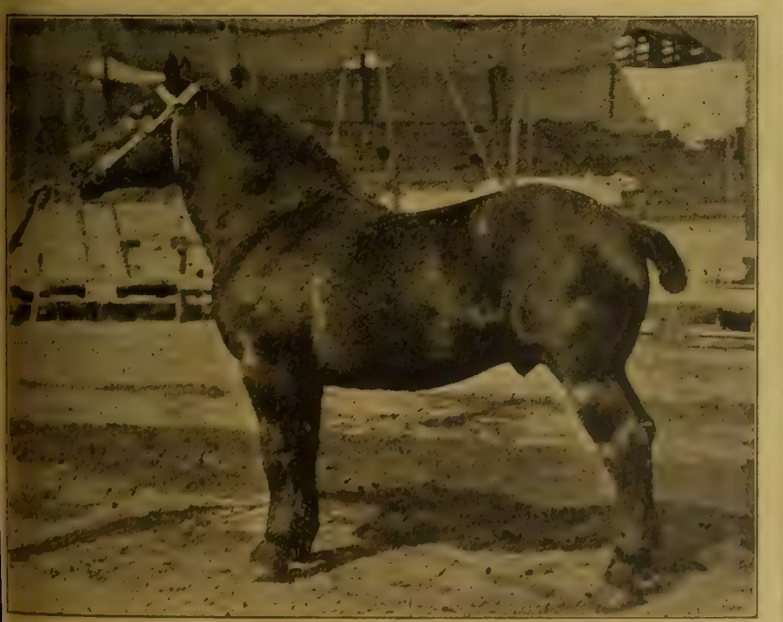
Whenever there is a decided shortage of American beef in the big cities, then the cry will go up: "Take off the duty on beef and let it come in free and untaxed from South America." That is why The National Farmer and Stock Grower is in favor of stockmen doing their very best to control their own market, and the only way to control it is by a sufficient production. Directly a shortage of beef is in sight encouragement will be given to bring in foreign productions. The last Congress reduced the duties on beef from 2 cents a pound to 1½ cents, thereby opening the door a little for Argentine beef. Congress also took off the duty on hides. The present reduction from high prices in the face of comparative light production is due in the main to the falling off in meat demands, and the falling off in meat consumption is largely due to the quietness in general trade throughout the country.

Prices Not Reduced.

It is reported that although live stock is considerably below the high mark in price, the retail butchers have forgotten, neglected and failed to come down. The retailer is in a class by himself.

REMINDER OF RANGE HORSE SALES AT THE ST. LOUIS NATIONAL TOCK YARDS—Pen of horses ready to be driven to the Sale Pavilion. he August sales of Western range horses will be held by Campbell & Reid nd Western Sale Stables Compnay on Thursday, 11th and 25th. There are pecial opportunities at these sales—horses and mares that can be fitted for he domestic sale ring at a living profit.

REMINDER OF THE GREAT ST. LOUIS FAIR, which it is the intention o revive as a permanent Exposition to be open six months in the year. The icture represents the first-prize herd of swine at the St. Louis Fair of 1901.



A PRIZE-WINNING PERCHERON STALLION—This is a reminder that he Fair season is coming on. The Percheron horse makes a good display at he Fairs. All stockmen should attend and look them over. The above allion was imported from France and sold in the United States. Bred to ood size American mares the result is a colt that will be serviceable on a arm, as it grows from two to four years old, and when matured will sell om $200 to $300 in any first-class market.

A Cure For Alkali.

Almost all soils contain more or less alkali. Whenever the soil strata is such that there is no natural underdrainage and water is applied to the surface, it generally collects in the basin, the surface of the underground water gradually rises, and when it gets near the surface excessive evaporation occurs, and as the moisture passes away as pure water the salts contained in the water are left at the surface of the ground. In due time the soil in Colorado takes on a white appearance and vegetation suffers.

Naturally, the cure for this condition is to lower the water table, and if there is no natural drainage, this must be done by artificial drainage. Anything that will provide a channel through which the underground water may get away will answer the purpose. Brush, boulders, flag stones, tile and lumber have been successfully used.

In many cases tiles have proved to be unsatisfactory. Both cement tile and some burned clay tile have shown the effect of alkali, and there are instances where each has disintegrated and gone to pieces in a few years.

The open-bottomed wooden box seems to last as well as anything, and there are instances where these have been in service for eighteen years and the wood is still sound. Wood kept absolutely dry will last indefinitely, and wood kept soaked will also last indefinitely. There are instances where piles have been driven and kept continually covered with water. After centuries of time these piles have been removed and found to be as sound as they were the day they were driven.

A wooden pipe or box used for a drain is surrounded by moist earth and water continually runs through it, so it is saturated and therefore a long life under these conditions.

Get a good engineer to plan and lay out your drain for you and it is necessary for him to make an examination of the subsurface soil as well as of the surface soil in order to intelligently place the drain.

This is a common statement: "My ground will not drain, for I have tried it." If an investigation is made, however, nine times out of ten it will be found that the drain is an open drain, the banks have caved and choked the channel, and weeds have been allowed to grow in it. Of course, it won't work under these conditions.

Wooden boxes are easier to lay and lay properly than tile, for the sections are longer and there is less danger of tilting and choking the channel. Remember, however, that in all cases careful work must be done if the drain is to be a success. It is not an exaggeration to say that all land can be drained if the system is properly planned and the work properly done, and this is the permanent cure for alkali.—E. B. House, Colorado Agricultural College, Fort Collins.

The Russian Farmer.

From St. Petersburg it has been recently reported that slowly but surely the Russian agriculturist is rousing to his opportunities in the meat markets of the world. News of the shortage in America and the advancement in Argentine, Australian and South African packing has filtered through to remoter Russia, with the result that a distinct revolution is setting in, especially in Siberia.

Transport difficulties alone prevent those eastern territories under Russian administration from becoming the chief competitors of the Western Hemisphere in European markets. As it is, agricultural production is advancing more rapidly than the growth of population, and the government is conferring with local authorities with a view to overcoming obtacles in the shape of transport costs and delays.

FARM AND RANCH LANDS.

Minister of Agriculture.

Baron Oura, the Minister of Agriculture of Japan, is visiting this country, coming from Europe. The Baron is also Minister of Commerce, and his first visit in New York was to the Stock Exchange of Wall street. All agricultural organizations in this country will heartily welcome Baron Oura and we hope his stay in this country will be both pleasant and profitable.

Caught in the Act.

The New York Produce Review says: "Among the patrons of the Flandreau (South Dakota) Co-operative Creamery were a few of those undesirable, always dissatisfied, disgruntled farmers who are ever looking for a cream buyer that will give them a higher test and a higher price than the local creamery can do. Some time ago the Hanford Produce Company supplied them with just such a buyer. He did as other unscrupulous cream buyers have done—overread the test when a patron of the local creamery brought cream and underread the test when he thought his victim would stand for it. He paid four cents more per pound for butter-fat than the agents of the same company ten miles distant, where there was no competition. He was caught in the act by A. P. Ryger, the State Dairy Expert; plead guilty when brought into court and paid his fine and costs, amounting to about $25."

Dairy and Creamery.

It is now estimated that in Siberia there are 3,000 creameries. The output is sold in Russia and constitutes the main portion of the Russian butter exportations. Russia exported only 310,000 pounds in 1896; 3,164,000 pounds ten years later, in 1906, and the total for the year 1909 was 3,456,000 pounds. Look out for Russia in the butter market.

From Princeton, N. J., late in July, it was reported that rather than sell to city distributors at ten cents a gallon the milk producers of Northern New Jersey were feeding their milk to hogs. What they ought to be doing and probably are doing is separating the cream and feeding the skim milk to hogs.

Cool the Cream to Fifty Degrees.

If the cream is to be delivered sweet it must be cooled as soon as separated to a temperature in the neighborhood of fifty degrees. It may then, and not till then, be mixed with older cream. Many creamery patrons now store ice for household purposes, but do not use it for cooling cream, as the creamery has not demanded an improved raw material. If the cream were all delivered sweet, the improvement in the quality of the butter would demand a premium in price that would well repay the patron for his extra time and labor.—J. F. Singleton, Creamery Instructor, Kingston, Ontario, Canada.

New York Storage.

Butter and eggs are now stored in the warehouses of New York and neighborhood in larger quantities than ever before at this time of the year. Last year's figures on storage and prices made largest records up to that time, but they are exceeded by the totals of the past month. Butter is now higher in price than it has been in July of any other year since the Civil War times. A report made from twenty-nine of the thirty-two food warehouses in the metropolitan district shows that 2,334,000 cases, each containing thirty dozen of eggs, are now in storage. A year ago the total was 1,911,000 cases. Never before has the total in these warehouses exceeded 2,000,000 cases in July.—The Milk Reporter, July, 1910.

Alfalfa and Dairying.

"No other branch of agriculture presents more advantages than dairying, disposing of the products of the farm, as milk and butter-fat. When the latter may be sold to creamery stations and the skim milk fed to calves and pigs along with alfafa, the profits are greater than from almost any other form of agriculture. No other business tends so rapidly to build up the fertility of the farm, and, when judiciously conducted, no other branch of farming yields more satisfactory financial returns. Raising and feeding alfalfa will add from 15 to 30 per cent. to the profits of dairying over the use of any other feedstuff that may be raised or bought. The profit problem for the dairyman is constantly to find the feed that will decrease the cost of his production."—From Coburn's "The Book of Alfalfa."

A New World Milk Record.

It remained for the College of Agriculture at Columbia, Mo., to raise and develop the champion dairy cow of all the world. Missouri Chief Josephine, a Holstein-Friesian cow, finished her six-months' test on July 18th, producing 17,008.8 pounds, an average of 93.4 pounds of milk daily for 182 days. This is equivalent to 46.7 quarts, or 11.6 gallons, every day. Her highest record for one day was 110.2 pounds. This record is the more remarkable because no special preparation had been made for this test, and Josephine has done her full duty in the regular dairy herd of the University, having had five calves in five and one-half years.

Not only has this record smashed all previous world's records for milk production, but the per cent. of butter-fat is increasing daily, so that, barring accidents, this cow will undoubtedly produce more butter during a period of twelve months than any other cow that has ever been tested in the world.

This cow is but one of a number of remarkable cows owned by the University of Missouri and maintained solely for the instruction of its students in agriculture and for investigational purposes. Only twenty Jersey cows in the history of the world have produced more than 700 pounds of butter in one year. Five of these cows, or 25 per cent. of the total number, are owned and were bred by this Missouri institution. The college owns more than 300 pure-bred and registered animals, belonging to seventeen distinct breeds.

Josephine's record exceeds the present world's record for six months by 1,458 pounds. The foregoing is from the Agricultural College.

Cream on the Farm.

The Blue Valley Creamery Company of St. Joseph, Mo., is sending out some practical literature relating to the care of milk and cream. We notice two statements which are interesting. One is in relation to holding milk at different temperatures; the other is a comparison of the results of cooling by air and by water. We quote as follows:

"To show the value of quick cooling upon the keeping quality, a sample of milk was kept at ninety-eight degrees Fahrenheit (the same temperature at which it was drawn from the cow) and it curdled in eighteen hours. The same size sample of the same milk was cooled in seventy degrees Fahrenheit and it did not curdle until forty-eight hours had elapsed. Another sample was cooled to fifty degrees and it kept for ten days without curdling. Although these figures would not be the same for all samples of milk, it brings out the fact that the bacteria which cause milk to sour grow very slowly at low temperatures.

"To bring out the fact that it is possible to cool the cream much quicker by placing the can in cold water than by allowing it to stand in the air, a four-gallon can of cream at ninety-eight degrees Fahrenheit was placed in water having a temperature of sixty-four degrees. The cream cooled to the temperature of the water (sixty-four degrees) in two hours. Another can of the same size, containing the same amount of cream, at the same temperature, was allowed to stand in the air, having a temperature of forty-five degrees, (nineteen degrees lower than the temperature of the water) yet it did not cool down to sixty-four degrees until ten hours had elapsed."

Corn Harvester.

A most practical corn harvester is made by the New Process Mfg. Co., of Salina, Kas. It will do almost anything that a corn binder will do and cost only a fraction as much. With it a man can cut and shock from four to six acres a day, and it is so simple in construction and operation that a boy can run it. It has been sold in every state in the Union, and has given universal satisfaction. It will pay for itself in less than one season, and is so compact and well made that it will last for years.

If you will write them, mentioning this paper, they will send you full particulars.

Last year the wheat crop of the world, 3,616,109,000 bushels, was the largest on record.

Investigate The Record of The Spreader You Buy

BEFORE you buy a manure spreader, find out what it has done for other farmers. That is the best proof of what it will do for you. Investigate carefully, and you will find that in the matter of service rendered, there are three machines that rank high above all others. These are the—

I H C Spreaders

Cloverleaf Corn King Kemp 20th Century

They have proved their value in actual use in the hands of hundreds of satisfied farmers. Choose one of these machines, and you will be sure of getting the full value of your manure by spreading it in the most economical and efficient way.

Here are a few "reasons why:"

The mechanism which transmits the power from the axle to operate the apron and beater on I H C spreaders is simple and efficient. It requires little power to operate—does not get out of order.

The beater is strong and positive in its action. It thoroughly pulverizes the manure and distributes it evenly. It can be quickly regulated to spread manure as thickly or as thinly as desired. This adjustment can be made from the driver's seat while the spreader is in operation.

The wood in I H C spreader frames is hard, resinous, non-porous, very regular and narrow ringed. It is air-dried so that the sap is retained—cementing the wood fibres together. This prevents manure liquids from penetrating it and makes it proof against the action of the acids in the manure.

Wide-tired wheels and roller-bearings insure light draft, making I H C spreaders easy on the horses.

Cloverleaf spreaders have endless aprons. Corn King and Kemp 20th Century spreaders are of the return apron type. All can be furnished on special order with lime hoods for spreading commercial fertilizers, and drilling attachments for distributing manure in rows. All three styles are made in several sizes, so, when you choose from the I H C line, you are sure of getting just the machine that will meet your needs.

Call on the I H C local dealer and go over the matter with him, or, if you prefer, write direct for catalogue and full information.

Shoo-Fly THE ANIMALS' FRIEND

KILLS EVERY FLY

it strikes when our gravity sprayer is used. Keeps insect pests off animals in pasture longer than any imitation. Used since 1885. Thousands of dairymen duplicate 10 to 50 gallons annually after testing imitations. Absolutely harmless; cures all sores

30 cents worth saves $10

worth of milk and flesh on each cow during fly season. **No Lice in Poultry House** or any place it is sprayed. If dealer offers substitute, send us his name and $1 for 3-tube gravity Sprayer and enough SHOO-FLY to protect 20 cows. Name express office. **$1 returned if animals not protected.** Free booklet. Special terms to agents.

Shoo-Fly Mfg. Co., 1305 N. 10th St., Phila., Pa.

Editor knows from experience that Shoo-Fly is O. K.

Afforestation and Reforestation.

Afforestation means the putting of forests where they have not previously been. Reforestation means the planting of forests where they have previously been. The work of afforestation and reforestation is engaging the attention of the nations as never before.

In much of this country it is a matter of afforestation. This is particularly true of the Prairie States, where only the buffalo and the Indian roamed before the coming of the white man. So far as we are able to find out, these prairies have been without trees for centuries; but ages ago, in the carboniferous age, they were covered with dense forests, which later became our great beds of soft coal. But for all practical purposes the land has never borne a forest, for the carboniferous age is so very far away that new land surface has been formed since its time.

Every state in the West is looking in the direction of afforesting the land along its water courses. There is no doubt that it is entirely feasible for the people to secure this land at low cost, for it is of little value to the owners. In most cases the water is making inroads at the outer angles and filling up the inner angles, thus constantly threatening or injuring the tillable land. For the state to secure it is an easy matter, as the inhabitants of each locality would like to see trees covering the banks of streams, that their roots might prevent the constant erosion going on.

Illinois has largely provided for this in her laws relative to the organization of park districts. It is possible for any lot of territory to be formed into a park district and this park district can purchase the streams and their adjacent banks or tops of hills or anything else they want. This work is even now progressing, and one such park district in Northern Illinois is preparing to reforest the banks of two noted streams. The forests so created will be serpentine in character—long, narrow and winding. It will thus be an ideal park, for it will pass near the homes of many people. It will cost less to care for it than the ordinary park, for wildness and thick woods will be its chief charm. The fire warden and the skilled forester will be the chief park officials. Thus pleasure, and, later, profit, will be the result.

As such areas can be purchased by bonding the park district and paying off the cost gradually, it is proving very popular, and many park districts are now bending their attention to the securing of areas to be put to use in the future.

We have not begun this work any too soon. The rise in the value of land makes it from year to year more difficult for the public to buy back what it sold for almost nothing; but every locality should be awake to the danger and delay and secure land to be reforested or afforested.

Prizes For Ayrshires.

The Ayrshire Breeders' Association is offering liberal prizes at Western State Fairs, consisting mainly of silver cups, valued at $25 each, to be won by registered Ayrshires. They are as follows: Springfield, Ill., best dairy record, test to conform to the rules of the Fair. National Dairy Show, three best cows in milk, owned by exhibitor. Minnesota State Fair, best female of any age. Iowa State Fair, best bull of any age. Ohio State Fair, best bull of any age.

Tomato preparations are being very largely imported from Italy. Canned tomatoes and tomato paste constitute most of the shipments.

Read! Reason! Reflect!

If all Live Stock Commission firms were alike
It wouldn't pay us to advertise.

But there is a difference
In favor of CLAY, ROBINSON & CO.

Advertising cannot prove this;
It can only create a desire for the best service.

In the live stock commission business
The best service costs you no more than the poorest.

Why Not Have the Best?

In the majority of cases a trial of our firm
Means the making of a life-long patron and friend.

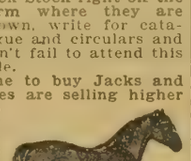
BLUE GRASS FLOCK OF SHROPSHIRES.

Registered Rams and Ewes of best breeding and quality. Dense fleeces of good length. Animals that will improve any flock. Best imported Rams at head of flock. Prices reasonable.
WILLARD MILLER, R. F. D. 2, Anita, Iowa.

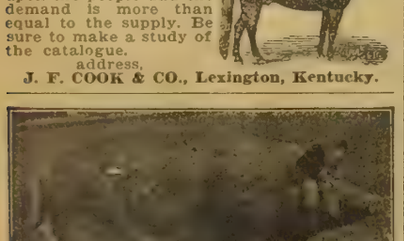
FIRST ANNUAL SALE.

The Cook Farms near Lexington, Ky., will hold the First Annual Sale FRIDAY, SEPTEMBER 30th. The offerings will consist of 100 Saddle Mares, Jennets and Colts, all registered. If you wish to buy a Saddle Horse or Jack Stock right off the farm where they are grown, write for catalogue and circulars and don't fail to attend this sale.

This is the right time to buy Jacks and Jennets. The best Mules are selling higher than was ever before known in the history of the trade. The Kentucky Saddle Horse is also taking a new hold upon the people and the demand is more than equal to the supply. Be sure to make a study of the catalogue.



address,
J. F. COOK & CO., Lexington, Kentucky.



TAMWORTHS FOR SALE. The Bacon Hog, the largest and most prolific breed. Early to mature, economical feeders and unsurpassed as range hogs. Boars, Sows and Pigs not akin from best strains. None better. Prices reasonable. My herd won over 100 ribbons at four State Fairs the past year. A few choice Pigs from imported stock; sire and dam winners at Royal Show, England, 1907.
CHAS. FORD,
Mortonsville, Woodford County, Kentucky.

Meats have advanced in price in Austria. The fact is, none of the European countries can feed themselves.

Litters of Pigs by Breeds.

"Dr. Rommel has compiled from records of the Poland-China and Duroc-Jersey Associations a fund of figures showing the fecundity of such a great number of sows of these breeds as to make their summing up thoroughly representative. Observations of 14,703 Poland-China litters in the five years, 1882-86, inclusive, disclosed an average of 7.04 pigs per litter. Observations of 39,812 litters of the same breed in the years 1898-1902 showed an average of 7.52 pigs. This was an increase in the latter five years of .48, or nearly one-half, pig per litter, a percentage of 6.81. From 1893 to 1897, inclusive, 3,762 Duroc-Jersey sows averaged 9.22 pigs each. From 1898 to 1902, inclusive, 17,890 Duroc-Jersey sows averaged 9.27 pigs each, or an increase of .054 per cent. Of the more than 76,000 sows of both breeds reported as under observation one Poland-China farrowed twenty pigs and two Duroc-Jerseys a like number."—From Coburn's "Swine in America."

Draft Horse Exhibit at the Missouri State Fair.

The Secretary of the Missouri State Fair is the authority for the statement that in the total of eighty-six (86) classes for draft and coach horses at the Missouri State Fair of 1909, there was a total of only seventy-six (76) entries and an average of less than one horse to each class.

A total of $780 in prize money was offered in the class "Open to the World" for draft and coach horses, and over $400 of this money was not competed for.

A total of $735 was offered in prize money in the class "Limited to Missouri-bred Animals" for draft and coach horses. Less than 10 per cent. of this money was competed for, leaving over $650. In the class of Percheron and French draft horses "Limited to Missouri-bred Animals" there was not one exhibit. This is also true of nearly all the other classes, "Limited to Missouri-bred Animals."

The $50 which was offered for grade draft horses remained with the Treasurer because there were no grade draft horses exhibited.

The $400 in the "Open to the World" class was not competed for, and much good advertising could have been had by Missouri horsemen if they had exhibited at the Missouri State Fair in 1909. The $650 not competed for in class "Limited to Missouri-bred Animals" was set aside for the special benefit of Missouri breeders.

The premiums on draft and coach horses have been increased for the year 1910 to nearly $2,000. The American Association of Importers and Breeders of Belgian Draft Horses offers $105 in special premiums and two gold medals valued at $100 for that breed of horses at the 1910 Missouri State Fair. The Percheron Registrry Company offers seventeen (17) silver medals for horses registered in that association to be competed for at the 1910 Missouri State Fair.

The time is ripe for a big exhibit of draft horses. The demand for this class of live stock is so great that such an exhibit will be very profitable advertising.

It is sincerely hoped that Missouri breeders will take advantage of the present opportunities to increase the volume of draft horse business within the state and to build up a permanent, lucrative business for themselves. If you have anything in this class of live stock that can be exhibited, such an exhibit should be considered.

The catalogue for the Missouri State Fair is ready for distribution and may be had by addressing a request to Secretary John T. Stinson, Sedalia, Mo.

Sheep Premiums Won.

Wm. Cooper & Nephews, of Berkhamsted, Engand, are manufacturers of the famous Cooper Sheep Dip. The firm is also engaged in breeding Shorthorn and Red Polled cattle and Shropshire sheep. So far this year the Cooper exhibits have won two championships, four reserve championships, one special prize, eighteen firsts, twenty-five seconds, twelve thirds and two fourth prizes. This is a record hard to beat with the season just becoming interesting.

Blooded Stock Notes.

Attention is invited to the card of J. F. Cook & Co., Lexington, Ky. The Cook farms are devoted to raising saddle horses, jacks and jennets, all registered. This firm wins a large number of prizes at the Kentucky Fairs, which is a guarantee of the quality of the stock. The annual sale will be held on Friday, September 30. Be sure to send in your name for a catalogue.

Walker Bros. & Co. have headquarters at 721 East Fifth street, Oklahoma City, Okla., and have on hand a fine collection of Percheron stallions, also coach stallions and mares. They would like you to inspect their stock after writing for price list. Many of our readers will find it to their advantage to pay this establishment a visit.

Mr. R. Breininger, of Woodland Herd of Duroc-Jersey Swine, is again advertising in this paper. He has young boars for sale that can safely be relied upon to sire first-class, growthy pigs.

Mr. Chas. Ford, of Mortonsville, Ky., writes that there is an ever-increasing demand for Tamworrth hogs. For this reason he is enlarging his herd by bringing in different strains, having recently bought some of the best ones from Canada. He is a great prize winner at the Fairs. See page 12.

Live stock breeders are reminded that The National Farmer and Stock Grower paper has averaged above one hundred thousand copies a month for the past seven years. It is the best medium for advertising pure-bred cattle, hogs and sheep, and rates are very reaonable.

Canned Meats For England.

The London representative of Libby, McNeil & Libby, American meat packers, announced from London, August 2d, that his firm had closed a big contract with the British Army at a ecord price, against Australian and Argentine competition. The firm is to deliver $5,000,000 worth of canned meats.

The contracts call for 346,000 cans of corned meat, packed in Welsh tin. British officers will go to Chicago to oversee the packing.

Pigeons and Squabs.

St. Louis quotations for country consignments, early in August—quote: Live pigeons at 75 per dozen. Squabs—Fancy homers, $2.50 per dozen for eight-pound; $3.00 for nine-pound; $3.25 for ten-pound; $1.50 for small; common at $1.00 to $1.25 per dozen.

The Illinois State Fair.

The premium list of the Illinois State Fair and the rules governing awards are now ready and can be had by applying to Mr. J. K. Dickerson, Secretary, Springfield, Ill. The Fair opens September 30th and closes October 8th.

DUROC-JERSEY BOARS.

Large enough for service, the big-boned, growthy kind, with plenty of quality. Price, $18 to $20.
R. BREININGER, R. R. 2, Monroe, Ind.

FOR SALE: FIFTY O. I. C. PIGS.

June farrow. They are all the good kind. For prices write ALVEY BROS.,
Meriden, Kansas.

PURE-BRED REGISTERED ANGORA GOATS

Bred from the choicest strains of imported Angora Goats. Sweepstake and First-prize Winners at the American Royal Show. Satisfaction guaranteed.
R. C. JOHNSTON, Lawrence, Kansas.

SUNSET JERSEY CATTLE HERD.

For Sale: One full-blood Bull Calf, but not registered—a bargain.
One registered Bull Calf nine months old.
One registered Bull Calf two months old. These Calves will not last long. If you want one, write
ALBERT S. ENNIS,
712-21 Missouri Trust Bldg., St. Louis, Mo.

REGISTERED SHROPSHIRE SHEEP.

Rams, Ewes and Ram Lambs of the best breeding. Ram at head of flock sired by an imported English Ram out of a Canadian Ewe. Have used Rams from the best flocks in the United States and Canada. These sheep are bred for wool and mutton. Prices reasonable.

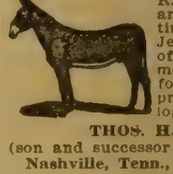
Mill Creek Stock Farm,

The home of the noted Starlight family of Jacks and Jennets for the past thirty years, is located seven miles southeast of Nashville, Tenn., on the N. C. & St. L. R. R., at Asylum Station, and has on hand at all times a nice lot of Jacks, Jennets and Stallions, all of the best blood, from six months to six years old, for sale at reasonable prices. Write for catalogue. Also Jersey Cattle.



THOS. H. EZELL, Prop.,
(son and successor to the late H. C. Ezell),
Nashville, Tenn., Sta. B, R. F. D. No. 7.

The Wells Medicine Company, Lafayette, Ind., invite attention of our readers to Craft's Distemper Cure, by advertisement in our columns. It is an unfailing remedy for distemper, coughs, colds, pinkeye, shipping fever and it is a valuable treatment for "heaves." This is prized by thousands of horse owners who have used it, as well as by flock masters for sheep and dogs. All druggists should be able to supply this to the reader. Free literature may be obtained by writing to the above address.

Salesmen and Saleswomen Wanted.

Thousands of good positions now open, paying from $1,000 to $5,000 a year and expenses. No former experience needed to get one of them. We will teach you to be an expert salesman or saleswoman by mail in eight weeks, and assist you to secure a good position and you can pay for your tuition out of your earnings. Write today for full particulars and testimonials from hundreds of men and women we have placed in good positions paying from $100 to $500 a month and expenses. Address nearest office.
Dept 505, NATIONAL SALESMEN TRAINING ASSOCIATION,
Chicago, New York, Minneapolis, Atlanta, Kansas City, San Francisco.

PURE-BRED SEED WHEAT.

I have for sale this year an extra fine quality of "IMPROVED TURKEY RED" Seed Wheat. This seed is clean, very heavy, and it is as fine a quality as I have ever sent out. Prices are right. Send for free sample and prices, stating the number of bushels that you will want to buy this season. Address,
L. C. BROWN, Seed Farm Specialist,
LaGrange, Cook County, Illinois.

Earn $60 to $140 Month

Hundreds of positions open for steam railway Firemen and Brakemen, and electric railway Motormen and Conductors. Experience unnecessary. Write immediately for full particulars stating position desired.
RAILWAY ASSOCIATION,
235 Reliance Bldg., Kansas City, Mo.

William H. Collins Dies.

William H. Collins died at Quincy, Ill., July 29th, aged 79. He was born in Collinsville and graduated from the Illinois College, Jacksonville, in 1850. He took a post-graduate course in theology and philosophy in Yale, and then served as pastor of the Congregational Church at LaSalle for six years.

At the opening of the Civil War he was chosen Chaplain of the Tenth Illinois Infantry, but soon resigned to assist in raising another company. He was appointed Chaplain and distinguished himself, winning promotion to a position on the staff of Gen. John M. Palmer. From 1864 to 1865 he was Provost Marshal of the Twelfth Illinois District. In 1886 he established the Collins Plow Company in Quincy, which has become a leading industry. On different occasions he was elected as Alderman of Quincy and once served a few months as Acting Mayor to fill a vacancy.

He was a member of the Legislature from 1884 to 1886, and from 1880 to 1890. He received a complimentary vote for Lieutenant-Governor. For six years he was a member of the Adams County Board of Supervisors, and for several years was President of the Quincy Board of Education. He was a favorite public speaker and achieved distinction as a magazine writer. Above all, he was the farmers' friend and a successful plow manufacturer.

Flies the Cause of the Great Chicago Fire.

The great fire which swept over Chicago is numbered among the greatest conflagrations in the history of the country. The cause of this terrible calamity is said to have been due to a cow kicking over a lighted lamp. The animal was being milked in her stall after dark, and, being tormented by flies, grew restless and the accident followed.

Flies seem to take a fiendish delight in inflicting tortures upon horses and cattle, and it is a well-known fact that farmers and dairymen are robbed of a large part of their profits through worry and torment which their stock suffer from bites of flies an dother insects.

The protection of his stock from flies and other insects is an important matter, and one farmer who successfully solved the problem twenty-five years ago has been making this preparation ever since, and it is now used by thousands of farmers and dairymen everywhere.

He appropriately called his preparation Shoo-Fly and the success of the article has been so great that it is used in every state in the Union.

Shoo-Fly not only keeps flies and insects off animals in stable or pasture, but it cures all kinds of sores, barb-wire cuts, hoof ailments, etc., and there is nothing can equal it in keeping poultry and poultry houses free from lice and mites.

Every farmer and dairyman should at least give this preparation a trial. If your dealer does not handle Shoo-Fly, write to the Shoo-Fly Mfg. Co., 1305 North Tenth street, Philadelphia. On receipt of $1.00 they will send you a three-tube gravity sprayer and enough Shoo-Fly to protect 200 cows. We urge our readers to write for it.

Chlorophyl and Blood.

Chlorophyl is the green coloring matter in plants that gives the green color so universal in nature. Recent chemical investigations seem to show that there is a close relationship between the coloring pigments in chlorophyl and the red pigments of blood. In other words, rich green in plants is the correspondent of redness in the human form. Good, rich, red blood is synonymous of health in man and animals, while bright glossy green in plants always denotes health and thrift in the plant.

Both good, rich, red blood and glossy green indicate that the animals and plants have the power of overcoming disease germs. In blood certain qualities exist that make war on disease germs and destroy them The actual process of doing this has been studied out by the physiologists There is no doubt that the chloro phyl has in it germicidal power to a limited degree. This will account for the well-known fact that a thrifty plant is less likely to be attacked by insects or disease than a weak plant

The lice on a brood of chicks will often concentrate on the weakest chick. It is also well known that among human beings, to overwork and become run down is the surest way of opening the door to disease. Therefore to keep up the supply of rich, red blood is one way of warding off disease; and to keep up the supply of chlorophyl is one way of preventing diseases and sometimes even insects.

The fact that chlorophyl has germicidal qualities probably lies at he base of the development of disease-resisting plants. During recent years much has been done in the selecting of plants that have the power to resist of plants that have the powe to resist rust and other diseases arising from attacks of minute vegetable parasites. Out of hundeds of plants one will be found that does not go down under the attack. This one is used for the propagation of new hundreds of plants out of which a few will be found resistant to disease and even to insects. The cause is perhaps the abundance and high quality of the chlorophyl in the particular plants found resistant.

It therefore should be a hint to the farmer to give his plants all kinds of proper cultivation that the chlorophyl may be abundant and have in it a vigor such as is found in rich, red blood. The supply of plant food and the supply of water will help in the elaboration of this desirable element.

Speaking of the value of chlorophyl to plants, a professor of botany said to the writer: "The chlorophyl in plants is the only thing known in nature that has the power to take inert matter and change it into living tissue. Chlorophyl is in some mysterious way connected with life. By its power the plant lives. The supply of chlorophyl regulates the life element in the plant, though we do not yet understand just how."

In a general way it may be said that there is no better way to keep plants free from disease than to feed them well and water them properly. This at least is a great help in the battle against disease.

Easy Method of Handling Hay.

An old stockman who has long traveled the great agricultural section was recently reminiscing on modern farm progress. One of the things specially mentioned as typical of the clean, business-like farm method of to-day was the handling of hay.

This advance in hay handling has been largely due to the Collins Plow Company, of Quincy, Illinois. This progressive manufacturer early saw the great advantage such a machine would offer the farmer and became pioneers in its manufacture and stand to-day with leaders in this field.

The "Ell" line put out by them has long been recognized as one of the most popular and best machines on the market.

It is manufactured in eighteen styles, both horse and power, to suit every need. One of the distinctive features of this line is the new condenser with which all their power presses are equipped. This special device increases the capacity of each machine fully one-third and is being spoken of in the highest terms by many of our readers who have used it. In fact, they say that nothing could persuade them to return to the old method.

We would suggest than any of our readers who are interested in this up-to-date side of farming would write for catalogue and information to the Collins Pow Company, 2014 Hampshire street, Quincy, Illinois.

A RACING SCENE—Reminder of the Great St. Louis Fair. Under the present laws of the state of Missouri the sport of racing cannot degenerate into a gambling game. Racing is sucessfully conducted at the State Fair. At the Universal Exposition of St. Louis there will be aviation field, speed way for autos and track for harness and running contests.

ABSORBINE ONE OF THE BEST.

LeRoy Gaul, of Clinton, Iowa, reported September 26, 1909: "I am using your Absorbine on a curb and splint. I rub them down with a hard-wood stick and then put on your Absorbine. I do this every day and the curb and splint are going away nicely, and you can hardly tell that I have used any of it. It takes only a little, and I can say that Absorbine is one of the best remedies." Absorbine at druggists, $2.00 a bottle, or sent direct upon receipt of price, is an excellent preparation for treating bog spavin, thoroughpin, capped hock, sprung knee, swollen tendon, big knee, etc. Write for descriptive pamphlet, sent free. W. F. Young, P. D. F., 106 Temple street, Springfield, Mass.

Poultry and Farm Paper Club.

We are often asked which is the best poultry paper in the United States, and the answer is **The Reliable Poultry Journal.** There are other excellent poultry papers, but the one we take home to read and one the family is demined to read is **The Reliable Poultry Journal.** We have made arrangements whereby we can send The National Farmer and Stock Grower and **The Reliable Poultry Journal,** both papers, one year, for fifty cents. This is a bargain that is good now, but this advertisment may not appear again. Address, **Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

REMINDER OF THE GREAT ST. LOUIS FAIR—The Coliseum where the greatest saddle horse contests were held. The picture represents the preliminary canter before a contest. The St. Louis Fair is to be revived and enlarged under the name of the Universal Exposition of St. Louis.

Mexican Agricultural Products For the United States.

Consul Alexander V. Dye, of Nogales, Mexico, reports that a writer and an authority on agriculture sent out by the Mexican government is delivering lectures in the principal towns of Sonora to induce the farmers of the state to raise products for the American market, especially early vegetables, lemons, dates, figs, etc. A National Chamber of Agriculture, to encourage such cultivation, was organized at Hermosillo on May 15, composed of the leading agriculturists of the state, convened by the Governor for this purpose. The idea is that eventually all agricultural products will be admitted by the United States government free of duty.

The Favorite Corn Husker.

This Corn Husker is more largely sold than any other on the market. We have therefore selected it as a seasonable subscription premium. It is made for the right hand. The hook sets at any angle, to prevent glancing. Opening or closing the

small end of the plate adjusts a fit to any size hand and prevents chafing. The improved shape of the plate and leather make this hook the favorite. We will send The National Farmer and Stock Grower for one year and one Favorite Corn Husker for 50 cents. The Corn Husker is a free premium. Address, **Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

Practical Farming and Gardening.

This is a book of 500 pages, 6x7¼ inches to the page. It is a complete farmer's instruction book. The feeding chart is worth a ten-dollar bill to any stock farmer. Soil fertility, drainage, grain crops, gardening, truck growing, fruits, forestry, pruning, grafting, budding, injurious insects, plant diseases, spraying, cattle, sheep, horse raising and feeding, treatment for diseases, silos and silage, poultry, handy rules and farm cookery, are a few of the subjects. There are eighteen three-column pages of index. If you look for something you find it. We have adopted this book as a subscription premium. Send One Dollar and we will send you **Practical Farming and Gardening**, postage paid, and The National Farmer and Stock Grower for two years. This is a grand offer. Address, **Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

A Few Points on Roads.

The problem of road construction is not so simple now as it was before the days of the automobile. Before that time the macadam road with its top layer of fine stone dust was considered very good, and had only the objection against it that the dust sometimes blew into the houses of the people living on the road.

But the automobile has a large wheel tired with rubber. When this rubber tire presses the surface of the road it lies flat with it for a few inches at its point of contact with the road. As the rubber is pressed down on the surface it forces out the air, and when the rubber pulls up the air that is under the fine road material pushes up the said material to prevent a vacuum being formed. This operation is spoken of as "sucking." The dust and finely-broken stone are tossed into the air with great force and given to the winds to carry off. This fine material was placed on the road bed at the first to act as a buffer between wagon tires and the stones composing the major part of the macadam. The composition of macadam is largely of a soft lime rock that would be continually ground under the wheels of wagons if not protected by a fine surface.

But the auto wheel removes the protecting fine surface and exposes the lime rock to the work of multitudinous wheels. The result is that such a road soon wears thin and water collects in the low places and wheels dig through in wet weather.

In cities and villages the wearing out of this kind of road is very rapid, due to the necessity for frequently cleaning it. On the country road the droppings of horses do not amount to enough to cause the road to be cleaned. But in cities and villages the number of horses is so great that the droppings of horses accumulate to a point that creates a public demand for cleaning. Then the man with the broom gets to work and sweeps up not only the droppings, but at the same time a part of the surface of the road. This is carted off to be dumped in some out-of-the-way place. The writer has inspected several such dumping places and found the dumped material full of macadam, including broken stone of considerable size.

In places where mud is hauled onto the streets from unpaved roads, the cleaning has to be more frequent and the destruction of the road is more rapid.

In the building of village and city roads one thing should be always kept in sight. That is, the building of a road, the surface of which can be cleaned without at the same time beginning to destroy it. Among the materials that will stand cleaning are brick, cement and asphaltum in its various combinations.

On country roads the cleaning is a small factor and may be ignored. The question of cost is, however, the greatest one. Where large, coarse gravel unmixed with loam can be obtained it will greatly help the solution of the road problem. Although coarse gravel may be lifted by the sucking action of the automobile wheel, it will not, however, blow away or become a nuisance on the dinner table of the farmer whose house stands by the side of the road.

FARMERS' SONS EXCEL.

Boys From Rural Districts Have Much Advantage as Veterinarians.

The boy raised on the farm does usually far excel his brother from the city in the study of any profession. Perhaps this is because he is willing to give more time and real hard work to his studies.

In the study of one profession, however, that of veterinary science, the boy from the farm has a distinct advantage.

AGENTS WANTED

We want men who are not actively engaged in business to act as our agents. We pay liberal cash commissions. Write for our catalogue and full particulars.

ON CREDIT

Buggies
Only $10. Cash.
Balance $5 a month. Warranted for 3 years.

Surreys
Only $25. Cash.
Balance $7 a month. Warranted for 3 years.

Farm Wagons
Only $15. Cash.
Balance $5 a month. Warranted for 3 years.

We trust honest people located in all parts of the world. Cash or easy monthly payments. Write for our free catalogue.

CENTURY MFG. CO.,
Dept. 871, East St. Louis, Ills.

By his close association he knows horses, cattle, sheep, etc., far better than the boy from the city, and, having a good understanding of the subject to start with, he gets to his work at the veterinary college quickly, and rarely fails to complete the full work and secure his degree in regular time.

Dr. S. Stewart, the Dean of the Kansas City Veterinary College, East Fifteenth street, Kansas City, Mo., said recently: "About sixty per cent. of our students come from the farm. The boys from the farm, as a rule, do well in general practice; they understand stockmen, the farmer, get acquainted quickly generally and do well. Some of our graduates make as much as $5,000 a year in general practice, and any number of them earn $2,000 or more."

Handling Fleeces.

An improved method of handling the fleece as it comes from the sheep's back has been much improved on at Killarney Station, in the Narrabri district, the property of Mr. W. F. Buchanan. Running almost the entire length of the shearing shed, one of the finest in the state, is a device known as a "creeper," a revolving table, constructed of wood on the principle of a windlass, which moves slowly in its frame. Its object is to carry fleeces down to the roller's table. The wool is placed upon the structure by employes, whose work was formerly to carry it to the tables ——sometimes the full length of the shearing board. This was very trying work on youths. Now a constant stream of fleeces is slowly carried down to the tables, and the picker-up's work is made much lighter, and the fleeces receive less handling and breakage. The structure is worked by belting attached to the machinery of the shearing plant.—Sydney Stock and Station Journal.

The ranch of Mrs. J. F. Ray, of Beeville, Tex., consisting of 12,763 acres, situated in Live Oak county, was sold, July 23, to Dr. B. D. Smith, of Cincinnati, and A. E. Foster, of Covington, Ky., for $172,287. The tract will be divided into farms and colonized.

Roasting pigs, twenty to thirty pounds, are selling at $1.75 to $3.00 per head.

Cavalry Feeding Test.

A cavalry horse is allowed twelve pounds of corn or oats and fourteen pounds of hay as the daily ration. At Fort Riley, Kas., a test will be made to improve on this ration. There are 884 horses which will be fed various rations that might be available in war time.

The army horse ration as now served out has stood many a test. Run-down horses have been fattened upon it and horses in garrison have been kept in excellent condition for service. The test will be made upon a bunch of horses having the same work, same exercise, same time of feeding, in fact all of them will be treated as nearly alike as animals can be treated by different individuals, leaving no chance for variation in results. The experiment will begin October 1st, 1910.

A Fifteen-pound Colt.

There was born on Col. Harry C. Trexler's pony farm near Allentown, Pa., what is claimed to be the smallest colt in the world. It weighs only fifteen pounds. In fact, many a baby is as big.

The colt, which is perfect in every way, began to kick up its heels in the liveliest fashion when it had reached the age of eight hours. Like all the ponies on Col. Trexler's farm, it is a standard-bred Shetland out of registered stock. It is not believed it will grow to be any larger than a setter dog.

Death of Allerton, 2:09¼.

Allerton died on July 5th at the age of twenty-four years. He was foaled in 1884 and was bred by C. W. Williams, of Independence, Iowa. His sire was Jay Bird, a son of George Wilkes, and his dam was Gussie Wilkes, granddaughter of Mambrino Patchen. Allerton was campaigned as a two-year-old, and his record of 2:09¼ was made in 1901. When he died he had 58 sons with 102 trotters and 52 pacers to their credit, and 19 of his daughters produced 29 trotters and 7 pacers. He was sire of Redlac, 2:07½; General Forrest, 2:08; Gayton, 2:08¼; Nancy Royce, 2:09¼; and Alves, 2:09½—all trotters; also Locanda, 2:02; Allercon, 2:05¼; and Charley Hayt, 2:06¼—pacers. During his turf career he went a mile to wagon in 2:15.

Belgian Horse Trade.

Consul-General Ethelbert Watts, of Brussels, in Belgium, in one of his reports to the Department of Commerce, says that the exportation of horses from Belgium to the United States has increased very much in the last decade, particularly in 1909, but these shipments have been mostly of the heavy Brabancon stock, which were so successfully shown at the St. Louis International Exhibition of 1904 and on account of which this demand in the United States fairly started. For the first eleven months of 1909, 1,909 horses were shipped to the United States, valued at $243,960, and to the United Kingdom 506 horses, valued at $117,678.

On February 12 and March 12 very successful Horse Fairs were held in Brussells. At the first about 3,000 horses were shown, most conspicuous among them being the native Brabant heavy draft horses, which were very fair animals. About forty car-loads of these were sold and shipped to foreign countries, principally to the United States and England. The prices realized for the best stock in Belgium were very satisfactory, ranging from $386 to $465; some lighter draft horses, principally for the local market, sold at an average of $288. At the second Fair buyers from various countries were present, and horses of the better class brought from $360 to $500 a head.

Italy to the Front.

When the American continent was unknown, and England an obscure province of the mighty Roman Empire, over two thousand years ago, there were horse races in Italy. The Romans were the first of the great nations to apppreciate the value of the horse, and the knights of the equestrian order were the elite of the army. In times of peace the chariot races were favorite amusements of the vast crowds at the coliseums.

To-day the trotter is decidedly to the fore in that classic land, and though they have imported a few Russian Orloffs, the tendency is to the American trotter. They have in a few years imported quite a few good sires, such as Elwood Medium, 2:24¾, by Happy Medium, Atlantic, 2:21. Later on Onward Silver, 2:05¼, Col. Kuser, 2:11¼, and Codero, 2:09½, and others followed. These have been bred in many instances to native mares, Orloff or American mares, and a trotting breed is being gradually developed. The champion three-year-old trotter in Italy last season was Glisner Kuser, who took a record of 2:15. She was by Col. Kuser, 2:11¼, out of a mare by Joktan, 2:19¼. This young champion started in thirty races, winning twenty-four, was second in one, fourth in two and unplaced in three.

The races in Italy are from a mile to a mile and a half. This is a market which should be cultivated.

Breeders should adopt an aggressive policy and they should not be content with the home market. The manufacturers of all classes of machinery invade all parts of the globe and sell their goods. The American sewing machine is on every continent and our agricultural implements are a close second.—The Horseman.

Successful Hay Farmers Give Up Their Secrets.

Just what would be the net result of interviews with fifty of the most successful hay growers in America ought to be of considerable interest to every farmer, whether he pays little or much attention to this valuable crop.

Such a book dealing with real, practical methods, employed by these king of hay growers, telling when they cut, how they cure their hay, how they take advantage of the market, and many other pointers, ought to be of the greatest value to other farmers, and yet at considerable cost Mr. E. P. Ross, of the Auto-Fedan Hay Press Company, has prepared just such a book, which he is givving free to all hay growers who ask for it.

It is full of live pointers told in a most attractive manner, how to rescue big hay losses. Write to the Auto-Fedan Hay Press Company, 1506 West Twelfth street, Kansas City, Mo.

Handling Range Horses.

A Missouri farmer with a horsey turn recently gave some figures showing that there is money at this time in feeding and partially breaking Western range horses in the corn belt. Last summer he bought a band of Colorado rangers at $27.50 per head, took them home, fed them until fat, partially broke them and put them on sale in a bunch. An Eastern man came along and took the outfit at $80 each, the cost at that time aggregating about $50. This left a margin of $30 a head, or around $850 a car. The horses gained 200 pounds apiece in the feeding process, the heaviest weighing 1,400 pounds when sold.—Drovers' Journal.

Time Has Told

You don't need to experiment on a remedy for Spavin, Ringbone, Curb, Splint, Capped Hock, Swollen Joints, or any lameness of horse or man.

Kendall's Spavin Cure

has been the unfailing remedy for 40 years.

Horse and Mule Notes.

The Saddle Horse Department of our Shows is rapidly gaining in importance, says an Eastern exchange. The saddle horse's future seems to be assured. At any rate, in almost direct ratio to the increase in motor-driven vehicles on highways we find new recruits on the by-ways and bridle paths far in excess of what we could boast of two or three years ago. The horseback-riding brigade is growing daily.

J. O. Singmaster writes from Paris, France: "The first-prize three-year-old Percheron stallion in the Paris Horse Show goes to South America, and the price paid was $5,000 in France."

An exchange says: "Probably the oldest horse in the world is a pony owned at Lancaster, N. Y. According to evidence in his owner's hands this pony is fifty years old. For the last two years he has lived almost entirely on soft feed and gruel."

Horse Secrets Disclosed.

This is a valuable book. It tells how to feed and fatten your stock in the cheapest, quickest way, how to rear an orphan foal by hand, the secret of silage feeding, how to break a horse of bad habits, and scores of other money making, money saving secrets.

This book is published by the FARM JOURNAL of Philadelphia, the foremost monthly agricultural paper of this country.

THE FARM JOURNAL

does not sell this book, but offers it to its new subscribers. This paper has for thirty-three years been working for the prosperity of farmers and the happiness of farm homes. It is taken by 600,000 people who we call "our folks," and we believe you will be as fond of it as they now are. Everything in it is boiled down so that its twenty-four to sixty pages every month give you the most matter in the least space. It is ably edited by authorities and is a cheery and welcome friend in every home it enters.

"Horse Secrets" and The Farm Journal for two years, both for 50 cents. Address, FARM JOURNAL, 1068 Cherry Street, Philadelphia, Pa.

THE LUNGS OF AN ENGINE.

Gasoline Vapor Instead of Air Breathed in by the "Mixer" or "Carburetor."

The mixer on a gasoline engine; the carburetor on an automobile, and the lungs on a man, are equally important, and in each instance fills the same office. That is, they supply the vital power machinery. The human being, of course, requires more air, and the lungs are called upon for more active service when working than in repose, and this supply is so automatically regulated that we seldom give it a thought. The same requirements exist with an engine. As the load is increased means must be provided for increasing quantity of fuel and air fed to it.

J. B. Seager, General Manager of the Seager Engine Works, has hit the nail square on the head with the mixer which he is using on the Olds Engines. This is a patented idea of his own and has the distinctive feature of supplying the proper proportion of gasoline and air to the engine without the use of a gasoline pump and without employing a single moving part. The mixer once set remains in adjustment, and the suction of the engine piston draws in its charge for each working stroke, so that the more numerous the strokes the greater the supply.

It is the nearest approach of any gasoline mixer in its operation to the human lungs. For catalogue address Seager Engine Works, 1075 Seager street, Lansing, Mich.

THE HEEL FLY.

The Torment of Cattle Which Produces the Grub in the Hide.

(By B. F. Kaupp, of the Agricultural College, Fort Collins, Colo.)

The ox warble is the larval or worm stage of a fly known by various names, such as the heel fly, striped hypoderma, grub or warble fly, etc.

This fly is found most abundant in the Southern States, while in the extreme Northern States very few or none are found. This fly has four stages—the egg, or ova, the larval, or worm, the cocoon, or pupal, and the adult, or fly. It was thought by early writers that the fly layed the eggs in the skin of the back of cattle. This idea has long ago been proved to be wrong by Dr. Cooper Curtice. The writer has been able to confirm Doctor Curtice's story of the history of the various stages of this parasite, which is as follows: The fly lays the eggs, cementing them to the hair in the region of the heel of cattle, where, perhaps by the crawling of the minute larva, or worms, over the skin causes the animal to lick the part and thus gets the larva into the mouth. They now become lodged in the mucous membrane (lining) of the oesophagus and here pass a part of their worm stage. The part in which they are imbedded is not inflamed and no serious injury is produced at this point. The worm at this stage can be found in this locality during the summer months. At this point they never reach a size greater than about a half inch in length and three-sixteenths in diamter. After passing this part of the life, they leave the oesophagus and find their way between the muscles, through the loose connective tissue and become lodged under the skin in the region of the withers and down the spinal column. The question has often been asked: "Why do they lodge here?" I will answer that by asking: "Why a lung worm upon being swallowed and reaching the stomach finds its way to the lungs and will not develop in any other part of the body?" These tumors in the region of the back grow as the worm grows. At the summit of each tumor will be found a hole, which also grows as the tumor enlarges. In April and May (depending upon the latitude) they are fully developed and leave the tumor. This they are enabled to do from the fact that they are soft and contractible. It has been observed that most of them leave the tumors in the morning. They now burrow into the ground and form around them a cocoon in which they pass through the stage which brings them to the adult or fly stage again. The length of time they are parasite in the animal is about ten months. The length of time in the ground, from four to six weeks, and the length of the life of the fly from two to four weeks, making the entire life history about twelve months.

The warble in the back does not cause a great deal of injury to the animal. Some irritation is at times manifested. The warble can be easily squeezed out by gentle pressure at the base of the tumor. The injury to the hide industry (in those cattle slaughtered that are "grubby") is considerable. Everywhere there is a tumor there is a hole, and when the hide is tanned a larger hole results.

There is No Exercise to Equal Cycling.

Among all the sports or forms of exercise which have found any degree of favor with Americans, cycling is most ideally suited to American needs and American temperament.

It satisfies our passion for being "on the go" in a sane, health-building manner. There is no nervous tension to cycling, such as attends the swift ride on the speeding motorcycle, or in the whizzing auto.

Gliding along on a light-running wheel, one forgets he has nerves, or muscles. Instead of a rush of air in the face that renders breathing a difficult task, it seems second nature, when wheeling, to drink in long, sweet, soul-refreshing breaths of nature's ozone.

"Get out your bicycle and get the fresh air" has been many a physician's advice to the patient seeking relief from nervous strain, stomach disorder, or a long list of kindred ailments. That, too, is our advice to our readers.

An hour or two a-wheel each day will make a new person of you—will help the lungs carry away impurities from the blood, will clear the brain, quiet the nerves and bring the restful sleep of health.

If you have a bicycle, use it. If you haven't one, you will be surprised to learn how fine a wheel can be bought for a very few dollars. Write for catalogue to Mead Cycle Co., Dept. G 138, Chicago, Ill.

Spring Plowing For Corn.

A forty-acre field of corn, which was plowed last fall, disced and cross-harrowed twice before planting this spring, has completely grown away from a twenty-acre field which was spring-plowed. The fall-plowed field had a deep and well-pulverized seed-bed and moisture was retained at just the critical time. The spring-plowed ground was turned when the ground was rather wet, although the harrows did efficient work in reducing the clods and bringing the field into tolerably good condition. But the crop since July 1 has shown that much more moisture was lost in this field than in the fall-plowed. There is really nothing new in this, but it shows the wisdom of doing quick surface work on spring-plowed ground. A neighbor who is using dry-farming methods on a field of corn which was spring-plowed has kept one-horse drags going right along up to this time. That is helping some, and it will make many bushels per acre difference in the yield of his crop, but much more could have been accomplished had he put in more work on this ground right at plowing time. Once over with a harrow will not make the surface fine enough. Lapping half and then crossing as soon as the field as finished would have left the ground in better condition to withstand six weeks of hot, dry weather.

ADVANCE GUARD—A trotting-bred coach horse, owned by the Farm Department of the Iowa State College, Ames, Iowa.

ADVANCE GUARD has been pronounced by good judges to be one of the greatest show stallions in America. He produces his type in his colts to a remarkable degree and breeds colts of good size. He has been a mile in 2:30 in his work, and should sire speed as well as show horses.

ADVANCE GUARD is a bronze chestnut, a scant fifteen hands high, weight 1,000 pounds. The foregoing half-tone picture is an exact reproduction of the horse taken in action. It shows his perfect, well-balanced action and his excellent conformation as a carriage type better than words can describe.

The following is a partial list of ADVANCE GUARD'S winnings:

First in class for best harness horse at Louisville Horse Show in 1907, open to stallions, mares or geldings.

First in championship class, Oak Park Show, 1907.

First in champion American carriage horse class, and in gig class, Iowa State Fair, 1909.

First in American carriage stallion class and in gig class, Minnesota State Fair, 1909.

First in American carriage class and champion heavy harness class, Kansas State Fair, 1909.

First in runabout class and first in championship stallion class for stallions under 15.1, Chicago Horse Show, 1909.

ADVANCE GUARD was sired by Inflator, 26,695, by Onward, 1,411, by George Wilkes, 519. Inflator's dam, Godiva, was by Egmont, 1,828. Egmont is grandsire of the famous show pair Lord Brilliant and Lord Golden. Godiva is the dam of Hubbett, 2:23½, and Alcolyte, 2:27¼. ADVANCE GUARD'S dam, Vernie Wilkes, is by Robbie Wilkes, 4,316, by Mambrino Boy, 844. Robbie Wilkes is out of Nora Wilkes by George Wilkes.

GOLD DIGGER—A Shorthorn bull, owned and exhibited by Wm. Smiley, of Malcolm, Iowa, a prize winner at Fairs of 1909. A reminder that all good farmers should lay by their crops and attend the Fairs.

Sheep and Lamb Trade.

One lot of strictly good lambs ught $6.60 per 100 pounds, which s the top of the market, while er right good lambs sold from 25 to $6.50; fairly good lambs, luding a good many Southwest bs, sold from $5.75 to $6.00. ll lambs, and there were lots of m, brought from $3.50 to $4.50, a rule. Best mutton sheep went $4.50, with most of them selling $4.25 to $4.35. Breeding ewes d stockers sold on a steady basis. t ewes brought $4.50 to $5.00, d best stockers $3.00 to $4.00; ile the common old skin ewes fairly good stockres sold at $1.50 $2.75. Bucks sold at $3.00, the ne as for the past month. All ces quoted are tat the price stated r 100 pounds.

WESTERN
Range Horse Sales

will be conducted by

ampbell & Reid and Western Sale Stables Co.,

ATIONAL STOCK YARDS, ILL.,
usual, during the season of 1910.

The August Sales will take place

HURSDAY, AUGUST 11 and 25,

nd every two weeks thereafter until e close of the season. We will be ad to hear from Ranchmen having orses for sale. The demand is sure be good, especially for well-bred ares and Geldings in good condition.

Please address
J. J. SEARCY, Sale Manager,
ATIONAL STOCK YARDS, ILL.

The Hog Market.

On August 1st, at the St. Louis hog market, a few lights brought $8.85 per 100 pounds, which was the top of the market, while the bulk of the hogs of all weights sold frrom $8.15 to $8.50. Butcher hogs went from $8.30 to $8.50; good lights, $8.50 to $8.85; while the best of the heavy hogs sold at $8.05 to $8.15; and medium grade heavies, $7.80 to $8.00. Hogs with weight were the ones that showed the greatest loss. It will be seen from this that the Eastern shippers and butchers, and no tthe packers are furnishing the competition on the St. Louis market.

Clay, Robinson's Service.

By shipping cattle, hogs or sheep to Clay, Robinson & Co. at any market in which they are established, shippers obtain the benefit of a line of service that will advise them and protect them in their purchases. They issue combined reports, special reports and special circulars for cattle, hogs and sheep. The packers are not any better posted than the customers of Clay, Robinson & Co. See page 11.

The St. Louis Mule Trade.

Holland, Nugent & Maxwell Bros., under date August 1st, advised their mule shippers as follows:

"The mule trade is about the same as it has been; very little change. There isn't any demand for anything but good miners and good, big mules. Don't buy any little outclassed stuff. There is no demand for anything but a good, big mule and a good, big miner at present."

St. Louis Beef Cattle.

On August 1st, at the St. Louis National Stock Yards, prime steers, 1,300 to 1,500 pounds average, were quoted at $8.00 to $8.25 per 100 pounds; choice steers, similar weights, at $7.00 to $7.85; medium to good steers at $6.00 to $7.00; choice to prime yearlings, high quality and fat, $7.50 to $8.00 per 100 pounds. Sales included twenty steers, 1,275 pounds, at $6.95; thirty-six steers, 1,265 pounds average, at $6.90; twenty steers, 1,253 pounds, at $6.60; sixty-eight steers, 1,228 pounds, at $6.75; steers, 1,228 pounds, at $6.75; twenty-one steers, 1,250 pounds, at $6.15; twenty steers, 1,250 pounds, at $6.00. These were representative sales.

Western Range Horses.

The season is on for the great sales of Western range horses and mules conducted at the St. Louis National Stock Yards by Campbell & Reid and Western Sale Stables Company. The sales take place every two weeks, and always on Thursday. The August sales will be held on Thursday, 11th, and on Thursday, 25th. These horses are put pp at auction and sell fairly at bidders' prices. The offerings range from colts and fillies to matured mares and geldings. The numbers at each sale range from 800 to 2,000 head. Further particulars can be had by addressing J. J. Searcy, Manager, National Stock Yards, Ill.

Southern Cattle Quotations.

The following quotations show the range of prices for Southern cattle at St. Louis, August 1st: Choice to prime corn-fed steers, $6.50 to $7.50; good to choice steers, $5.50 to $6.50; medium to good steers, $4.50 to $5.50; common to medium steers, $3.50 to $4.50; fair to choice heifers, $3.75 to $4.75; good to choice cows, $3.50 to $4.00; fair to good cows, $3.50 to $4.25; cutters, $3.15 to $3.50; canners, $2.50 to $3.15; bulls, $3.50 to $4.25; fair to choice heavy calves, $4.00 to $5.50; heretics, $3.75 to $4.25; yearlings, $3.00 to $3.75; vealers, $5.00 to $8.00—all quotations at the price stated per 100 pounds

A First-class Commission House.

In consigning live stock for sale at the St. Louis National Stock Yards, remember the Evans-Montague Live Stock Commission Company. It is a successful firm, highly competent and persevering in the interest of their customers. The Evans-Montague Commission Company solicit consignments of cattle, hogs and sheep for sale on the market, and desire stockmen to take notice that the company has special buyers who select and buy stock and feeding cattle for their patrons. Address, Evans-Montague Commission Company, Box 68, National Stock Yards, Illinois.

The Great Horse Firm.

Horses are sold to be sorted and put in classes and shipped to new destinations; therefore the price of a horse is not tagged for public information on the halter. Commission firms protect their customers all they can. Mr. T. H. Holland says: "Let a horse buyer once ship us a load of horses for sale on this market and thereafter he will understand us, and no matter where he may be buying horses, he can be kept advised and

MR. T. H. HOLLAND, of HOLLAND, NUGENT & MAXWELL BROS., National Stock Yards, Ill.

prevented from buying and shipping horses that are bound to lose money.

The advice we give the shipper and our private messages are worth as much as our action in the market selling the horses. We have a good market here, as shippers in Missouri, Kansas and Nebraska and other states will testify. Holland, Nugent & Maxwell Bros., at National Stock Yards, Ill., will be glad to communicate with horse buyers and shippers with a view to representing them on the St. Louis market.

During 1909 the number of declared settlers who arrived in Canada was 152,071. Of this number 72,349 came from the United States, 47,580 from the United Kingdom, and the rest from other countries.

Evans-Montague Commission Company

THE MEASURE OF SUCCESS attained by a SHIPPER OF LIVE STOCK depends largely upon THE COMMISSION HOUSE to which he consigns his CATTLE, HOGS AND SHEEP.

If you wish to receive TRUSTWORTHY AND RELIABLE SERVICE and have your consignments SOLD BY CAPABLE AND CONSCIENTIOUS SALESMEN, you cannot do better THAN PATRONIZE OUR HOUSE.

The Shippers' Interests ARE OUR INTERESTS, and our rapidly increasing business IS THE STRONGEST TESTIMONIAL of our ability TO PLEASE OUR CUSTOMERS.

Evans-Montague Commission Company
Box 68,
NATIONAL STOCK YARDS, ILL,

Diseases of the Horse.

During the present month, anyone who sends fifty cents to pay for one-year's subcription to The National Farmer and Stock Grower can seiect as a premium a copy of Magner's book, Diseases of the Horse. This book is a standard work. It contains 116 pages, with articles on telling the age of a horse, methods of shoeing, and after the part devoted to diseases of the horse there are careful instructions as to their treatment. The book contains many illustrations. Send fifty cents to the Hale Publishing Co. to pay for The National Farmer and Stock Grower for one year and select this book. We will send it postpaid, safe deliery guaranteed. Address, Hale Publishing Co., 3550 Vista Ae., St. Louis, Mo.

THE TWICE-A-WEEK ST. LOUIS REPUBLIC

is a magnificent newspaper, containing all the latest home, foreign and political news. It is undoubtedly the best Democratic newspaper in the United States. We highly recommend this paper.

The National Farmer and Stock Grower is a large, clean, general farm monthly publication, full of practical interesting and instructive information. It contains good reading for all the family. It comes useful to all real farmers, to vegetable and fruit growers and especially to stock men. Sheep, cattle and hogs are treated of by men who are not dealers, and if you have any questions to ask about your stock, you will get a reliable answer. It is published once a month, 12 times a year, or twice every day in the month.

Combination Offer.

Send us $1.40 in cash or postal note by mail to address The St. Louis Republic Twice-a-Week Edition for one year, and The National Farmer and Stock Grower for one year. Address EVANS SUBSCRIPTION AGENCY, 3551 Vista Ave., St. Louis, Mo.

The new crop of broom corn is selling at $140 per ton for fair to $160 for choice. New arrivals are from Texas.

THE SEWING AWL.

A Most Useful Premium For Subscribers to The National Farmer and Stock Grower.

A farm on which there is not a sewing awl is in difficulties when work is most pressing. It is surprising how useful this little implement is. It is the Myers Famous Lock Stitch Sewing Awl. It is the only sewing awl made with a groove running the full length of the needle and has what is known as a diamond point. In order to sew leather or any heavy, thick material without breaking or cutting the thread it requires a needle with the groove running the full length of the needle. You might just as well have no groove in the needle as to have it only part of the way. With the Myers Awl you can sew old or new harness, saddles, carpets, canvas, tents, rugs, quilts, shoes, grain bags, and many other things. You can use any kind of thread in the Myers Awl, and it makes a lock stitch same as a sewing machine. It is very simple; a woman can use it as well as a man. It is one of the most practical devices ever invented. They are put up with two needles; one is straight and one curved, with a small screw-driver and wrench combined. Also a reel of waxed thread with each awl ready for use. Every teamster and farmer should own a Myers Lock Stitch Sewing Awl, as there is use for one in almost every household. The Myers Awl is nicely finished, the metal parts are nickel-plated, the needles and wrench are kept in the hollow handle, which has a screw top.

Anyone who will send One Dollar cash to pay in advance for two-years' subscription to The National Farmer and Stock Grower can select one of Myers' Lock Stitch Sewing Awls, which we will send by mail, postage paid, as a free premium. Address, **Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

Hammond's Handy Atlas of the World.

This great Atlas contains 107 pages, 6x8 inches, is printed in colors and is bound in a durable red-cloth cover. It contains seventy full-page maps of every state and territory, with new railroads and towns: Every country in the world is shown by maps of the latest plates. We use this Atlas as a subscription premium. For sixty (60) cents paid in advance we will send one copy of **Hammond's Handy Atlas** post free by mail and credit one-year's subscription to The National Farmer and Stock Grower. Address, **Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

A Coyote-proof Sheep Pasture.

The enclosure of a sheep range within a coyote-proof fence has been tried in Colorado by F. H. Taylor, of Mancos, with highly satisfactory results. An experiment begun by the United States Department of Agriculture on the Wallowa National Forest, in Oregon, to discover whether sheep could be advantageously pastured within such an enclosure, led Mr. Taylor to give the new method a trial. The outcome is set forth in a letter to the Department, as follows:

"After reading the description of your coyote-proof fence in Oregon, I constructed a fence to enclose about 500 acres in the same manner. The fence was constructed during the fall of 1908, and in the springs of 1909 and 1910 one thousand head of ewes were lambed in this enclosure." In the vernacular of the herder, "one hundred per cent. of the lambs were saved," that is, a lamb to each ewe, "and one man did all the work. I think the percentage of the lambs would have been higher, but one animal, presumably a coyote, was inside when the fence was constructed. It was impossible to capture this animal even with hounds. Some of the herders thought the animal was not a coyote, but since coyote tracks were found in several places, I am of the opinion that it was. Whatever the animal was, it raised its young inside the enclosure."

Connecting his loss with the rapacity of this animal, Mr. Taylor says:

"A great many of the lambs were killed and a small hole eaten behind the foreleg and the remainder of the carcass was untouched. On the land outside of the enclosure it required the services of three men and a pack of hounds to care for one thousand ewes, and only 95 per cent. of the lambs were saved. This number could not have been saved without the assistance of the hounds.

"I consider this fence a splendid investment, since it easily pays for itself in three years. On the other hand, it is often difficult and sometimes impossible to get men during the lambing season. For this reason the money value of the fence can hardly be estimated."

The Department of Agriculture entered upon the experiment of enclosing sheep range within a fence which would turn stock-destroying animals, in the belief that this method would save forage as well as stock and wages. This belief has been fully justified by the results. The Oregon enclosure carried more sheep than an equal area of range of the same quality outside, produced a heavier lamb crop, heavier sheep and more wool and at the same time resulted in a better condition of the range itself. These advantages are due to the different behavior of sheep pastured within such an enclosure from that of sheep herded in the ordinary way.

When a band of sheep moves about in charge of a herder, it must be kept from scattering much. As a result, much of the forage is wasted through trampling. Within an enclosure, however, the sheep soon learn to spead out and shift for themselves. Under these conditions it is not to be wondered at that a given area supports more sheep, puts them in better condition and suffers less wear and tear. The success of the new method, however, depends on the extermination of all dangerous animals within the enclosure and on the maintenance of a fence which will keep off outside attacks.

Mr. Taylor believes that the Wallowa plan of construction is open to improvement in one particular. He advocates placing a barbed wire on the ground before the woven wire is unrolled and stapling it down. "I expect to build another enclosure soon," his letter concludes, "and will have a barbed-wire stretched around the enclosure and have the men place their foot on the wire and press it close to the ground and staple it. With the fence already constructed it seemed almost impossible to get the wire as close to the ground as is necessary on account of the uneven surface."

Origin of the Poland-China.

"The truth is, no one man can say he had more to do with the formation of the Poland-China breed than another. It was the result of the labors of many. It grew out of the introduction of the China hogs by the Shakers of Union Village, Ohio, their crossing with the Russian and Byfield, and the subsequent crossing with the Berkshires and with the Irish Graziers. After 1841 or 1842, these breeds ceased to exist in either Butler or Warren counties, and have had nothing whatever to do with the Poland-China breed for the last thirty-four years. Controversies as to the precise crosses and by whom and under what particular circumstances they were made, prior to the middle of the last century, to form the breed, may interest a few, but what is vastly more important to the practical swine breeder is the fact that there was produced a race of swine now bearing the name of Poland-China that has been able to hold its own for three-fifths of a century as the most popular and most widely-distributed pork-making machine in the foremost pork-producing region of the world." — From Coburn's "Swine in America."

The Sow and Pigs.

"Whether or not a sow is safely in pig will be known usually about twenty or twenty-one days after coupling, so that the probable time of farrowing may be known. The period of gestation is about 112 days from the date of service. Young sows are likely to carry their first litter for a slightly shorter period, not infrequently farrowing in 106 or 108 days, while old sows may take a longer time, extending to possibly 115 days. Instances are exceptional when any variation either way exceeds a week from the 112th day."—From Coburn's "Swine in America."

Results of Lamb Feeding.

In a lamb-feeding test at the Wyoming Experiment Station the average gain was .29 pound per lamb per day. The best gain, .35 of a pound daily, was produced on a feed of corn and alfalfa, .28 of a pound daily on barley and alfalfa, .29 of a pound daily on emmer and alfalfa, and .25 of a pound per day on corn and native hay.

The lambs averaged about 64 pounds each when put up to feed; were fed ninety-one days; weighed 89.1 pounds when shipped from Laramie, and shrank 8.3 pounds per head on the road to Denver.

A gain of 10 to 12 pounds a month in feeding lambs is considered very good. This experiment indicates feeding with the foods tested.

After having traveled across the continent from San Diego, Calif., behind a pair of Angora goats, Captain V. Edwards, owner of a ranch in California, called on the goat experts of the Agricultural Department, Washington, D. C., July 25. He came to receive and impart information about the angora goat industry and incidentally to show his fine goats.

THE DOMESTIC SHEEP.

There is one modern writer on Sheep industry who has made his mark. It is Dr. Henry Stewart. He has written a book entitled **The Domestic Sheep.** It is up-to-date in every particular. There are 384 pages, and besides going into the subject in a practical way there are illustrations of every breed and every subject belonging to the industry. For $1.50 we will send **The National Farmer and Stock Grower** for one year and one copy of **The Domestic Sheep.** This is the time to study the sheep business. There is money in it. Address,

HALE PUBLISHING CO.,
3550 Vista avenue, - St. Louis, Mo.

Master Painting Post Cards.

Send us 50 cents and we will send you The National Farmer and Stock Grower for one year. We will also send you as a free gift or premium **Fifty Illuminated Post Cards.** The fifty cards are put up in a telescope box with leatherette covering and gold embossed top, known as the Edition de Luxe. These cards are reproductions of the most famous paintings by the great masters and are an art course in themselves. They are called the **Master Painting Post Cards.** We have never seen a set of Post Cards before that in any way compare with these. There are fifty of them, every one a reproduction of the most glorious painting in the history of the world. Address, **Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

MAGNIFICENT SUBSCRIPTION PREMIUM.

The National Farmer Hat.

The sizes are from 6⅝ to 7½. They are hats suitable for men or boys. They are of good material, well made and stylish. These hats are sent direct from the manufacturer to the subscriber in a tube and sent by mail prepaid. These hats are black and steel gray. We send black unless gray is called for. These hats wear as well and last as long as any $2.00 to $3.00 hats on this market. They will give entire satisfaction. The subscription price of The National Farmer and Stock Grower is One Dollar for three years. We cut out one year, and in place of the third year we include the hat. Therefore, send us One Dollar to pay for two-years' subscription to The National Farmer and Stock Grower, and we will send you by mail one of these fine National Farmer hats as a premium. Be sure to mention the size and color.

A Turkey District.

Cuero, Tex., now comes forward with the claim to be the largest turkey-shipping point. A news item says: "There are several concerns here which handle turkeys on an extensive scale. In order to be better equipped for the coming season's turkey business, the Cuero Dressing Company is enlarging its cold-storage plants. There are two large cold-storage plants and slaughter houses here that are devoted to handling turkeys. Great droves of turkeys are raised by the farmers all through this section. They are a big help in ridding the cotton fields of the boll weevil pest."

Keeping Dressed Poultry.

The keeping of dressed poultry is a matter that has long engaged the attention of scientists. It is not the simple matter it seems. It is not true that a tub of dressed poultry can be kept very long by putting in any amount of ice.

The mere freezing of poultry does not entirely stop decomposition. The freezing point is 32 degrees above zero, and that is the point of melting ice. The ice that is put into a barrel or tub affects the flesh only as it melts, and therefore does not reduce the temperature of the bodies much below the freezing point.

At the temperature of freezing, certain ferments continue to work, and even work vigorously. This fact is now being taken advantage of in the curing of cheese. It has become quite common now to cure cheese by keeping it below the freezing point. The curing is the result of the multiplication of minute forms of vegetable life in the cheese. The flesh of poultry and all meats are affected in the same way.

It is now a popular error to imagine that all life activity stops at the freezing point. If this were so, then frozen meat could be kept indefinitely, but a greater degree of cold must be secured before the development of germ life can be arrested.

Numerous experiments have already been made, and it has been ascertained that when a temperature as low as five degrees above zero is reached, bacterial action is almost wholly stopped, though not all bacteria are killed at that point. But for the keeping of meat and butter and cheese, this temperature of 27 degrees below freezing is sufficient for all ordinary uses.

Even when the temperature is lowered to 40 below the freezing point (eight degrees below zero), only a part of the bacteria is killed, and the ones left alive are ready to begin work as soon as the temperature rises. This is why frozen poultry decays so quickly after it is thawed out. If ice is present, the melting of the ice gives the moisture needed for bacterial development.

If poultry were frozen perfectly dry, the result would not be the same, for the bacteria would not have the moisture for its development. For this reason it is a bad plan to mix ice and the flesh to be kept, unless the flesh is to be used immediately after being taken out of cold storage or out of the ice in which it is kept.

Avoid dampness in the keeping of poultry. If the air is dry enough to dry up the surface of the flesh as soon as the fowl is dressed the meat will keep a long time, even without ice, if the temperature be not too high.

If poultry be drawn carefully and the intestinal cavity dried out, the flesh will keep sweet a much longer period than if the intestinal cavity be left moist.

Most of our ice chests and refrigerators are so constructed that the air is saturated with the moisture from the melting ice. This is a good arrangement to get away from.

Poultry Notes.

Perfection, a white Wyandotte male owned by George H. Rudy, a poultry fancier of Mattoon, Ill., died on May 28th. He had fourteen times won the blue ribbon at principal exhibitions, and was undefeated show bird, having competed with 1,000 of the best of the breed. One of his sons, Perfection,2d, sold last year for $150.

Commercial Poultry says: "One squab raiser at Morristown, N. J., last year sold $25,000 worth of these birds. Most of them went to the big hotels and restaurants of New York and to supply the great steamship lines."

The Thirty-fifth Annual Convention of the American Poultry Association will be held at the Planters' Hotel, St. Louis, Mo., from August 15th to 20th.

Michael K. Boyer, authority on poultry subjects, says that one man on four to five acres suitably situated can find pleasant and profitable occupation and a better income than many hard-working people are making.

In a number of Eastern poultry yards, where 12,000 chicks are raised, the average percentage of live chicks from incubators was better than 75 per cent.

It is now said that the surest way to get 200 eggs per layer per year is to get Indian Runner ducks.

Hereafter, in New York state, the most popular breed of fowls will be the one that can lay the largest number of eggs to weigh an even pound.

The lawmakers who require eggs to be sold by the pound and not by count would find themselves in difficulties if they sold eggs at all. Eggs cannot very well be broken to make up an even pound any more than they can be stretched to make an even yard. It was always a sure thing that twelve eggs made a dozen.

Tuberculosis in Chickens.

Tuberculosis in chickens has been found in five cases this year by the State Hygienic Laboratory at the University of Wisconsin. In no case, however, has it been proven that people have contracted the disease through eating such fowls.

"It is quite evident that the chickens get the disease by pecking about in barn-yards where there are cows or people infected with it," said Dr. M. P. Ravenel, Director of the laboratory, recently. "We had a chicken sent us not long ago from the neighborhood of Janesville. We found the bird had tuberculosis, and upon visiting the farm it had come from, discovered nearly every animal in the entire dairy herd there badly infected.

"Few cases of the disease among fowls have been reported hitherto, only two or three having been known in the United States until this year."

Warning—Bad Eggs.

It is up to the farmer. The egg movement must be quicker. The hen lays the egg to-day and it ought to be on the road to market to-morrow. Every stop between the farm and the consumer endangers the product. After July 15 in Missouri there is close inspection of eggs. Eggs will be fresh when the hen lays them; will have to be fresh when the country speculator gets them; will have to be fresh when they are sold to the country store; will have to be good when they are shipped to the city market; will have to be O. K. when the retailer gets them, and have to be just so when the consumer buys them.

If the consumer receives bad eggs from the retailer, the retailer is up against it; but he in turn can charge the commission man with selling rotten eggs; the commission man can come back on the country store; the country store can have the farmer arrested, and he in turn can arrest the hen.

The law says: "The sale and keeping for sale or offering for sale of any food product that contains a poisonous or deleterious ingredient or substance, due to filth, putrescence, disease or decomposition, is prohibited. The sale, keeping for sale or offering for sale of tainted or rotten eggs is prohibited. The penalty for each offense is a fine of not less than ten dollars nor more than five hundred dollars, or by imprisonment in the county jail not to exceed six months, or both, and in addition be adjudged to pay all costs and expenses incurred in inspecting and analyzing such food or drug."

Low Wagons For Silage Hauling.

In a little while, at silage-making time, the low-down handy wagon will again demonstrate its great advantages. Hauling green corn is heavy work, at best. It is all foolishness to lift it onto a high-wheeled wagon. We suggest that readers who will be making silage take this as a timely note of warning and look into the merits of the low wagon for this purpose.

As a matter of fact, low wagons are great labor savers at all farm work. No reason why they shouldn't be used for hauling stone, manure, posts, wire, potatoes, grain, hogs to market, etc. Silage hauling is simply a more striking illustration of the advantages. The advantages for all farm hauling will be apparent when you look into the matter. If you are looking for a first-class wagon of that type, write to the Electric Wheel Company, P. O. Box 40, Quincy, Ill., and get particulars about their popular Electric Handy Wagon. If you desire, they will supply you with low steel wheels, to turn your old running gears into a "handy wagon."

Egg-shipping Clubs.

Poultry raisers in every community will find it to their advantage to form egg-shipping clubs. The unit of a shipment is a case of thirty dozen. One farmer may not be able to send a case to market every day or two, but an egg-shipping club can be organized by a community of farmers to do so. Every member of the club should take his turn as manager and be allowed so much per dozen for receiving and shipping. He or she should keep the books and pay over the actual net amount received. All eggs not distinctly fresh should be refused by the collector. Every shipment should catch the train that carries the case of eggs to market. They should be consigned to a commission firm and not to a buyer. The duty of a commission house is to sell the shipment to the best advantage and make honest returns therefor, charging a fair commission for services rendered. If a commission man does not rustle hard to sell the case of prime fresh eggs at a good price, try another commission firm. A trade can be worked up for every case of fresh eggs that farmers can send to market. There are plenty of markets to ship to.

Farmers who dump their eggs, a week or two weeks old, on a country store are not wise farmers. They think the country store is the market, but it is not. The country store fills up the egg case with doubtful eggs from everybody, and they do not sell high in market. The egg-shipping club is able to get more money for eggs than the country store.

Make good rules. The first is that a member who quits the club cannot come back again; that will hold the kicker and disorganizer; the other rule is, keep the club down to an economical working circle. Don't take in people too far away; let them start clubs of their own; furthermore, don't allow any eggs in the case that are not laid by the hens owned by the members of the club.

There are numbers of egg-shipping clubs. We would like to hear from some of them about their rules, their methods and the results.

POULTRY HOUSES, COOPS, ETC.

This is an up-to-date poultry book, written by H. A. Nourse, editor of the Poultry Herald. It was prepared during the past year and is the result of many years' study and experience. It is a book of newest plans for building poultry houses, with description of coops, fixtures and poultry utensils for the farm, village or suburban poultry keeper. It is a book of 100 pages, and is finely illustrated. It is worth its weight in gold. We are sending The National Farmer and Stock Grower for one year and the book Poultry Houses for 60 cents. Address, Hale Publishing Co., 3550 Vista Ave., St.Louis, Mo.

FARM BLACKSMITHING.

Here is a book for the farmer. The book was written by A. J. Drew. It is a complete treatise on blacksmithing from the farm standpoint. This book teaches how to profitably spend stormy days. Many thousands of farmers will find it to their interest to own a copy. There are 100 pages. It is nicely and clearly illustrated and bound in cloth. We credit one-year's subscription to The National Farmer and Stock Grower and send one copy of this book by mail for 65 cents. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

FOR THE FRUIT GROWER.

Someone in the family ought to be a fruit grower; and yet it is very hard to interest the stockman in fruits. We will do our best, however, by placing a good fruit book in the hands of our readers. The book entitled Amateur Fruit Growing was written by Samuel B. Green, a practical man and one of the best authorities on the subject. There are 134 pages, written with special reference to the growing of fruits for the home and the market. We will send the book entitled Amateur Fruit Growing and The National Farmer and Stock Grower one year for 55 cents. Send a money order to Hale Publishing Co., 3550 Vista Ave., St Louis, Mo.

Helps For the Economical Girl.

"Take care of the pennies and the dollars will take care of themselves," is a trite saying, and when a girl has learned to take proper care of her clothes she saves many a dollar, for they not only look better but last twice as long.

If your parasol is worn down the seams, sew narrow strips of velvet down each seam and sew three or four rows around the edge; and if the cover is worn, rip off the old cover and cut out one section for a pattern and make a new cover of sateen or any preferred material.

Clean your white shoes with gasoline and let them stand for an hour or two, then wash them with peroxide of hydrogen and place them in the sun.

White kid shoes may be colored black with any good dye by applying it warm with a brush, and, when dry, the shoes can be given a coat of black shoe polish.

You can have nice cuff links by buying four pretty buttons and sewing a small cord through the shanks of two of them and then working over the cord with thread to match the buttons, and one may have a pair of links for every shirt waist if desired.

Fine white waists last twice as long if they are rubbed lightly in the washing, and they need very little rubbing if they are put to soak in warm suds in which a little borax is dissolved, as this softens the water and whitens the fabric; and there is nothing better than this suds for washing chamois gloves. After washing them clean through this suds, they should be rinsed through a light suds, so a little of the soap can be left in the kid to keep it soft.

The borax suds is excellent for washing the pretty ginghams and muslins, as the borax helps to keep the color in the goods and it is fine for washing woolen dress skirts of any color.

I have seen summer waists made prettier than when new by setting in a vest when they had become too tight across the bust.

Artificial flowers and straw hats can be made to look like new by dissolving some water-color paint of the desired color in gasoline and painting them with a paint brush, and sometimes the addition of new leaves, which can be bought for a trifle, will give the flowers a fresher appearance.—Aline.

Table Rabibts.

(By A. V. Meersch, Poultry Specialist. Written for The National Farmer and Stock Grower.)

Amongst the various branches of small stock farming or useful adjuncts to poultry keeping, for which these series are written, there is surely none more profitable, less troublesome and quicker and more certain to bring in a good return than the production of rabbits for the table. There is in this country a surprising, great—one may say an enormous and daily increasing—demand for young, well-fed and tender rabbits which our home supply is at present quite incapable of satisfying. What the actual quantity of home rabbit flesh supplied to the various large markets and private customers throughout this land is, is impossible to ascertain. The quantity must be very great. Think of the thousands upon thousands of wild rabbits shot throughout the year, of which it is safe to say that not many are permitted to go to waste; think of the further thousands of tame rabbits which are killed for table purposes and try to imagine if you can what an amount of rabbit flesh consumed these represent? Yet in spite of these and of the millions of dead rabbits which we yearly get, a plump young table rabbit has no need to go a-begging for a purchaser.

And what is the quantity of rabbit flesh which we have yearly to get from our Western States to our Northern markets to help to satisfy our craving for this meat? According to the Board of Trade returns, we obtained in 1902 not less than 341,037 hundredweight of dead rabbits from far-away distances to the North, and 110,420 hundredweight from nearer-by states, making a grand total of 451,457 hundredweight. Think of the number of rabbits this weight represents and their value in dollars, a value which has been lost to the home producer. 1902, is it true, was a record year, but the average is not much lower. In 1903 we had great value of them in one month alone. In December, a month in which wild rabbits are plentiful, we spent $50,737 in wild rabbit flesh in our Northern markets, every cent of which might have gone to enrich the home producer, table rabbits being one of the few things which we could comfortably raise in sufficient quantity and of sufficient excellence at all seasons and in all kinds of weather, to be entirely indeper-dent of far-away states.

Given a plentiful supply of cheap green stuff, plentiful in comparison with the number of rabbits intended to be raised, rabbit-keeping pays and pays handsomely. Experience, of course, is necessary as fodder, but by beginning in a small way and increasing by degrees as knowledge is gained up to the limit to which accommodations, food and time permit, a very welcome addition may be made to the income. There are a few, yes, a very few in this country, and there might be many who look to rabbit farming for the greater part of their total earnings. There are many more who regard rabbit raising as a very profitable adjunct to their pursuits. The number of these might be vastly increased with benefit, and it is to this class of rabbit keeper that I would wish to appeal more especially.

The power of multiplying possessed br rabbits is proverbial. A rabbit properly housed and treated will breed at practically all seasons, and the litters are large and frequent. By using a suitable variety or cross, the young may be brought to a suitable size for killing in twelve weeks, and frequently even ten. The room occupied by the stock is small, the appliances are simple and may be inexpensive, and the food bill is or should be small. Even the purchase of the breeding stock requires no large outlay of capital. Here, then, are all the essentials for making a good profit, particularly as there is no difficulty in disposing of the product, and good prices are obtainable.

Table rabbits sold at eight cents per pound live weight pay. Rabbits at killing age should not weigh less than four pounds, and the cost of rearing and fattening them should not exceed eighteen cents each. It will be seen that there is a good margin of profit after deducting the cost of marketing and the percentage fro the cost of appliances, etc. In addition, there is the manure available for garden or field, and the paunches, which, if the rabbits are killed in any quantity, provide valuable food for pigs and may be retained as such. Eight cents per pound is, however, a low estimate, ten cents and thirteen cents being the usual price.

Warm-weather Hints.

With the return of hot weather extra care must be taken with the food products. Not all farm homes have ice, and some of the precautions of the season are not dependent upon cold storage.

The flour and meal bin is one of the great sources of trouble. Do not criticise your dealer for furnishing the damaged article when the trouble may really be due to carelessness on your part. If you flatter yourself that your bin is tight, remember that a very tiny crack wil admit an insect. It is safest to keep it in paper sacks in the bin and to tie them up carefully after using.

A bag carelessly tied is in reality little protection. Some of the dealers set us a good example in this respect. The sack is first folded over an inch across the top, and then the top is neatly gathered together and tied. This practically shuts out all chances for insects to enter providing there is no hole in the sack.

A pitcher of milk or cream may be kept delightfully cool without ice by wrapping it in flannel wrung out of cold water and kept constantly wet. The evaporation in drying keeps the temperature down. This same principle may be used in cooling a room, if there is no objection to the attendant dampness. Wring sheets out of cold water and hang them over doors and windows. You will be surprised at how much cooler this will make the room.

Keep all cereals carefully shut up. Avoid buying such food in bulk at this season of the year. It is cheaper to pay a little more than to take the chances of getting damaged goods.

When bread or cake becomes stale and you are not ready to use it, dry thoroughly and shut up in a tight can. It will then keep without moulding. But let it get cold before shutting up, or the heat will condense and form moisture within the can.—Bessie L. Putnam.

The steamships carrying meats from Australia to England have raised rates a second time—getting all the traffic will bear.

The BOOK of LIVE STOCK CHAMPIONS.

The Most Valuable Live Stock Publication Ever Issued. An Elegant Cloth-bound Book. 240 Pages. Pages Magazine Size.

CONTAINS 500 OF THE FINEST ENGRAVINGS OF FAMOUS ANIMALS.

DAN PATCH, 1:55.—One of 500 pictures in Book of Live Stock Champions.

THE BOOK OF LIVE STOCK CHAMPIONS.

Special Offer of the Complete, Cloth-bound, Up-to-Date Edition, With Two-years' Subscription to The National Farmer and Stock Grower.

This great work was first published in March, 1903, a paper-covered volume of 126 pages, containing 250 pictures. It was enlarged in 1904 to a volume of 190 pages, containing 400 elegant pictures. The present enlargement makes it a volume of 240 Pages, weighing 24 ounces, containing

500 Half-tone Pictures

Every picture in The Book of Live Stock Champions represents a champion in domestic live stock. There are first-prize, sweepstake and championship winners at State, National and International Fairs and Expositions. The pictures include every breed of dairy, beef and general-purpose cattle; running, trotting, pacing, jumping, coach and draft horses and ponies; fat swine and individual champions of every breed of sheep; also famous Angora goats.

The photographs bring back recollections of the Chicago Columbian and Pan-American Expositions, the Louisiana Purchase Exposition, the Chicago International and the principal State Fairs on this continent.

There is not a second-class animal or inferior picture in the book. Every animal is a record-maker, record-breaker, famous sire, mother of champions, or winner on the turf or in the prize ring.

Every picture is placed in the book without any charge whatever. No amount of money would buy a place in the book for an inferior animal, and the pictures of champions have to be worthy of the animals, or they are rejected.

This beautiful work is a Souvenir Supplement to The National Farmer and Stock Grower, and cannot be purchased in any other way. Anyone who will send in One Dollar to this office by mail will be credited with any arrears now due and with two-years' subscription to The National Farmer and Stock Grower, and a copy of the complete, cloth-bound, up-to-date Book of Live Stock Champions will be sent by mail, postpaid.

Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

ew Method of Making Money on the Farm.

There is seldom a week passes ithout one finding new ways for aking money on the farm. The p-to-date farmer has long since bandoned the idea that his entire evenue lies in his crops, poultry and ock, and is continually on the look- ut for new plans to increase his rofits.

One of the largest roofing manu- acturers in the country now comes ut with some new steel shingles, hich actually pay back to the rmer from four or five times what pays for them.

The manufacturers claim that it sts less to shingle a roof with "Reo" eel Shingles than it does to shingle with wood shingles, and that the Reo" Steel Shingle Roof will out- ear at least four wood shingle roofs d six composition or tar roofs.

Furthermore, the "Reo" Steel ingles reduce insurance rates from to 20 per cent. Working on the eory that "A penny saved is a nny earned," these Steel Shingles ould certainly be good money akers on the farm.

By writing the Edwards Manu- cturing Co,. 847 Lock street, Cin- nnati, any of our readers can get ll particulars regarding these Steel ingles and the $10,000 guarantee nd which is furnished each pur- aser of "Reo" Steel Shingles.

The Popcorn Industry.

(By Arch T. Edmonston, Statistical Bureau of Labor of Missouri.)

To indicate how profitable pop- rn is, and to induce farmers to vote several acres to this grain in 11, the following facts are given show what has been accomplished a popcorn farm in Iowa.

One man with forty acres planted opcorn received $3,780 for his op last year. Out of this sum he id $5.00 an acre for the picking d harvesting. This, together with other expense, including inciden- ls and the rent of the place, totaled 3.50 an acre. His net profit on entire crop was about $3,240, hich meant a net profit of exactly 1 for each of the forty acres anted to popcorn. The average rnings, however, are $50 an acre, ove all expenses.

Pickers in the fields are paid out 15 cents a hundred pounds, nd a skillful picker can make about 3.00 a day. This work includes ard beside the wages. Popcorn ust be picked with great care and husks or silk left on the ears.

Popcorn Culture.

One of the strictest rules in the lture of popcorn is the handling of e grain after it has been harvested. o time is allowed to elapse after e picking until it is safe in a roofed rib, especially constructed for that se, for upon the thorough drying the grain rests its grading and its pping qualities.

The cribs are of strips of wood, uch narrower than those in the des of an ordinary corn crib, in rder that the air apertures may ccur with greater frequency. A mplete air circulation is estab- shed in many cribs by laying a line loose drain pipes through the opcorn.

Many cribs are fitted with drying ues at intervals of about six feet, nd various other means are taken insure a complete drying of the rop. Each kernel or grain must ry throughout. Popcorn that is amp on one side or in the center ill not pop freely and perfectly.

Many farmers hold their popcorn ntil late in the winter for a higher Seed popcorn is worth five cents a rice market.

ound. It usually takes five or six pounds of seed to the acre. A pop- corn farm on the outskirts of a large city, if properly run, pays well.

The Horse That Came Back.

Country Jay, the fourteen-year-old trotter, proved the wonder in harness history when he won the second heat of the 2:05 trot in Kalamazoo, Mich., July 29th. He made a new record for himself in the time of 2:05¼. Country Jay won this race, which broke the world's record for the three fastest heats ever consecutively trotted, the time being 2:04¼, 2:05¼ and 2:05½. Gus Macy drove Country Jay. Sonoma Girl won the first heat.

And the Cream Whipped.

This is an unjust world.

Yes; even the innocent egg gets beaten for other people's desserts. —Boston Transcript.

HARDY, EVER-BLOOMING ROSES.

The Most Delightful Subscription Premium Offered by a Farm Paper.

The Coming Season We Will Help to Establish Rose Clubs and Offer Prizes For Competition in Rose Growing.

The National Farmer and Stock Grower will again offer rose plant premiums. It is rather early to begin advertising them, but it is our intention to introduce a new feature and to make rose growing an interesting contest, just as it is a delightful pastime.

The roses will be offered as a subscription premium, and it is by far the finest collection that can be obtained. There are eight varieties.

Collection of Roses.

No. 1. Rhea Reid. One that received the gold medal at the National Rose Society. The flowers are rich velvety red.

No. 2. The Bride. A rose that will thrive under most unfavorable conditions. The flowers are the purest ivory white.

No. 3. Etoile de Lyon. This is a most magnificent yellow rose, massive in size and beautiful in every stage of development.

No. 4. The Bridesmaid starts with the first warm days of spring and requires but little care. The flowers are an exquisite clear pink, beautiful in form and highly fragrant.

No. 5. The Papa Gontier rose is a grand variety for outdoor planting, producing double flowers of clear, glowing crimson and blooms from June to late in the year.

No. 6. Bessie Brown is a charming, pure snow-white rose. The flowers are very large and it blooms profusely.

No. 7. Champion of the World is a rich, ivory pink, and without it no garden selection is complete. It is unequaled for size of flower, fragrance or beauty.

No. 8. Crimson Rambler, the last of the collection, is a bright crimson flower that covers the entire bush. It is valuable for decorative hedges, arches and screens.

We cannot properly describe this beautiful collection, but we will guarantee them to please any lover of flowers.

OUR SPECIAL OFFER.

This special offer is a sixty-cent proposition. Each subscriber sends us 60 cents and each subscriber will receive: 1st. The National Farmer and Stock Grower for one year; 2d. The set of Eight Hardy, Ever-blooming Roses. They are one-year plants, each plant with the name attached. 3d. A lovely picture by Paul De Long Pre entitled "American Beauties." This picture is 10½x14 inches and is a panel picture, reproduced from the original painting for which the artist received $2,500. This picture of American Beauties is truly unsurpassed in artistic excellence. The subscription to the paper will be credited as usual, the plants will be sent out at the proper time, and the picture will be sent on receipt of the subscription.

Club Membership and Prizes.

It is our intention to encourage the organization of rose-growing clubs by offering prizes to be competed for and awarded whenever twenty-five or more subscribers can be obtained in one community. If the club is formed, a flower show is the result, and we furnish premiums to be competed for by roses originally furnished by us. It will furnish a basis of a local flower show. We will furnish clubs of fifty the amount of $5.00 to be awarded in prizes. Clubs of 100 will receive $10.00 for prizes. Clubs of 150 will receive $15.00 for prizes, and in addition wherever a club is formed we will furnish the ribbons to be awarded—a suitable inscription on each. Rose clubs will make their own rules, set their time for exhibit, and are advised to connect with some other exhibit in their own community, and so enable them to include other flowers in the show.

The Rose Club Idea.

The rose-growing club idea has come to us just as we are issuing this edition of The National Farmer and Stock Grower. We hope our friends and patrons will help us to carry out the idea. We hope to start a thousand clubs. Don't wait to complete your club. Send in your own subscription and encourage others to do the same. It does not take long to get together a rose club. If it is impossible to raise a large club, we will make our prizes in proportion to the total membership. Whenever clubs are started they will be announced in the paper.

BLANK TO BE FILLED OUT.

The Hale Publishing Co.:

Gentlemen:—Herewith please find 60 Cents. On receipt of same please credit me with one-year's subscription to The National Farmer and Stock Grower; send me at once the picture "American Beauties" and put my name on list for the set of Eight Hardy Ever-blooming Roses to be sent as soon in spring as it is safe to do so.

The Farmer's Prize Ear.

"You took a vacation last summer?" he queried of the clerk in the music store.

"Oh, yes."

"Went to a farm house, probably?"

"I did."

"Seven dollars a week?"

"Just seven."

"Have any moonlight nights out there?"

"I can't remember."

"Any girls around to spoon with?"

"I have forgotten."

"Catch any fish?"

"Well, really, now—"

"Milk and vegetables all right?"

"Dear, dear me, but my memory is bad."

"Do any bathing?"

"Say, now—"

"Do you remember any one thing that happened to you?" demanded the questioner.

"Oh, yes. I worked an ear of corn out of the mattress of my bed and carried it to the farmer and asked what he thought of it, and he replied:

"'Gee whiz, but I lost that ear over five years ago, and have been looking for it ever since."—Joe Kerr, in Exchange.

"Mandy Lee" is Moving.

The year 1911 is to witness some important developments in the incubator world. One of the big concerns, shipping all over the country, is establishing a great plant in California to handle its Pacific coast and export trade. The George H. Lee Company, which is so well known to our readers, has outgrown the plant at Omaha. Mr. Lee has for some time been in California laying the foundation for future operations. He has established a permanent branch house at 225 West Second street, Los Angeles. The factory may go elsewhere. The exact location has not yet been determined. The probabilities are that it will be located at some good shipping point in the redwood country, from which car-load shipments can be made to the East and supplying his great California trade will be made an easier matter. We are informed that the 1911 Mandy Lee will make something of a sensation in the poultry world. Readers would do well to take notice and know the Mandy Lee before buying. In addition to improvements, two new large-sized incubators and a lamp-heated outdoor brooder are to be added to the line. The company sees a flood of business in sight, and is laying a good, broad foundation to take care of it. Particulars of 1911 Mandy Lee doings will be mailed to anyone writing to the Omaha or Los Angeles office.

I WANT A MAN

of good character in each city and town to act as my

THE HORSE FAIR—BY ROSA BONHEUR.

Great Combination Subscription Offer.

Four Leading Papers One Year and Beautiful Picture of the Horse Fair All For One Dollar.

The National Swine Magazine is a splendid publication, issued monthly, finely illustrated and highly instructive. **The Reliable Poultry Journal** is just as reliable as its name implies, elegantly printed, edited by men who know how to help the beginner. **The National Farmer and Stock Grower** is a highly serviceable paper and fits in finely with the requirements of the stock farmer, dairyman, etc. **The National Fruit Grower** is a splendid monthly up-to-date paper; wastes no words; collects useful information, illustrates it and puts it before the people in a way that all may understand. For **One Dollar** we will send these four papers for one year, and we will send as a premium supplement the splendid 16x20-inch picture in grand colors entitled **"The Horse Fair."** This is a reproduction of the greatest horse painting in the world by the French female artist, Rosa Bonheur. The original cost fifty thousand dollars and was presented by Cornelius Vanderbilt to the Metropolitan Art Gallery. The picture that we are sending our subscribers is a pure lithograph, and there is a border round it in imitation of a frame of gilded oak. The picture can be tacked on the wall without framing and will remain in good condition for many years. Address, **The Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

Complete Tour of the World.

Send us 50 cents and we will credit you with one-year's subscription to The National Farmer and Stock Grower. You can also select as a free premium to be sent post free by mail **A Complete Tour of the World on Post Cards.** One hundred actual scenes in colors—places of prominence and points of interest in all parts of the world, reproduced from original photographs taken in all parts of the world by noted travelers. These cards are equal to a book on geography and much more interesting. Don't miss this premium. Address, **Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

Making Worthless Lands Valuable.

Ignorance of what is in soil has been at the foundation of the discarding of large areas of land. It does not take long in any community for a certain type of soil to get the reputation of being worthless for cultural purposes. After that reputation has been obtained by a type of soil, it is possible to buy it at a very low price.

This fact has already been taken advantage of by some of the men that know the chemical constituents of soils. Recognizing the ease with which some of the discarded soils can be brought into the list of valuable soils, these gentlemen have from time to time made large purchases of cheap lands for the purpose of converting them into valuable lands.

One class of land generally considered valueless is that known as bog land, swamp land, and about all wet land rich in decaying vegetable matter. This land almost uniformly contains a large amount of nitrogen, most of it in a rather unusable condition, but enough of it immediately available to give all that can possibly be used by growing plants. It is well that such soil has in it the insoluble plant food, that it may not be wasted in drainage waters or by producing a too rank growth of plants.

All over the country such land is now being drained and treated with potash and lime, with some phosphates, to give it the proper balance for producing crops. The results have been remarkable in the eyes of the people who had not been able to grow any crops on such lands. Often such areas have been purchased at $10 per acre and less, to be made in a few years worth $50 to $100 per acre. It must be remembered that many of these redeemed lands are near cities where crops are doubly valuable on account of near-by markets

The steps by which such lands have been made valuable are few. First there has been the drainage, without which even the best soils will not produce anything of value. Second has come the testing of the soil, by chemical analysis or otherwise, to ascertain the composition for plant production. This has usually been followed by liming to neutralize the acid in the wet soil. The next step has been the application of one element lacking, most frequently potassium.

Another class of land being made valuable is the so-called worn-out land. A weedy farm is a prize in the eyes of the men that know what rank weeds mean. One of the best-known horticulturists in this country some years ago found a run-down farm that was covered with rank weeds. He was assured that the land had been worked out and had for years been allowed to run to weeds. He snapped it up at a low price and began to farm it on approved principles. Every foot of soil was turned under, and the weeds became fertilizer. Then he put on some fertilizer and brought the land into use again. It became one of the very good farms of that locality.

It is easy to make almost any land valuable if the process undertaken is right. There is very little land that cannot be made valuable by the application of methods well known to agricultural science.

In St. Louis, pecans at wholesale are selling at seven to eight cents a pound.

At St. Louis, peanuts continue to sell at three to three and one-half cents a pound. This refers to shipments on the market.

Grand Subscription Offer.

A MOST DELIGHTFUL PICTURE.

This glorious and beautiful picture is 6 x 8 inches and is mounted on a nice green mat which is 8 x 11 inches. It is just the right size for a panel picture. It is rich in colors and is ready to tack or hang on the wall. It is not necessary to frame this picture, but no picture in the world is better worth framing.

MOTHER AND CHILD.

The dark, warm colors of the room, enlightened by the glow of the candles; the chubby face; the restful, healthy, natural position of the child; his delicate, little hands, and the fond look of the mother, all go towards perfecting a picture that will be enjoyed and give happiness to any house it may enter.

We offer this picture as a subscription premium. Send us 25 Cents and we will send The National Farmer and Stock Grower for six months. We will also send one mounted copy of the MOTHER AND CHILD PICTURE, in colors, postpaid, and safe delivery guaranteed. Address, THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

Cement Workers' Handbook.

This book is designed to teach anybody how to work with cement; how to mix mortars of all kinds for all concrete purposes; how to make building blocks; how to build walls, floors, ceilings, walks, posts, cisterns, troughs, tanks, etc. It gives estimates of the cost of all kinds of mortars and concretes and all methods of house construction. It is a cloth-bound book of 100 pages and covers more than fifty most important subjects on cement and its uses and construction. This is a diamond of a book for wide-awake farmers. The price of the book alone is 50 cents.

For sixty cents we will credit one-year's subscription to The National Farmer and Stock Grower and send a copy of the **Cement Workers' Handbook.** Address, **Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

A bushel of seed corn will plant seven acres of ground, which may yield from $60 to $260 worth of corn. The Agricultural Extension Division is advocating strongly the observance of seed corn week, beginning September 12th next, during which time every farmer in Minnesota is urged to devote one day at least to the selection of seed corn.

Credit Subscriptions.

We desire to invite attention to our blank form at the end of this item, which can be filled out for subscriptions on credit. This is an invention of Uncle Piper, our subscription editor, who has guaranteed that every one of them will be paid when they are due. The subscription price of this paper is $1.00 for three years, and the bill for the subscription is sent to the subscriber at the end of the first year. When the bill goes out Uncle Piper generally slips in a list of handy premiums for the subscriber to select one, providing he pays the bill promptly, and the general result is that the bill is soon paid. When it comes to getting subscriptions from intelligent, high-class farmers, Uncle Piper is at the head of the class.

Uncle Piper.

SUBSCRIPTION BLANK.

Top of the Chicago Cattle Market.

Clay, Robinson & Co.'s Live Stock Report of July 15th said: "F. W. Frost, the well-known farmer and feeder of Shabbona, Ill., was on the Chicago cattle market July 7th with cattle which Clay, Robinson & Co. sold at $8.25 per 100 pounds, the top that day by 25 cents per 100 pounds. In the shipment which made this price were nine head of 1,233 pounds average and ten head of 1,518 pounds average. The latter offerings were the tail-ends of the cattle which were bought by us as feeders for Mr. Frost at Chicago in November at $4.85 per 100 pounds. The first cut of these cattle were sold by us about two months ago on a very bad market at $8.00, averaging 1,523 pounds. The chief ration for the above cattle was shelled corn, clover hay, corn fodder and oil meal. Mr. Frost expressed his gratification with both the buying and selling of the cattle."

A. J. Lundegreen, near Amarilla, Tex., is reported as having 1,320 acres of broom corn in a thriving condition. Speaking of broom corn, Mr. Lundegreen is quoted as saying: "Broom corn is the one crop in which there is no waste. The brush has a value that runs readily into money, and the seed is classed with the leading feed products of the country, while the stalk and fodder are excellent feed for cattle."

Statuette of Allerton.

Spirit of the West says: "B. B. Cabell, of Chicago, Ill., a noted sculptor and modeler in clay, is at the Hopper Stock Farm, Indianola, Iowa, making a model in clay of the famous Iowa stallion, Allerton. 2:09¼, who died recently there. Mr. Cabell has a great reputation as a modeler and sculptor of animals, and the statuette he is making of Allerton will be about one-quarter life size, being seventeen inches high at the withers. Mr. Cabell went to the Hopper Stock Farm on July 4 and took many measurements of the horse before the death of Allerton, which occurred the following day, and has been there ever since. He will be at work there some two weeks longer on the clay model, which he will then take to Chicago to make a plaster of paris cast and this will be taken to New York City, where a bronze statuette will be made. Mr. Cabell is recognized as one of the leading modelers in clay in the West, and has been a prize winner with many of his works throughout the country, and those who are intimately acquainted with Allerton for many years pronounce the work as far as completed as a perfect model of the famous horse."

Pocket Knife Subscription Premium.

This is a splendid three-blade pearl-handle Pocket Knife, three inches long, superior steel, imported. No better knife on the market. Directly one is seen and examined,

everybody wants one. The subscription price of The National Farmer and Stock Grower is $1.00 for three years. Send us $1.00 and we will mail you The National Farmer and Stock Grower for two years, and in place of the third year we will give you this splendid Pocket Knife. This will please everyone who gets it. Uncle Piper, subscription editor of The National Farmer and Stock Grower, has undertaken to eat his own head off if we fail to send out ten thousand of these knives in one month, and we don't wish to lose Uncle Piper that way. Address, **The Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

AMERICAN BEAUTY ROSE PICTURE FREE.

This illustration very indefinitely represents a most beautiful and delightful premium picture—a reproduction of a masterpiece. This magnificent picture is in the richest of color. It is 16x20 inches. It is finished equal to an oil painting. It will adorn and beautify any room in which it may be placed. If it is neatly framed it will be "a thing of beauty and a joy forever." Without framing it will last for several years. The illustration gives no idea of the size and beauty of the picture. We are using the AMERICAN BEAUTY ROSE PICTURE for the purpose of introducing our National Farmer and Stock Grower. Send us 25 Cents for six-months' subscription to The National Farmer and Stock Grower and you can select the AMERICAN BEAUTY ROSE PICTURE as a free supplement. We will send it in a tube, postpaid, safe delivery guaranteed. Address, HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

A MOST BEAUTIFUL PICTURE—"THE WOOING."

This is a most elegant and beautiful picture. The colors are delightful. It is the refinement of elegance in the treatment of the "Story of Love." Many of our friends and patrons saw the original of this picture at the St. Louis World's Fair. It was one of the great attractions of the Art Gallery. It portrays a courtship in the Revolutionary days, one hundred years ago, and as the subject never grows old, so the beauty of the picture never fades. We use the picture "THE WOOING" as a subscription premium to The National Farmer and Stock Grower. Anyone who will send us 25 Cents for a six-months' subscription to The National Farmer and Stock Grower can select the picture "THE WOOING" as a free supplement or premium. We will send it in a tube, postpaid, safe delivery guaranteed. Address, HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

A Bashful Bridegroom.

Some years since an Australian Justice of the Peace was interviewed by a woman of about forty-five years of age, who announced that she would be married on a certain night at her farm house, and that His Honor had been selected to come out and perform the ceremony. She asked how much the fee was, paid it, and took a receipt. Business concluded, she said: "You won't funk out of this?" she said, as she rose to go, after exhausting the contents of her pipe. "Oh, no; I'll be there, sure!" "So'll I—and so'll he, or I'll know the reason why."

"I hope nothing unpleasant will occur," observed the Justice.

"I hope so, too, but I'm going to be prepared for a scrimmage just the same. You always back the weaker sex, and I guess you'll be right! Don't forget the date."

His Honor went out prepared to perform the ceremony with promptness and good will. He found about a dozen persons assembled at the house, and the women looked gorgeous under the light of the kerosene lamps. The bride had her face covered with a bland smile as she shook hands and said: "Take a cheer. The old man isn't here yet; but I'll send for him." Then, turning to a boy in the room, she continued: "Samuel, go and tell the old man it's time to come in and be spliced."

Samuel departed on his errand, and, after the lapse of ten minutes, he returned and announced: "The old man is over to Martin's. He's got his boots off, and is whittling out a wooden cat, and I don't believe he cares two cents about being married to you or anybody else."

The widow then said to a long-legged farmer who seemed hungry for the bridal feast: "Moses, you go over and tell Noah I want him." Moses departed. He was absent ten minutes, and then lounged in and said: "Says he is quite comfortable where he is. Guess he isn't on the marry very much."

"Judge," began the woman, as she looked around for her bonnet, "you play a game of fox-and-geese with Moses while I go over and see about this thing. There's going to be a marriage here to-night, and I'll bet a new hoss-rake on it!"

She was absent about twenty minutes, and then returned in company with Noah. He had neither coat nor hat on, and only one boot, and both were panting for breath.

"G-go ahead, Judge!" she gasped, as he hauled the groom into the center of the room. "He heard me coming, and got out and ran four times round the orchard; but here he is!"

"Do you want to marry this woman?"

"Yaas!" was the blunt reply.

"Then why did you run away?"

"Suppose I'm going to give right in the first thing?" demanded the indignant Noah. "I'll go and fix up and come back."

"No, darling—no, you won't, my pet amethyst!" chuckled the widow. "We'll be married right here and now, boots or no boots."

She crowded him against the table. Moses stood behind the pair to render any needed aid, and the knot was soon tied. As soon as the ceremony was over Noah skipped out of the back door, but no one pursued. The widow called the guests to supper and remarked:

"Sit right down and don't worry about the groom. I've been nine years working him up to this; but he'll be a little bashful for a few weeks. Have some of this roast pig, Mr. Judge? Don't trouble 'bout Noah."—Exchange.

Beets.

We have always enjoyed beet greens, and the small plants usually need thinning out in order to let those left attain to their greatest size. But the revelations of a friend have spoiled this dish, and if her observations are true generally, it is safe to say that the taste for greens will be curtailed.

The blistered leaves are nests for insects, she declares. And certainly it is well for every lover of this form of vegetable to give the plants examination under the lens before again indulging.

When beets are tender in early summer, cook a few more at a time than you care to use. Heat vinegar to cover them, slice, season and seal. They are more tender in winter than the old beets, and those fond of beet pickles will readily favor this plan for having the prime article at all times of the year.

Those who do not like the vinegar on this vegetable will enjoy it with butter, pepper and salt, served hot.

Try baking beets for a change, serving as above. They have a rich flavor, and the loss of juice is not so great as in boiling.

Beets are one of the most attractive salad dishes, their bright color rendering them an object of real beauty on the table.

Still another form of service is to boil, remove the skin, cut in halves and serve very hot with a dressing made of one tablespoonful of butter, two of vinegar, pepper and salt.

Beets should be cooked with more care than most vegetables. The water must be boiling when they are put in and remain in the state of ebullition until they are done. Be careful about testing until you are sure they are done, as every cut or fork mark releases some of the rich coloring matter. Avoid breaking the skin in preparing them. They will usually cook in an hour in summer, though those kept until winter require at least three hours before they are tender.—Bessie L. Putnam.

Separator Notes.

In the hot, midsummer days there is no trouble because the "cream don't rise well." The separator wants it warm, and it separates better than skimming will do under the best of conditions.

It is so nice, too, to be able to get everything out of the way once for all. There is no tugging back and forth of pans and crocks; no long tableful of them to arrange, wash and scald. The parts of the machine may seem numerous to the uninitiated, yet they are small in comparison with the number of dishes which the old way requires. Then there are brushes which reach each part easily, and a dash of cold water, a rub of the brush in warm water and some good washing powder and a scalding with warm water, that does it all.

The cream is real cream, in July as well as in May. There are no lumps. No one will criticise it for being either too thick or too thin. It is smooth, even and velvety. The dish of cereal or berries which it combines with is always first-class. With such cream at hand one can readily evolve a sumptuous meal, even though company does come unexpectedly.

But do not think that this separator cream looks like the old-fashioned product. Until you have eaten it or churned it you will be disappointed. There is not the tinge of a leathery nature which the housewife thought she must have in order to skim well. Yet it is the pure stuff, well blended and in prime condition. If you want it thick or thin, set the gauge accordingly.

The calves enjoy the fresh, sweet milk, and it is much better for them than when skimmed and heated in the old-fashioned way. True, they do not get a part of the butter-fat as of old, but there are many substitutes quite as good for calves, yet much cheaper than butter. — Bessie L. Putnam.

A WONDERFUL NOVELTY.
THE ODOROUS FERN TREE.

A novelty beyond compare. One of the most charming and fragrant of all out-door plants, and one of the most delightful for pot culture. You can have beauty and fragrance all the winter.

These unique ferns are so attractive, their exquisite perfume is abundant, and they are so readily grown, certainly no lover of the beautiful can afford to be without them.

The incomparable fragrance of the leaves and bloom—in fact the entire plant (either green or dried) is perhaps the most wonderful—the most lasting, as well as the most pleasing of anything in the floral kingdom.

Sprays kept in a room or trunk will give out delightful fragrance for years.

The Odorous Fern is grown from seed. One single packet of seeds will produce many plants. Every plant has a selling value.

Plants are very hardy, succeeding everywhere—either in sunshine or dense shade. Blooms profusely first season. Height, four to six feet or more.

Plant for out-door culture any time up to July, and any time later for pot plants for winter.

We have adopted the seed of the Odorous Fern as a subscription premium to the Universal Magazine. Anyone who will send us 25 cents to pay for one-year's subscription to the Universal Magazine can select as a free premium one package of true, guaranteed seed of the Odorous Fern. Remember, the packet of seed will produce a large number of plants. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Prize Packet Post Cards.

Send us 50 cents and we will credit you with one-year's subscription to The National Farmer and Stock Grower, and we will also send you by mail as a free gift one set of **Prize Package Post Cards.** The Post Cards constitute a complete assortment. They are all kinds, elegant, beautiful, and would cost $1.50 if bought at retail at city stores. The set was printed for our use in five million lots. There is double and treble value in this offer. The cards are practically a free gift, postage paid by us. Address, **Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

China proper and Manchuria are establishing pork-packing houses with a view to shipping meats to England.

THE BUILDINGS AND GROUNDS OF SEARS, ROEBUCK & CO., manufacturers and mail order house, Chicago. This famous house has advertised automobiles in The National Farmer and Stock Grower. The machines are built in their own Chicago factory, and prices range from $370 up. Sears' Model "L," costing $495, complete, is specially recommended. We advise our readers to write Sears, Roebuck & Co., Chicago, and ask for Automobile Catalogue No. 66 N 44, also mentioning this paper.

THE GENUINE MEXICAN

Resurrection Plant.

One of the Greatest Marvels of the Plant World.

The Mexican Resurrection Plant is one of the most wonderful novelties in the vegetable kingdom. It possesses the strange power of turning in a few minutes from an apparently dead, lifeless, dry herb to a beautiful living plant.

The Resurrection Plant grows in the wilds of the mountains of Mexico. It is called by the Mexicans the "siempre viva," which means about the same as our English word everlasting. This is because, although it frequently seems to be entirely dead, it quickly revives when it receives moisture.

Apparently Dead.

A Beautiful Living Plant.

It is a wonderful sight to see the marvelous transformation of the surfaces of rocks on which this plant grows during the summer season. In its normal condition in its hot, dry native country the Resurrection Plant is in a dormant state, for little rain ever falls. The traveler will see large surfaces of rock completely covered with what apparently are dried-up, dead, worthless, fern-like plants curled into a sort of a ball, the leaves brittle and dry as dust. If a summer thunderstorm comes up, there is an immediate transformation, which looks more like a miracle than a process of nature. Within a few minutes after the rain has begun to fall, the thousands of apparently dead plants on the rocks begin to open. Little by little the dry, brittle leaves of the plants seem to be imbued with life and gradually unfurl. Within a very short time—half an hour or thereabouts—the whole surface of the rock is covered with beautiful fern-like plants of a rich dark green color. As soon as the sun has dried up the rain, the plants dry up again to their former comparatively lifeless condition. This process of coming to life and apparently dying is repeated indefinitely with each rain that comes on.

Gathered at the right season and properly treated, the Mexican Resurrection Plant will retain these marvelous qualities indefinitely. Placed in a saucer of water, a plant will revive within a very few minutes, and shortly turns into a beautiful dark green, fern-like living plant. At any time it may be taken out of the water, put in a dry place on a shelf, and it will curl up into its dry or dormant condition, and can be kept for an indefinite length of time. The plant will last for years. It requires no soil, no nourishment, no attention, other than to put it in a saucer of water whenever it is desired to revive it.

The process of "resurrection" or coming to life which this plant goes through is so rapid that it is an excellent article for use at parties and similar occasions, as the change that takes place within a few minutes seems, to one who has never seen it before, more like an act of magic or a miracle than anything else.

We have adopted the Resurrection Plant as a subscription premium to the Universal Magazine. The magazine is most interesting and is published monthly. It is an illustrated publication, with genuine stories, splendid poetry and home reading. Send 25 cents for one-year's subscription to the Universal Magazine and we will mail you one of these genuine Resurrection Plants as a free premium. Address,

The Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Garden Notes.

If the cucumber vines turn yellow and incline to die as the season advances, the chances are that they lack nourishment. Dig a hole between each four hills and fill it with fertilizer; or a tin can with holes in the bottom may be sunk in the ground and filled with fertilizer. Water filled into the can will furnish plant food in an available form.

Keep the large cucumbers closely picked. If one escapes your eye until it is too large for ordinary use, pare, soak in salt water for a few hours and then make into sweet pickles. They should be cut in transverse slices half an inch or an inch thick before pickling.

Most members of the vine family will mix, the pollen from the one being transferred to the others through the agency of bees. If you discover that the melons planted near your squash vines have squashy flavor, do not save seed, but buy next year directly from the seedsman. The trouble would be transmitted, perhaps in an aggravated form. It is always wise to separate such kindred plants as much as possible in planting, though where the garden plot is small and the variety desired is large, the problem of separation becomes difficult.

Watch the cauliflower plants closely. They soon deteriorate in quality if left past a certain stage. Remember when preparing them for the table to soak in salt water for a short time as the intitial preparation. This disposes of the many insects which hover among the tender parts.

Because the most of the garden plants have reached maturity is no sign that they should be let alone. They may not need the cultivator, but they do need watchfulness that advances, the chances ahe that they no insect pests destroy, that the development is symmetrical, and that the harvesting is done at the most opportune time.—Bessie L. Putnam.

Obstacles.

The head of the house is often more responsible for the disrespect of the child than he is himself aware. He wonders why his wife cannot make the children mind the first time speaking. He has no trouble. They know better than to make pert replies to him.

But there are a few things which he forgets. "Familiarity breeds contempt" is an old saying. This is too true in the home. The mother must be the overseer at all times. Were she in charge during only a few hours of the day it would not be the old story. The restraining influence would be more easily given.

Then her patience would not be so continually strained, perhaps to give out entirely. The man who criticises his wife for losing temper should remember that while it is his part to curb his temper for a few hours, she must do it continually, no matter how great the stress of work.

Again, Johnny may have observed that mother is a sort of servant to father in many ways. He soon picks up the idea that it is manly to answer her in a gruff manner; to throw down his hat and coat when he comes in and leave them for her to pick up; to bring dust or mud in upon her clean floor. If she protests, more than likely the father chides her for "nagging," and Johnny's ideas of what is manly keep pace with the vantage gained. And yet father thinks it queer that she can't control him!

The obstacles are on her side of the house now. But for the child who fails to distinguish between manliness and insolence there will sooner or later come obstacles in various forms. The habit will grow. The father will some time find that the spirit of pertness tolerated will grow The woman who has the care of a family is entitled not only to their respect but to that of their father. Lack of this will fill the path with stumbling blocks for all concerned.—Bessie L. Putnam.

The Outlook.

"You were very cold last evening," 'phoned the young man to the girl he had called on. "What is the outlook for to-night?"

"Fair and warmer to-night," came the answer, promptly.—Rocky Mountain News.

Pattern Subscription Premiums.

In every issue of the Universal Magazine we publish a splendid line of patterns. This blouse or shirt waist is No. 6556. It is cut in sizes for a 32, 34, 36, 38, 40 and 42-inch bust measure. The price of the pattern is 10 cents. We have made arrangements with the May Manton Pattern Company, whereby we can offer our readers two of these patterns as a free subscription premium to the Universal Magazine. The subscription price of the paper is 25 cents a year. Please send us that amount for a new or renewed subscription and you can select any two patterns as a free premium. The patterns can go to one address and the paper to another. This applies to embroidery or dress patterns. It makes no difference which patterns you select. Send subscriptions to Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

The Universal Book of Original and Selected Poetry.

This book consists of One Hundred Pages, containing three hundred and ninety beautiful, interesting, pathetic, descriptive, humorous and delightful poems. These poems have been selected from the very best of the ancient and modern authors and the occasional pieces which have attracted favorable attention. It is a book to be kept by the bedside to compose one to sleep, a book to carry in the satchel or to read on the train and street car. It is a book for all people at all times. This is our own publication. It is not sold by anyone else. We issued the Universal Poetry Book for the purpose of using it as a subscription premium in connection with our own new successful paper, the Universal Magazine. The Universal Magazine is a nice, bright, cheerful, illustrated monthly magazine of thirty-two pages, three columns to the page, containing home reading, stories, patterns, fashions—a splendid publication. Anyone who will send us 25 cents to pay for one-year's subscription to the Universal Magazine can select one copy of the Universal Poetry Book as a free premium and we will send it prepaid. Address, THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

Lincoln's Ideal Statesman, His Political Opponent, Famous Generals of the Civil War. Members of his Cabinet and many other interesting figures in our history.

Fac simile letters, speeches, quotations, genealogy and a chronological table giving the principal events of his career, with the dates of their occurrence.

4to., Cloth, St. Louis, 1907, Sent Prepaid (Weighs 3 Pounds) for $1.00.

Address A. J. CRAWFORD, 4th and Chestnut Streets, St. Louis, Mo.

THE BEST POULTRY PAPER.

We are often asked which is the best poultry paper published in the United States, and the answer is, The Reliable Poultry Journal. There are other good papers, but this is the best. The subscription price of The Reliable Poultry Journal is 50 cents a year, and the subscription price of the Universal Magazine is 25 cents a year. We have made arrangements whereby we can send the Universal Magazine and The Reliable Poultry Journal, both papers, one year, for 50 cents. Address, HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

Simpson-Eddystone Prints

are time-tested fabrics

They have been recognized by the women of the United States as the standard calico dress-goods for over 65 years. Always in demand, because of their superior quality—cotton cloth well-woven and durable, beautiful designs, rich fadeless colors.

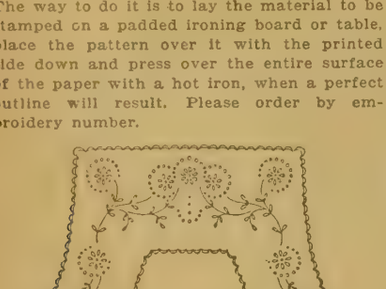
Show this advertisement to your dealer when you order, and don't accept substitutes. If not in your dealer's stock write us his name and address. We'll help him supply you.

The Eddystone Mfg. Co., Philadelphia
Established by Wm. Simpson, Sr.

MAY MANTON EMBROIDERY.

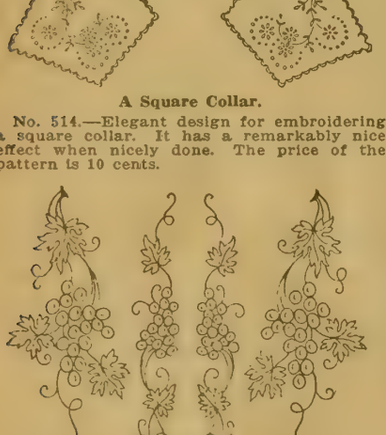
A Line of Nice, Useful, Up-to-Date Paper Patterns.

These paper patterns require only a hot iron to insure a perfect transfer on cloth. The way to do it is to lay the material to be stamped on a padded ironing board or table, place the pattern over it with the printed side down and press over the entire surface of the paper with a hot iron, when a perfect outline will result. Please order by embroidery number.



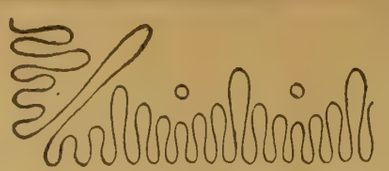
A Square Collar.

No. 514.—Elegant design for embroidering a square collar. It has a remarkably nice effect when nicely done. The price of the pattern is 10 cents.



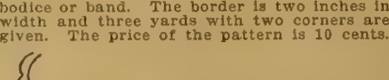
For Coat Collars and Cuffs.

No. 513.—A splendid design of grape clusters and bands suitable for embroidering coat collars and cuffs, shirt waists, blouses and lingerie waists, skirts and decorative objects. Patterns for stamping four separate sprays and two bands fifteen inches long are included. The price of the pattern is 10 cents.



Braiding Design.

No. 512.—This is a design for braiding a bodice or band. The border is two inches in width and three yards with two corners are given. The price of the pattern is 10 cents.



Simple Border or Edge.

No. 510.—Design for a scalloped border or edge. Five yards and five corners are given. The price of the pattern is 10 cents.

Please send all orders for these embroidery patterns to the **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Could Not Stretch the Farm.

The Assessor was doing the very best he could, but the farmer was shrewd and wary.

"How many acres of farming land have you?" he inquired warily.

"'Bout twenty, I guess," said Reuben.

"Twenty! Why, it looks to me like nearer 100. Come, now, can't you increase that a little? There are surely more than twenty acres in that tract. Suppose you stretch that a little."

"Say, feller," said the farmer, "this ain't no rubber plantation."—Harper's Monthly.

Linen Belts and Handbags.

Some ultra women this year have had handbags and parasols, as well as leather-finished belts, made of the same linen as their costumes. Belts, however, are often the sole point of color which is introduced upon the one-tone tailored gown, and all sorts of old favorites are coming back into favor again, including linked metal and fine leather, beaded and fancy elastic articles.

With linen tailored dresses, as with the soft, long, one-piece forms, a narrow silk underskirt is worn, generally of the same color as the gown. This skirt is made with a messaline top and ruffle, possibly, though not necessarily, of shot taffeta. Batiste or lawn skirts are made up with the same proportions and general shape, the idea being to have the garment as thin as possible and without a bit of superfluous fullness around the hips. —Harper's Bazar.

Farewell, Pompadour.

That the pompadour has gone out of fashion is a matter of congratulation to all artists. They realize what a trying style of coiffure this was for young girls. The new style of softly waved, parted front hair, with either a coronet braid or coils of hair at the back, is infinitely more becoming to a fresh young face.—Harper's Bazar.

Linen Walking Skirts.

The walking skirts in linen, as a rule, clear the ground by full two inches. Practically all of them are pleated. English models are rather conventional and are followed by the majority of American tailors. They are made with side-pleated skirts, the pleats turning back from a narrow center-front box pleat and meeting in the back, where they fasten.—Harper's Bazar.

An Intimate Portrait of Mark Twain.

The most notable article of the many now appearing about Mark Twain are the personal recollections of the great humorist, written by his life-long friend, W. D. Howells. In the August Harper's. Mr. Howells continues his "Memories of Mark Twain," which deal largely with the early seventies, when Mr. Howells was editor of the Atlantic, and Mr. Clemens, in the first days of his fame, was a prominent contributor to that periodical. The experiences which they shared as young men together are intimately and delightfully told. In recounting their life-long friendship, Mr. Howels has produced almost as much a life-story of himself as of the great humorist.

Canning Notes.

Discard overripe fruit, especially for jellies. It is surer of keeping if used before it gets dead ripe.

A teacupful of sugar to a quart of fruit is the average amount required; individual taste and extreme acidity in fruit, however, may render modifications necessary.

Tomatoes may be put up in glass cans, but they are somewhat uncertain. Those using tin cans rejoice that they never lose a can. The contents of the can positively must be removed as soon as it is opened, or corrosion will commence at once, rendering the tomatoes poisonous. Never use a tin can a second time unless the tin is perfectly good.

Have the fruit boiling hot when it goes into the cans, and sterilize cans, rubbers and caps thoroughly. If you use Lightning cans, the preferable ones for pickles, as the vinegar will corrode the metal caps, slip a piece of thick paper folded two or three times on top of the glass cover before adjusting the wires. If fruit has previously inclined to mould in these cans the plan will tighten them sufficiently to insure their keeping well.

After the cans are sealed and cooled, invert each for a few minutes to see if it is tight. Some keep them in this position for several hours. It seems like a more severe test than is practically necessary and one which will sometimes cause a can to become loose when if it had been handled in a less strenuous way it would have kept perfectly.

Save the bits that are left. Some delicious marmalades, jellies and other relishes are the result of these odds and ends. If you have not enough juice for a glass, cook a few apples and add the juice, which will insure a firm jelly.

It is poor economy to use poor rubbers.—Bessie L. Putnam.

A PRIVATE-LIGHT PLANT FOR THE FARM HOME.

At a Moderate Cost Coal Oil Lamps Can Be Replaced With Up-to-Date System.

At an initial cost of less than $300 and a nominal yearly expenditure, a farmer can replace the oil lamps in his home with a private lighting system which will compare favorably in convenience and economy to a city lighting service. How such a system can be installed and maintained is explained in a bulletin just issued by the Engineering Experiment Station of the University of Missouri. The bulletin is entitled "Acetylene For Lighting Country Homes."

Acetylene, as explained in the bulletin, is a colorless, tasteless gas, produced from a substance called calcium carbide. It is considerably less poisonous than the coal gas ordinarily used for illumination. When burned from a suitable burner, it gives a brilliant white light, especially adapted to domestic purposes. The gas may also be used for cooking or heating, having about two and a half times the heating value of ordinary coal gas.

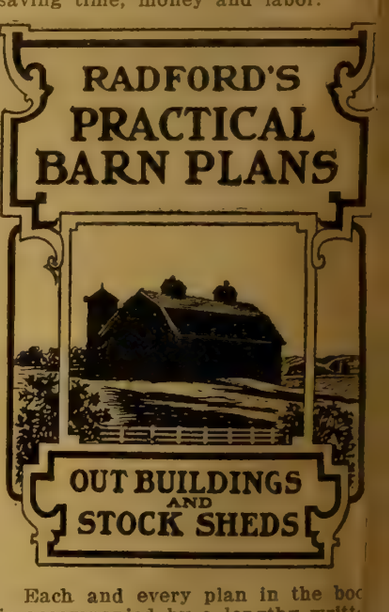
Private lighting plants of the kind described in the bulletin are to be found in the homes of many prosperous farmers throughout the country. They are finding favor also as municipal plants in small towns and villages that cannot afford expensive electric or gas lighting plants.

The bulletin gives complete plans for the installation of the plant, with diagrams showing the location of the piping and generator. A detailed estimate of the cost is made and directions are given for the care of the apparatus.

The Engineering Experiment Station was established at the University of Missouri last year. This bulletin, the first it has issued, is by J. D. Bowles, an assistant in the Station, who has made an exhaustive study of the subject. It will be sent free to anyone interested on application to the Director of the Engineering Experiment Station, Columbia, Mo. Anyone particularly interested will be placed on the regular mailing list to receive all bulletins.

Practical Barn Plans.

This is the name of the best book out. Every farmer needs it. It contains drawings, pictures, plans, specifications and everything necessary and up-to-date for a barn, stock shed, wagon shed, corn barn, smoke house, ice house, silo, dairy barn or any other conceivable outbuilding on the farm. Not only one plan of each, but many of each are shown with all the latest inventions and contrivances for saving time, money and labor.



Each and every plan in the book is accompanied by a lengthy written description, explaining and giving the details of the drawings, and worded and arranged, numbered and indexed, that it must be readily understood by anyone who reads it.

The price of this book is One Dollar, and we include one-year subscription to The National Farmer and Stock Grower. Address, **Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

In the year 1852 the average price of wheat on the Chicago market was fifty cents a bushel, the lowest average in sixty years.

Frog legs are selling in St. Louis at $2.00 per dozen for large; $1.50 for medium, and small at $1.00 per dozen.

Consumption Book FREE

This valuable medical book tells in plain, simple language how Consumption can be cured in your own home. If you know of any one suffering from Consumption, Catarrh, Bronchitis, Asthma or any throat or lung trouble, or are yourself afflicted, this book will help you to a cure. Even if you are in the advanced stage of the disease and feel there is no hope, this book will show you how others have cured themselves after all remedies they had tried failed, and they believed their case hopeless.

Write at once to the Yonkerman Consumption Remedy Co., 4211 Water Street, Kalamazoo, Mich., and they will gladly send you the book by return mail free and also a generous supply of the New Treatment, absolutely free, for they want every sufferer to have this wonderful remedy before it is too late. Don't wait—write today. It may mean the saving of your life.

Cleaning Black Goods.

Black alpaca can be freshened considerably by sponging on the right side with well-strained cold coffee and pressing on the wrong side as fast as dampened; and black silk can be cleaned by sponging with wood alcohol, or with stale beer.

When black materials begin to look gray or rusty, they can be brightened by rubbing on the right side with equal parts of alcohol and water and pressing on the wrong side while damp; and the best way to remove dine from black cloth is to rub with after made very blue with common ning and press.

Grease spots can be removed with alcohol and salt, and to avoid the unsightly circle that often appears when a grease spot has been removed, the oth should be rubbed lengthwise nd with the weave, and the rubbing ould be continued until the cloth is erfectly dry.

An excellent way to renovate black oods that are not soiled enough to e washed is to sponge on the right nd wrong sides with a cleaning fluid ade with one pint of soft water and ne-fourth pint each of ammonia and urified oxgall. Hang the pieces over ne line and press on the wrong side ithout wringing them.

There is no better way to clean all inds of black goods that are soiled nough to be washed than to put em through a strong Pearline suds ith a little ammonia added, as this ids cleans perfectly and leaves the oods soft and bright. The washing nd rinsing waters should be of the ame temperature, and the last insing water should be made very ine.

Black velvet can be freshened by rushing until clean and then holding er steam from a boiling teakettle, nd it is best to have an assistant rush the velvet with a stiff brush hile holding it over the boiling ater to raise the nap. Too much rushing with a stiff brush will wear e fabric and soon make a nice black arment become shiny, and the best ay to keep them clean and free from rinkles is to shake them well after ch wearing and put them away refully folded.—M. A. T.

Cleaning Laces at Home.

When laces are sent out to be eaned, they are often sent home oking beautifully new, but very uch injured by the use of cleaning ids, and all kinds of laces and lace-immed articles can be easily and safely cleaned at home. Fine laces that are only slightly soiled can be cleaned with calcined magnesia or with hot flour, taking care that it is not browned in the heating. Sprinkle the magnesia upon a smooth piece of white paper, lay the lace upon the paper and sprinkle more magnesia over it, then cover with another sheet of paper and place a light weight over this and let it remain for several days; then shake and brush the lace with a soft brush.

Some soiled lace collars and pieces of white lace are made to look like new by cleaning in this way.

A strong lather was made by cutting up nice white soap in hot, soft water, then a tablespoonful of ammonia and the same of turpentine was used for two quarts of water. The articles were placed in a large wash bowl and stirred and pounded gently with a wooden potato masher until perfectly clean, then this water was poured off and they were covered with clear, hot, soft water. They were lifted up and down and pounded through this water, then this was poured off and clear, hot borax water poured over the laces, and they were allowed to stand until this water was cold. The borax water whitens without injuring the fabric; and there is nothing better for cleaning Battenburg lace and crocheted articles than warm borax suds, and a little of the borax should be used in each of the rinsing waters, as they should all be softened alike.

The best way to dry the collars and pieces of lace is to pull them in perfect shape and baste while damp to a piece of stout muslin, then pin this smoothly and evenly over a board. Before they are quite dry, iron them over the cloth, then cut the basting thread, and if any stiffening is desired, sponge them on the wrong side with thin gum arabic water before pressing, and this is prepared by pouring boiling water over pieces of white gum arabic.—M. H.

The Bite of a Dog.

Especially during the summer months is there, and with reason, the dread of a dog bite. But the panic into which an accident usually throws people prevents them from using common sense in the matter. Some time ago I received a letter from a man, requesting me to find out from some indisputable authority whether hydrophobia might not develop in a person bitten by a dog that in after years became sick of rabies, even though at the time of the bite the dog was in good condition. Desiring to quote to the man an authority that would still all uneasiness, I obtained an interview with Dr. Lagorio, head of the Chicago Pasteur Institute.

"No," he said emphatically. "If the dog is well when he bites there is no more danger than would accompany any other wound of a like seriousness. It should be disinfected and kept clean, just as any cut should be. But you can no more get hydrophobia from the bite of a dog that has not rabies than you can take smallpox from a person who has not the disease. If the dog develops rabies some months after the bite is given, there need be no fear that you will contract smallpox because some months ago you may have been with a person who now has it."

Another authority says: "Dogs must be sick with rabies in order to give hydrophobia, and should one become so after the bite is inflicted, there is no danger in it. As foolish to say a person contracts fleas from a dog that has not fleas on him."

In all cases of a bite, the wound should be immediately cleaned and cauterized. Carbolic acid or some other powerful antiseptic may be used for the cauterizing; or the wound can be burned by pressing upon it a red-hot iron. If it is possible to get the patient to a Pasteur Institute or a very reliable doctor, the wound should be immediately cleaned and washed with a powerful antiseptic, and then the patient be taken to the doctor, who can tell if more stringent measures are necessary. Do not use a plaster on the wound.—Janet Thomas Van Osdel.

"PLAYING TWO GAMES AT ONCE."

That is the appropriate title of the picture. The young man plays chess with the father that he may have the opportunity to make love to the daughter. It is a most attractive subject, and our illustration very poorly represents the magnificent picture. The original is a painting in oil by one of the greatest painters. It was a World's Fair attraction and hundreds of thousands of people admired it. We have secured a beautiful colored reproduction of the great painting, and it is 16x20 inches. It will adorn and beautify any home. With a very inexpensive frame it can be made "a thing of beauty and a joy forever." We are using the picture "PLAYING TWO GAMES AT ONCE" as a subscription premium to introduce The National Farmer and Stock Grower into new homes. Send us 25 Cents and we will send you The National Farmer and Stock Grower for six months. You can also select this picture as a fee supplement or premium. We will send it in a tube, prepaid, safe delivery guaranteed. Address, HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

THE HORSE FAIR—BY ROSA BONHEUR.

The greatest horse painting in the world is the famous picture by the French female artist, Rosa Bonheur. The original cost fifty thousand dollars and was presented by Cornelius Vanderbilt to the Metropolitan Art Gallery, Central Park, New York, and it is the subject of many reproductions. The latest and probably the best reproduction is just obtained by us for use as a subscription premium. It is in eight colors, a pure lithograph, and there is a border round it in imitation of a frame of gilded oak. The picture can be tacked on the wall without framing and will remain in good condition for many years. It is sixteen by twenty inches and is a splendid adornment for any room. Anyone who will send us 25 Cents for a six-months' trial subscription to The National Farmer and Stock Grower can select a copy of "THE HORSE FAIR" as a free supplement. We will send it in a tube, postpaid, safe delivery guaranteed. Address, HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

Fat is Dangerous

It is unsightly, uncomfortable, spoils the figure, causing wrinkles, flabbiness and loss of vigor.

Let me send you my Proof Treatment absolutely Free; you can safely reduce your fat a pound a day.

Note what my treatment has done for others:

Mrs. Eva M. Reynolds, Box 114, Lehigh, Webster Co., Iowa, writes: "When I commenced your treatment I weighed 285 pounds. I now weigh 165 pounds, and never felt better in my life."

Mrs. W. D. Smith, Box 34, Abbott, Me., writes: "I have lost 51 POUNDS by your treatment. I used to have heart trouble and shortness of breath; now I am well and can walk and work with ease."

Miss Dicie Wilson, Box 78, Franklin, Tenn., writes: "I have lost 69 POUNDS by your treatment and I feel like a new person."

I could fill every page of this journal with testimonials from grateful patients.

It is dangerous, unsightly, uncomfortable and embarrassing to be too fat. Excess fat weakens the heart. The liver, lungs, stomach and kidneys become diseased, the breathing becomes difficult and the end comes in HEART FAILURE and sudden death. You can save yourself from these DANGERS.

I want to prove to you that my treatment will positively reduce you to normal, and no matter where the excess fat is located, stomach, bust, hips, cheeks, neck, it will quickly and safely be reduced without exercising or dieting. **Your figure will be beautified; flabbiness and wrinkles disappear.** Rheumatism, asthma, shortness of breath, kidney and heart troubles leave as the fat goes away. I will send you without a cent of expense on your part, my PROOF TREATMENT FREE. It reduces fat at the rate of a pound a day and does it safely and permanently. **FREE**

Don't miss this offer. My PROOF TREATMENT is FREE. It will make you feel better at once. I will also send you **Free** my **new book of advice,** together with testimonials from many well-known people. **Write to-day.**

H. C. BRADFORD, M. D., 12 Bradford Bldg., 20 East 22d St., New York, N. Y.

(Licensed physician by the State of New York.)

A Fruit and Garden Paper.

Inquiries for a first-class publication devoted to fruit growing and gardening are answered by our adopting **The National Fruit Grower and Gardener** as a companion paper to The National Farmer and Stock Grower. The combination is a good one. We will send both papers one year for fifty cents. This is offering one as a suscription premium to the other. Don't fail to include **The National Fruit Grower.** It is very interesting, instructive and highly illustrated, partly in colors. Address, **Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

Two Papers One Year For 50 Cents.

We have adopted **The National Swine Journal** as a companion paper to The National Farmer and Stock Grower, and if so ordered we will send both papers for one year for fifty cents. **The National Swine Journal** is a first-class, up-to-date, special publication in the interest of swine raising. It is published in Illinois, where pigs are pigs, and is a finely-illustrated monthly publication. Our readers will do well to send us their subscriptions. Address. **Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

MAY MANTON EMBROIDERY.

A Line of Nice, Useful, Up-to-Date Paper Patterns.

These paper patterns require only a hot iron to insure a perfect transfer on cloth. The way to do it is to lay the material to be stamped on a padded ironing board or table, place the pattern over it with the printed side down and press over the entire surface of the paper with a hot iron, when a perfect outline will result. Please order by embroidery number.

four small sprays and for four separate flowers are given. The price of the pattern is 10 cents.

Please send all orders for these embroidery patterns to the **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Desserts.

Happy is the woman who has the knack of getting up a dainty desert with little time or material. And yet there are plenty of them who have the ability to do this every time.

As one gains in experience she relies less and less upon her cook book. As she does not go to her arithmetic for the variations in practical problems, but depends upon the different combinations of the fundamental rules, neither does she feel it obligatory to consult the cook book for the several changes required in the menu. An addition of fruit, whipped cream, custard or some similar dressing will convert a piece of stale cake into a delicious pudding.

A most acceptable rhubarb pudding is made by adding to an ordinary cream cake batter a teacupful of stewed rhubarb, as little water being used as possible. If you use soda and cream tartar, cut out half of the latter. The acid in the rhubarb will cause the soda to foam up light, and the latter neutralizes the sour taste of the rhubarb so that one is scarcely aware of its presence save for the feathery lightness and the distinctive flavor. Serve with whipped cream or any dressing preferred. Apple sauce may be substituted for the rhubarb; and some make a similar pudding by using blackberry jam.

Crackers browned slightly in the oven with a little butter and served with canned or fresh fruit are a quickly-made and wholesome dessert. Some like slices of stale bread, buttered and covered with fruit, cream and sugar. In fact, the number of changes which can be made with milk, cream and fruit insures a variety of the very best.

Make pies rarely. Those with one crust are more healthful than the two-crusted ones, besides being more quickly made. Nature calls for a light dessert to counteract the heavy meat dinner; but it may be simple and yet prove most attractive.—Bessie L. Putnam.

England is importing "black fat" tobacco from the United States and reshipping it to the Blacks of Africa.

There is a whole lot of talk about the scarcity of lumber, but houses are being constructed out of sawed number in Northern Mississippi at a cost of $10 per 1,000 feet.

FARM BLACKSMITHING.

Here is a book for the farmer. The book was written by A. J. Drew. It is a complete treatise on blacksmithing from the farm standpoint. This book teaches how to profitably spend stormy days. Many thousands of farmers will find it to their interest to own a copy. There are 100 pages. It is nicely and clearly illustrated and bound in cloth. We credit one-year's subscription to The National Farmer and Stock Grower and send one copy of this book by mail for 65 cents. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Address. **HALE PUBLISHING CO, 3550 Vista Ave., St. Louis, Mo.**

MAY MANTON PATTERNS.

ry Elegant Pattern Service, With Full Instructions For Ordering and Making.

This is the very best pattern service, and e are very much pleased to obtain it for r friends and patrons. Each pattern is w and original.

Plain Fitted Corset Cover.

No. 6707.—The closely-fitting corset cover a necessity under closely-fitting gowns. is one is shapely at the same time that it simple. It can be made as illustrated or cut off at the waist line, as preferred, and the neck can be made round or in V-shape. Mercerized batiste is the material illustrated, and the trimming is lace with beading, but all the materials that are used or undergarments are appropriate for the corset cover. Cross-barred and embroidered muslins are liked by a great many women, but nainsook, lawn and batiste make the standard fabrics. Either lace or embroidery

n be used as trimming, or the neck or mhole edges can be embroidered with me dainty little design.

The corset cover is made with fronts, cks and underarm gores. The front edges e finished with hems and the closing is ade with buttons and buttonholes.

The quantity of material required for the edium size is 1 yard 36, ⅞ yard 44 inches de, with 1½ yards of insertion, 2½ yards beading, 3½ yards of edging.

The Pattern 6707 is cut in sizes for a 36, 40, 42, 44 and 48-inch bust measure, and ill be mailed to any address by the shion Department of this paper on receipt 10 cents.

Child's Dress.

No. 6671.—Simple one-piece dresses are ceedingly fashionable for the little folk, d this one is just as smart and charming it can be, while it represents the least possible labor. Both the front and back are tucked to give a double box-plait effect, but the plaits below the belt are pressed to position only, so allowing pretty flare and comfortable freedom for young legs. There is a distinctly novel collar finishing the neck, and the closing is made invisibly at the left of the front for little girls, at the right of the front for little boys. White pique is the material illustrated, and the collar is finished with embroidered scallops and dots, but the dress will be found just s well adapted to hinner materials of the warm weather as it is to

e heavier piques, linen and the like. It uld be very dainty made from white en or embroidered muslin, and it would very serviceable made from blue chamay or linen. It is smart made from white que, and the same material in colors is ually appropriate. With a colored frock e collar and sleeve-bands and belt could of white. Any pretty tie can be worn, as is tacked to position only and can be reoved when the dress is laundered.

The quantity of material requird for the edium size (four years) is 3¼ yards 24 or 2⅞ yards 32, or 2⅛ yards 44 inches wide, th ⅛ yard of banding for sleeves, 1 yard edging.

The Pattern 6671 is cut in sizes for chilen of two, four and six years of age, and ill be mailed to any address by the Fashion epartment of this paper on receipt of 10 nts.

Child's Rompers.

No. 6690.—The rompers that are made ith sleeves in one with the body portion e the latest and the newest. These are actical and attractive in effect and altogether desirable. The back portions of the drawers are attached to the belt and consequently are easily buttoned in the place. The little garment can be worn over a frock or in place of one, as liked. All the simple washable materials are appropriate, gingham, chambray, linen, percale, galatea and the like, and there are a great many of the inexpensive printed wash fabrics that serve such purpose admirably well. The rompers illustrated are made of blue chambray trimmed with the same material in blue and white plaid. At the front the body and leg portions are in one, but at back they are separate.

The quantity of material required for the medium size (four years) 1⅝ yards 24 or 27, 1¼ yards 32, or 1⅞ ds 44 inches wide, with ½ yard 27 inches e for trimming.

he Pattern 6690 is cut in sizes for children of two, four and six years of age, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Three-piece Walking Skirt.

No. 6708.—Skirts that are gathered at about knee depth are new and much liked. This one is among the prettiest to have appeared, and it can be utilized for combinations of material and for one throughout with equal success. It is very simple, and it is smart in effect. It means very little labor for the making, and it is absolutely up-to-date. In the illustration dotted material is combined with plain, but, as already stated, either one could be used for the entire skirt. The essential feature is to be found in the circular sides that are gathered at their lower edges and joined to the plain band.

The quantity of material required for the medium size is, for the front panel and flounce 2½ yards 24 or 27, 1¼ yards 32 or 44; for the side portions 2½ yards 24 or 27, 2 yards 32 or 44 inches wide. If one material is used throughout, 5 yards 24 or 27, 3¼ yards 32 or 44 inches wide will be needed. Width of skirt at lower edge, 2¼ yards.

The Patern 6708 is cut in sizes for a 22, 24, 26, 28 and 30-inch waist measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cnts.

Girl's Dress.

No. 6685.—Little girls are wearing a great many pretty dresses this season, the blouses of which are tucked to form their own yokes. This one is just as dainty as can be, yet it means very little labor. The straight skirt is finished with a wide hem and with a tuck, and in this instance trimming has been arranged above both, but it is only gathered at the upper edge. The blouse is laid in fine tucks that give graceful lines and provide fullness below, while it is joined to a shallow round yoke that is pretty and becoming. As illustrated, this yoke is made from strips of insertion, but any all-over material or plain linen or lawn embroidery would be pretty. The sleeves are novel and give exceptionally becoming lines. Embroidered muslin makes this dress, and it is trimmed with Valenciennes banding, but all the dainty thin summer fabrics are appropriate. With the trimming omitted and the round yoke made from the material or from all-over embroidery, the dress would become adapted to figured lawns and batistes and to similar materials of every-day wear, while as illustrated it suits the embroidered muslin, cotton, chiffon and the like very well.

The quantity of material required for the medium size (ten years) is 4¾ yards 24 or 27, 4 yards 32, or 2¾ yards 44 inches wide, with 18 yards of banding, and 3½ yards of edging.

The Pattern 6685 is cut in sizes for girls of eight, ten and twelve years of age, and will be mailed to any address bytheFashion Department of this paper on receipt of 10 cents.

Pointed Tunic Skirt.

No. 6646.—Every variation of the tunic skirt is fashionable, but this pointed one is peculiarly smart and attractive. It gives becoming lines to the figure and is adapted to a great many materials. Bordered foulard makes this one, and the border has been cut off and stitched to the lower edge of the tunic, but any trimming can be used, or the tunic can be of a material to match the blouse, while the flounce is of something in contrast. Foulards with messalines are much used in this way, while wool material is combined with silk and checked and striped with plain, and there are, indeed, innumerable attractive effects of the sort that are in vogue. If washable material is used, the flounce can be gathered, as that treatment renders laundering somewhat simpler. Small buttons are much liked this season, and the row at the back of the tunic gives a distinctive touch; but it is not obligatory, for any preferred finish can be used.

The skirt consists of the five-gored upper portion, flounce and tunic. The flounce is straight and can be either gathered or plaited. The tunic is made in one piece and is fitted by means of darts over the hips.

The Pattern 6646 is cut in sizes for a 22, 24, 26, 28 and 30-inch waist measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

FREE TO YOU—MY SISTER

Free to You and Every Sister Suffering from Woman's Ailments.

I am a woman.
I know woman's sufferings.
I have found the cure.

I will mail, free of any charge, my home treatment with full instructions to any sufferer from woman's ailments. I want to tell all women about this cure—you, my reader, for yourself, your daughter, your mother, or your sister. I want to tell you how to cure yourselves at home without the help of a doctor. Men cannot understand women's sufferings. What we women know from experience, we know better than any doctor. I know that my home treatment is safe and sure cure for Leucorrhoea or Whitish discharges, Ulceration, Displacement or Falling of the Womb, Profuse, Scanty or Painful Periods, Uterine or Ovarian Tumors, or Growths; also pains in head, back and bowels, bearing down feelings, nervousness, creeping feeling up the spine, melancholy, desire to cry, hot flashes, weariness, kidney, and bladder troubles where caused by weaknesses peculiar to our sex.

I want to send you a complete ten day's treatment entirely free to prove to you that you can cure yourself at home, easily, quickly and surely. Remember, that, it will cost you nothing to give the treatment a complete trial: and if you wish to continue, it will cost you only about 12 cents a week or less than two cents a day. It will not interfere with your work or occupation. Just send me your name and address, tell me how you suffer if you wish, and I will send you the treatment for your case, entirely free, in plain wrapper, by return mail. I will also send you free of cost, my book—"WOMAN'S OWN MEDICAL ADVISER" with explanatory illustrations showing why women suffer, and how they can easily cure themselves at home. Every woman should have it, and learn to think for herself. Then when the doctor says—"You must have an operation," you can decide for yourself. Thousands of women have cured themselves with my home remedy. It cures all old or young. To Mothers of Daughters, I will explain a simple home treatment which speedily and effectually cures Leucorrhoea, Green Sickness and Painful or Irregular Menstruation in young Ladies, Plumpness and health always results from its use.

Wherever you live, I can refer you to ladies of your own locality who know and will gladly tell any sufferer that this Home Treatment really cures all women's diseases, and makes women well, strong, plump and robust. Just send me your address, and the free ten day's treatment is yours, also the book. Write to-day, as you may not see this offer again. Address

MRS. M. SUMMERS, Box H - - Notre Dame, Ind., U. S. A.

Please be sure to give the size of pattern ordered and write your own name and address plainly that no mistake can be made to cause delay.

Kindly address all pattern order to **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Eliminating the Dish Towel.

Most of us think that we know how to wash dishes. Some of us are inclined to criticise the labor saver who is "too lazy to wipe them." And yet there is no quicker, easier or neater way than to dispense with the time-honored cloths. At best, they are apt to leave more or less lint. They make unnecessary work, and it is certainly a pleasure to see how the drained dishes shine. Go through the large institutions of any sort and you will see special racks for draining instead of wiping. If the work was not better as well as more quickly done, some of these institutions would not tolerate it.

In the newer houses there are similar provisions made in the building. Those less fortunate may easily improvise a substitute. A brush is largely superseding the dish cloth, being more effectual in its work and more easily kept in order. Even if you use the cloth for ordinary work, a small brush for cleaning in notches and creases is most useful. But avoid putting it into very hot water if you would prolong its life. Water as hot as the hands will bear is hot enough for the washing process. With a mop, of course one is free to use it hotter, though if there is delicate china this is not desirable, as it will surely cause it to crack.

Use soap or some washing powder in the first water. For finishing, pour on hot water, boiling, if the common ware is used, fold a cloth and place in the bottom of the sink if you have no rack, and place the cups inverted at one end; then place the saucers, plates, etc., on their edges, leaning against the cups. If the water is hot, they will soon be dry and shining. If preferred, two or three sheets of newspaper instead of the cloth will absorb the moisture. Wash and wipe the knives, forks and spoons before commencing with the china.—Bessie L. Putnam.

Indestructible Records.

There is no longer any need to have phonograph of graphophone records that will break. There are records that will not break. They are made by the Columbia Phonograph Company and they are guaranteed. No one need ever buy another wax record. Dealers are wanted. See page 32 and address Columbia Phonograph Company, 6 Frankfort street, New York City, N.Y.

St. Louis Peach Prices.

Fluctuations in the prices of peaches often take place. Early in August they were selling as follows: Four-basket crates, 70 to 95 cents; six-basket crates, $1.00 to $1.50; bushel baskets, $1.00 to $1.50.

These are not Egyptian Hieroglyphics as you might on first glance suppose, but are the characters taken from our great Ancient Code of secret writing, which enables you to communicate with your friends without danger of a third party knowing what you have written. THIS IS A BRAND NEW PUZZLE—the best you have ever seen. $300.00 REWARD FOR WORKING IT. Can you find out what sentence is above represented. It will pay you to work it out. All you have to do is to learn the secret code. Get your friends to help you if you cannot do it yourself. Some one will get the $300, why not you. The above secret sign writing makes a sentence which we will pay you to work out. $300 PRIZE will surely be paid without quibble or fail and if you have any use for money, you should not pass this by. You might just as well win the gold prize as the next one. We want your answer and send it to us today with 25 cents for a year's subscription to Everyday Life, our big illustrated monthly magazine that gives you live, up-to-date stories, miscellaneous, entertaining. Send us your answer to this puzzle at once, enclosing 25 cents for Everyday Life for one year, and you will find it the best investment you ever made. Contest will close Sept. 1st, 1910, prizes paid and winners names published at once. To the person who correctly reads the above sentence, we will pay $300. If there is more than one correct answer, we will divide the prize between the contestants. Every correct answer gets a cash prize. You must not miss this chance. Everyday Life one year, only 25 cents, and correct answer brings the prize. **EVERYDAY LIFE, DEPT. 32, CHICAGO, ILL.**

THE ANCIENT CODE OF SECRET WRITING

Learn this Code and you can decipher the sentence herewith shown

You take the alphabet and arrange it as follows.

AB	CD	EF									ST		
												UV	WX
CH	IJ	KL											
MN	OP	QR										YZ	

and the position of the straight lines that enclose the letters represents the letters. The second letter enclosed is represented by a dot. This is a great code for those to use who want to make sure their letters cannot be read by a third party, should it be lost or stolen. An example of how the letters are formed is shown opposite.

A is L
B is L
C is L
I is O
J is O

Hot Walking Hot Riding

You can't get away from the heat; but you can keep it from hurting. Whenever you're hot, tired or thirsty

DRINK

Coca-Cola

It refreshes mentally and physically—relieves fatigue and quenches the thirst. Wholesome as the purest water and lots nicer to drink. *5c Everywhere.*

Delicious---Refreshing---Wholesome

Send for our free booklet "The Truth About Coca-Cola." Tells all about Coca-Cola, what it is and why it is so delicious, wholesome and beneficial. 2-F

THE COCA-COLA COMPANY. Atlanta, Ga.

The Water Question.

This is the season when typhoid reigns, and while science has discovered how to avoid her germs, lax methods in one of many directions may prove fatal.

Not long ago a family of five were reported dangerously ill with it. The house and surroundings were neatness personified. The query was, how was the disease contracted? There had been no case for months within a radius of several miles. Water from both wells was sent to chemists for analysis and pronounced pure. There was one death, and two others pronounced hopeless. Then came a revelation of the secret. It was in the milk.

Later, where the cows pastured was found rank with typhoid germs. The mystery was solved but the mischief had been done. No knowing how many miles the common house fly has spread the contagion. If this milk was sent to the factory, other lives are endangered.

It is not enough that you provide pure water for family use. This purity must extend to your stock, especially the dairy cattle. Every impure draught of water affects the milk as well as the general health of the animal. In the dry season too many think that any water that is wet may be substituted for the genuine aqua pura. But it will not do. Even bees will seek moisture from the most degrading filth if not cared for in this respect. Pure honey requires pure water.

Clean out the springs and sources of water. Drill wells if there is lack of pure water. The driller's bill will be less than the doctor's, and the results far more satisfactory.—Bessie L. Putnam.

Had He Been Company.

When Mrs. Baldwin heard the door bell ring she fluffed up her hair, smoothed her pretty white apron and opened the door with a sweet smile for whomever the caller might be. For a moment she stared at the boy on the porch, then a little frown replaced the smile and she said: "For pity's sake, Charley, what possesses you to ring the bell and bring me to the front door? Go 'round the back way and be sure you clean those dusty feet. I thought you were company."

"I wish I was," muttered Charley, and the half-mischievous, half-expectant expression that had lighted his face while waiting for an answer to the ring changed to one of sullenness. The mother watched him as he turned to go to the back door. There was a pathetic droop to the awkward figure that had almost outgrown the form of a boy and yet had not arrived at man's estate. The woman was pondering his words, "I wish I was company." Before he reached the corner of the house she called: "Charley, come here!" The boy retraced his steps and when he looked up into his mother's face her bright smile was there again. She held out her hand, saying: "Charley, dear, I am more glad to see you than any company that might have rung the bell. Forgive mother for thoughtlessly speaking as she did. I am really glad you came to this door, for it is such a warm day that every step seems to count. Now when you are cooled a little we will have a glass of iced lemonade, just what I serve my guests on such a day as this."

The boy's drooping form straightened and a new light shone in his eyes. He had come into his own. Then he answered his mother: "I think I'd rather be your boy, after all, mother."—Janet Thomas Van Osdel.

The City Farmer.

While there are those who regard the city farmer as something of a joke, he is in many ways showing us business methods as applied to farming.

He may not know which end of the plow is designed for attaching the horse; but he can quickly learn this and the other details of the work. He may have been earning five or even seven dollars a day in the city where he came from. But does he complain that his wages are less, now that he is in touch with the soil? He glories, rather, that he can be near to nature; can get the pure air and food.

He may not know the details of agriculture or dairying; but he can learn the technical features in a marvelously short time and is ready to combine them intelligibly. He knows how to meet a business proposition in a business-like manner; and while the ordinary farmer is trying to make both ends meet he shows him that the little things are worth taking into account.

When a new point comes up, he at once seeks all available information. Instead of depending upon some old farmer who has stuck to the ways of his fathers, he asks: "Where can I secure some literature upon the subject?" He reads it. He posts himself upon modern methods, and his business drill is an excellent schooling for the up-to-date methods in farming.

Usually he has enough capital to go to his work properly equipped. He is accustomed to the new ways of lighting and heating, and his water system is on an improved plan.

While the old resident may smile at some of his mistakes, he eventually sees not only an improvement in his farm, but many lessons of real worth in business management are shown. The city man may come to him to learn how to hold the plow, but he finds himself in the end repaid by the impetus given along more advanced methods.—Bessie L. Putnam.

Hyacinths.

Hyacinths induce plant beggars quicker than almost any other plant, the fact that a single bulb produces only from one to three spikes of flowers, and that one must have a quantity of bulbs to have the number of blossoms the flower lover likes to scatter about, being evidently lost sight of. Yet by watching the club offers one may be independent without any great outlay and yet have a collection which it is difficult to surpass in beauty or fragrance. They are of such exquisite form, texture and fragrance, appropriate to all occasions, and may be forced to appear as needed.

For out-door planting they are best started in early autumn; but, like other hardy bulbs, they will still give a fine display the next spring if the planting is deferred until just before the ground freezes permanently for winter. The hyacinth is a liberal feeder and a rich soil will reward the grower with much larger stalks. An old chip yard furnishes an ideal soil, only the fine rich earth being used. If this is not available, well-decayed fertilizer from the barn-yard may be substituted.

For forcing during the winter months the same soil is necessary. After potting, keep the bulbs in a dark closet for a few weeks, that they may become well rooted. Then place in a sunny window and the buds will soon appear. If the flowers incline to open while the spike is still small, slip a paper tube over it and thus induce it to creep up toward the light before the blossoms open.

Hyacinths may be forced in water, a form of growth especially pleasing to children and at the same time giving them a practical lesson in plant life. Bulbs which have been forced should be planted in the garden in the spring, where they will eventually recover from the exhaustive process and aid in the increase of new bulbs.—Bessie L. Putnam.

The Crocus.

A bed of crocuses, coming as they do before the snowbanks have retreated, always commands attention. Every beholder wants some of the beautiful blossoms. Yet not one in ten realizes that such a display may be within their own reach another year by the investment of a few cents and a little labor.

The crocus is as easily grown as an onion, but one must commence the autumn previous. September and October are the ideal months for planting, though if for any reason this is not convenient the bulbs may be tucked into the ground as late as the holidays, if it is not frozen.

Give the bulbs rich ground. Ordinary garden soil is satisfactory. If fertilizer from the barn-yard is used, be sure that it is entirely decayed, otherwise it is almost sure to induce rot. When cold weather comes, cover the bed with leaves, using them about as nature does for her wildings. If the covering is too deep they will smother. A few branches of evergreen boughs will keep the leaves from blowing away and will still further protect the bulbs. When the warm days come in spring uncover the bed gradually, removing the dead leaves or working them into the soil.

Crocuses do nicely when planted in the grass of the lawn. With a sharp blade remove the sod and tuck in the bulb, carefully replacing the sod. The flowers bloom and the leaves die to the ground before the lawn mower is needed, so they do not interfere with that, and still the effect is pleasing.

The Mammoth Yellow is the earliest and the most liberal bloomer; but the white and lavender varieties, with larger flowers, should not be omitted from the list.—Bessie L. Putnam.

Danger in Empty Bottles.

Mothers may save themselves some anxiety and sorrow by warning children against playing with empty bottles they find lying about. Two children of a friend recently died a painful death from poisoning. It happened in this way: Several children playing together came across a pile of empty bottles in the yard. These they rinsed out at the well until they looked clean and shone brightly. Then they filled them with water, each child carrying one of the bottles with him and drinking from it occasionally. The bottles of the little girls in question had contained a deadly poison and no amount of rinsing would have made them safe containers for drinking water.—Janet Thomas Van Osdel.

Hats For Young Girls.

Many flounced hats are being worn by young girls, the materials being lace or pleated chiffon over lace. The forms these hats take are extremely diversified, some of them being tall, inverted pot shapes, with seven or eight-inch lace flounces draped from the top of the high crown and falling an inch or more below the brim all round. Festoons of baby rosebuds not larger in diameter than half an inch are used around the tops of the crowns of such lace hats; or, a single tinted gardenia with foliage is placed at the left side of the front.—Harper's Bazar.

SUBSCRIPTION PREMIUM — A POCKET COMPASS.

This is a true 1¾-inch Pocket Compass purchased from a reliable house. It is a fancy, nickel-plated, open-face, watch-shape Compass, with a silvered dial, and it weighs less than one ounce. Every farmer or ranchman should have one in his pocket. Send us One Dollar and we will send you The National Farmer and Stock Grower for one year, and we will also send you this Pocket Compass by mail postpaid. Address, THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

The Date Book History of Live Stock and Agriculture.

The editor of The National Farmer and Stock Grower has collected historical items relating to agriculture and live stock raising and arranged them in the order in which the incidents happened. It is a record which is intensely interesting to all earnest farmers and progressive stockmen. The events recorded include much that is ancient and is brought down through the ages of progress to about the year 1906. This material is all arranged in a handy booklet of 100 pages; it is nicely illustrated and is a handy useful publication. We will be glad to send a copy, postage paid, to any of our readers on receipt of 25 cents, or we will credit one-year's subscription to The National Farmer and Stock Grower for 50 cents and we will send a copy of the Date Book History of Live Stock and Agriculture as a free premium. Address, Hale Publishing Co., 3550 Vista Ave., St Lopis, Mo.

MOTHER NATURE.

Good, kindly Mother Nature plays
No favorites, but smiles for all
Who care to tread her pleasant ways
And listen to the song birds' call.
The tulips and the violets grow
For all the world to gaze upon;
With beauty are hills aglow
Not for a few, but everyone.

Her grass grows green for rich and poor,
For proud and humble, high and low;
Beside the toiler's cottage door
Her morning glories sweetly grow;
In palace or in tenement
Her sunbeams just as gayly dance;
No special charm to one is sent
No favored few possess her glance.

Her skies are blue for one and all,
Her flowers for every mortal bloom;
Her rains upon all creatures fall,
For all the world is her perfume.
The rich man gets no sweeter smile
Than does the ragged, barefoot boy;
Yes, all who live and love the while
May Mother Nature's charms enjoy.

Ah, what a lesson we may learn
From kindly Mother Nature's ways;
A smiling face we seldom turn
To strangers when we meet their gaze;
A kindly word we seldom speak
Except unto a favored few,
And some return we often seek
For every kindly deed we do.
—Detroit Free Press.

LINES FROM AN UNCLAIMED RIB.

Oh, unknown man whose rib I am,
Why don't you come for me?
A lonely, home-sick rib I am,
That would with others be!
I want to wed—
There now, 'tis said!
(I won't deny and fib)—
I want my man to come at once and claim
His rib!

Some men have thought that I was theirs,
But only for a bit;
We found out soon it wouldn't do;
We didn't seem to fit.
There's just one place,
The only space
I'll fit—(I will not fib)
I want that man to come at once and claim
His rib!

Oh, don't you sometimes feel a lack,
A new rib needed there?
It's I. Do come and get me soon
Before I have gray hair!
Come get me, dear!
I'm homesick here;
I want—(and I'll not fib)—
I want my man to come at once and claim
His rib!
—New York Times.

HOW PA FIXED THE MOWER.

We got our old lawn mower out,
But it would hardly run a bit.
"We'll have to get it fixed," says ma,
But pa says: "I can tinker it;
It's wasteful, this extravagance,
So get some oil, a wrench, a file;
I'll fix it up the same as new
In only just a little while."

"Be keerful, now," says ma, but pa
Jest looked at her and kinder sniffed;
"I know what I am about," says he,
"At fixin' things I got a gift.
You just take Willie off to church,
And when you're home again you'll see
That I can do things mighty well
When no one's by to pester me."

I begged to stay a-helpin' pa,
Because I like to hear 'im cuss,
But had to go to Sunday school
And couldn't wait to see the muss.
I wouldn't stay there, though, but sneaked
Away and run for home like Ned;
I didn't dare go in, but peeked
At pa from round behind the shed.

And there was pa—his Sunday pants
Looked like he'd taken them to wipe
An engine with; he'd tore his shirt
And bit the stem from off his pipe;
He kicked the thing an' hurt his corn,
Then run and got the ax, and—vow!
When he got through he grinned and yelled:
"Doggone you, guess I've fixed you now!"
—New York Press.

THE FARMER TALKS.

Here's a letter from John in th' city,
Ain't heard from him now fer a year;
Yes, his handwritin's stylish an' pretty,
An' rounded an' wonderf'ly clear;
Says he hopes we are all well an' thrivin',
Remarks that June's been rather cool,
But I know jes' at what he is drivin'
When he says that the kids have done school.

Don't hear much from John through the winter,
Excep' when I go into town,
An' then he don't even begin ter
Warm up or git rid of his frown;
Guess he ain't fond of much entertainin',
An' thinks mebbe I am a fool,
But I know jes' why he's explainin'
The kids will soon be out of school.

Poor John ain't got much excep' trouble,
A mortgage or two an' some debts,
An' I sell one hog fer jes' double
The weekly amount that he gets,
But still John is given ter braggin',
In the city that's often the rule;
An' his wife is eternally naggin'—
So the kids will soon be out of school.

Well, I guess that I'll send fer 'em, Jenny,
Though I ain't got much use fer John,
An' I wouldn't favor him any,
But now that th' summer is on
Those youngsters need sunshine, I'm thinkin',
An' air that is fresh an' is cool;
I'm writin' him—darn me, I'm blinkin',
To send 'em when they's out of school.
—Edgar A. Guest, in Detroit Free Press.

IN REMEMBRANCE.

Sit closer, friends, around the board!
Death grants us yet a little time.
Now let the cheering cup be poured,
And welcome song and jest and rhyme.
Enjoy the gifts that fortune sends.
Sit closer, friends!

And yet, we pause. With trembling lip
We strive the fitting phrase to make;
Remembering our fellowship,
Lamenting Destiny's mistake.
We marvel much when Fate offends,
And claims our friends.

Companion of our nights of mirth,
Where all were merry who were wise!
Does Death quite understand your worth,
And know the value of his prize?
I doubt me if he comprehends—
He knows no friends.

And in that realm is there no joy
Of comrades and the jocund sense?
Can death so utterly destroy—
For gladness grant no recompense?
And can it be that laughter ends
With absent friends??

O scholars! whom we wisest call,
Who solve great questions at your ease,
We ask the simplest of them all,
And yet you can not answer these!
And is it thus your knowledge sends,
To comfort friends?

Dear Omar, should you chance to meet
Our brother somewhere in the gloom,
Pray give to him a message sweet,
From brothers in the tavern room;
He will not ask who 'tis that sends,
For we were friends.

Again, a parting sail we see;
Another boat has left the shore;
A kinder soul on board has she
Than ever left the land before,
And as her outward course she bends,
Sit closer, friends!
—Arthur Macy.

THE HEROES OF THE SCHOOL.

I used to think that Ned was quite
The smartest boy in all the land;
That fortune held in trust for him
The choicest gifts within her hand.

And when each Wednesday afternoon
Bruce spoke his "piece" in tones intense,
I pictured him an actor grand,
With laurels won by eloquence.

John's voice was liquid melody
That rippled forth in music sweet,
And when he played his old guitar,
My feet the measure softly beat.

Jim ran to art; his thin, rough hand
Could pencil pictures full of grace;
And Tom was great in history,
He knew when everything took place.

Joe had no gifts, but his old sled
Was quite the largest in the school,
And on the snow-packed coasting ground
He followed out the Golden Rule.

Ned drives a grocer's wagon now,
Bruce lies among the quiet dead;
John works and sings and taps old shoes,
And Jim paints houses for his bread.

Tom went to Congress once or twice;
He knew how all the laws should be;
But Joe he was the bravest one,
For he, oh, yes, he married me.
—Adella Washer.

GLAD SONGS.

Sing me a song of gladness,
Sing me no song of woe;
Life has enough of sadness,
Let all your dirges go;
Cheer me with merry laughter,
Rouse me with songs of glee,
Leave for the long hereafter
Wailing and misery.

Never a song bird swinging
Out in the apple tree
Wastes ever a moment singing
A sorrowful melody.
Always the notes are cheery,
Always his songs are glad;
Sing not your dirges dreary,
Sing me no song that's sad.

For life has enough of weeping,
And life has enough of rain,
And many a soul is keeping
A grief that's akin to pain.
So sing not a song of sorrow
That starts up our tears again,
But sing of the bright to-morrow,
And gladden the hearts of men.
—Detroit Free Press.

A William Morris Test.

Presumably we are all acquainted with the theory of William Morris, that whatever we have in our homes should be either useful or beautiful; which, of course, does not imply that a thing cannot be useful and beautiful at the same time. But suppose we study each article in a room according to this theory, asking: "Is it useful? Is it beautiful?" And when "No" must be given in reply to both these questions, why should the article remain as a part of the furnishing of the home? True, there may be some treasure of grandmother's or some other member of the family which will appeal to us as neither useful nor beautiful, but if it is giving real pleasure to any one member of the family, can we say it is not useful?

Then when we have decided that a piece of household goods is of neither use nor ornament, why should it be kept around the house? It is mere clutter if it serves no purpose. And a cluttered room not only shows extremely poor taste, but it entails such a needless amount of disagreeable dusting and cleaning. Does it not seem worth the while to apply the William Morris test to our home furnishings?—Janet Thomas Van Osdel.

How to Buy Soda Crackers in the Country

Next time you go to the store buy enough Uneeda Biscuit to last till next market day. "But," you say, "will they keep that long?" Yes—

Uneeda Biscuit

are the soda crackers that come to you protected in sealed packages, so that you *always* have fresh soda crackers no matter how many you buy or how long you keep them.

5¢ (Never Sold in Bulk)

NATIONAL BISCUIT COMPANY

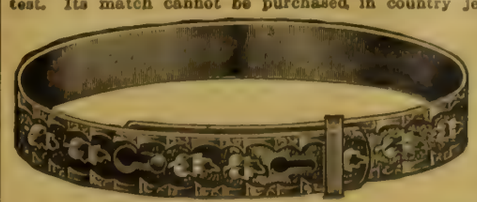
The National Corn Show.

The National Corn Show will be held at the Ohio State Fair Grounds, Columbus, from January 30th to February 11th. The premium list includes corn, small grain and grasses. All who are interested as exhibitors should send at once for premium list. Write to George H. Stevenson, Secretary, Columbus, Ohio.

Prime beeswax is selling in St. Louis at 28½ cents a pound.

The Universal Magazine Bracelet.

This is all the rage. And Adjustable Bracelet. The most elegant design and perfectly finished. It is not solid gold, but it is washed and plated and will stand the acid test. Its match cannot be purchased in country jewelry stores for any price. It is a duplicate of the latest Parisian creation made expressly for the purpose of using it as a subscription premium to the **Universal Magazine**. The **Universal Magazine** is a nice, bright, cheerful, illustrated monthly magazine of thirty-two pages, three columns to the page, containing home reading, stories, fashions, patterns and poetry—a splendid publication for the money. To anyone who will send us a money order for 50 cents we will send the **Universal Magazine** for two years, and we will send one elegant **Universal Magazine Bracelet**, postage free, as a subscription premium. Money returned if not satisfied. Address, **HALE PUBLISHING CO., 3559 Vista Ave., St. Louis, Mo.**



Universal Magazine Bracelet.

Agricultural Blue Book.

This is our own publication, and is a copyright work of great merit and convenience. It is called **"The Agricultural Blue Book and Live Stock Breeders' Directory."** It is designed to be useful to farmers and to business men in all sections of the country.

The Farming Section.

The Agricultural Blue Book contains 128 pages devoted to names and addresses of live stock breeders, experimental and general farmers, dairymen, horticulturists, etc. This farm list numbers 150 to 180 to the page—about 22,000 in all. All the names and addresses have been carefully verified. In each instance the principal occupation and class of stock raised are stated. It is fully up-to-date and represents the owners of about twelve millions of acres of land, who conduct their own farming operations. In various lines of business the value of this **Agricultural Blue Book** cannot be overestimated.

The Business Section.

At the request of many of our patrons we have also included a Business Section, consisting of thirty-two pages. This contains a list of firms who do business with agricultural people. This list is arranged alphabetically by states. It gives the name, address, occupation and class of manufacture, etc. A general farmer, stock raiser, dairyman, poultry keeper, ranchman, fruit grower, will find this book to be valuable and interesting.

Ready For Delivery.

The Agricultural Blue Book is just out and ready for delivery. The size is 6x9½ inches, elegantly bound in blue cloth with gilt title. The price is $2.50 per copy. If the buyer is not satisfied he can return the book and the money will be refunded. **Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

Cotton-picking Machine.

Another new cotton-picking machine is announced. This time the principle of the machine is a double row of bristle brushes about one and one-half inches in diameter and fourteen inches long, spinning rapidly in such a manner that the revolving brushes are introduced into the plants close to the ground and drawn up a vertical line through the plants, the brushes penetrating the bushes from both sides of the row. The ripe cotton adheres to the brushes, while the rest of the plant is not in any way affected, the brushes traveling to a receptacle, where they are stripped off the cotton and the operation is repeated. It may be that this invention is the long-looked-for machine. The best advertisement of it will be a few bales of cotton picked by the machine.

"Aberdeen-Angus Supremacy."

Mr. Chas. Gray, Secretary of the American Aberdeen-Angus Breeders' Association, is issuing free to those who wish to know something about Aberdeen-Angus cattle a pamphlet entitled as above. It is the record of the breed at Shows and Expositions, adorned with splendid pictures of champions and grand champions of the breed. It is a booklet splendidly compiled with colored covers. Write to Chas. Gray, Secretary, 817 Exchange avenue, Chicago, Ill., and ask for a copy of "Aberdeen-Angus Supremacy" as mentioned in this paper.

A Record Shipment.

On Monday, August 1st, at the Union Stock Yards, a train-load of range cattle were received by Clay, Robinson & Co. for sale on the market. It consisted of forty-two cars, and each car was forty-four feet in length. There were twenty-five different owners and upwards of 1,100 cattle in the shipment. The Judith Mercantile Company, of Judith, Montana, and the Shonkin Stock Association, of Fort Benton, Montana, were the shippers. The run was 1,422 miles in 120 hours. This is the largest single shipment received by a commission firm.

That Canadian Trip.

If you had intended going to Canada for the purpose of purchasing land on which to establish a home and accompanying some land company, whose holdings you proposed to look over or to go on your own account, you should delay no longer. Reports at hand show that the crop prospects in Canada were never better than they are to-day. A great many who are going up this season expect to pay two or three dollars an acre more than they were asked to pay last year. Others who wish to homestead are prepared to go farther from the line of railway than would have been necessary last year. Still, it is worth it. So it will be with you. Next year lands will be higher-priced and homesteads less acessible. There is a wonderful tide of immigration to Central Canada now.

It is difficult to say what district is the best. Some are preferred to others because there are friends already established. The Grand Trunk Pacific, on its way across the continent is opening up a splendid tract of land, which is being taken up rapidly. The other railways—the Canadian Pacific and Canadian Northern — are extending branch lines into parts inaccessible a couple of years ago. With a perfect network of railways covering a large area of the agricultural lands it is not difficult to secure a location. Any agent of the Canadian government will be pleased to render you assistance by advices and suggestion and a good plan is to write or call upon him. The government has located these agents at convenient points throughout the states, and their offices are well equipped with a full supply of maps and literature.

Refreshing Coca-Cola.

For several months this paper has advertised the beverage called Coca-Cola, and glad to do so. We do not advertise liquors and would not advertise Coca-Cola if we believed it to be in the slightest degree injurious. Having drank it continually ourselves whenever in need of a refreshing and harmless tonic, we have no hesitation in recommending it to our friends.

Very Monopolous.

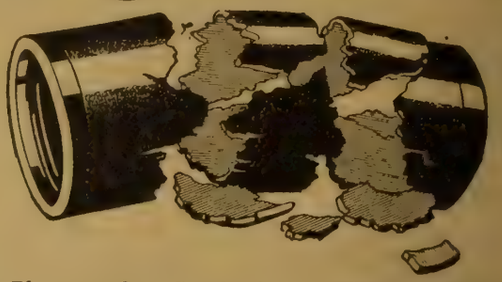
Senator Beveridge, discussing a certain monopoly, said, with a smile: "This company reminds me of the old man in the train who said to his neighbor:

"'Would you mind lending me your specs, sir?'

"'Why, certainly,' the neighbor answered, and he took off his spectacles and surrendered them with a courteous gesture.

"'And now,' said the old man, 'since you can no longer see to read your newspaper, I'm sure you'll be willing to let me run my eye over the sporting pages.'"—Washington Star.

Crash!!—another wax record gone to smash!



If you own a Phonograph or Graphophone (Edison or Columbia) never bu another wax record for it. Get one Indestructible Record from your dealer

Or let us mail one to you;—35 cents (for the 2-minute) or 50 cents (fo the 4-minute), postage free, and a catalog with it. Give it the hardest pos sible test. Lend it to the youngsters. Toss it on the table. Drop it on th floor. Kick it across the room. Leave it in the sun. Then play it and hea a finer, clearer, purer, stronger reproduction—better music in every way— than your machine ever gave out before. Play it every day for ten years an you will still have it, good as new. Almost too good to be true? Try it Prove it! Send for one!

and Stock GROWER

Unexpected Large Yields.

Wheat crops and oat crops are turning out more than average yield; in many instances the yields are almost phenomenal. On account of the very dry, hot weather from the time when grain entered the milk stage up to the time it reached the dead-ripe stage many looked for poorly-filled heads and light-weight grain, so the threshing returns have set us to thinking about what really contributed to the unexpected results.

Quick, sustained early growth is the most important factor in growing a grain crop, and in order to get this growth the seed-bed or feeding grounds of the plants must be in perfect condition. Every factor was favorable last spring for getting this perfect seed-bed condition, and from the mechanical standpoint at least we had everything in our favor for starting the crops. Moisture, heat and porosity of soil make quickly available all the elements necessary to produce a vigorous crop, so that taking all the factors together seldom have we had a more favorable season for starting and pushing growth of small grain.

There are two very important things to bear in mind about the remarkable growth and the resultant crop. First, it is a matter of general knowledge that ground put into good condition for seed releases more readily the unspent fertility which may have been locked up for several years, and that as the largest proportion of the substance goes into the plant by the time it reaches the flowering stage it is essential that there be present sufficient stores of plant food to push the crop up to the flowering stage.

The hot, dry weather, coming on practically after the plants had completed their growth, tended to hasten maturity, and a far greater amount of the substances which were stored in leaves and stems passed into the grain than would have occurred had the growth not been checked by dry weather. This theory is borne out by the fact established by observation, that both wheat and oats have yielded a larger proportion of grain to straw this season than I have ever known. A Winnebago county, Illinois, farmer refers to this point and says he got about 1,800 pounds of straw per acre from wheat which yielded thirty-five bushels per acre. It is a matter of common observation that frequently a better quality of grain is secured when the growth of the plant is checked, although it also happens sometimes when the check comes too soon that yield is sacrificed for quality. This season, however, the crop was too far advanced to be injured by the check put upon it by the dry weather, and the crop ripened off under nearly perfect conditions.—L. C. Brown.

Why Some Farmers Succeed.

A Coles county, Illinois, correspondent writes: "We have some good farms in this neighborhood and we have some poor ones. I have always presumed that the difference was in the soil, but lately have about made up my mind that it is the farmer himself. I refer particularly to a 160-acre farm near me which for ten years has scarcely produced enough to pay the cost of operation. It was generally referred to as a "poor piece of land." This farm changed hands last year. I really do not know what the new owner did to that land, but he has the star crops of the whole township this season. I do know this, that man has almost incessantly worked his fields."

Very frequently the "run-down" condition is more in the man than in the soil. It simply is due either to lack of knowledge of proper methods of handling ground, or it is shiftlessness, and one is as bad as the other. Ground which has any substance in it will respond to proper handling, but some men seem to have the faculty of doing the wrong thing at the critical time, and this in soil management is very apt to put the ground in poor condition and perhaps make unavailable the ample stores of plant food. Seldom can a piece of ground, which has been scourged for several years by poor management, be brought into good heart again in one season. The instance which our correspondent cites was undoubtedly one due to poor farming, and the fact that the new owner has grown bumper crops shows that he has set to work the potentials of that land. The best land in the world will not produce bountiful crops under poor management.—L. C. Brown.

Disking Alfalfa.

"The foremost method of cultivating alfalfa is with the disk harrow, one of the most excellent farm implements ever invented. Alfalfa sown in the fall is almost invariably helped by disking the following spring, with the disks set quite straight, so as not to cut the crowns, but to split them. It is usually well to follow this disking with a tooth harrow, with its teeth set straight. Occasionally in a dry summer the disk may be used to great advantage after the second, and possibly the third, cutting also. Many disk their alfalfa fields every spring, and some after each cutting, others doing so only once in two or three years, owing to weather conditions and the condition of the alfalfa. In some instances the common harrow is used instead of a disk.

"The disking has several beneficial effects. It splits and spreads the crowns, causing more and consequently finer stems to spring up, affording hay of the most delightful quality, easily cured; it loosens the soil about the crowns, conserves moisture and destroys the weeds. There need be no fear of killing the plants if the disks and the harrow teeth are set straight and weighted or otherwise adjusted to give direct and steady forward movement. As an implement for the cultivation and invigoration of alfalfa the disk harrow has no equal, and its frequent use by those who know it best is deemed quite indispensable."—From Coburn's "The Book of Alfalfa."

Permanent Increase in Crops.

A temporary increase in crops may come as an incidental combination of circumstances, such as a full year following a lean year, in which lean year nature elaborated in the soil more plant food than was taken out, and the following year the crop received the benefit of that plant food, combined with the amount of plant food naturally elaborated in the year of full crops. But an increase every year is what is wanted on American farms.

The first great factor in the increase of crops is the increasing of the amount of plant food in the soil. All other factors must take a relatively lower place. The European farmer long ago reached this conclusion, but American farmers, in the West, at least, have recognized this truth only as a theory. Otherwise much of their land would not have been cultivated without the application of fertilizers, till the yield had sunk to an unprofitable point.

If we compare our own yields with the yields of crops in the most thrifty European countries, we will see the possibilities in the increase of crop yields. There are several European countries in which the yields of the cereals are more than double the yields in this country, and this result is declared due to the greater profusion with which European farmers use fertilizers.

The European farmers not only use all the manures made in Europe, but import millions of dollars' worth annually from the United States and other countries. In this importation they have to pay much larger prices than the Americans would have to pay to secure the same kinds of fertilizers.

But the Europeans are working on very high-priced land and know that every square foot of their soil must be made to produce the largest possible amount of harvest. The American farmers have been hitherto working on cheap land and felt that they could afford to scratch over the soil to avoid the necessity for using purchased fertilizers.

But the time has come when the Americn farmer is using land that must produce more to make its culture profitable. It must be fertilized to prevent it even losing the profitableness it now has. A free application of fertilizers will help greatly in the increase.

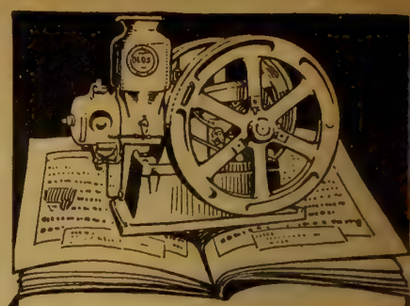
Commercial fertilizers are high-priced, but they must be used, in spite of the high prices. The farmers on the other side of the water have been figuring on this proposition for centuries and they have been able to discover no way to avoid the purchase of the fertilizers. They have simply made the necessary use of fertilizers a paying investment. It does not seem probable that we will be able to arrive at any solution other than that arrived at by the most intensive farmers in the world.

A permanent increase in crops can only be brought about by putting back into the soil all the fertility that is taken off in each crop, and by increasing the amount over that till the yield has reached a reasonable one. Good cultivation, the keeping down of weeds and the use of improved seed are great helps, but they can never be effective without the use of sufficient fertilizers.

Get Ready First.

With many the main thing is to sow wheat early. While early seeding is desirable, still it is by no means the prime essential. Put your ground into condition first. The seed-bed condition is the factor which makes the crop. Wheat requires a firm bed for its roots. Cloddy ground or loose ground will not do, and sowing seed under such conditions is more than likely to result in partial or total failure of the crop. Take ample time to fit the seed-bed so that the crop can start without any handicap. Never have I seen proper condition of seed-bed count so much as it has done this season. I have observed a difference in yields of wheat fields of fifteen to twenty bushels per acre, and so far as I can determine, due entirely to condition of ground. On one farm where it was simply impossible to reduce an eighteen-acre field to a fine condition the yield run nearly twenty bushels per acre under nearby fields.—L. C. Brown.

The best way to start sheep raising is to begin with a few, and the few to be inclosed in a pasture that is protected by a dog-tight fence.



Read our catalogue

If a gasoline engine is worth buying, it is worth thinking about, worth studying into. The reasons an

Olds Gasoline Engine

will appeal to you are the same that have induced thousands of shrewd, practical farmers to look into the engine question carefully, to investigate the Olds and then select it because it was exactly what they needed, and the price was right for what they got.

Send for our new catalogue; it is worth its weight in gold to you.

The WILLIAM FETZER COMPANY, Box 42, Springfield, O

Automobiles and Prosperity.

Much has been written against the automobile as a sporting and useless luxury, and even asserted that farmers have been led into extravagance in order to buy them.

In reality the farmer has been the most sensible automobile buyer of all. He refused to purchase the early machines when they were too uncertain and too costly, notwithstanding he had use for them all the time. He has decided to purchase them now that the machines are practically reliable and reasonably cheap.

The automobile is a long-distance machine and the farmer is a long-distance rider. The farmer can build his own garage, he can be his own chauffeur, he can save time in his journeys, and for the first time in his life he finds his family no longer consider themselves outcasts from society.

Automobile manufacturers are now advancing the claim that to a great extent the manufacture of motor cars has furnished employment of such an army of men that they have been a considerable factor in advancing the value of farmers' products. On the theory that activity in one line begets activity in another, Mr. K. P. Drysdale, of the Cadillac Motor Car Company, says:

"The chain of activity is an endless one. Even the farmer is not exempt from the influences. Unemployed labor must economize in everything, including foodstuffs. The sale for products of the farm becomes lessened and prices fall accordingly.

The great prosperity of the farmer during the past few years has called forth universal comment. What has been back of that prosperity? Not only good crops resulting from advanced scientific methods of farming, but the fact that the farmer has awakened gradually to the realization that there is something in life besides drudgery; that he could avail himself of comforts and pleasures. He had been accustomed to hoarding what little cash he could scrape together instead of keeping it in circulation—keeping it working. When he began to spend his money for some of the things that helped to make life worth living, that cash soon commenced coming back to him an hundred fold because, in its travels, it had materially enhanced the value of what he himself was producing.

"The farmers are the subject of severe criticism for their extravagance in buying automobiles. Yet, the very fact that they are doing so is the underlying reason for their being able to buy them. More plainly speaking, the farmers are getting their automobiles, and in fact are getting them without cost. This statement, upon first thought, may appear absurd; but let us reverse the process of reasoning and see if it is not true.

"The farmers, by expending millions of dollars for the comforts and enjoyments of life—even for the luxuries if you will—are creating enormous opportunities for the employment of labor. The employment of that labor in turn increases the consuming and purchasing power of labor with the resulting increase in the value of what it purchases and consumes, the greatest items of which are the foodstuffs, the products of the farm.

"Take the farmers who to-day have the cash to pay for comforts, for automobiles and other so-called luxuries. Let them all suddenly stop and in less than a year it would be found that they would have no surplus to buy with. The whole country would quickly revert to the old order of things, the soup-house, low prices for farm products and the resulting depreciation of farm properties. The man who decries the spending of money which goes to pay for the products of labor, with the idea that such expenditures are detrimental to the industrial welfare of the people as a whole, does so either because he himself happens to be so situated that he can profit by the misfortunes of others or because he is not mentally broad enough to comprehend fully the process necessary to produce industrial well-being and general prosperity."

Waste Lands and Pastures.

We can show some very fine pastures that were once regarded as waste lands. They are not our own lands, but have come under our observation. It is very nearly the fact that all pastures were once useless and regarded as valueless, whereas many such are now at the highest value in agricultural properties. With waste lands in large bodies far away from farming sections we have nothing for the present to do. We refer to the waste lands of Missouri, of Arkansas, and of every state in the South. Did you ever see a pair of ten-year-old oxen voraciously attacking every undeveloped blade of grass on the open range, at the same time cutting down every hope of a stand of grass? If so, you know what we mean.

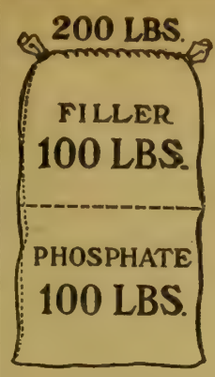
We have seen the same grassless, hopeless range that would not support one yoke of oxen one year support five yoke of oxen the next year, and not starve them, either. We have seen the open range starve hundreds of thousands of cattle to death, and we have seen hundreds of thousands of cattle keep in good condition, winter and summer, on the same amount of ground. This gain in forage was not caused by fertilizer, by cultivation, or by any extraordinary effort—simply by a little brush cleaning and a barb-wire fence. It does seem ridiculous when we attribute such benefits to the erection of a barb-wire fence, yet we have no hesitation in saying that there will be no lasting prosperity in any country while fifty to eighty per cent. of it is open range, furnishing a contest between the grass that is trying to grow and the other man's cattle that are busily engaged in keeping it down. We are told, and do not doubt it, that subdividing pastures will starve out the cattle tick; we are told that cattle cannot get fat while cattle ticks are feeding upon them, and we can add this to the combination, that in getting rid of the tick by rotation in pastures farmers at the same time multiply the yield of grass and redeem many an unprofitable farm.

At the Agricultural Experiment Station of the state of Mississippi quite recently some cattle were fed cotton-seed meal on a wild-grass pasture. The result was satisfactory but not remarkably so. The comparison would have been realistic if one bunch of cattle had been marked and turned on the open range to starve and another bunch had been turned into a pasture which had been fenced in before the grass started to grow in the spring. A comparison of the results would be interesting.

This for the present is enough of the subject. People who have waste lands ought to consider whether it will not be advisable to turn them into pastures by the liberal use of the brush knife and an investment in a barbed-wire fence.

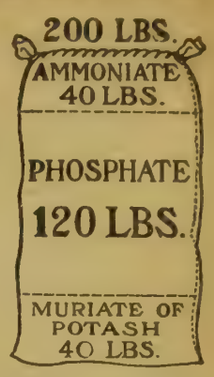
Sowing Wheat After Barley.

A Pulaski county, Indiana, correspondent writes: "Would you recommend sowing wheat on barley stubble?"



Permanent Agriculture

Cannot be Based on Phosphate and Filler



Field experience all over the world proves that sooner or later a well-balanced supply of plant food must be used. Clover and phosphate do not make a balanced ration for wheat.

POTASH

is needed—the longer bone or phosphate has been used, the greater the *present need of* **Potash.** We will sell you or your dealer a carload or a ton. Write us for prices. **Potash PAYS.**

Write for our new pamphlet on **Filler-Free Fall Fertilizer,** telling you just how to supplement your old brand with **Potash,** and how to *mix filler-free fertilizer at home.*

GERMAN KALI WORKS, Continental Building, Baltimore, Md.

This is not considered a good practice, although I have heard of instances where under such procedure phenomenal yields of wheat were made. On light soils, such as are common in Northern Indiana, it is doubtful whether the barley ground could be brought to a proper condition for wheat. Wheat does best when only two or three inches of the surface soil is mellow with the nether soil compact. Barley requires easy feeding ground as far down as its roots extend. It will be difficult to get proper conditions for wheat on light soil which has been prepared for barley and plowed twice within six months.

However, contrary to the general notion that wheat must not follow barley, a Clinton county, Iowa, farmer got 47½ bushels of wheat per acre this season from a field which was previously in barley. His soil is heavy, which no doubt was a factor in getting such a splendid crop. His ground was plowed and harrowed, and then double disced, and was put in good condition before seeding was done.—L. C. Brown.

Convict Farms of Texas.

In Texas the government is to work convicts on state farms, and 56,000 acres of land are to be devoted to this purpose. With labor under control and that amount of good land available, the state farms ought to turn a million dollars a year into the treasury, thereby relieving the taxpayers of that much burden. This, if it is not a dream, is a good idea. The convict also learns a profession. It is like sending him to a practical college at his own expense.

It is not so easy to get into the habit of using concrete construction on the farm; but once the habit is formed it is never abandoned.

Lightning Pitless Scales

New Pattern. Solid Channel Steel Frame

Channels are seven inches which is the height of platform from ground. Levers are octagon in shape giving greater strength. Bearing are Toolsteel. This Scale will last a life time with ordinary care Equipped with compound Beam Free. Furnished absolutely complete except platform planks. Guaranteed accurate and tested to more than its capacity. Write for our prices and description before buying.

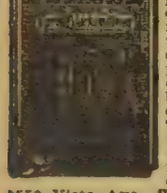
FARM BLACKSMITHING.

Here is a book for the farmer. The book was written by A. J. Drew. It is a complete treatise on blacksmithing from the farm standpoint. This book teaches how to profitably spend stormy days. Many thousands of farmers will find it to their interest to own a copy. There are 100 pages. It is nicely and clearly illustrated and bound in cloth. We credit one-year's subscription to The National Farmer and Stock Grower and send one copy of this book by mail for 65 cents. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.



Rice Polish—A Stock Food.

[From Farmers' Bulletin No. 412, issued by the U. S. Department of Agriculture.]

Rice polish is the flour removed from the rice kernel in giving it a pearly luster that the trade demands. It contains less fat and protein than rice bran, but a higher percentage of starch. It is sometimes used as a stuffing material in the manufacture of sausage. A considerable amount of the polish made in this country is exported to Germany, where it is made into buttons. Recent analysis of rice polish showed a variation of 10.13 to 15.50 per cent. protein, 4.44 to 14.26 per cent. fat, 51.73 to 70.30 per cent. carbohydrates, 0.51 to 4.87 per cent. fiber.

Rice polish, when substituted for part of the cotton-seed meal in a ration for steers at the Texas Station, resulted in increasing the rate of gain, while the cost of the gain was slightly reduced. The following ration for a steer weighing 1,000 pounds is suggested: Cotton seed, eight pounds; rice polish, four pounds; alfalfa or pea-vine hay, five pounds; Johnson grass hay, ten pounds. In five experiments at the Alabama Station rice polish was found superior to corn meal in feeding pigs. One pound of gain required only 3.73 pounds of rice polish, as compared with 4.74 pounds of corn meal. Hence, 78.6 pounds of the polish are equal to 100 pounds of corn meal.

Nitrogen-fixing Bacteria For Alfalfa.

[By Walter G. Sackett, Colorado Agicultural Experiment Station, Fort Collins.]

As the time for sowing alfalfa approaches, inquiries are being received by the Colorado Agricultural College regarding cultures of nitrogen-fixing bacteria to be used with alfalfa and other leguminous crops for increasing the available nitrogen of the soil. In the first place, it should be clearly understood that these cultures are of direct benefit only to plants of the legume family, represented by alfalfa, clover, vetch, cowpea, field pea and soy bean. On the roots of such plants these germs produce nodules, and, living there as parasites, they take nitrogen from the air of the soil, store it up in the nodules and ultimately give a portion or all of it to the host plant. Other crops, such as wheat, oats, sugar beets, and potatoes, following alfalfa, produce better yields, not because of the presence of these bacteria, but because of the nitrogen contained in the root tubercles of the alfalfa, and which has become available for other crops by the destruction and decay of the tubercular outgrowths.

Experiments have been conducted with pure cultures of these bacteria, used for inoculating the seed, at many of the Experiment Stations, and while some have reported decided benefits, the majority are of the opinion that the increased good coming from their use is so slight and the results so uncertain that the doubtful benefit to be derived is not worth the trouble which one is put to in inoculating the seed.

A much more satisfactory way of introducing the germs is to secure soil from an old alfalfa field which is known to be inoculated, as shown by the presence of nodules on the roots of alfalfa, and scatter this over the field at the rate of 200 to 300 pounds per acre. Soil inoculated by this means has given very satisfactory results, and is a much surer method of securing inoculation than the use of pure cultures on the seed. If the soil is already abundantly supplied with the proper bacteria for the desired crop, adding more germs will be of little value.

So far as the observations of the writer go, the majority of our Colorado soils that are adapted to alfalfa growing are already abundantly inoculated by nature with the alfalfa organism, and consequently a further application is unnecessary. In no case can the presence of nodule-forming bacteria be expected to counteract the influence of poor seed, inadequate drainage, unfavorable weather conditions, grasshoppers, unsuitable soil, or weed competition.

St. Louis Root Quotations.

Country consignments of roots to the St. Louis market were quoted as follows, September 1st—quoted by the pound: Golden Seal, $1.80; Ginseng—Wild at $5.50 to $5.75, and cultivated at $5.25 to $5.50—damp, less; Lady Slipper, 15c.; Seneca, 32c.; Pink, 18c.; Black (dry), 6c.; May Apple 4c.; Snake, 28c.—dirty, leafy and stemmy, 15 to 22c.; Kansas Black Snakeroot, 23c.; Angelica, 5c.; Wahoo—Bark of root, 14 to 16c.; bark of tree, 4c.; Blood, 4½ to 5c.; Blueflag, 5c.; Sassafras—Bark of root, 5c.; bark of tree valueless; Wild Ginger, 10c.; Spikenard, 3c.; Skullcap, 9c.

Dried Fruit Market.

One day (September 1st) report at St. Louis: Apples dull and weak, at 6c. for current make evaporated rings. This stock, made from inferior early fruit and indifferently handled, was undesirable—choice, if obtainable would bring more. Only small lots sun-dried arriving—these sell fairly from 4½c. to 4¾c. Peaches sold at 4c. for sun-dried halves. Sales: 82, 12 and 8 sacks evaporated rings and 27 and 13 sacks sun-dried quarters apples—all at quotations.

New Cement Block Machine.

In our July edition mention was made of a new machine for making cement blocks for building purposes, which originated in Switzerland but would be soon manufactured in the United States. The machine has revolving molds for shaping building blocks.

Brick, clay, various mixtures of cement, sand, gravel, slag, sawdust, cork, etc., may be readily pressed into compact blocks with exact measurements, sharp lines and edges. All kinds of mixtures have been experimented with, the machine molding them into blocks which have successfully withstood the severest tests. Several different sizes of bricks or blocks may be turned out at the same time, and in series of ten of uniform size, every half revolution of the press producing five blocks. It may be operated either by hand or motor power, without special skill and by one person. It is unlike any machine on the market, cheap in price, operates without the sudden jars usually incident to such machines, and is durable. It occupies small space, is easily adjusted and portable. In making bricks this machine dispenses with frames for drying, the process of molding hardening them.

The item in the July number naturally caused some inquiry, which for the time being we were unable to answer. We desire to say that we have since obtained information that the firm manufacturing this machine is taking orders for future delivery, and we will take pleasure in forwarding any inquiries that come to this office. We will send them to the manufacturer.

From the pictures we have of the Swiss machine it looks like a business proposition that will make blocks to build a city.

Always Successful BLIZZARD Ensilage Cutter
Cuts any feed dry or green and elevates any height. No waste power. Can't strain. Has the only knives adjustable while running. Belt fed. Mounted or unmounted. Every machine tested and GUARANTEED. A labor-saver and money-maker. Ask for free Book, "WHY SILAGE PAYS."

THE STUDY OF CORN.

By Prof. V. M. Shoesmith.

A most helpful book to all farmers and students interested in the selection and improvement of corn. Just the thing for the individual farmer, for corn schools, Farmers' Institutes and corn improvement associations. It is profusely illustrated from photographs, all of which carry their own story and contribute their part in making pictures and text matter a clear, concise and interesting study of corn.
Illustrated, 5x7 inches, 100 pages. Cloth.
Price, net, 50 cents.
ORANGE JUDD COMPANY,
439-441 Lafayette Street, - New York.

Milk Selling at Retail.

In the stylish saloons and restaurants of St. Louis buttermilk is sold at ten cents a glass. It is pasteurized and is kept on the counter in a can which is itself a refrigerator. This milk retailed at $1.60 a gallon does not at wholesale cost the distributing company ten cents a gallon delivered in St. Louis. There is another milk product called fermillac, which retails at ten cents a half pint or glass. We understand the retailer holds out half the money as his share, which gives the wholesaler eighty cents a gallon.

As a general proposition it would appear that farmers ought to take upon themselves the distribution of their product and make immense profits by doing so; but the trouble is that "all is not gold that glitters." The buttermilk trade requires a equipment for distribution, which includes the usual milk route for house-to-house delivery, from restaurant to hotel, and it also comprises the manufacture and sale of ice cream. The business of milk distribution is a great enterprise, yet it is subject to limitations. The retailers will not handle buttermilk unless they get as much out of it as they would selling beer.

Milk is the raw perishable product which is the foundation for the distributing enterprises. For every cent the farmer gets the ultimate consumer pays three cents. The city dealers of milk do not trust the milk producer to ship the milk to market; they go out after it and establish so-called dump stations, thereby getting the milk at their own price in as good condition as possible. There they pasteurize it and manipulate it and ship it into the city. The shipments to town in the hands of the producers are becoming less and less. That is the reason why the distributors can sell buttermilk and skim milk, and butter, and whole milk, and cream, and ice cream, all from the same establishment. They get the milk before it deteriorates, and then its care begins. The farmers, as a rule, have no control over the selling price. A Milk Producers' Association formed with St. Louis as the center is falling to pieces simply because farmers would rather lose ten dollars indirectly than pay fifty cents directly. This we regret very much. The association has done good work, but it is not supported as it ought to be. We are approaching the time for the annual meeting, and it looks as though it will be a great misfortune if something is not done to revive the association to its former strength and usefulness.

Too Many Peaches.

From Topeka, Kas., August 25th, reports indicated that thousands of bushels of early peaches were going to waste on account of lack of facilities for handling the yield. In years there has not been as prolific yield, and this in the face of the positive statements sent out early in the spring that the buds and blossoms were killed by unseasonable weather conditions.

The peach crop according to these reports wil be heavier than in many years past, and the grass under the trees in Central and Eastern Kansas is covered with decayed peaches worth thousands of dollars if they could be cared for. In many of the smaller towns as well as in Topeka it is next to impossible to get fruit jars and glasses with which to preserve the fruit crop.

Late peaches will be plentiful in the eastern and central parts of the state, where the trees are loaded beyond their capacity and where props are being used to save the limbs from breaking under their burden of fruit.

Grapes which were also badly damaged by the crop killers' reports sent out early this spring are just commencing to ripen, and the prospects for a bumper crop were never better.

September State Fairs.

September State Fairs include Nebraska, at Lincoln, 5th to 9th; Ohio, at Columbus, 5th to 9th; Minnesota, at Hamline, 5th to 10th; Kansas, at Hutchinson, 10th to 17th; Indiana, at Indianapolis, 12th to 16th; Kansas, at Topeka, 12th to 17th; Kentucky, at Louisville, 12th to 17th; Illinois, at Springfield, September 30th to October 8th; Oklahoma, at Olahoma City, September 27th to October 9th.

Feeding Meal on Pasture.

At the Mississippi Agricultural College, after conducting a cattle-feeding experiment and making $6.96 per steer, the conclusion was arrived at that: "It is a safer business proposition to make beef during the summer months by feeding cotton-seed meal upon pasture than by feeding cotton seed and hulls during the winter.."

The Missouri State Fair opens at Sedalia, October 1st, and continues until the 7th inst. It opens on Saturday of one week and closes on Friday of the next. Jno. T. Stinson is Secretary.

You Can Live One Year
For What You Now Spend to Live 8 Months

If you could buy all the groceries you need to last you an entire year for what it now costs you to live only eight months, that would mean a big saving to you. That is exactly what our proposition means to you, and we are very anxious to have you give us an opportunity of proving that we can save you at least one-third on all your grocery purchases. If you will write us a letter or a postal card today—right now—and say, "Please send me your grocery catalogue for September and October," the day your letter reaches us we will send this very valuable catalogue to you by mail, postpaid. No matter what you need in groceries, you are sure to find it listed in the pages of this free grocery catalogue and at a considerable reduction from the usual retail prices. We give you in this advertisement just a few quotations taken from our Chicago grocery catalogue which will show you the prices we regularly charge for these well known articles. Compare these prices with the prices you have been in the habit of paying and we are very sure you will find that the saving is well worth while.

Another interesting feature of this special grocery catalogue (which we will be glad to send you free) is the fact that we offer our very best values in other lines of merchandise in its pages from time to time. This grocery catalogue is issued new every sixty days because grocery prices fluctuate more or less, and oftentimes we find that we are overstocked on certain lines of seasonable goods, or the factories which have supplied us are unable to supply sufficient quantities for another season's cataloguing, and for many other reasons we frequently sacrifice the stock on hand, and when such occasions arise we offer these special bargains in our grocery catalogue. You will be surprised to learn how often you will be able to save even one-half or two-thirds of the usual prices on high grade, seasonable merchandise. It is therefore not only a valuable book because it quotes the lowest possible prices on high grade pure foods, but also because it brings you very unusual offerings on other lines of merchandise which you require from time to time.

69c *for 1-gal. can Pure Rock Candy Syrup. Lot A 3160.*

Why Our Prices Are So Low

Our methods of buying and selling merchandise are unlike the methods employed by retailers generally. We buy our merchandise in the primary markets from the manufacturer, or the producer, or the grower, and then pass them along to you with just one small margin of profit added. As a consequence, you pay none of the expenses which are added in the selling price of goods sold by the average retailer who buys from jobbers and producers and traveling men, because there are no commissions or profits in our prices to wholesalers, jobbers, manufacturers' agents, no expenses to traveling men and their hotel bills and railroad fares. You have no idea how much our new methods of buying and distributing merchandise have reduced cost of the best merchandise. Our free grocery catalogue tells the story more eloquently than we can tell it here. Every page is filled with interesting price quotations. We number millions of customers who find it profitable and very satisfactory to send us their orders; and if you will spend one cent for a postal card and get this free book, we feel sure that it will show you a new and better way to secure groceries and other goods you need from time to time. Write us today and address us at the store nearest you, 19th and Campbell Streets, Kansas City, or Chicago Avenue Bridge, Chicago.

Montgomery Ward & Co.

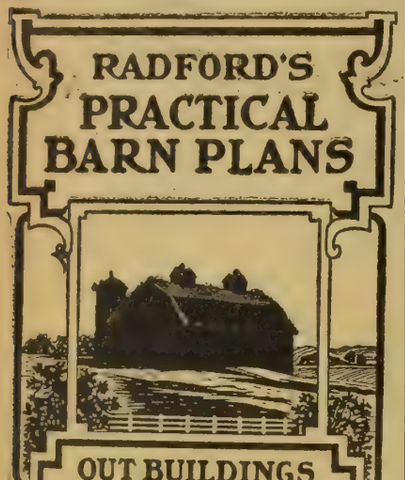
[Please mention National Farmer and Stock Grower.]

MISSOURI-FED CATTLE WHICH BROUGHT A HIGH PRICE ON THE EAST ST. LOUIS MARKET.

On June 8, CLAY, ROBINSON & CO. sold these fifty-one native Missouri beef steers of 1,580 pounds average at $8.50 per 100 pounds for Wilcox & Littrell, of Renick, Mo. This price was within 10 cents per 100 pounds of the extreme top of the market that day, and 60 cents per 100 pounds higher than any other load of cattle sold by any other firm. The cattle, which brought $8.60, were handled by CLAY, ROBINSON & CO., and, barring this sale, the Wilcox & Littrell offerings sold as high as any cattle made on that market that far this year, only one car since January 1st equaling them in price. These cattle were put on feed in November by Wilcox & Littrell, and had been on a full feed of corn and clover hay. They were of fairly good quality and in good flesh condition. The picture shows something of cattle that when fat will weigh close up to 1,600 pounds.

Practical Barn Plans.

This is the name of the best book out. Every farmer needs it. It contains drawings, pictures, plans, specifications and everything necessary and up-to-date for a barn, stock shed, wagon shed, corn barn, smoke house, ice house, silo, dairy barn, or any other conceivable outbuilding on the farm. Not only one plan of each, but many of each are shown with all the latest inventions and contrivances for saving time, money and labor.



Each and every plan in the book is accompanied by a lengthy written description, explaining and giving the details of the drawings, and so worded and arranged, numbered and indexed, that it must be readily understood by anyone who reads it.

The price of this book is One Dollar, and we include one-year's subscription to The National Farmer and Stock Grower. Address, **Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

Our Good Friends, the Butchers.

Producers of cattle, hogs and sheep have been taught a lesson by the butchers. At a recent meeting held by the United Master Butchers of America, held very properly at Chicago, they explained away the high price of meat without saying anything about retail profits.

But the butchers asserted that the high price of meats was partly due to the tariff. Farmers are told that farming is not a protected industry, but the butchers know better. There was in fact a duty of two cents a pound on imported fresh meats, and while stockmen were asleep some one managed to cut away one-half cent a pound, so that the duty is now only one and one-half cents a pound. If meats come in from Argentine, from Canada, from Australia, or from any foreign country the import duty paid for the support of this government is one and one-half cents a pound. In other words, there is a tariff on foreign meats as stated, and the butchers wish foreign meats to come in without supporting the government, and they wish to reduce the price of cattle by making laws that will give the foreigner the advantage in our country over our own people.

Stockmen will naturally be shocked when they understand the attitude of the butchers, but they will stand another shock when they are told that the butchers went still farther and advocated the removal of the duties on live cattle, so that Canadian, Mexican and any other foreign cattle may come in tax free, in order that they, the butchers, may get the cattle cheaper and add another percentage to the enormous margins which a careful and thorough investigation on the part of the Agricultural Department revealed as being enormously high. The report referred to stated that there were too many butcher shops trying to make a living on one cow. The farmer may not object to supporting one butcher shop per farm, but there is surely a decided objection to the oversupply of meat-cutting butcher shops that serve no useful purpose and are obliged to charge extremely high prices in order to exist.

This paper is not disposed to find fault unless there appears to be a remedy in sight; indeed, we have never seen any sense in following the cry of "Wolf!" and we have at times become unpopular because we never believed and never said that the packers controlled the live stock markets, when of our own knowledge we were satisfied they did not. But we feel very sure that two-thirds of the retail butcher shops can be dispensed with to the advantage of the farmer on the one hand and the consumer on the other. The retail butcher is the father of the most extraordinary system of extravagance known to the human kind. In districts where there are people of very moderate means wagon deliveries for small parcels exist and a credit system is built up that perpetuates extortionate profits and results in the consumer getting fifty cents' worth of meat for one dollar; and here is where we are in full accord with the Honorable Secretary of Agriculture when he says that butcher shops are too many and that they are a considerable factor in causing high prices without any corresponding benefit to the farmer.

We did not bring the argument upon the butcher; he brought it on himself. If the butcher does not mend his ways we will have community butcher shops and dispense with his services. Since he became a meat cutter he is but the fifth wheel to the wagon, and the best advice he can take is to reform himself and not pick on the stockman who has fed him and kept him in affluent circumstances ninety years out of the hundred.

If we hear any more from the retail butcher in relation to removing the duties on fresh beef we will make another suggestion that will be in order and try to make it clear how the fifth wheel to the wagon can be dispensed with altogether.

Selecting Seed Corn in the Field.

Some have a notion that seed corn should be selected from the stalks just as soon as possible after the corn has passed the dent stage. This is a mistake, for if the seed ears are husked before they are fully matured their vitality is weakened. It is best to allow corn to fully mature on the stalk and to dry out as much as possible on the stalk. This is nature's method of ripening seed, and it is hardly probable that we can improve upon it. At the hard dent stage of corn there is still much substance left in the stalk. Two or three weeks later all this has passed into the grain, thus insuring stronger vitality. Another thing about seed ears selected early in the field is, they are hard to dry out and keep in good seed condition. When ears are left on the stalk they usually incline so that water does not run into them and the husks protect the grain from injury.

I do not wish to be understood as not recommending field selection. That is all right, but make the selection after the corn is well matured. Practical farmers now agree that continuous early selection will result in an earlier strain of corn, but they also agree that it is much more difficult to get seed of strong vitality from those immature ears.

Aside from getting the earliest-matured ears and putting away the seed supply early in the fall, there is this advantage from field selection: The seed ears may be taken from robust, well-rooted stalks, and some attention may be given to other characteristics, which may be more or less desirable.

But after all our work in making selection of splendid individual ears, the thing of supreme importance is the subsequent care of the seed ears. The experience of many last fall should show just what this means. Last fall at husking time many thought that almost any corn was good enough for seed. Corn contained an unusual amount of moisture last fall, and the result was disastrous to germination after the hard freezing weather which came in November. Careful selection is good, but the most important thing is to thoroughly dry the seed ears before they freeze.—L. C. Brown.

Getting Big Oat Yields.

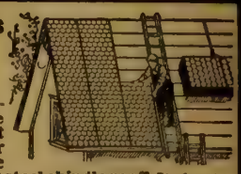
We are getting some good, old-fashioned oat yields this season. Threshing returns are surprising everyone, and it seems that some of our old-stand-by sorts are giving us the biggest yields. An Ogle county, Illinois, farmer reports to me a yield of 83 bushels per acre of "Lincoln." The seed was brought down from Minnesota last spring, and it was fine and heavy. Another farmer in the same county has just threshed his early "Sixty-day oats. They run 81 bushels per acre. A Ford county, Illinois, farmer who has grown "Silver Mine" for several years had a crop this season of 93 bushels per acre, and another grower of Silver Mine, in Indiana, got 90 bushels per acre. These are all extraordinary yields, yet with one exception they were made under ordinary conditions and without any special fertilization. The fact of such heavy yields over all sections of the Northern oat belt indicates that yields were due to a favorable season, and were not due to the result of sowing any particular variety, nor to any particular method of seeding. While most farmers now drill in their oats, yet one of the farmers who got these heavy yields sowed his oats broadcast among stalks and merely shoveled them in. The only advantage that drilled grain had over broadcasted grain, so far as I have observed this season, has been merely in the seed saved.—L. C. Brown.

Clay, Robinson & Co.'s Live Stock Report says: "It was on August 17th that our South Omaha house handled a shipment of sheep and lambs for Lowry & Roth, of Washington county, Idaho. Included were two doubles of lambs that sold to feeder buyers at $6.40, averaging sixty-five pounds, the top of the day's trade and higher than anything else in that line has sold since early in the season. On the same day they sold for E. A. Van Sicklin, of Washington county, Idaho, 342 feeding lambs at $6.40, averaging sixty pounds."

The champion Lincoln ram at the Argentine International Live Stock Show, exhibited by Mr. Fred Miller, was sold at auction for $500 in American money. They are partial to Lincoln sheep in Argentine.

STEEL SHINGLE ROOF DEFIES WEAR!

The Nation's Roofing Sensation!



For cash expended the farm's biggest money-maker today is the famous "REO" steel shingle roof! It shoots up farm values the instant farm buildings are crowned by the handsome, wonderful, indestructible "REO" steel shingles! Put on a "REO" roof at manufacturer's Factory-to-Farm prices!—half the cost of best wood shingles!

Edwards "REO" Steel Shingles outlast the buildings themselves. One "REO" roof **outwears four wood roofs!** Outwears SIX composition roofs! Cuts fire insurance rates, because **absolutely FIRE-PROOF! A $10,000 bond GUARANTEES you against money-loss from lightning!**

Stop! Look! Listen!

[By C. R. Barnes.]

This admonition—so long used by the railroads as a cautionary signal against a possibly approaching danger—finds a new application in these days of improved methods in agricultural pursuits. On every hand the farmer hears the invitation to stop a moment as he follows the paths of outworn tradition; to look at the superior results achieved by totally different means; and to listen to those who are eager that he shall benefit by being put in the way of securing like results from his own toil on his own land.

Stop! Look! Listen!—to the story of the corn field! Compare the labor involved and the results achieved in and by the modern system of level and shallow cultivation, with those under the outworn system of high "hills" and deep cultivation. It is now seen that all the extra labor of "hilling up" was worse than wasted, as exposing the soil to evaporation on all sides as well as on the top of the hill; also that on level ground the roots of the corn spread farther and extract more nourishment from the soil. Also, that after the corn has fairly started in its growth, cultivation below a depth of about two inches is destructive, rather than beneficial. How much unnecessary labor have our farmers undergone in the past because they "did not know!"

Stop! Look! Listen!—to the story of the dairy herd! "Cows were cows" and "milk was milk" with the farmer, not long ago, regardless of breed or butter-fat. So he fed them all alike, season after season—losing on some the money he made on others—because he had not learned to test each cow's milk separately, or to keep an account with each animal as he would with each storekeeper to whom he sold his farm crops on credit. The new agriculture has taught him the unprofitableness of breeding animals of inferior quality, and to distinguish between profitable and unprofitable cows of whatever breed.

Stop! Look! Listen! The bulletins issued every few days from the Department of Agriculture at Washington and from the various State Experiment Stations may any one of them contain information as valuable to you as that which awoke you to the method of cultivating corn so that it yields the larger crops of recent years, or to the value of the "Babcock test" in determining the worth of a cow. You cannot afford not to read them—at least such of them as relate to your special branch of farming.

The rooster does the crowing, but it's the hens that meet the demand for eggs

I'm not knocking the rooster. I'm defending him. Somebody has to crow and surely it is better that it be done by a disinterested party.

My enthusiasm over Sherwin-Williams Paints and Varnishes for the farm might seem like bragging if I made the goods.

But I don't. I do the crowing and the Sherwin-Williams Company meet the demand for the right paint and varnish for your house, inside and outside, your barns, your fences, your implements and your wagons.

You believe in keeping things painted, of course, but what I want to make sure of is that you know the importance of getting the right paint—paint that is pure, paint that is produced from accurate, time-tested formulas; paint that is thoroughly ground by modern machinery; paint that has great spreading and covering power and paint that is specially prepared for the kind of surface on which it is to be used.

That is Sherwin-Williams Paint—a product for every farm need, ready to apply and obtainable of any Sherwin-Williams dealer.

I have a book telling how to paint everything on the farm that needs painting and the paint, varnish or enamel to use. Want a copy free? Then

Address THE LITTLE PAINT MAN, care of

SHERWIN-WILLIAMS PAINTS & VARNISHES

689 Canal Road, Cleveland, Ohio. In Canada, to 639 Centre Street, Montreal

When Economic Plants Are Weeds.

Someone has described a weed as a "plant out of place." That is, any plant may be a weed if it is in a place where it should not be, or in a place where it will decrease the size of the harvest. Too many strawberry plants may result in some of them being weeds.

The superfluous strawberry plant should be hoed as carefully as a weed. The life of the strawberry bed is often shortened by years because the plants are allowed to set too numerously. The common way of merely keeping the plants confined to rows helps some, but even in the rows so many plants set in the course of two years that the possibility of bearing large berries is destroyed. The plants become so numerous that no one plant can produce much fruit, and the bed is supposed to run out. It may require a good deal of work to keep the extra plants from setting, but so it requires work to keep out weeds of all kinds, and it must not be forgotten that he unneeded strawberry plant is a weed.

In the corn field are many stalks of corn that are weeds. The writer knew of one farmer that always went through his corn field and cut out the unproductive stalks as soon as the ears had set on the productive ones, so that he could tell the productive ones from the others. The unproductive stalks were cut out and carried to the cows and thus added much to the dairy ration. The barren stalks would have taken much nourishment from the ground. and that nourishment would have gone to make only forage for farm animals anyway. The extra stalks were thus eliminated from the rest of the weeds.

The writer remembers seeing a field of beans which were planted so thickly that most of them played the role of weeds. The land was an old garden that was very rich and had been manured and tilled for no one knew how long. The owner thought it would be a fine place in which to grow beans, so he drilled them in thick. The growth of foliage was prodigious, but no beans matured. The number of plants was so great that the effect was the same as if the plants, gradually reducing their size, of innumerable weeds. In the fall the farmer in despair did the only thing he could with these beans—he plowed them under.

One of the common ways of running out an asparagus bed is to permit the seeds that fall to take cover and produce plants. These plants grow up into plants large enough to steal substance from other asparagus plants, gradually reducing their size, just as weeds would do. When this is likely to take place, one of the best ways is to cut out the stalks that are producing the seed balls and thus prevent the sowing of the seeds.

Great loss in the size of crops is caused by permitting too many plants to grow on a certain area. The plants sometimes all play the part of weeds, disputing with each other the limited amount of plant food and moisture.

Better or Worse.

"Susannah," asked the preacher, when it came her turn to answer the usual question in such cases, "do you take this man to be your wedded husband, for better or for worse—"

"Jes' as he is, pahson," she interrupted; "jes' as he is. Ef he gits any bettah Ah'll know de good Lawd's gwine to take 'im; an' ef he gits any wusser, w'y, Ah'll tend to 'im myself."—Youth's Companion.

Press Bulletin No. 177 issued by the Oklahoma Agricultural College at Stillwater is devoted to broom corn. It gives the manner of planting, the method of culture, the process of harvesting, curing, with the yield and value.

The National Farmer and Stock Grower.

(Title Registered in U. S. Patent Office.)

Published monthly by The Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Subscription Price, 50 cents a year, or $1.00 for three years.

Entered at Postoffice at St. Louis, Mo., as second-class matter in January, 1904.

We are offering a pocket compass as a subscription premium. Few people take notice of it, but it is really the most valuable premium we offer .

The excellent, smooth dirt road, 380 miles long, between Council Bluffs and Davenport, Iowa, is an example of what concerted effort will do when it comes to the use of the split-log drag. In this improvement the automobile was a considerable factor. It did not take long to establish the fact that a motor car could drag after a rain from eight to ten miles of the highway in an hour, thus leaving the road in excellent condition.

Bonding Commission Merchants.

There is a movement in New York state to require every commission firm receiving and selling farmers' products to give bond for the faithful performance of their duties, including making returns in a specified time.

In order to do this it is necessary to license the commission firm and to prohibit any unlicensed person from doing a commission business.

If there is any occupation in the world that requires government inspection, it is the business of produce commission merchant. Their transactions, their books and their returns should be open to inspection. They are trustees for other people. They receive consignments for sale on the market. The goods belong to the consignor; their compensation is the commission usually charged on the market. It is their duty to sell the consignment to the best advantage, sending the owner the proceeds of sale, less freight, commission and other legitimate charges.

The absolute want of regulation has been the means of bringing the produce commission business into disrepute. Many times the returns are accurate and sometimes they are not. Sometimes the commission firm sells to himself and then disposes of the goods a second time for his own profit.

We do not wish to convey the opinion that the produce commission firms are habitually dishonest—far from it. What we wish to say is that the opportunity for dishonest methods is there, and the want of supervision encourages them.

We decidedly object to a firm soliciting a consignment and then selling it to the firm to be resold, unless the owner understands it so. If a man is buyer and seller also, someone gets the worst of it. In the produce business there is no telling where the commission business begins and ends. Most of the produce firms are speculators on their own account. They send out buyers rather than solicitors; they will receive a consignment for sale on commission, or they will buy it outright, and both are perfectly honorable transactions; nevertheless the speculator and the commission man are different, yet they are badly mixed up.

Many firms apparently in the commission business are in fact very properly dealers on their own account and do not accept consignments. The license system would soon separate the speculator from the commission firm. This would be a good idea.

The commission business in cattle, hogs and sheep is already under regulation and inspection. It is done by the Live Stock Exchanges, which practically make regulation for the government of the trade requiring open books, every load or part of load to be sold separately and distinctly, so that every sale can be traced in books of buyer and seller. The produce firms have started trade organizations, but have not made and probably could not enforce some of the good rules that are easily enforced at a stock yard.

We hope to see the produce commission business under regulation, as much so as will give the consignor the same sureties that he has in the live stock trade.

Our Own Paper.

This is a paper that is issued only once a month, and all it costs is 50 cents a year. It is full of information that a farmer cannot very well obtain on his own farm except it be from a publication. It is clear, concise, practical. When read it is understood. There is no nonsense, no complaints, no flummery. We understand the troubles and vexations of farm life, and so far as it is possible for four cents and a fraction a copy we help the farmer to understand those things which we ourselves, in our own interest, are also trying to understand. We believe that the first, best and most lasting form of farming is stock farming, which includes poultry. We can find room for the orchard of large fruits, for the vegetable garden and for the small fruits, but when it comes to improving the farm, to keeping up the farm and getting back good money for products in substantial checks big enough to go to sleep on, we look to the cattle, hogs, sheep, horses, mules, poultry, etc., to bring in the results. The stock farmer must also be a grain farmer, but his pastures and meadows make up the right combination. The dairy farm is a branch of stock farming that has much to recommend it. In this paper we can be understood by all farmers, because stock raising is much the same the country over. We can help all alike, because we are all striving to earn an honest living and to enjoy the blessings bestowed upon us. The editor of The National Farmer and Stock Grower has for thirty-one years been a farm editor. For thirty-one years also he has been a stock farmer, and for twelve years he was a reporter of the market for live stock and agricultural products. He is, therefore, in a position to understand the drift of events and to write useful market articles. We have been led into this explanation because one farmer placed us in one class and himself in another, thinking that our interests differed. In this he was mistaken. If we did not own a farm to-night, to-morrow we go out and buy one, even if we have to borrow money to do so, because we need a farm for safety and independence. City life is rotten to the core. A few bright lights and then poverty. The taxes eat one up. People earning ordinary salaries pay eighty per cent. of it for food, clothing and rent. Wealthy people with large incomes are always in trouble —their children grow up with extravagant tastes and without ability to earn money. There is a contest in luxurious living, and yet in summer the cities are unbearable and the people drift to the pure and open life of the country to save their children. The country used to close down at nightfall. With the farmer it was work and sleep. Not so now; the farmer can have every luxury that a city man has, and, above all, he can carve out his own life and destiny, whereas the city man is dependent upon others, and is liable at any time to find his occupation gone. The day of the farmer is here. There are ninety-three millions of people to be fed, and more arriving daily. It is up to the farmer to feed them and to make them pay a fair price for their food.

The International Show.

The International Live Stock Show at Chicago for 1910 will open November 26th and close December 3d. The preliminary classification for all awards has been issued and is available. It contains new classes and full particulars of every award. All stockmen should remember that this is the greatest live stock show—the clearing house of the State Fairs and representing the perfection of live stock production—a contest of champions. Write to Mr. B. H. Heide, Secretary, Union Stock Yards, Chicago, and ask for copy of the premium list.

Farm Land Salesmen.

A call has been issued for a convention to be held at the Planters' Hotel in St. Louis, October 11, to form a permanent organization of real estate dealers who handle farm lands. There are 1,500 real estate agents in the state, buying and selling Missouri farms. Those who head the movement claim that it will be the means of bringing more capital to the state and benefit every member individually.

An Executive Committee making plans for the convention consists of R. F. Chew, President, Kirkwood, Mo.; J. B. Blakemore Secretary, Kennett, Mo.; B. H. Rucker, Rolla, Mo.; F. W. Low, Chaffee, Mo.; H. C. Schult, Caruthersville, Mo.; J. A. Parker, Parma, Mo.; and W. H. O'Brien, St. Louis, Mo.

The National Farmer and Stock Grower sent out several thousand pounds of pure-bred seed corn to subscribers last spring and offered premiums for prize corn raised from the seed furnished by us. Last year we paid some premiums and will be glad to do so this year.

Read about the Agricultural Blue Book and Live Stock Breeders' Directory. Every business house and every farmer and stock raiser should have a copy.

The National Farmer and Stock Grower, if read from beginning to end, will be of value on any farm—to the farmer, his wife, his family, and to his employes. It costs but a few cents a month, only fifty cents a year.

Our Animal Exports.

During the year ending June 30, 1910, we exported 139,430 cattle, against 207,542 the previous year, and 349,210 in 1908. This branch of trade is decreasing. We exported 4,410 hogs, 28,910 horses, 4,512 mules and 44,617 sheep during the year ending June, 1910. Last year Canada received from us 10,283 of the cattle exported; Mexico, 5,149, and Great Britain, 122,139. Of the 4,410 hogs exported, the West Indies received 3,216. Of the horses exported, Canada received 24,518; also 36,531 of the sheep. Canada also received most of the mules.

Tomato Industry in Danger.

Very important action is being taken to arrest the disease called the tomato leaf spot, and another disease called the tomato wilt, which is afflicting the tomato-growing industry in many sections of the country and particularly in St. Louis county, Missouri, where tomato growing is one of the largest truck-growing industries. A carefully-compiled list of questions is being sent out for tomato growers to answer, so that from a consensus of views satisfactory measures of relief may be obtained. This is a subject of considerable importance to tomato growers, who are requested to write to Mr. B. Greensfelder, R. F. D. No 2, Clayton, Mo., and obtain a list of the questions for the purpose of answering them at once.

Its Economy and Power Startle the World!

The Engine Runs on COAL OIL at a Fraction of Cost of Gasoline.

Thousands of these marvelous engines—in actual use today—prove beyond question that kerosene is the engine fuel of the future. The success of the "Detroit" Engine is absolutely unparalleled.

Demand is overwhelming.

Kerosene (common coal oil) runs it with wonderful economy. Kerosene generally costs 6 to 15c less per gallon than gasoline —and gasoline is still going up. Runs on any engine fuel. Only three moving parts. Light and portable. Does work of engines weighing four times as much. Runs everything.

The Amazing

"DETROIT"

The Kerosene Wonder—on 15 Days' Trial—Direct From Factory

Any engine you want, from 2 to 20 H. P., sent on 15 days' free trial—**tested immediately before shipping and ready to run.** If dissatisfied—**every dollar you have paid us for the engine cheerfully refunded.** Prices lowest ever known for high-grade, guaranteed engines.

The New Book is Ready—WRITE! Tells all about these new wonders that mark a newera in engines. Special introductory price on first "Detroit" engine sold in each community. Quick action gets it. Address

Detroit Engine Works, 383 Bellevue Ave., Detroit, Mich.

THE SALT OF THE EARTH.

Jo Jenkins counted up his cash
And couldn't understand
Why he was near financial smash
With such a lot of land.

"I've worked and slaved for years," said he,
"My eighteen hours a day,
And yet I'm poor! It's up to me
To farm some other way!"

So Jenkins tried the potash plan
He'd often read about,
And how to be a wealthy man
He speedily found out.

For now he views his crops with pride,
And truthfully declares
That potash properly applied
Produces millionaires.

—N. P. Jones.

We are requested to mention the fact that the Illinois State Fair this year will be open for business and all exhibits in place on Saturday, October 1. There will be the largest crowd of the week on that day, Aero-Auto Day, and Sunday, when Mr. Bryan lectures, will be nearly as important.

During the month of August, at Chicago, Omaha and Kansas City, sheep receipts increased over former records by a total of 300,000 head.

Subscribe for The National Farmer and Stock Grower. It will pay you to do so.

FOR THE FRUIT GROWER.

Someone in the family ought to be a fruit grower; and yet it is very hard to interest the stockman in fruits. We will do our best, however, by placing a good fruit book in the hands of our readers. The book entitled Amateur Fruit Growing was written by Samuel B. Green, a practical man and one of the best authorities on the subject. There are 134 pages, written with special reference to the growing of fruits for the home and the market. We will send the book entitled Amateur Fruit Growing and The National Farmer and Stock Grower one year for 55 cents. Send a money order to Hale Publishing Co., 3550 Vista Ave., St Louis, Mo.

Agricultural Blue Book.

This is our own publication, and is copyright work of great merit and convenience. It is called **"The Agricultural Blue Book and Live Stock Breeders' Directory."** It is designed to be useful to farmers and to business men in all sections of the country.

The Farming Section.

The Agricultural Blue Book contains 128 pages devoted to names and addresses of live stock breeders, experimental and general farmers, dairymen, horticulturists, etc. This farm list numbers 150 to 180 to the page—about 22,000 in all. All the names and addresses have been carefully verified. In each instance the principal occupation and class of stock raised are stated. It is fully up-to-date and represents the owners of about twelve millions of acres of land, who conduct their own farming operations. In various lines of business the value of this **Agricultural Blue Book** cannot be overestimated.

The Business Section.

At the request of many of our patrons we have also included a Business Section consisting of thirty-two pages. This contains a list of firms who do business with agricultural people. This list is arranged alphabetically by states. It gives the name, address, occupation and class of manufacture, etc. A general farmer, stock raiser, dairyman, poultry keeper, ranchman, fruit grower, will find this book to be valuable and interesting.

Ready For Delivery.

The Agricultural Blue Book is just out and ready for delivery. The size is 6x9½ inches, elegantly bound in blue cloth with gilt title. The price is $2.50 per copy. If the buyer is not satisfied he can return the book and the money will be refunded. Address, **Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

Small-yield Cows.

Don't discuss small-yield cows. Cut them out as fast as you can. Increase the average yield per cow as fast as you can. The 3,000-pound yielder will be a heavy loser, the 4,000-pounder will be a fairly large loser, the 5,000-pounder will be a small loser, the 6,000-pounder will bring her owner out about even, in the coming years. You should aim for 7,000-pounders at the very least, for only when that yield is reached can you be sure of a profit on your milk. Line up and breed up for big-yield cows. Your business is to make milk. The Hollanders show you how to do it with their 8,000 to 15,000-pound cows, whose yearly average is over 9,000 pounds of milk per year.

Cut out the small-yield cow, whose only claimed virtue is that she puts five to seven per cent. butter-fat into her milk. That class of cows is the favorite class of the middlemen, who can skim or water such milk down to the fool state "standards," and it is the ruination of the producers, once the 3,000-pound to 4,000-pound yearly yield of such cows is made at a cost of four to eight cents per quart, while the market price averages three to four cents a quart. —Minnesota Dairyman.

A Mammoth Cheese.

The National Dairy Show has entered into a contract with the N. Simon Cheese Company for a mammoth Cheddar cheese to be placed on exhibit in the Chicago Coliseum during the coming show. It is to be of extra fine quality and to weigh more than a ton. The National Dairy Show will be held this year at the Coliseum, Chicago, October 20th to October 29th.

A Transaction in Cotton.

A number of cotton dealers who had contracted to deliver cotton at a stated time had to buy it at three cents a pound advance in order to fill their contracts. They had to do it or fail in business, but they had to do it all the same. This is what is called gambling in futures. It is a contract and a delivery of the goods. If a farmer contracted to deliver twenty bales of cotton a a stipulated price, and when the day of reckoning came he was short three bales, he would have to do one of three things: One is to default upon his contract; the second is to buy cotton of someone else to fill the contract; or the third is to settle with the buyer by paying the market price for three missing bales of cotton. The Cotton Exchange dealer who was short was no more short than the farmer who was short three bales. The cotton dealer had the same mode of settlement as the farmer.

The Duty on Broom Corn.

We have read somewhere in free-trade literature that an example of oppression by tariff is the duty of three dollars per ton on broom corn.

Farmers who are raising broom corn may not know that raising broom corn is a protected industry, but it is. There is a duty on foreign-grown broom corn. If any broom corn is imported from foreign countries, each ton of it contributes $3.00 for the support of the United States government.

The United States broom corn growers support the government by taxation, and we see no reason why the foreign grower of broom corn should have the advantage over our own people. But there are some misguided persons who say: "Tax our own productions and let foreign productions in free." They say it some other way, but that is what they mean.

A ton of broom corn will make 6,000 whisk brooms. The tax is $3.00, which is one cent on every twenty whisk brooms, or one-twentieth of a cent on each whisk broom. In this we have one of the awful examples of the protective tariff. It is an actual fact that the broom-corn farmer is held up as an example of the benficiaries of an iniquitous tariff.

Last year tariff duties collected on foreign goods for the support of the national government amounted to three hundred million dollars. The free-trade idea is to take off these duties, let the goods come in untaxed, and then tax ourselves to make up the deficiency.

A Word About Land.

Land bargains are fast passing away Were it not that large tracts of land are being cut up for sale to settlers, prices would now be on a very much higher basis. Already most of the land north of the Tennessee river and east of the Mississippi is so high in price that to farm it profitably is something requiring rare ability. The West and the Southwest contain what are left of the opportunities for a man to buy land on a basis so that it can support the farmer and his family and pay for itself in a few years, and all these bargains will not last long, for population is increasing and the people must have homes, regardless of cost.

We have heard a new word lately. It is "conservation." It means a change of policy. The government used to open up every foot of land and let the people have it as homesteads, pre-emptions and timber claims. It used to be "free grass;" now it is forest reserves, and pay rent. We are not putting any argument against it, simply stating facts. We have reached the limit of good land free; hereafter lands will cost money. Ten years from now lands will be for sale, but the buyer will pay more and get less.

Farmers' sons who intend to get farms of their own had best get started towards land of their own. People who intend to become farmers had best not delay. The farmers who have farms had better hold onto what they have, unless they buy three for the one they sell. Twenty years from now all land owners will be rich, and the rich will all be land owners.

The West is cheap, because settlements began in the East. Western lands are worth as much, more productive, as near to market. The West will not be the West any more twenty years from now.

FARM AND RANCH LANDS.

ALABAMA.—12,000 acres of cut-over pine lands in Baldwin county, Alabama, nearly thirty-five miles southeast of Mobile. Soil a sandy loam with clay subsoil. A colony now being developed on land adjoining, and the lands being sold at $20 per acre. Four or five miles distant, on apparently the same kind of land, a superior quality of tobacco is being grown, and the lands are selling at prices ranging from $20 to $30 per acre. Good water, delightful climate. Price, seven dollars and fifty cents ($7.50) per acre. **T. H. Jones,** 513 Roe Bldg., St. Louis, Mo.

ARKANSAS.—Hundreds of bargains in improved farms. Nice, smooth land, rich and productive. Homeseekers' Guide mailed free. State map 10c. **L. E. Moore,** Searcy, Ark.

We Pay Your Fare Both Ways to Florida

If you buy Celery Farms property—ten acres—you get your railroad fare both ways. We have 60,000 acres in the finest section of Florida, a place where one crop of potatoes in 90 days will pay for the land and put money in the bank. Rail and river transportation, the best market, the earliest market, where the owners of the Colony help every man to success. We want 1,000 families in the next sixty days, and make concessions that will bring them. Don't wait to write to-morrow—

DO IT NOW!

FLORIDA HOMELAND COMPANY,
458 Atlantic National Bank Bldg.,
Jacksonville, Fla.

FLORIDA.—50,000 acres of moderately level land in Northwest Florida. Railroad passes through the tract, with location for a town on the property. It is within sixty miles of the city of Appalachicola and its fine harbor. Soil a sandy loam with a clay subsoil, adapted to the growing of truck garden, fruits, pecans, grapes, etc. Near to this property is one of the regions where is grown the famous Sumatra leaf wrapper tobacco, so there seems to be no reason why this same tobacco could not be grown on this land.

There is estimated to be now on the land about 3,500 feet per acre of yellow pine timber, or a total of about 175,000,000 feet. It is claimed that there are no swamps or wet land, except a small acreage along the creek.

This property is well located as to climate, soil and purposes for which it can be used for a subdivision and colonization proposition.

Price, six dollars ($6.00) per acre. **T. H. Jones,** 513 Roe Bldg., St. Louis, Mo.

MISSISSIPPI.—10,000 acres on two railroads, in Jackson county, Mississippi. A sandy loam soil with red clay subsoil; moderately level, yet sufficiently rolling to drain and cultivate well. Good water, delightful climate. Here can be grown cotton, corn, oats, potatoes, both Irish and sweet, and nearly all kinds of garden truck, besides figs, Satsuma oranges, grapes, berries of many kinds and the excellent and profitable paper shell peas. Some believe that this coast region of Mississippi, Alabama and Florida will rival California when it is developed. Price, ten dollars ($10) per acre. **T. H. Jones,** 513 Roe Bldg., St. Louis, Mo.

MISSOURI.—Stock Farm of 680 acres on the southern slopes of the famous Ozarks, about 125 miles south of St. Louis. The clear, spring-fed Black river runs through the farm. About 390 acres of good bottom land, of which nearly 200 acres are in cultivation. Orchard of nearly 1,200 apple trees, probably 100 pear and 50 peach trees, besides some other fruits. Remainder of the land in pasture and timber. Good farm house and barn, hog and poultry houses. Healthful location. Good place to grow stock, fruit and poultry. Price, $25 per acre for quick sale. **T. H. Jones,** 513 Roe Bldg., St. Louis, Mo.

MISSOURI.—1,700 acres of "cut-over" hardwood timber lands, located in Reynolds county, Missouri, nearly 125 miles south of St. Louis. Not a solid body, but in tracts of 40, 80, 100, 200, 320 and 960 acres. About 25 to 40 per cent. can be used as farming land, remainder as orchard and pasture land. Some of it hill land, some rolling, some smooth. Excellent water; very healthful climate. Good land for growing poultry, stock and fruit, especially apples, peaches, grapes, strawberries, blackberries, etc. The timber is chiefly oak and hickory, and it is estimated that there can now be cut nearly 3,500 feet per acre. Price, $5.00 per acre. **T. H. Jones,** 513 Roe Bldg., St. Louis, Mo.

MISSOURI.—4,120 acres of rich, cut-over, well-drained bottom land, within one mile of railroad station. Located in the rich, productive region of Stoddard county, Southeast Missouri. This is the locality where such great crops of cotton, wheat, oats, corn, timothy, red clover, alfalfa, potatoes, and, in fact, nearly all kinds of grains, grasses and fruits and vegetables grown in the United States are produced so well. The land is very rich and the region is developing rapidly. It will cost about $10 per acre to get the land ready for plowing. Good markets and shipping facilities. Will be sold in farm tracts at $25 to $30 per acre. Many consider this better than the rich lands of Illinois selling at $200 per acre. **T. H. Jones,** 513 Roe Bldg., St. Louis, Mo.

NEW MEXICO.—136,000 acres of slightly-rolling, well-drained land, in one body, now used as a good stock ranch. This is located about twenty miles from Roswell, New Mexico, and nearly ten miles east of the Pecos river. It is estimated that four-fifths of the land would be well adapted to agricultural purposes, it being about the same quality and characteristics of thousands of acres now in farms in the Pan Handle of Texas, and which is being sold at $10 to $20 per acre. Much of this land situated in the valley is a black, alluvial soil, well adapted to agricultural purposes.

This property is, however, now used and well adapted as a stock ranch. Since stock growing is so profitable, it certainly is a good proposition to so continue to use it. Nevertheless, it might be subdivided, sold into small farms and cultivated, especially following out the methods of dry farming.

The ranch is well supplied with water holes and a number of wells and windmills. It is also fenced with a substantial fence of five wires.

There are prospects of a railroad being built through the land.

Price, six dollars ($6.00) per acre. Reasonable terms. **T. H. Jones,** 513 Roe Bldg., St. Louis, Mo.

TENNESSEE.—Send for booklet on farming and full description and prices of lands for sale in the valley of East Tennessee, the healthiest climate and best lands in the country. Address, **East Tennessee Real Estate Company,** Morristown, Tenn.

TEXAS RANCH FOR SALE: 68,000 acres, 25 per cent. of which is first-class agricultural, the remainder is rolling and good grazing land, divided into fourteen pastures, watered by thirty-two wells, equipped with windmills, three large tanks and permanent running water, situated within five miles of the town of Del Rio, in the counties of Valverde and Kinney, bordered on the south for five miles by the Southern Pacific Railroad, with a large warehouse and loading pens in the ranch on the railroad. The Favorite Corn Husker.

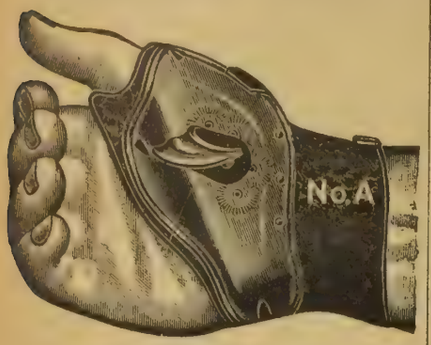
This Corn Husker is more largely sold than any other on the market. We have therefore selected it as a seasonable subscription premium. It is made for the right hand. The hook sets at any angle, to prevent glancing. Opening or closing the small end of the plate adjusts a fit to



any size hand and prevents chafing. The improved shape of the plate and leather makes this hook the favorite. We will send The National Farmer and Stock Grower for one year and one Favorite Corn Husker for 50 cents. The Corn Husker is a free premium. Address, **Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

EXTERMINATING TICKS.

A Pasture May be Freed of Ticks by Keeping All Stock Off of It From September 1 to July 1.

The months of August and September lend themselves well to the eradication of cattle fever ticks where a pasture rotation plan is used. By vacating a pasture and keeping it vacant until July 1 of next year it may be freed of ticks, and if no tick-infested animals are allowed to enter after July 1 the pasture will remain free. The United States Department of Agriculture advises farmers in the tick region to take advantage of this favorable time so far as practicable.

Pastures from which live stock is removed for a sufficient time becomes free of ticks by a process of starvation, as the ticks can not live to maturity if they are unable to get upon animals. The time required for all ticks to die after the stock has been removed from infested fields and pastures varies considerably, depending on climate, season and weather conditions. Experience has shown, however, that the period from September 1 to July 1 is sufficient, and this appears to be the most convenient time.

The advantage of vacating a pasture for the period named is twofold. Not only is the pasture freed from ticks, but its disuse during that time will probably cause less inconvenience and expense than at any other season, and it will be benefited by the rest and will have a better growth of grass the following summer. In some sections where pastures are utilized throughout the winter, to vacate would probably necessitate feeding the stock, unless the farmer is situated so that he can keep his stock on one pasture while another pasture is kept vacant. But it is also true that beginning with September there will be a more abundant supply of rough feed about a farm which can be utilized. August is a most favorable month for making a start toward freeing premises of ticks by the method suggested.

The animals should of course be free of ticks when they are again turned on the pasture in July. Where the owner has a small number of cattle, greasing or spraying them with Beaumont crude petroleum is a good way to rid them of ticks. When the number of cattle is large, or when a dipping vat is convenient, it may be more practicable to dip them.

Full information as to how to get rid of the ticks, including directions for the preparation of dips and sprays, may be obtained free upon application to the Bureau of Animal Industry, Department of Agriculture, Washington, D. C.

Ayrshire Records.

The report of the official test for Ayrshires in the Home Dairy Test for 1909-10 gives an average of 9,593 pounds of milk and 434 pounds of butter for the thirty cows comprising the six best herds in the test.

The six best cows in the test averaged 11,712 pounds of milk and 531 pounds of butter.

One cow gave 12,218 pounds of milk and 537 pounds of butter.

Another cow gave 11,784 pounds of milk and 566 pounds of butter.

While the above records may not be phenomenal, they are of value in showing the working daily ability of the Ayrshire cow, and her uniformity of production in the working dairy.

They are of value, too, as showing full-year work in the production of milk and butter for sale.

The test, too, is of value as showing the high average of the poorest cows compared with the yield of the best.

The lowest yield in the whole thirty cows was one cow which gave 7,512 pounds of milk and 337 pounds of butter.

The value of a breed for a working dairy is shown in the general average of the large number of cows, more than in an occasional cow of phenomenal ability.

Another thing of interest in the Home Dairy Test is, that it is made on the farms in different localities.

One of the above herds is located in Maine, and another in the state of Washington, with herds scattered all along between, all of them doing good, practical work in the dairy under diverse conditions.—C. M. Winslow, Secretary, Brandon, Vt.

No Sale of Prize Corn.

The management of the National Corn Association announces that there will be no sale of prize-winning exhibits at the Fourth Annual National Corn Exposition, to be held January 30th to February 11th, 1911, at the Ohio State Fair Grounds, Columbus, Ohio. This will be the first Exposition where the samples have not been sold at auction. At the last Exposition, which was held in Omaha, Neb., one sample of corn sold approximately at the rate of $2,345 per bushel, and a peck of wheat sold at a price that would make it bring $800 a bushel.

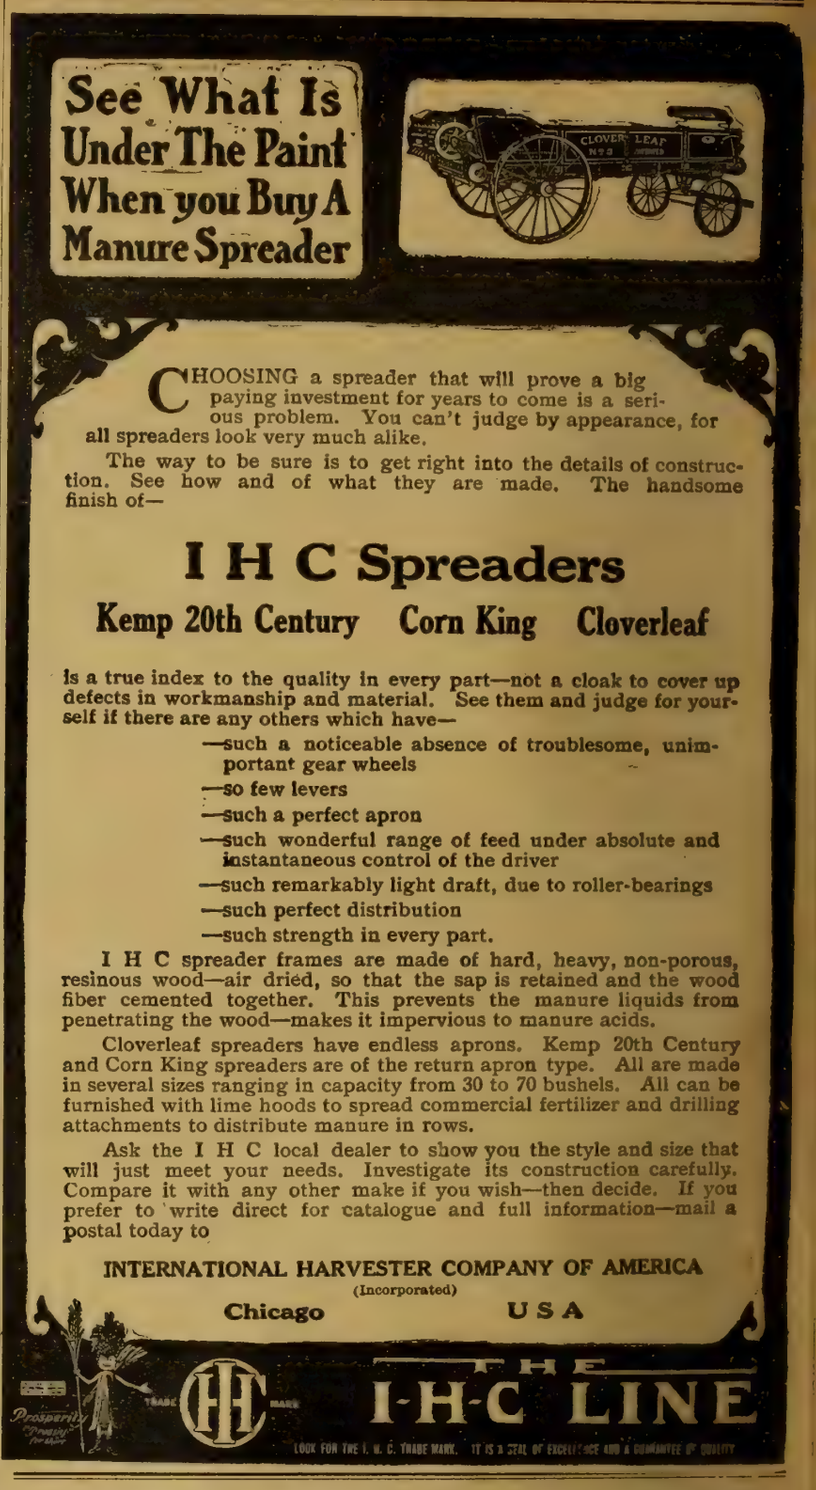
The only samples becoming the property of the Exposition this year are those winning the grand champion prizes, the balance remain the property of the individual exhibitor or state organization assembling the exhibits for the Exposition.

The Strawberry-raspberry.

The officials of the Wisconsin College of Agriculture are warning people against buying the so-called strawberry-raspberry.

Commenting upon this so-called hybrid fruit, Prof. J. G. Moore states that the plant is not a cross of the raspberry and strawberry, nor has it any of the qualities of the strawberry. It is really an inferior type of raspberry, being a small producer of inferior fruit, and is by no means as good as the common kinds of raspberry.

In the climate of Wisconsin the stems of the plant are not hardy and are killed down by frost each year. It is largely used as an ornamental shrub, and farmers should not buy it for fruit.



See What Is Under The Paint When you Buy A Manure Spreader
CLOVER LEAF
CHOOSING a spreader that will prove a big paying investment for years to come is a serious problem. You can't judge by appearance, for all spreaders look very much alike.
The way to be sure is to get right into the details of construction. See how and of what they are made. The handsome finish of—
I H C Spreaders
Kemp 20th Century Corn King Cloverleaf
is a true index to the quality in every part—not a cloak to cover up defects in workmanship and material. See them and judge for yourself if there are any others which have—
—such a noticeable absence of troublesome, unimportant gear wheels
—so few levers
—such a perfect apron
—such wonderful range of feed under absolute and instantaneous control of the driver
—such remarkably light draft, due to roller-bearings
—such perfect distribution
—such strength in every part.
I H C spreader frames are made of hard, heavy, non-porous, resinous wood—air dried, so that the sap is retained and the wood fiber cemented together. This prevents the manure liquids from penetrating the wood—makes it impervious to manure acids.
Cloverleaf spreaders have endless aprons. Kemp 20th Century and Corn King spreaders are of the return apron type. All are made in several sizes ranging in capacity from 30 to 70 bushels. All can be furnished with lime hoods to spread commercial fertilizer and drilling attachments to distribute manure in rows.
Ask the I H C local dealer to show you the style and size that will just meet your needs. Investigate its construction carefully. Compare it with any other make if you wish—then decide. If you prefer to write direct for catalogue and full information—mail a postal today to

The Good Brood Sow.

"Serenity, undisturbed by fretful restlessness, are characteristics of a good brood sow. Any breeder of experience will know just what is meant when it is said that a sow is 'motherly,' but the exact meaning is difficult to set down in words. This maternal manifestation has an important bearing on success with a litter, and the dam's promise in this regard should have weight in her purchase. In making a selection the teats should be examined to discover that there are a dozen well-formed, not too small or obscure, and giving indications of supplying abundant milk."—From Coburn's "Swine in America."

Misplaced Advertising.

The real estate firm of Solomon & O'Sulivan had lots for sale in a newly-planned suburban district.

O'Sullivan — young, enthusiastic and Irish—was writing the advertisement, the national eloquence flowing from his pen. He urged pending purchasers to seize the passing moment.

"Napoleon," he wrote, "not only met oppodturnity; he created it."

Mr. Solomon read this line in the advertisement slowly and carefully.

"This fellow Napoleon," he said, "what's the use of advertising him with our money?"—Answers.

The thoroughbred race horse and sire Kingston has been retired from further service in the stud, although apparently in the best of health at the age of twenty-six years. During his career on the turf Kingston started in 138 races, was first eighty-one times, second thirty-three times, third twelve times, and unplaced four times, winning a total of $142,562.

New York Short of Milk.

On August 8th the New York milk market was mentioned by the Milk Reporter as follows:

"City milk dealers have had great difficulty in getting enough milk to meet the demands of their trade. More stock was wanted than came through their regular channels of supply, and in instances they bid as much on the platform for a little extra milk as it is selling to city consumers. The extra efforts to draw additional supplies this way have resulted in increasing the weekly receipts only 5,922 cans. The net price paid to farmers in the 26-cent freight zone is 3½ cents per quart."

From Dalhart, Texas, a large land deal was reported, in which the famous J. J. Cattle Ranch of 212,000 acres was sold by E. D. Neely to Pruitt Bros., of Kansas City, Mo., for $1,200,000 cash. The ranch is well watered with running streams and springs. Eventually it will be cut up in smaller tracts and sold out in smaller parcels.

Credit Subscriptions.

We desire to invite attention to our blank form at the end of this item, which can be filled out for subscriptions on credit. This is an invention of Uncle Piper, our subscription editor, who has guaranteed that every one of them will be paid when they are due. The subscription price of this paper is $1.00 for three years, and the bill for the subscription is sent to the subscriber at the end of the first year. When the bill goes out Uncle Piper generally slips in a list of handy premiums for the subscriber to select one, providing he pays the bill promptly, and the general result is that the bill is soon paid. When it comes to getting subscriptions from intelligent, high-class farmers, Uncle Piper is at the head of the class.

Uncle Piper.

SUBSCRIPTION BLANK.

To the Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Gentlemen: — You are hereby authorized to enter my name as a subscriber to The National Farmer and Stock Grower for three years. At the end of the first year I will pay the Dollar for the three-year period. This order is given with the understanding that I am at liberty to stop the paper at any time by paying the subscription to that date.

The Farm Cow and Farm Milk.

Milk has again jumped in price and is now selling in many of our cities at eight cents per quart and five cents per pint. This should mean more prosperity for the producer of milk, but in some localities the buyers of milk will continue to purchase at the some old prices paid to the farmers.

Milk should be clean enough to keep without putting chemicals into it. In some states there are now severe laws against the use of preservatives in milk, but where there are no such laws the conscience of the milk producer should ensure a product free from chemicals.

Don't believe the story of the druggist or agent of the milk preservatives, when he tells you that the preservative he has is absolutely harmless. There are no such chemicals known to the chemists, and they know all the chemicals being sold by druggists or agents. In the past it has been found that some of the most dangerous chemicals were sold in packages labeled to contain only harmless ingredients. By the use of such chemicals you may unknowingly sacrifice life.

Feed the old milk to the pigs and the chickens and do not mix it with the fresh milk. Old milk and new milk mixed together help both to spoil rapidly. This is because the old milk is full of germs and the new milk full of heat, and the two combined make a splendid opportunity for the further multiplication of germs.

The absolute cleanliness of the utensils will do very much to keep the milk from spoiling. The cans should be thoroughly cleaned, that they will have no disagreeable odor, even if kept shut up for hours on a hot day. But this shutting up should not take place. The mouth of the can should be open to the sun and the air up to the time it is in use for carrying the new milk to market.

If you are shipping your milk to some of our city markets you will not be allowed to use fermented feeds. But fermented feeds, if fed rightly, make good feed and are not detrimental to the quality of milk nor to its keeping power. Among the most valuable fermented feeds are silage and starch feed, both of which are very digestible.

The farmer's family should be the farm's best customer for milk in all its forms. It can be used in so many ways that it is often cheaper to use it on the table than to send it to the city. Some farmers actually lose money by selling most of their milk and leaving only a limited daily allowance for the family.

Buy a hand separator and be in shape to control the use and the sale of the milk. The farmer that is progressive enough for that will find the ways of utilizing his surplus milk increased in number.

A good many farmers just now are finding that it pays to cater to the cream trade. The sale of the cream brings in as much as would the butter, were it made, and the labor of buttermaking is avoided. In addition, the farmer has left the skim milk for many purposes of his own family and of the live stock, such as the chickens and pigs. Foster and encourage the cream trade.

The Use of Bacteria in Buttermaking.

[By Walter G. Sackett, Colorado Agricultural College, Fort Collins.]

Those who are engaged in buttermaking as a profession consider that the two most important factors in good buttermaking are clean cream and proper ripening. The former can be obtained only by the most scrupulous care on the part of those who are entrusted with the handling and the latter is accomplished best by the use of what is known as commercial starters. These are pure cultures of acid-producing bacteria capable of imparting a desirable flavor to the butter.

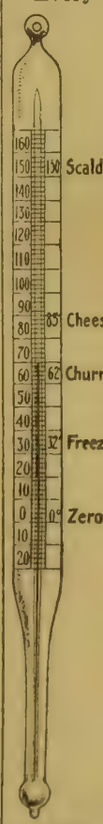
The bacteria that are normally present in the cream and in the end find their way to the butter, are in a large measure responsible for the flavor, and if it happens that filth germs dominate, which is apt to be the case in natural ripening, the butter will have a strong, rancid flavor and odor. When the commercial starter is used in ripening the cream, immense numbers of bacteria, capable of producing an agreeable flavor, are introduced; the growth of the undesirable is checked and many of the unpleasant flavors already produced are covered up, so to speak, either wholly or in part.

The cost of these commercial products is so small, and the method of using them is so simple in comparison with the benefits to be derived, that their more general use is to be recommended. The initial cost of a starter is about fifty cents, and by careful handling it can be propagated for an indefinite period.

Pure culture starters are put up by the different manufacturers in two forms—one, a powder, and the other, a liquid. They are for sale under trade names, such as Butter Culture, Flavorene, Lactic Ferment, etc., and can be procured either directly from the manufacturer or through any drug store or creamery supply house.

"Dazey" Dairy Thermometer.

This thermometer is offered as a subscription premium in connection with The National Farmer and Stock Grower. It is one of the discoveries of Uncle Piper, the subscription editor of this publication.



Every farm ought to have a dairy thermometer for home use. We have found one —the best of all. It is 8½ inches long. It is high grade, and with care will last for many years. The temperature of cream regulates to a great degree not only the time required in churning, but the quality of the butter. If the cream is churned when at the proper temperature, the result is generally nicely-granulated butter. When the temperature is wrong, the work is uncertain, troublesome, and the butter is inferior. Uncle Piper used to be on a dairy farm in Texas. He did not manage it, however. He would buy a dairy thermometer and demanded that it be used; but She Who Run the Ranch said No! Now Uncle Piper is trying to force the dairy thermometer on other people because he could not properly introduce it into his own family. Send us 60 cents and we will send you The National Farmer and Stock Grower for one year. We will also send you, securely packed, postpaid, safe delivery and quality guaranteed, one "Dazey" Dairy Thermometer. Address, The Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Broom corn is selling at $140 per ton for fair to $160 per ton for choice.

Own your own farm!

The price of good, rich land in the Southwest is so low that you can own a big farm there without investing much money or mortgaging the place. The land will raise as big or bigger crops than you are now raising, and you will get better prices for what you raise.

Why don't *you* go

Southwest

now while good, fertile land is *still* cheap—where you can earn money *every* month; where your expenses are *lower*, your *living easier* and your *social* advantages as good or *better* than you have now. The Southwest is *no longer wild*—there are schools, churches, neighbors and modern towns *nearby* no matter where you locate there.

The *more* you look into the great Southwest, the *bigger* the opportunities *loom up*. My monthly magazine "The Coming Country" is *full of facts* and *actual results* in the Southwest—it will be mailed you *free* for *three months*. Send your name and address *today*.

Reason For Buying a Roof That Needs No Painting.

In making a roofing, the problem of the manufacturer is chiefly a matter of getting a durable wearing surface. In the past roofing manufacturers have depended upon a heavy coat of paint for such protection. If kept properly renewed, a painted roofing will give satisfaction.

The objection to this type of roofing, however, was that the painting constituted a nuisance and expense. The average owner was fairly sure to neglect it, and when the paint wore off—and of course no paint could wear very long under the severe conditions of roof service—the water and frost began to do serious damage.

Of late years the roofing industry has been considerably changed by the appearance of Amatite, a mineral surfaced roofing which needs no paint. It is obvious that a surface which consists of small particles of mineral properly cemented upon the top surface of the roofing will not need any paint. The effect of weather upon the mineral surface is pratically neglible.

Amatite costs no more than the painted roofings, and the saving of work and expense has made it exceedingly popular.

A sample of it is obtainable on request from the Barrett Manufacturing Company at New York, Chicago, Philadelphia, Boston Cincinnati, Cleveland, Pittsburg, Minneapolis, St. Louis, Kansas City or New Orleans.

In Egypt the cotton acreage is increasing, but the crop does not increase in the same proportion.

Buckeye SAW MILL

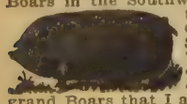
Simple in construction, economical in power, durable in every part and moderate in price. Guaranteed the Most Up-to-Date Saw Mill on the Market. ALSO, Engines & Boilers for Saw Mill work. Descriptive catalog free to interested parties. Write Weber Implement Co., 416 N. Main street, St. Louis, Mo.

POLAND-CHINAS.

"Kirby's got the best." Not what we say but what our customers in nine different states say. Write for prices.
KIRBY STOCK FARM, Marmaduke, Ark.

POLAND-CHINA HOGS.

Home of Royal Meddler (50,111) and Hutchinson Sensation (53,000), two of the greatest Boars in the Southwest. Hutchinson Sensation (53,000) was Grand Champion at Missouri State Fair, 1909. Weighs 750 at eighteen months old. I have a nice lot of Glits bred to these grand Boars that I am offering at a bargain; also a fine lot of Pigs that will please you. Write for catalogue—it is free.



JOHN McLAUGHLIN, R. F. D. No. 1, Marmaduke. Ark.

POLAND-CHINAS.

Address,
J. G. TRUMAN, Manager, BUSHNELL, ILL.

Of national reputation for size and bone. They are sired by 1,000-lb. Boars and are out of stretchy, prolific Sows.
J. P. VISSERING, Box 1, Godfrey, Ill.

O. I. C. AND CHESTER WHITE HOGS, all ages, from First Premium Boars at Illinois and Iowa State Fairs. 150 September Pigs, eight weeks old, at $10.00 each; three for $25.00. Very cheap. Send for free catalogue. **W. A. HINKLE, R. R. 7, Decatur, Ill.**

FIRST ANNUAL SALE.

The Cook Farms, near Lexington, Ky., will hold the First Annual Sale **FRIDAY, SEPTEMBER 30th.** The offerings will consist of 100 Saddle Mares, Jennets and Colts, all registered. If you wish to buy a Saddle Horse or Jack Stock right off the farm where they are grown, write for catalogue and circulars and don't fail to attend this sale.

This is the right time to buy Jacks and Jennets. The best Mules are selling higher than was ever before known in the history of the trade. The Kentucky Saddle Horse is also taking a new hold upon the people and the demand is more than equal to the supply. Be sure to make a study of the catalogue.

Address,
J. F. COOK & CO., Lexington, Kentucky.

BLUE GRASS FLOCK OF SHROPSHIRES.

Registered Rams and Ewes of best breeding and quality. Dense fleeces of good length. Animals that will improve any flock. Best imported Rams at head of flock. Prices reasonable.
WILARD MILLER, R. F. D. 2, Anita, Iowa.

TAMWORTHS FOR SALE. The Bacon Hog, the largest and most prolific breed. Early to mature, economical feeders and unsurpassed as range hogs. Boars, Sows and Pigs not akin from best strains. My herd won over 100 ribbons at four State Fairs the past year. A few choice Pigs from imported stock; sire and dam winners at Royal Show, England, 1907.
CHAS. FORD, Mortonsville, Woodford County, Kentucky.

ELECTROTYPES FOR BREEDERS.

A Valuable Premium For Our Friends and Subscribers.

Very few stockmen have good letter paper and envelopes, but every farmer or live stock breeder ought to be in style. It costs very little to have well-printed envelopes and letter heads, especially if we furnish the electrotypes.

Any farmer, breeder, stock raiser, dairyman or poultry fancier who will send us a dollar to pay for same will be credited with one-year's subscription to The National Farmer and Stock Grower. We will also have set up in type his name address, class of stock raised, with one cut of cattle, hogs, horses, sheep or any breed of poultry, and we will have an electrotype made of same from which he can have any number of envelopes and letter heads printed in his own town at a very low price. The electrotype will last a lifetime and his printer will always be able to furnish a supply of letter heads and envelopes on short notice. We will send the electrotype properly mounted and ready for use.

ABERDEEN-ANGUS CATTLE.

INDIAN LAWN HERD
J. W. WHEATLEY,
Proprietor,
Rural Route 5, Kempton, Ind.

This display explains what we mean. We have set up a sample card. The electrotype will do from which to print the letter head and envelope also. We will try to do as well for any farmer or live stock breeder. Send in one dollar and your full name, rural route, the class of stock raised, name of farm and correct postoffice address and we will try to please you. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Imported Shires For Illinois.

Mr. Geo. M. McCray, of Fithian, Ill., has recently received three Shire mares and a stallion from England. He already had a fine stud of Shires and ordered Trumans' Pioneer Stud Farm of Bushnell, Ill., to buy for him four of the best that could be procured. We understand Mr. McCray is very much pleased with the manner in which the order was filled. His consignment arrived with the Trumans' latest importation.

The Sheep Herder's Grave.

A story of the sheep herder's grave, commencing in the Cheviot hills of Scotland and ending at Wild Horse Canyon, Wyoming, is an interesting, true-to-life narrative of Western ranch life, and, written by John Clay, is at once pathetic and realistic. It is elegantly printed, with a center picture of a ranch in the West, and is sent out as a gift compliment by Clay, Robinson & Co. Write for a copy and address the firm at National Stock Yards, Ill., or any other market in which the firm is established. See page 13.

Death of Col. Oscar L. Miles.

With great regret we hear of the death of Colonel Oscar L. Miles, owner of Point Comfort Place, on the Petit Jean river, near Boonville, Ark. As a live stock breeder and improver he was one of the foremost and a leader in agricultural pursuits. He died on August 17th at the age of fifty-six years.

Wise Conduct of Louisiana.

The state of Louisiana by constitutional amendment has freed from taxation the money which may be invested in land mortgages. The land is taxed once, and that is enough. If the mortgages were also taxed the land would have to pay it, which would be double taxation. It is a wise provision on the part of the state of Louisiana.

Blooded Stock Notes.

Mr. J. P. Vissering, of Piasahurst Farm, near Godfrey, Ill., wishes attention called to his Poland-China hogs, which have a national reputation for size, bone and finish. He has some extremely stretchy young stock for sale now. See his card in this paper..

At the sale of pure-bred Berkshire swine held August 18th by W. S. Corsa at Whitehall, Ill., the highest price paid was $395 by Roycroft Farm, Sidnaw, Mich., for Masterpiece's Handsome Lady, 3d, farrowed September, 1909. At the sale forty-four bred sows averaged $177.

Mr. W. A. Hinkle, of Rural Route 7, Decatur, Ill., is again advertising his Jumbo strain of O. I. C. hogs in this paper. Although he sells pigs very cheap he is an excellent breeder and makes his mark in the show ring when he exhibits.

Mr. Charles Dorr, of Route 6, Osage City, Kas., has Duroc-Jersey swine of his own raising for sale. He has well-bred stock and sells fine pigs of his own breeding and raising at a evry reasonable price.

The grand sweepstakes prize for saddle horses at the Blue Grass Horse Show this year was Golden Butterfly, first called Bourbon Belle, 3,655, and registered as such. She is a splendid chestnut mare, star and hind feet white, bred by W. H. & M. Bridges, of Mount Sterling, Ky., and owned by Shropshire & Matlack. She was sired by Bourbon Chief, 976, and her dam was Annie King, 3,358.

At the Blue Grass Fair held at Lexington, Ky., most of the blue ribbons and both championships were won by our advertiser, Mr. Chas. Ford, of Mortonsville, Woodford county, in the Tamworth exhibit.

Attention is invited to the card of J. F. Cook & Co., Lexington, Ky. The Cook farms are devoted to raising saddle horses, jacks and jennets, all registered. This firm wins a large number of prizes at the Kentucky Fairs which is a guarantee of the quality of the stock. The annual sale will be held on Friday, September 30. Be sure to send in your name for a catalogue. At the recent Blue Grass Fair Messrs. Cook won prizes for best jack, any age, and best jennet, any age, besides other important premiums.

The Thirteen Superstition.

J. K. Fowler, a well-known shipper from Boston, Ky., says he used to be superstitious about the number 13, but it is all off now, and 13 is all right. He says last year he bought an old milch cow for $13; in 13 months and 13 days she had dropped four calves (two sets of twins) and all lived and did well. He sold the cow Monday with two of the calves and she netted him $26 (twice thirteen). — Farmers' Home Journal.

The KKK Medicine Company, Keokuk, Iowa, advertise in our columns for responsible men as salesmen to reperesent them in their own vicinity. The advertisement gives particulars.

The Arkansas State Fair will be held at Hot Springs, Ark., October 10th to 15th. Geo. R. Belding is Secretary.

Best Fox, Cat, Deer, Wolf and Coon Hounds. Send for free list at once. Prices low for quality. Address,

WALKER BROS. & CO., Oklahoma City, Okla.

Mill Creek Stock Farm.

The home of the noted Starlight family of Jacks and Jennets for the past thirty years, is located seven miles southeast of Nashville, Tenn., on the N. C. & St. L. R. R., at Asylum Sation, and has on hand at all times a nice lot of Jacks, Jennets and Stallions, all of the best blood, from six months to six years old, for sale at reasonable prices. Write for catalogue. Also Jersey Cattle.

THOS. H. EZELL, Prop.,
(son and successor to the late H. C. Ezell),
Nashville, Tenn., Sta. B, R. F. D. No. 7.

THAT GUARANTEE

Which does not mince words, and does not equivocate in any sense, and that is made by a firm amply able to "make good," is the guarantee that amounts to something. Such is the warranty put out by the manufacturers of Frazier's Distemper Cure. This remedy has been before the horsemen for a quarter of a century; it is guaranteed to give satisfaction in all cases of distemper, influenza, shipping fever, coughs and colds. Here is their guarantee: We guarantee to refund the purchase price, 50 cents for the small size, and $1.00 for the large size, holding three times as much as the 50-cent size, of each and every bottle of "Frazier's" that fails to cure one case. Send for our thirty-two-page booklet; it is free. Sold by all druggists. Binkley Medical Company, Dept. H, Nappanee, Ind.

PURE-BRED SEED WHEAT.

I have for sale this year on extra fine quality of "IMPROVED TURKEY RED" Seed Wheat. This seed is clean, very heavy, and it is as fine a quality as I have ever sent out. Prices are right. Send for free samples and prices, stating the number of bushels that you will want to buy this season. Address,
L. C. BROWN, Seed Farm Specialist, LaGrange, Cook County, Illinois.

The American Well Works, Aurora, Ill., have just issued Catalog No. 117, which describes among others the "American Centrifugal Pump," the greatest money saver, dependable under every condition. Has had forty-one years of manufacturing experience behind it. Took all the Yukon-Pacific Exposition prizes in 1909. Made in both horizontal and vertical types, in any size. Our readers should not the announcement with beautiful illustration in our columns, and write for the catalog, if interested, to the general office and works.

The Missouri College of Agriculture has issued a very valuable circular entitled "The Principles of Mainaining Soil Fertility." It is Circular No. 38, by Prof. M. F. Miller.

The Market For Hay.

At St. Louis hay is sold on two sides of the river. The best way to give an idea of hay prices is to quote actual sales. On August 31st the following sales were made: St. Louis side: Part car no-grade at $10; three cars common clover-mixed also at $10; two parts of cars do. at $10.50; one car and part car do. at $11; one car do. at $11.50; one car light clover-mixed at $13.50. Timothy—Part car threshed at $11; part car at $13; two cars No. 2 (one old) at $15; one car No. 1 at $17; one car part No. 3 at $11 and part No. 1 at $17.50; one car No. 1 at $17.50; two do. at $18; two do. at $18.50; one old do. at $19. Prairie—One car No. 2 at $12.50; two do. at $13; one No. 1 at $14; one choice at $14.75. Alfalfa—One car No. 1 at $16; three choice at $17. On East Side: Two cars heavy clover-mixed at $11; one car clover-mixed at $13; one car do. at $13.50; one light do. at $14.50; two do. at $15; one car part clover-mixed at $13.50 and part timothy at $15 do; one car part heavy clover-mixed at $10 and part No. 1 timothy at $17 do.; one car part light clover-mixed at $14 and part timothy at $17 do. Timothy—One car No. 3 at $12; four scant No. 2 at $13; one do. at $13.50 do.; ten No. 2 at $14; part No. 2 do. at $14.50 do.; four scant No. 1 at $15; one do., two do. at $15.50; one No. 1 at $16.50; two do. at $17; one do. at $17.50; two do. at $18; one do. at $18.50 do. Clover—No. 2 quotable at $9.50 to $11.; No. 1 at $12 to $13.

The Trade in Oats.

From a farmer's standpoint the trade in oats is distressing. At St. Louis, on close of July, cash oats were selling at 41 to 41½ cents a bushel, and at the close of August the prices had declined to 34 and 34½ cents.

At Chicago, during August, the September option declined from 37⅜ cents to 33⅛ cents. The December option declined from 38⅝ to 36¼ cents, and the May option of 1911 declined from 41 to 39¾ cents.

Although oats are grown all over the world, it is not much of an export crop. Last year we exported only 1,685,474 bushels, and 15,538,535 pounds of oatmeal. We imported 1,034,511 bushels of oats.

The oats grown in this country are sold at home with very little speculation. The crop this year is estimated to be the largest ever grown, the quality is good, and after the farmer pays the freight bill to market it looks like there is very little left. Farmers can advance the value of the oats crop by not shipping or selling under present circumstances. Oats can be fed satisfactorily on the farm at present prices, and something else can be sold that will pay a better net return.

The Market For Corn.

Corn is raised in other countries, but it is not a world's crop. United States conditions control corn. Corn has been selling satisfactorily, but corn declined about five cents a bushel in the month of August. At St. Louis, cash corn declined from 65 cents on July 30th to 59 cents on August 31st. At Chicago the September option, which closed at 64⅛ cents the previous month, closed at 59 cents on August 31st. On the same day, December corn closed at 57⅝ cents and the May, 1911, option closed at 60¼ cents. The traders appear to believe there is plenty of corn, and that prices will do well to remain steady, or at a slight decline until the end of the year.

IT'S BETTER TO SHIP TO

CLAY, ROBINSON & CO.

THAN TO WISH YOU HAD.

In the selection of your commission firm be sure of at least two things: First, that you consign to a firm whose financial standing and responsibility is beyond any question. Second, that your stock is consigned to the firm that will get you most money for it.

These Requirements Are United in Clay, Robinson & Co.

Our firm, organized in 1886, has weathered all the storm and stress, droughts, depressions and panics of nearly a quarter-century. Failure, change or reorganization are unknown in the history of CLAY, ROBINSON & CO., who to-day stand as the largest, strongest and most efficient organization in the live stock commission business in the world.

If you are a shipper or prospective shipper you owe it to yourself to consider these unassailable facts, and to act upon them. Ask your banker about our financial responsibility, and ask any customer about our ability to realize top market value for all stock consigned to us.

Consider, also, our selling record for twenty-five years, our staff of over fifty of the best salesmen in the trade, at ten markets, our annual cash turn-over of upward of $75,000,000.00, and the thousands of unsolicited testimonials from pleased customers which you yourself have seen printed in these pages from month to month.

Practical Farming and Gardening.

This is a book of 500 pages, 6x7¼ inches to the page. It is a complete farmer's instruction book. The feeding chart is worth a ten-dollar bill to any stock farmer. Soil fertility, drainage, grain crops, gardening, truck growing, fruits, forestry, pruning, grafting, budding, injurious insects, plant diseases, spraying, cattle, sheep, horse raising and feeding, treatment for diseases, silos and silage, poultry, handy rules and farm cookery, are a few of the subjects. There are eighteen three-column pages of index. If you look for something you find it. We have adopted this book as a subscription premium. Send One Dollar and we will send you **Practical Farming and Gardening**, postage paid, and The National Farmer and Stock Grower for two years. This is a grand offer. Address, **Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

ALBERTA FIELD PEAS.

New Fattener For Beef, Pork and Mutton, Which is Supplanting Corn—Facts and Figures of Interest.

[By Herbert Vanderhoof.]

"Corn-fed" is still, the world over, the term that indicates the finest beef, pork and mutton. But the term has a rival now, and already there is a market for the "pea-fed" meat that is fetching top prices. In the land where the people are supposed to spend the most thought on the meat they eat, in the England that is the home of well-finished beef and choice salt-air mutton and well-flavored bacon, "pea-fed" bacon now brings at least $1.00 a hundred more than corn-fed.

This new rival of the time-honored finisher of live stock comes out of the land that is furnishing rivals to so many crop records and high-quality things. It is in Western Canada, chiefly in the province of Alberta, that the new fattener is being given the attention that is making the product famous.

Field peas as the finishing feed for market stock was an accident. A farmer in Colorado planted field peas to restore the nitrogen to the land that had been exhausted by the grain crops. The field peas grew so well that they got away from him, and to clear the land of them he turned in a flock of sheep.

The sheep fattened so well and the news spread so quickly that in the five years since that time the value of half a million acres of Colorado land has been doubled.

Yet agricultural experts all agree that the field peas of the United States hardly resemble those of Western Canada. The reason is, that in all but a few parts of the Northwestern States climate is too cloudy, the air too moist, and, above all, there are too many hot days, the first one of which blasts the field pea.

Warm winters and cool summers, the climate of the province of Alberta, make the field pea thrive as it does no place else. It remains green until fall. When a hard frost strikes it the vines are killed, the peas are matured and the vines are cured into a sweet hay. From fifty to a hundred bushels an acre of these peas are grown in the irrigated tract of the Canadian Pacific Railway in the Bow River Valley, in Southern Alberta. Besides that crop there are several tons of the best feeding hay to balance the rich food of the peas.

It is a double-acting profit maker, is the field pea in Western Canada. Besides paying as well perhaps as either the far-famed "Alberta Red" winter hard wheat or the rich alfalfa with its three and four crops a year, the field pea is a land renovator that is rivaled only by alfalfa. It sucks the nitrogen from the air and stores it in the earth, making a rich humus, and in two crops restores land exhausted by continuous wheat to full grain-bearing power.

With these two profits for the farmer, field peas are certain soon to take rank as one of the best crops in Western Canada.

It takes one-third the labor to produce fancy fed stock in the pea fields that it does to turn out a similar grade of stock in the corn belt. Besides this the growing demand for the pea-fed meat has already created a special price for it. The $1.00 a hundred premium paid by the English market for a steady supply of pea-fed bacon shows the possibilities of the pea fields.

Prof. Shaw, one of the foremost of agricultural writers and formerly employed by both the American and Canadian governments as an expert, sees in the field pea one of the causes of Western Canada's agricultural greatness. He makes the future particularly bright by eliminating the United States from competition in that field. He limits the zone of the best pea country to that land north of a line drawn through Bangor, Me., St. Paul, Minn., and Salem, Ore., or, roughly speaking, the forty-fifth parallel of north latitude.

It is in the irrigated districts that the field pea grows to the best advantage in Canada. There it gets the needed moisture when it is needed, and yet the clear, dry, warm air keeps it sweet and clean from mildew and blight, and furnishes it with the sunlight that is its life.

And when the first frost kills the vines, curing them into hay, and matures the pods, there is still ahead of the farmer the mild fall that enables him to turn his live stock into the pea field and there let them harvest the crop and finish their fattening.

Yet with all this in its favor there is much more in the future of the field pea. Science has said that the field pea as now grown is but a feeble imitation of what it will eventually be. Experiments in seed selection have shown that the crop of shelled peas may be easily one hundred bushels to the acre, not as an exception, but as the rule on well-handled farms. This possibility is in a fair way to be realized through the efforts of the Dominion Government Experiment Stations, and when it is, it will add that much more to the already prosperity of the stock farmer who finishes his beef, pork and mutton on the pea field, the little, hard, round pea that already is crowding King Corn for first honors.

Get Your Potash Right.

Manufacturers of alleged complete fertilizers are going to drive farmers to do their own mixing. They are particularly interested in furnishing substitutes for potash. This does not apply to all, but it applies to five out of five that were tested at the Missouri Agricultural Experiment Station. One sample guaranteed 3.00 per cent. potash, and they found 2.85; the second sample guaranteed 6.00 and they found 5.29; the third sample was guaranteed 5.00 and they found 4.84. These were reasonably within decency. One sample was guaranteed 5.00 per cent. and they found 2.06 per cent.; another sample was guaranteed 5.00 per cent. and contained 2.98.

The notation said: "The potash in these fertilizers is from manure ashes and is only partially soluble in distilled water when boiled for thirty minutes, as in the regular official method for the determination of soluble potash.

Potash is available by purchase in reasonable quantities direct from the mine owner. Address, German Kali Works, Continental Building, Baltimore, Md.

American Royal of 1910.

The American Royal Live Stock Show of 1910 will be held at the Kansas City Stock Yards, October 10 to 15. The horses and cattle will be judged in the big new pavilion, where the four-night horse shows and afternoon entertainment programmes will be given. The classifications this year embrace Hereford, Shorthorn, Galloway and Aberdeen-Angus breeding, feeding and fat cattle; range-bred feeding cattle; Percheron, Belgian, Shire and German and French Coach horses; mules; Berkshire, Chester White and Duroc-Jersey swine; Cotswold, Hampshire, Shropshire, Southdown and Oxford sheep; Angora goats; poultry. There will be the usual students' judging contest for young men, under the superintendence of W. L. Nelson, Columbia, Mo. Information as to entries in any department may be obtained from A. M. Thompson, Secretary of the American Royal, Nashua, Mo.

Special rates have been granted for the American Royal Live Stock Show, to be held in Kansas City, October 10-15, 1910. The fare will be two cents each way for visitors in Missouri, Kansas, Iowa, Nebraska, Oklahoma, Arkansas, Texas, Louisiana, with a minimum of $1.50 round trip in Missouri. Some of these states have two-cent fares, which is half fare compared with the old rates.

Under the auspices of the National Mohair Growers' Association the fleece is selling at 25 to 35 cents a pound, according to quality.

The Useful Farm Horse.

The horse most useful on most of our farms will always be the medium-weight farm horse. The very heavy-weight horse may be of use on a few farms where the land is very level and near which the roads are paved, on which heavy burdens are to be carried. His great weight will then prove useful in drawing a very heavy load along the highway.

But on most farms the land is uneven and the horse of medium weight will be able to manage the inequalities better than a heavier animal. Big horses are very seldom fast walkers. "Big bodies move slowly" is an adage that is as true of horses as of things. The farm horse, to be efficient on the farm, must be a fast walker. He will be required to not only get over plowed ground at a good speed, but will be also required to make quick trips to market. It must be remembered that quick walking means the saving of valuable time on the part of the driver. In these days wages are high, and the farmer cannot afford to throw money away in hiring drivers for slow horses.

The well-fed, well-developed horse will prove to be a good worker. Some horses are lazy because of parentage. The way their parents have been fed will largely determine the amount of energy they possess for the work of the farm. In the selecting, therefore, of a good farm horse one is to be preferred from a line of ancestors that have had a well-balanced ration of protein and carbohydrates. A horse that comes from a line of ancestors that have been fed on corn grain and corn stalks for generations will not generally have the energy desired and will, therefore, not be a good worker. All the truly great firms of horse breeders now recognize this fact and feed their horses in a way to produce good bone, good muscle, and therefore a large amount of energy.

In these days the good farm horse must have had considerable training in passing automobiles and trains. The problem is greater to-day than previously, because the automobile has a dreadful appearance to the untutored horse. The man that breaks in a new horse must have this in mind and must seek opportunities to make his animal feel acquainted with automobiles. Trains are now a secondary consideration.

The modern farm horse must be a good roadster but no racer. It is a mistaken idea to suppose that the farm horse should be able to pass fast horses to demonstrate his worth. One does not need to have a race horse now under the plea that it may be necessary to use him in going for the doctor. The telephone has made it unnecessary to make the trip to the doctor's.

The farm horse is, however, an animal of no particular type. He may come from any of several breeds or from no breed. His value is determined at present by his performance rather than by his pedigree. But the time is coming when we shall have an American type of farm horse and that farm horse will have a pedigree.

Old "Claybank" Horse Traveled 80,496 Miles.

When you talk about the old-time, overland mail carrier, this section of the country once had one of those very essential characteristics whose record would compare with the most interesting or best of them. Not only so, but while speaking of him it would be almost criminal not to mention the faithfulness of the animal that did such long and faithful work under the "old leather" mail bags, such as were carried in those days.

Until the building of the Norfolk and Western Railroad through the southwestern part of West Virginia, the mail throughout all that section of the country had to be carried on horseback. For many years a man by the name of Goodwin Adkins, who resides at Wayne, seemed to have the inside on the mail contracts. He for years carried it on several of the routes whose terminations were at "Trout's Hill" or Wayne.

During this time he had an old "claybank" colored horse, a small-sized animal, not weighing much more than a thousand pounds, if that much. In fact, for about six years this seemed to be about the only horse he kept. During these six years Adkins had the following mail contracts:

From Wayne to Warfield, weekly, round trip, 140 miles.

From Wayne to Cove Creek, weekly, round trip, 50 miles.

From Wayne to Louisa, round trip, 28 miles.

From Wayne to Ceredo, round trip, 40 miles.

The total mileage for each week was 258. Thus it required the travel of 13,416 miles each year, and for the six years that he had those routes would require a travel of 80,496 miles, enough to circle the globe three times and go over to New York on a fourth start.

Be it remembered that "Old Clay Bank" did all this, with only a small exception, when he might have had a little sick spell or was given a short vacation. It would no doubt be true to say that this animal traveled farther than any other horse that ever lived on this continent.

The above story may be verified by numerous older people in this section, many of whom will remember Old Clay Bank.—Catlettsburg Tribune.

Plea For Low Wagons.

If the farmer will but stop to think of it, he will find he has the same reasons for using a low-down, handy wagon that he has for using a gasoline engine or a cream separator, or a harvesting or mowing machine.

It is simply a quicker, easier way of doing things. Manufacturers do not hesitate to discard old machines, even when they are yet good, when they find other machines that will do the work better or more economically.

Why should not a farmer do the same? At least when his old high-wheel wagon is wearing out. He is, in a very large sense, a manufacturer. The one tool he uses most, practically every working day, is his wagon. It is beyond question that the low handy wagon, such as is shown here, made by the Electric Wheel Company at Quincy, Ill., is a great labor saver. It enables the user to save his strength. Isn't that doing the work more economically? Isn't it something that in the course of a year you are enabled to lift heavy weights a thousand times, perhaps ten thousand

times, onto a low wagon instead of a high one? Go over in your mind the kind of work you do with your wagon during the year. You load and unload heavy boxes and barrels, sacks of potatoes and grain, you haul manure, stone, earth, fodder, hay, water, feed, etc. You find no good reason why this work can't be done just as well on the low wagon as on a high one. Then isn't it something that you can load and unload all these things from a low wagon instead of a high one?

Our advice is, look into this low-down, handy wagon matter. Farmers have the same right to take the short cut on their work that other people have. The Electric Wheel Company, Box 40, Quincy, Ill., will gladly mail you free a book giving all information.

Mr. Malcolm H. Gardner, Superintendent of the Advanced Register for Holstein cattle, says that the Holstein is a handsome cow. This must be on the theory that "handsome is as handsome does."

KENDALLS SPAVIN CURE

Never failing cure for Spavin, Curb, Splint, Ringbone, all Lameness. Also a great family liniment. $1 a Bottle; 6 for $5. Ask druggists. "Treatise on the Horse" free at drug stores or address Dr. B. J. KENDALL COMPANY Enosburg Falls, Vt.

if it fails you get your money back. If he can't supply you write us. 3 valuable Horse Books, free. Write Wells Medicine Co. 173d St., LaFayette, Ind.

Two Papers One Year For 50 Cents.

We have adopted **The National Swine Journal** as a companion paper to The National Farmer and Stock Grower, and if so ordered we will send both papers for one year for fifty cents. The National Swine Journal is a first-class, up-to-date, special publication in the interest of swine raising. It is published in Illinois, where pigs are pigs, and is a finely-illustrated monthly publication. Our readers will do well to send us their subscriptions. Address, **Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

Horse Secrets Disclosed.

This is a valuable book. It tells how to feed and fatten your stock in the cheapest, quickest way; how to rear an orphan foal by hand; the secret of silage feeding; how to break a horse of bad habits, and scores of other money-making, money-saving secrets.

This book is published by the FARM JOURNAL of Philadelphia, the foremost monthly agricultural paper of this country.

THE FARM JOURNAL

does not sell this book, but offers it to its new subscribers. This paper has for thirty-three years been working for the prosperity of farmers and the happiness of farm homes. It is taken by 700,000 people whom we call "Our Folks," and we believe you will be as fond of it as they now are. Everything in it is boiled down so that its twenty-four to sixty pages every month give you the most matter in the least space. It is ably edited by authorities and is a cheery and welcome friend in every home it enters.

"Horse Secrets" and The Farm Journal for two years, both for 50 cents. Address, FARM JOURNAL, 1068 Cherry Street, Philadelphia, Pa.

The Kansas City Veterinary College.

Nineteen years ago the Kansas City Veterinary College was a modest undertaking, with a big, definite object as a reason for its existence. There was, even at that time, a growing demand for men with more real knowledge of animal medicine and more skilled in animal surgery than the old-time "horse doctor" possessed. It was to supply this demand that the college was organized.

Long ago the college was past its experimental stage and has established a permanent place for itself. The graduating class of 1909 was the largest up to that time. It was composed of 117 men from all parts of the country, who had successfully completed the three-years' course required for graduation. The graduating class of 1910 was composed of 152 members, and the exercises were held in our big, new auditorium hall, capable of seating comfortably 1,000 visitors.

To date the college has graduated about 650 veterinarians, numbering among them men who have gained a nation-wide reputation in their profession.

The college now has the largest buildings, the finest-equipped and best faculty of any veterinary college in the world and offers exceptional facilities to young men to fit themselves for this profitable calling. Dr. Sesco Stewart, Dean of the Kansas City Veterinary College, will gladly furnish information regarding course of study, requirements, etc. Address, 1308 East Fifteenth street, Kansas City, Mo.

COUNTRY COLD STORAGE.

Refrigeration, Like Charity, Should Begin at Home.

Refrigeration is no longer a mystery, neither is it an expensive luxury, but the benefits of the process are usually obtained at the wrong end. When eggs are plentiful and prices are low they are shipped to market, and after considerable deterioration they are stored for better prices, whereas the storage should begin at home before deterioration sets in.

In many instances the fruit market is glutted, and yet the fruit comes piling in because there is no place to hold it except in the great cities, after it has passed far away from the ownership and control of the producer. The storage of fruits, like charity, should begin at home.

Refrigeration in the past was to most people an unknown quantity. Cold storage meant an immense investment, complicated machinery and difficulty in filling and operating the house. It began with direct ice cooling, which is now out of date, because of the better methods now in use.

Under the present circumstances refrigerator systems are introduced that are economical in small operations. We can as well store apples in the Ozarks as we can in New York City, the difference in the action being deliberation instead of haste in marketing, less glutted centers and better average net results at the original shipping points.

Refrigeration preserves meats, poultry, eggs, butter, fish and fruits. At this time there are over one hundred establishments engaged in the manufacture of ice and refrigerating machinery.

Recent inventions and developments indicate that the smallest towns can obtain benefits from cold storage. The creamery and cold storage and the slaughter house can all be provided with coolers under one roof. We have before us the pictures of the building for butter and egg storage of Kuoni & Littel, of Sauk City, Wis.; the egg storage of Geo. Moore & Co., Galt, Canada; the South Bend Cold Storage Company, of South Bend, Ind., capacity 36,000 cubic feet of refrigeration; cold storage of C. H. Swindell & Co., Kalamazoo, Mich.; cold storage of C. E. Udell, Sheboygan, Wis.; a single cold storage room for ice cream in plant of J. C. Vanderbie, St. Paul, Minn.; the beef cooler of the Provision Company of Minneapolis, Minn.; the fish and oyster cooler of Anderson Fish and Poultry Company, Cincinnati, O.; the Drummond Packing Company of Eu Claire, Wis.; and the packing house of J. T. McMillan Company, of St. Paul, Minn.

There is a farm cold storage plant in New York state which cost no more than $2,000. It holds 1,000 barrels of apples, and the owner made $3,000 by storing apples and pears of his own production the first year.

Hon. Seth Low, at Bedford, N. Y., conducts his own creamery and cold-storage plant on the farm. On Shimni Valley Farm, Nantucket, Mass., there is a small storage house which will hold 400 cases of eggs. At LaJunta, Colo., and at Lamar, Colo.; at Los Angeles, Calif., there are sample plants which are all comparatively small and all sucessfully operated.

We have ample evidence to prove that in the future the large cities will have no monopoly of refrigeration. Every farmer, or farmers' union, or farmers' association, can own combined plants which ten years ago were impossible.

Home cold storage will result in the farmer, or at least the farming communities, holding control of the sale of perishable products. There will be no dumping fruits in the river and drawing on the shipper to pay the freight bill, neither will the storage egg be a rotten egg before it is placed in storage.

The editor of The National Farmer and Stock Grower has many pictures and plans of cold-storage houses, and will be glad to hear from any communities contemplating improvements in that direction. It is surprising how simple the subject of refrigeration is in the hands of the modern expert.

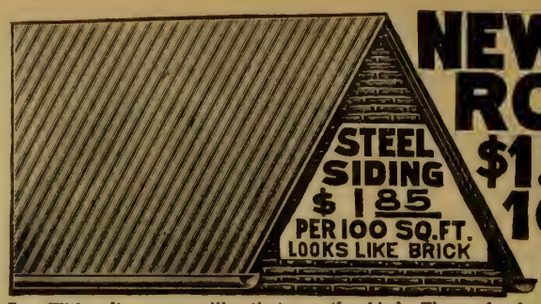
The Market For Wheat.

Wheat is a world's crop and sold upon the world's markets, and nothing else can be made of it. The United States grows wheat, but is not the only country. Russia is an equal wheat producer with the United States. Every wheat-growing country makes estimates of a wheat crop. The Hungarian Agricultural Minister estimates this year's world's crop to be 3,636,000,000 bushels, of which about 660,000,000 bushels are credited the United States. A Liverpool authority places the world's crop of 3,483,840,000 bushels, or 153,304,000 less than last year. All such items have an influence on trading. This year there is estimated decreased production in the United States, Canada, France and Russia. There is increased production in Hungary, Roumania and Argentina.

The speculative wheat market declined in August. The September option, which closed at $1.03¼ on July 30th, closed at 99¾ cents on August 31st, a decline of 3½ cents a bushel during the month. The December option declined about one cent in August, closing at $1.03¾, and the May option of 1911 gained about a cent, closing at $1.09¾ on August 31st.

Here we have the present situation—sufficient wheat to depress the market. The future expectation is, that before the next crop is available stocks of wheat may get rather low.

Gambetta Wilkes, 2:19¼, sire of speed horses, with 212 performers to his credit, died August 24th near Lexington, Ky., at the age of twenty-nine years. He was son of George Wilkes, 2:22, and gradson of Hambletonian, 10.



NEW STEEL ROOFING $1.60 PER 100 SQ. FEET

With ordinary care will outlast any other kind. Thousands of satisfied customers everywhere have proven its virtues. Suitable for covering any building. Also best for ceiling and siding. **FIRE-PROOF AND LIGHTNING PROOF.** Cheaper and more lasting than shingles. Will not taint rain water. Makes your building cooler in summer and warmer in winter. Absolutely perfect. Brand new. **$1.60** is our price for our No. 10 grade of Flat Semi-Hardened Steel Roofing and Siding, each sheet 24 in. wide and 6 or 8 ft. long. Our price on the Corrugated, like illustration, sheets 22 in. wide and 6 or 8 ft. long, **$1.85.** Steel Pressed Brick Siding, **PER SQUARE, $1.85.** Fine Steel Beaded Ceiling, **PER SQUARE, $1.85.** Also furnish Standing Seam and "V" Crimped Roofing. At these prices **WE PAY THE FREIGHT** to all points east of Colorado except Okla., Tex. and Ind. Ter. Quotations to other points on application. **SATISFACTION GUARANTEED OR MONEY REFUNDED.** We ship this roofing to any one answering this Ad., C. O. D., with privilege of examination if you send us one quarter of the amount of your order in cash; balance to be paid after material reaches your station. If not found as represented we will cheerfully refund your deposit. **ASK FOR 1000-PAGE FREE CATALOG No. 990.** Lowest prices on Roofing, Wire, Pipe, Plumbing, Doors, Household Goods, Clothing, Dry Goods, Shoes, Groceries, etc.

Horse and Mule consignments are olicited for sale by the most competent firm on the Best Market in the United States. Every consignment given personal attention. Keep in touch with us. Let us sell your lorses and Mules on commission.

IORSE DEPT.—Nugent Bros., Maxwell Bros.
IULE DEPT.—Ed Conway, Lan Morris.
AUCTIONEERS—Tim Holland, Ike Howard.

Write us for market information.
Address,
HOLLAND, NUGENT & MAXWELL BROTHERS.
P. O., National Stock Yards, Ill.

Quality of Range Horses.

Messrs. Campbell & Reid and Western Sale Stables Company hold auctions of Western range horses every two weeks of the season at the National Stock Yards. They report as follows:

"The quality of horses now coming to these sales is better than ever before, and prices are no higher, notwithstanding the marked advance in the price of native horses."

During the year ending June 30, 1910, the United States imported 2,611 cattle duty free for breeding purposes, and 193,327 that paid duty for the support of this government. There were 7,867 horses that came in duty free and 3,753 that paid duty. Of sheep, 6,335 came in duty free and 119,817 paid duty.

WESTERN
Range Horse Sales
will be conducted by
Campbell & Reid and Western Sale Stables Co.,
NATIONAL STOCK YARDS, ILL.,
As usual, during the season of 1910.
The September Sales will take place
THURSDAY, SEPT. 8 and 22,
And every two weeks thereafter until the close of the season. We will be glad to hear from Ranchmen having Horses for sale. The demand is sure to be good, especially for well-bred Mares and Geldings in good condition.

Please address
J. J. SEARCY, Sale Manager,
NATIONAL STOCK YARDS, ILL.

Basis of Hog Sales.

On September 1st the hogs sold on the St. Louis market sold at $8.90 to $9.80 per 100 pounds. The hogs at $9.80 weighed 182 pounds, and a load at $9.77½ averaged 174 pounds. The light weights sold higher per pound than the heavy weights. Packers bought real heavy hogs at $8.70 to $9.10; heavy hogs, weighing 240 to around 300 pounds, $9.20 to $9.55; while medium-weight hogs sold largely at $9.60 to $9.80; and light-weights sold on much the same basis.

A First-class Commission House.

In consigning live stock for sale at the St. Louis National Stock Yards, remember the Evans-Montague Live Stock Commission Company. It is a successful firm, highly competent and persevering in the interest of their customers. The Evans-Montague Commission Company solicit consignments of cattle, hogs and sheep for sale on the market, and desire stockmen to take notice that the company has special buyers who select and buy stock and feeding cattle for their patrons. Address, Evans-Montague Commission Company, Box 68, National Stock Yards, Illinois.

Sheep and Lamb Market.

At the close of August, on the St. Louis market, the best lambs were selling at $6.40 to $6.60 per 100 pounds; and medium to good grades at $6.00 to $6.25; fair lambs at $5.00 to $5.90. Culls sold largely at $4.25 to $4.75. Mutton sheep, fat, were seling at $4.25 to $4.35 per 100 pounds. Breeding ewes sold at $4.25 to $4.90; stock sheep, $1.75 to $3.90; and bucks at $3.00 per 100 pounds.

About Buying Breeding Ewes.

Clay, Robinson & Co. have made a specialty of purchasing breeding ewes. They are established at ten markets, and if there are any bargains, they can get them. They buy stock sheep and feeders in the West in behalf of their customers in the Eastern feeding states. They have issued a little pamphlet about buying breeding ewes. Write for a copy to Clay, Robinson & Co., National Stock Yards, Ill., or at any market in which they are established. See card on page 13.

St. Louis Wool Market.

Wool growers are complaining that the market is low, and when they do they naturally turn to St. Louis, which is a cash market and often starts the trading when other markets are stagnant. In the St. Louis wool trade A. J. Child & Sons are strictly commission agents. They are also strictly reliable in every respect. In addition to wool they make a specialty of selling consignments of grass seeds and grain from seed growers. Their office is at 511 to 513 North Main street, where they will be glad to see their customers, either buyers or sellers.

The Great Horse Firm.

The auction sales of horses at the St. Louis National Stock Yards every Monday and Tuesday in the year are conducted by the Holland, Nugent & Maxwell Bros. Commission Company.

On September 1st they reported a good demand for Southern horses, also for chunks with weight, and draft horses. Ordinary work horses sold fairly well, the exception being common thin horses without anything to recommend them. This firm attends strictly to commission business and devotes a great part of its energies to bringing buyers to the market, which is a first-class recommendation for a commission firm handling horses. Shippers will find it to pay to consign to this firm. The address is Holland, Nugent & Maxwell Bros., National Stock Yards, Illinois.

Western Range Horses.

The season is on for the great sales of Western range horses and mules conducted at the St. Louis National Stock Yards by Campbell & Reid and Western Sale Stables Company. The sales take place every two weeks, and always on Thursday. The September sales will be held on Thursday, 8th, and on Thursday, 22d. These horses are put up at auction and sell fairly at bidders' prices. The offerings range from colts and fillies to matured mares and geldings. The numbers at each sale range from 800 to 2,000 head. Further particulars can be had by addressing J. J. Searcy, Manager, National Stock Yards, Ill.

Refused $75,000 For Horse.

An offer of $75,000 for The Harvester, the champion trotting stallion, 2:02, was made at Boston, Mass., August 30th, by Wm. G. Bradley, the New York horseman, to August Uhleen, of Milwaukee, who refused to consider it. Mr. Bradley, it is said, then offered George Easterbrook, of Denver, $40,000 for Colorado E., 2:07¼, the champion three-year-old stallion, later advancing his price to $50,000. The deal was held in abeyance.

For Mule Shippers to Read.

"Mules are selling about the same as they have been, with the exception of cotton mules that are finished for selling some better. Get your mules with as much class as possible, sugar mules, miners, big mules and cotton mules. Leave common, plain stuff alone. We can sell some nice, tasty feeders on the cotton type if they can be bought cheap enough in the country."—From Holland, Nugent & Maxwell Bros.' advice to mule shippers, September 1st, 1910.

Mule Quotations.

At the St. Louis National Stock Yards, September 1st, medium to extra mules in car-loads were quotable as follows: 14 hands, $75 to $145; 14½ hands, $92 to $157.50; 15 hands, $117.50 to $192.50; 15½ hands, $135 to $225; 16 hands, $150 to $275 per head.

St. Louis Horse Quotations.

The following prices for horses were officially quoted at the St. Louis National Stock Yards, September 1st: Heavy draft, good to choice, $165 to $235; Eastern chunks, $115 to $165; Southern horses, good to extra, $125 to $165; Southern horses, fair to good, $75 to $115; Southern horses, common, $50 to $65; drivers, choice, $155 to $225; plugs, $15 to $25.

A Line on Beef Steers.

At the St. Louis National Stock Yards, September 1st, the quotations for native beef steers were as follows: Choice to prime steers, $7.65 to $8.10; good to choice steers, $7.00 to $7.65; medium to good steers, $6.00 to $7.00; choice to prime yearlings, $7.00 to $7.75; good to choice yearlings, $6.25 to $7.00; common to good yearlings, $5.00 to $6.25—all quotations being at the price stated per 100 pounds. Sales included 1,383-pound steers at $7.60; 1,284-pound steers at $7.35; 1,287-pound steers at $7.25; 1,210-pound steers at $7.20; 1,335-pound steers at $7.15.

NATIONAL STOCK YARDS, ILL.

The Horse Remedy That Every Drug Store Sells.

A very trivial thing oftentimes causes a horse to go lame, such as a slight wrench, a sprain, a cut, etc. These are things that are to be expected. They are liable to happen to any horse at any time. The lameness may cause inconvenience, but it is not otherwise serious. All that is necessary in many such cases is to be ready to treat promptly with some efficient remedy.

In this connection it is a suggestive thought that for over a score of years one could hardly speak or think of a horse remedy without calling to mind Kendall's Spavin Cure.

Perhaps no other single horse remedy has ever been so generally used or had so great a reputation. Almost everybody who owns a horse has heard of Kendall's Spavin Cure. Its popularity has not been confined to one locality or state. It is national, even world-wide. It is found on the shelves of well-posted horse owners in many countries.

It is worth while to remember that Kendall's Spavin Cure has been in use for nearly half a century, and its popularity is greater now than ever before. If it had not stood the test it would have been out of mind long ago.

This old favorite horse liniment is on sale at drug stores everywhere. The excellent horse book, entitled "A Treatise on the Horse and His Diseases," can also be had free at drug stores or by writing for it to the publishers, the Dr. B. J. Kendall Company, at Enosburg Falls, Vermont. Kindly mention this paper.

THE SEWING AWL.

A Most Useful Premium For Subscribers to The National Farmer and Stock Grower.

A farm on which there is not a sewing awl is in difficulties when work is most pressing. It is surprising how useful this little implement is. It is the Myers Famous Lock Stitch Sewing Awl. It is the only sewing awl made with a groove running the full length of the needle and has what is known as a diamond point. In order to sew leather or any heavy, thick material without breaking or cutting the thread it requires a needle with the groove running the full length of the needle. You might just as well have no groove in the needle as to have it only part of the way. With the Myers Awl you can sew old or new harness, saddles, carpets, canvas, tents, rugs, quilts, shoes, grain bags, and many other things. You can use any kind of thread in the Myers Awl, and it makes a lock stitch same as a sewing machine. It is very simple; a woman can use it as well as a man. It is one of the most practical devices ever invented. They are put up with two needles; one is straight and one curved, with a small screw-driver and wrench combined. Also a reel of waxed thread with each awl ready for use. Every teamster and farmer should own a Myers Lock Stitch Sewing Awl, as there is use for one in almost every household. The Myers Awl is nicely finished, the metal parts are nickel-plated, the needles and wrench are kept in the hollow handle, which has a screw top.

Anyone who will send One Dollar cash to pay in advance for two-years' subscription to The National Farmer and Stock Grower can select one of Myers' Lock Stitch Sewing Awls, which we will send by mail, postage paid, as a free premium. Address, **Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

Hammond's Handy Atlas of the World.

This great Atlas contains 107 pages, 6x8 inches, is printed in colors and is bound in a durable red-cloth cover. It contains seventy full-page maps of every state and territory, with new railroads and towns. Every country in the world is shown by maps of the latest plates. We use this Atlas as a subscription premium. For sixty (60) cents paid in advance we will send one copy of **Hammond's Handy Atlas** post free by mail and credit one-year's subscription to The National Farmer and Stock Grower. Address, **Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

CONCRETE ON THE FARM—Illustration showing mixing board and men at work mixing the materials.

CONCRETE ON THE FARM.

How to Select Your Materials and Mix Your Own Concrete.

On account of its cheapness, uniformity and quick development of strength, the only cement practically used at present is the kind called "Portland." There are almost as many brands of Portland cement as there are of wheat flour. For farm work choose some brand guaranteed by the local dealer to meet the standard specifications of the American Society For Testing Materials, which standards are approved by the National government.

Cement takes water so easily that care must be exercised in storing it. Upon the regular floor of a good building place timbers close together, as a support for a false floor, upon which the cement should be piled.

Keep the Cement Dry.

Cement is heavy; do not overload the floor of the building by piling it too high, and do not store it against the side walls. Keep it covered with canvas or roofing paper. Cement wet sets itself and is unfit for use. However, lumps due to pressure in the store house must not be mistaken for set-up cement. Such lumps are easily crumbled and may then be used.

What is Concrete?

Concrete is a mixture of Portland cement and particles of stone. The stone should vary in size from pieces one inch in diameter to sand grains. By so grading the stone, the smaller particles fit in the spaces between the larger pieces, thereby producing the most compact and the strongest mixture.

[See illustrations showing proportions of materials and the resulting concrete.]

The best stone for crushed rock is one which is clean, hard and breaks with sharp angles. Trap, granite and hard limestone are among the best; the use of shale, slate and soft limestones and sandstones should be avoided. The crushed rock should be screened on a one-fourth-inch screen to remove the fine particles. These small particles should be considered as sand, and, if sufficient in quantity to make the proper proportion of the concrete, enough sand should be added to them to produce the required amount.

Well-graded Gravel Good.

Gravel well graded in sizes is at least equally as good for concrete as crushed stone. Bank-run gravel, just as dug from the pit, seldom runs even and rarely has the right proportion of sand and pebbles for making the best concretes. The mixture most suitable has one part sand to two parts gravel, measured by volume, in which all sizes passing through a one-inch mesh screen and retained on a one-fourth-inch screen are considered gravel. As there is usually too much sand for the gravel, it is both advisable and profitable to screen the material and to remix them in the proper proportions. Gravel should have no rotten stone and should be clean, so that the cement may adhere to it tightly.

Sand Must Be Clean.

With dirty sand, no amount of cement will make strong concrete. Generally sand is clean, but if not, it can easily be washed by playing a hose or flushing water upon thin layers of sand placed on a tight-jointed inclined wooden board. In size of grain it should vary uniformly from fine to coarse. All particles passing a one-fourth-inch screen may be considered sand.

Any good-tasting drinking water is suitable for concrete.

No Great Expense For Tools.

The tools and equipment necessary for making concrete in moderate quantities are already at hand on a well-conducted farm, or will be useful afterward for other purposes.

The list:

[See illustration of mixing board and men at work.]

Two square-pointed "paddy" shovels, No. 3.

One round-pointed tiling shovel or one garden spade.

One heavy garden rake.

One sprinkling can or bucket or one spray nozzle for hose.

One water barrel or one length of hose.

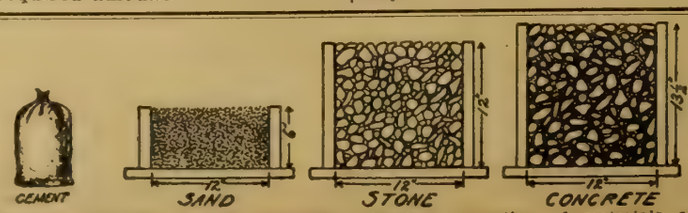
One sidewalk tamper or home-made wooden tamper.

One sand screen made of a section of one-fourth-inch wire mesh nailed to a wooden frame.

One measuring box or frame.

One mixing board.

Two wheelbarrows with steel trays.



CONCRETE ON THE FARM—Illustration showing proportion of materials and the amount of finished concrete.

Proper Proportions For Farm Work.

For farm work the following proportions are most suitable:

For concrete necessarily waterproof, 1 : 2 : 4 or 1 : 4.

For all other ordinary purposes, 1 : 2½ : 5 or 1 : 5.

Such proportions of three parts, as 1 : 2 : 4, indicate that the concrete is to be mixed one part cement to two parts sand to four parts screened gravel or crushed rock; and 1 : 4 that it is to be mixed one part cement to four parts bank-run gravel.

Measurement by counting shovelfuls is poor and uncertain practice. To avoid splitting of bags of cement, make as the unit of measurement one cubic foot, the amount of loose cement contained in one cement bag. Such measurements are made a very easy matter by gauging the wheelbarrows. For this purpose use a bottomless box holding one cubic foot. A shallow, bottomless frame is also a convenient means of measuring. Such a frame, when set on the mixing board and filled, should contain the full amount of sand or one-half the quantity of gravel, or crushed rock, required for one batch of concrete.

[To be continued in our next.]

St. Louis County Fair.

The St. Louis County Fair will be held at Upper Creve Coeur Lake, September 15, 16, 17 and 18, and promises to be the best ever held in the county. The officers of the Fair Association are: John Wotring, President; T. H. Lucas, Vice-President; George H. Bowles Secretary and Superintendent of Grounds; and Henry Heinemann, Treasurer.

MAGNIFICENT SUBSCRIPTION PREMIUM.

The National Farmer Hat.

The sizes are from 6⅝ to 7½. They are hats suitable for men or boys. They are of good material, well made and stylish. These hats are sent direct from the manufacturer to the subscriber in a tube and sent by mail prepaid. These hats are black and steel gray. We send black unless gray is called for. These hats wear as well and last as long as any $2.00 to $3.00 hats on this market. They will give entire satisfaction. The subscription price of The National Farmer and Stock Grower is One Dollar for three years. We cut out one year, and in place of the third year we include the hat. Therefore, send us One Dollar to pay for two-years' subscription to The National Farmer and Stock Grower, and we will send you by mail one of these fine National Farmer hats as a premium. Be sure to mention the size and color.

TABLE RABBITS.

A Profitable Adjunct to Poultry Keeping.

[By A. V. Meersch, Poulty Specialist. Written for The National Farmer and Stock Grower. Continued from the August number.]

Rabbits may be profitably bred and reared under three different methods, namely: (1) In a warren; (2) in stationary hutches; (3) in movable hutches; the latter is usually known as the "Morant System," in having been originally suggested and carried out by Major Morant.

Which of these three methods is likely to prove the most profitable and the most generally successful, is, of course, entirely a matter of accommodation. The first-named is the most pleasing and the least troublesome, but requires comparatively a large area of suitable ground; while the breeding, weaning, fattening and killing are not entirely under control. Returns from this source are also practically limited to the time of year when wild rabbits are in season, as the inmates of the warren must be severely left in peace during the breeding season; that is, from March to August, both inclusive. During this time the earlier litters will consume food and occupy space without in any way becoming more valuable as table rabbits.

It may be, however, that a natural wild-rabbit warren may be at hand, as on my land, or that a waste piece of ground or field may be available.

Either of these may be made profitable by stocking them with the right kind of rabbits. In the former case it will be necessary to improve the size of the rabbits by turning down a number of Belgian hares or Flemish Giants and to permit these to gradually gain the predominance. In the latter case it will be necessary to form an artificial warren and stock it with rabbits of the required kind. In either case, poultry may run with the rabbits, if desired.

A warren may be very cheaply and simply commenced by obtaining a few car-loads of brush wood and placing these in one or more heaps in the center of the available ground, after this has been suitably fenced in. The brush wood will provide a shelter and refuge for the rabbits when turned down until they have had time to construct their burrows according to their own inclinations.

A better warren is constructed by forming an earth mound in the center of the field, for which purpose the soil taken out in fixing the fence may be made use of. The procedure is as follows: Cut a trench from twelve to eighteen inches wide and from nine to twelve inches deep all around the ground to be enclosed, and with about half of the sod and soil thus removed form a pyramidal mound in the center of the enclosed area. Now, place around this and leaning against it in such way as to leave a free passage all around the mound faggots laid about nine inches apart. Over these lay another layer of faggots and brush wood in such way as to throw off the rain, and then cover the whole with an even layer of the remaining earth and sod from the trench.

The fence which should be placed around every warren, be it natural or artificial, should be made with four-feet-six-inch galvanized wire netting of one-and-one-half-inch mesh. One-inch mesh is better should there be any rats, stoats or other vermin in the locality. Thin netting must be placed in the trench above referred to and firmly pegged against its inner rim, being further supported by wooden uprights, such as stout tree branches, placed sufficiently near each other to keep the netting upright. The upper six inches of the netting must be turned inwards at right angles to prevent the rabbits climbing the fence. A little earth thrown against the netting in the trench will give greater solidity to the fence and further puzzle the burrowing ingenuity of the rabbits from within and the vermin from without.

In starting an artificial warren it will be advantageous to begin with wiring in only a small piece in the center of the field until the rabbits have become well established, as this will ensure an even distribution over the land subsequently allotted to them. They will there also be safer from their natural enemies, and these advantages will repay any additional trouble which may be incurred by having to provide the rabbits with green food, roots and hay during the time they are confined in the limited space.

The stocking of the warren should be done with young rabbits not over four months old, as older tame rabbits do not readily go to earth. One buck should be allowed to every seven or eight does, and the best time of year for turning them down will be in April or May. This will give them the spring and summer in which to grow and establish themselves, while breeding will probably be delayed until the spring following, when they will be at the most suitable age for that purpose.

No wild rabbit should be introduced to the warren, for although the cross is frequently recommended as adding a wild-rabbit flavor to the flesh of the progeny, the introduction of the wild rabbit has no other effect than to reduce the size of the warreners. Tame rabbits reared in a semi-wild state have precisely the same flavor as the wild rabbits.

When fully established and in full working order the warren must be well shot over during the winter months. If required for marketing alive, the rabbits must be trapped or netted. Both will provide good sport if the ground is not too limited.

[To be continued in our next.]

Fetzer Grain Drills.

Right in the heart of Illinois is an establishment said to be the most modern implement factory in the world. It is the factory of the William Fetzer Company, originally established in 1858 at Dayton, Ohio, and at Springfield, Ill., in 1908.

The company manufactures grain drills, fertilizer drills, seeding machinery, transplanters, potato planters, disc harrows rollers, etc.

In this paper on page 2 will be found the advertisement of the Fetzer Grain Drill with rollers. Many more dollars can be obtained from your field with a disc roller on your grain drills. This is easily demonstrated by using the roller on most of the field and leaving a strip without—the difference will be so great it will be surprising.

To fully appreciate the Fetzer implements, the best way is to write for a very instructive and practical pamphlet entitled "More Grain Per Acre." Address, Wm. Fetzer Co., Box 42, Springfield, Ill.

Selling Eggs by the Pound.

It is being discovered in New York City that selling eggs by the pound is an intolerable nuisance without having anything to recommend it; in fact, the difficulty in reaching an even pound, instead of being a protection to the buyer, is only an inducement for either the buyer or the seller to get the worst of it; whereas eggs sold by number represent a clean and honest transaction, which is fair to all parties. It seems, however, that there is no specific law requiring eggs to be sold by weight, but only the misconstruction of a "Jack-in-office," who, "clothed with a little brief authority," is trying to see how much discontent he can cause by straining a point which is hardly raised by the ordinance itself. Under the interpretation of the law which requires eggs to be sold by the pound, the ordinance just as clearly states that they can be sold by the yard. The fact of the matter is that the subject of selling eggs was left severely alone by the lawmakers, and they ignored the subect, to be fought out by the trade and inspector and finally decided by a Solomon on the bench, and it will take a Solomon to decide it. In the meantime the business of the public official is not disturbed.

Raising Layers.

[By W. E. Vaplon, Colorado Agricultural College, Fort Collins.]

Do not blame your pullets next winter when they are not laying; you should have been busy on the problem during the present winter. You should know which hens are furnishing the eggs from which these pullets will be hatched; the chances on the average farm are that the eggs from the poorer layers and slower-maturing pullets are being used for this purpose, and that the hens that have been laying all winter are being used to hatch these eggs. Culling, selection, elimination, kept constantly in mind, and continually practiced, will mean healthier fowls, livable chicks, earlier pullets, and eggs when they are most wanted.

Cull out the extra males and the weaklings; select the quick-maturing, early-laying pullets and the hens that laid well during their first laying year, and make up a breeding pen for producing eggs for hatching. With them, if possible, have a male or males whose dam was a vigorous, prolific hen. Do not set eggs from the whole flock, but dispose of all males not used in this breeding pen, and from the remainder of the flock gradually eliminate the drones. It is surprising how large a proportion of the average flock is useless, or worse than useless, for these non-producers are in the way of the workers and are preventing them from doing their best. If you cannot make up such a breeding pen this spring, try this for next season.

Next fall mark or band the first thrifty pullets to begin laying; also the yearling hens that are doing well this season. During the early winter carefully note their performance, and from these banded hens and pullets make up your next year's breeding pen. You will be surprised at the increased vigor and productiveness of your flock. If your hens are not responding to good treatment with a good average egg yield, try increasing that average by cutting out the non-producers. A well-bred, well-housed, well-fed and well-cared-for hen will lay sixty eggs during the three spring months, enough to pay her board for the entire year. There is money in hens; get it out!

Helps About the House.

Once or twice a week we rub all the wire screens on doors and windows with a cloth saturated with coal oil. This serves a triple purpose—it removes the dust, keeps the screens in fresh condition, preventing rust, and the kerosene odor is disagreeable to flies and insects, so they do not collect on the oiled screens.

An excellent sink strainer can be made from an empty lard or syrup pail. With hammer and an awl or a wire nail perforate the bottom of the pail so that the water will drain from it freely. Screw a hook into the corner of the sink just high enough so that the bottom of the pail suspended from the hook will hang a couple of inches into the sink. The practice of throwing all kitchen refuse into this strainer will keep a clean sink with little trouble. It will also help in keeping the drain pipe from clogging.

If the floor matting shows wear or discoloration, place it on the grass and give it a thorough sweeping. Then scrub it with tepid salt water, the salt being added in the proportion of one handful to a gallon of water. When the matting is dry, give it a coating of clear varnish. Renew the varnish a couple of times during the year. Not only will the matting look much better, but it is more easily kept clean, as the smooth, varnished surface does not hold the dust.

Many people find trouble in disposing of left-over mashed potatoes. An appetizing way to use them is given in this German recipe: Allow one egg, two tablespoons flour and a bit of butter for each cupful of mashed potatoes. Beat these together, then drop from a mixing spoon into hot fat consisting of half butter and half lard. Use about again as much fat as for ordinary potato frying. When the cakes are browned on one side, turn and brown on the other. The German name for these is potato noodles.—Janet Thomas Van Osdel.

POULTRY HOUSES, COOPS, ETC.

This is an up-to-date poultry book, written by H. A. Nourse, editor of the Poultry Herald. It was prepared during the past year and is the result of many years' study and experience. It is a book of newest plans for building poultry houses, with description of coops, fixtures and poultry utensils for the farm, village or suburban poultry keeper. It is a book of 100 pages, and is finely illustrated. It is worth its weight in gold. We are sending The National Farmer and Stock Grower for one year and the book Poultry Houses for 60 cents. Address, Hale Publishing Co., 3550 Vista Ave., St.Louis, Mo.

FARM BLACKSMITHING.

Here is a book for the farmer. The book was written by A. J. Drew. It is a complete treatise on blacksmithing from the farm standpoint. This book teaches how to profitably spend stormy days. Many thousands of farmers will find it to their interest to own a copy. There are 100 pages. It is nicely and clearly illustrated and bound in cloth. We credit one-year's subscription to The National Farmer and Stock Grower and send one copy of this book by mail for 65 cents. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

THE 500 QUESTIONS ANSWERED.

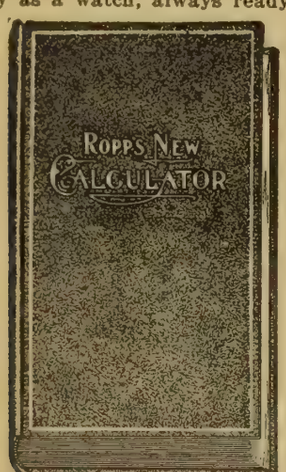
This is all about swine, and is a book by L. H. Cooch. There are 526 questions and 526 answers. They are natural questions and practical answers. The questions relate to breeding, mating, feeding, pasturing, fattening, management, diseases, etc., of swine. It is a complete veterinary authority on all swine diseases. The answers to questions on feeding alone, if properly attended to, will put enough pounds on one pig to pay for many books. We are sending The National Farmer and Stock Grower for one year and the 500 hog question book for 60 cents. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Poultry and Farm Paper Club.

We are often asked which is the best poultry paper in the United States, and the answer is **The Reliable Poultry Journal.** There are other excellent poultry papers, but the one we take home to read and one the family is determined to read is **The Reliable Poultry Journal.** We have made arrangements whereby we can send The National Farmer and Stock Grower and **The Reliable Poultry Journal,** both papers, one year, for fifty cents. This is a bargain that is good now, but this advertisment may not appear again. Address, **Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

Ropp's Commercial Calculator.

This is a standard book and a revised, enlarged and improved edition. There are millions in use. **Ropp's Commercial Calculator** is especially valuable to farmers. By its regular use many hard problems become easy. It will prevent mistakes, relieve the mind, save labor, time and money, and do your figuring in the twinkling of an eye. As handy as a watch, always ready and



reliable. Anyone who will send 50 cents for one-year's subscription to this paper, The National Farmer and Stock Grower, can select one copy of **Ropp's Commercial Calculator** as a free premium. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

How About Peaches?

On September 1st, at St. Louis, the peach market was quoted as dragging on Arkansas small and medium-sized Salways and White Heath clings, and receivers have trouble in cleaning up—some arriving in bad and worthless condition. Refrigerated Arkansas flat crates White Heath clings and small Freestones at 40 to 45 cents, delivered; flat crates Salways at 35 to 50 cents, and bushel baskets Salways at from $1.00 to $1.50 for selections down to absolutely nothing for badly-damaged stock—part car sold at 35 to 50 cents for flat crates and $1.00 for bushel baskets; another car in baskets at from nothing to $1.50, delivered, and a car flat crates Salways and Piquet late at 70 cents, delivered. Express receipts: Missouri and Arkansas flat crates Freestones at 40 to 65 cents, and White Heath at 40 to 45 cents, and bushel boxes Arkansas White Heath clings at $1.15 to $1.25.

How Cantaloupes Sold.

This market often changes. On September 1st, at St. Louis, the trade was dull; supply in execess of demand and movement dragging at relatively low prices; soft and overripe stock not worth charges. Arkansas standard at 25 to 75 cents, (two cars sold at 50 to 65 cents, delivered) and Ozark flat crates at 10 to 50 cents. Poag and Alton baskets at 15 cents. Home-grown sold at 15 to 40 cents per bushel, loose. Colorado Rocky Fords, standard crates, selling at 60 cents to $1.25 (car sold at 60 to 65 cents); flat crates Olney at 40 to 50 cents; flat crates Pink Queen at 75 to 85 cents; and flat crates Rural Gems at 75 to 85 cents.

I. H. C. Service Bureau.

Whosoever wants to know may ask and receive the freshest and most accurate information through the I. H. C. Service Bureau, recently established by the International Harvester Company of America.

Not only is the bureau designed to assist the farmer in a solution of his many and varied problems by answering directly questions regarding soils, fertilizers, rotation of crops, climatic conditions, irrigation, etc., but the aim is to give assistance to students of agriculture, to the agricultural, trade and general press, and to carry on a wide and popular campaign of education.

To do this experts have been engaged—men who have made a study of agriculture, fruit raising, dairying, animal husbandry, etc. They will co-operate with the United States Department of Agriculture, the government Experiment Stations and the Agricultural Colleges, and in addition will devote time to study and research along independent lines, thus making the bureau a center for the latest and most scientific information on any subject that directly or indirectly relates to agriculture.

News and agriculture data will be furnished the press and special articles will be prepared upon request of editors. Photographs of machines and agricultural products may be had for the asking. In short, editors, teachers, farmers and others will find the bureau ready and willing to answer any and all questions promptly and without charge.

Schools and Agricultural Colleges will be loaned lantern slides, as heretofore; but this service has been greatly enlarged and made more complete.

Illustrated lectures, presented by interesting lecturers, on subjects of general agricultural interest, are now being offered State and County Fairs, Land Shows, Farmers' Institutes, Teachers' Institutes, Granges, Chautauquas, etc.

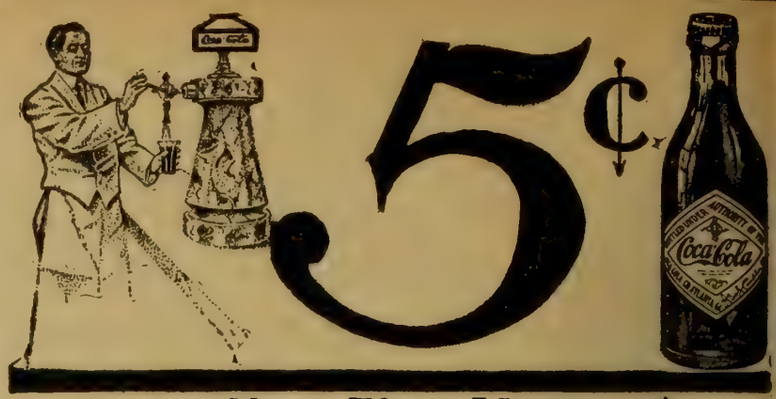
The only cheap thing about these lectures is the price. They are free. Beautiful colored slides and moving pictures have been made specially for the lectures, and no expense has been spared to make them as complete and entertaining as those for which a fee is charged.

The world is interested in agriculture as never before, for the reason that feeding the population is the paramount issue of the age. The struggle for enough to eat had no relief until the invention of the McCormick reaper in 1831. From that time dates all modern progress—the railroads, the telephone, the large cities, the comforts and the luxuries of life.

In the seventy-odd years that the world has had the reaper the world's population has doubled several times. These two factors have increased the number of farms and the number of acres farmed. And these have raised agriculture to a science, which, in turn, has made the farmer prosperous, and he has brought prosperity to all the people.

To further increase this prosperity is the idea the International Harvester Company of America had in mind when it established the I. H. C. Service Bureau. It wants to see more acres under cultivation and more bushels per acre raised. This can be done only through education, experimentation and scientific analysis and research.

In contributing this service to the cause of agriculture the International Harvester Company of America hopes to pay a small part of the long overdue debt every man owes to the inventor of the reaper, who was the real founder of the farm machine industry—the father of modern progress.



Next Time You Drive Into Town

you'll be wanting during your stay a real good drink. Something to quench your thirst to stay quenched.

Drink

Coca-Cola

No matter how thirsty you are, or how tired you are or how particular you are, you'll like Coca-Cola because it hits that dry spot —relieves fatigue and tickles the palate all the way down.

DELICIOUS—REFRESHING
WHOLESOME

Indestructible Records.

There is no longer any need to have phonograph or graphophone records that will break. There are records that will not break. They are made by the Columbia Phonograph Company and they are guaranteed. No one need ever buy another wax record. Dealers are wanted. See page 25 and address Columbia Phonograph Company, Frankfort street, New York City, N.Y.

The Principal Vegetables.

On September 1st, on the St. Loui market, Early Ohios were selling loos from farmers' wagons at 68 to 7 cents a bushel; receipts in 621 sack by boat sold at 70 to 75 cents. Home grown cabbage selling at 35 to 4 cents per 100 pounds; kraut stoc was selling at 30 to 35 cents per 10 pounds; home-grown turnips at 5 cents a bushel; sweet potatoes, hom grown Bermuda, at 40 to 45 cent per half-bushel basket and $1.00 pe bushel box, loose; Nansemond $1.25 per bushel box, loose; Virgini yellow selling at $2.50 per barrel.

For a Jumping Cow.

A poke that will hold any cow advertised in this paper, and the sul ject is worth investigating, especial as agents are wanted. Send for pa ticulars and circular to Seeder Man facturing Company, Box L, Home Michigan.

You Can Lay It Yourself

Amatite ROOFING

AMATITE is a *mineral surfaced* roofing, waterproofed with Coal Tar Pitch, the greatest waterproofing material known. It is so put together that it *will not leak* and *will never need to be painted.*

Amatite comes in convenient rolls, ready to lay. *Anyone can do the work.* Liquid cement for sealing the laps, and large headed nails, are supplied free inside of each roll.

We want everyone, whether in need of roofing or not, to know what Amatite looks like, to be thoroughly familiar with its properties.

For this reason we are prepared to send free a sample to anyone sending name and address to nearest office.

The Typhoid or House Fly.

[From Farmers' Bulletin No. 412, issued by the U. S. Department of Agriculture.]

Much has been written during the last few years calling attention to the danger that lurks in the presence of that common household pest, the house fly. In order to emphasize the importance of this fly as a disseminator of disease germs, Dr.L.O.Howard, chief of the Bureau of Entomology of this Department, has given to it the name typhoid fly, which name has now come into quite common use. This fly of world-wide distribution is perhaps the one most important insect pest known to man. As a direct pest it is a source of great annoyance, necessitating, with the mosquito, an estimated annual expenditure in the United States alone of more than $10,000,000 for the screening of habitations. But the importance of this fly as an annoying pest is insignificant compared with its importance as a menace to public health through the dissemination of disease germs. In the maggot stage the fly thrives in all kinds of filth, and as adult it feeds upon similar materials, thus ingesting the deadly germs of enteric diseases, such as typhoid fever, cholera, cholera infantum, and tropical dysentery, to deposit them hours, or even days, later in fly specks, often on various articles of food, or these microscopic organisms may be collected on the feet of the fly and later adhere to some food supply over which the fly may crawl in its travels.

Typhoid fever is one of the most serious ailments to which man is subject. There are about 250,000 cases of this disease annually in America, about 35,000 proving fatal. Sixty per cent. of the deaths in the Franco-Prussian war and 30 per cent. of the deaths in the Boer war were caused by this disease. One investigator has found the bacilli of typhoid fever in the dejecta of house flies twenty-three days after feeding, while another records the presence of this bacillus in flies during a period of two weeks. The possibilities of transmitting typhoid fever are appalling to the layman, when it is remembered that the germs of this disease may be in the system several weeks before diagnosis is possible, continue in numbers six or eight weeks after apparent recovery, and in exceptional cases may be discharged from the system during a period of several years. There are authentic records of a patient distributing these germs for seventeen years and being the incipient cause of thirteen cases during fourteen years of that period. Other diseases conveyed by this fly are tuberculosis, anthrax, plague, trachoma, septicemia, erysipelas leprosy, yaws, and perhaps smallpox

No Cause For Alarm.

He walked into the editor's office as quietly as might a shddow, and when that busy man looked up, startled, he was in the act of laying upon the desk a circular roll of something done up in brown paper. It was about twenty-eight inches long and eight inches in diameter, and upon this roll the editor fixed his eyes, while the hair on the back of his neck began to rise like that of an enraged porker.

"I wish," said the visitor, smiling upon him, "that you'd look over—"

The editor arose with speed, kicking over his chair. With dramatic motion he pointed at the door.

"G'out!" he gulped hoarsely and brokenly. Then his lost voice came back to him on the wings of indignation, and he hopped up and down, pointing at the fat roll on his desk.

"What d'ye take me for," he screeched. "Take that thing away. Do you s'pose I haven't anything to do but wade through a bunch of guff like a thirteen-inch gun? Take it away." The visitor regarded him in some alarm.

"Say, old man," he said, "are you sick?" The editor waved his arms.

"Don't you 'old man' me!" he howled. "Get out!"

"Here," said the visitor, sternly: "I came in here to pay my bill, and if you don't want it—"

"Pay * * * bill?" said the editor, weakly, sitting on the edge of the desk.

"Yes, I did," said the indignant visitor. "I wish you'd look over your book and see—"

The editor seized him by the hand. With the other hand he pointed at the fat roll on the desk.

"Then," he gulped, "it isn't a poem?" The visitor scowled.

"No, it ain't a poem," he said. "It's a joint of stovepipe."—Galveston News.

A National Beverage.

Everywhere you can buy a glass of Coca-Cola, the refreshing and sustaining beverage. If it is does not come when called for it is because there are inferior substitutes, and the calculation is that you will accept one. Look for the sign Coca-Cola and it will be found. If you are an investigator, write to Coca-Cola Company, Atlanta, Ga., and ask for the booklet "The Truth About Coca-Cola." The pamphlet will please you, and so will Coca-Cola.

A Suggestion For Getting Rid of Mice.

Some years ago an agriculturist in the north of Scotland, having suffered considerably from mice, put at the bottom, near the center, and at the top of each stack, as it was raised, three or four stalks of mint, with the leaves on, and never after that had any of his grain consumed. He then tried the same experiment with his cheese and other articles kept in store, often injured by the mice, and with equal effect, by laying a few leaves, green or dry, on the article to be preserved. From these results it must be inferred that mice have an antipathy to the smell of mint; if so, it may be worth the experiment to scatter a few drops of oil of peppermint in pantries and places that they frequent, as the effect will probably be the same. Peppermint seems to put forth new claims to utility every day, its properties as a disinfectant, a soother of pain, a preventive against cold, and a stomachic being only a few of its characteristics.—Farmer and Grazier, Melbourne, Australia.

HARDY, EVER-BLOOMING ROSES.

The Most Delightful Subscription Premium Offered by a Farm Paper.

The Coming Season We Will Help to Establish Rose Clubs and Offer Prizes For Competition in Rose Growing.

The National Farmer and Stock Grower will again offer rose plant premiums. It is rather early to begin advertising them, but it is our intention to introduce a new feature and to make rose growing an interesting contest, just as it is a delightful pastime.

The roses will be offered as a subscription premium, and it is by far the finest collection that can be obtained. There are eight varieties.

Collection of Roses.

No. 1. Rhea Reid. One that received the gold medal at the National Rose Society. The flowers are rich velvety red.

No. 2. The Bride. A rose that will thrive under most unfavorable conditions. The flowers are the purest ivory white.

No. 3. Etoile de Lyon. This is a most magnificent yellow rose, massive in size and beautiful in every stage of development.

No. 4. The Bridesmaid starts with the first warm days of spring and requires but little care. The flowers are an exquisite clear pink, beautiful in form and highly fragrant.

No. 5. The Papa Gontier rose is a grand variety for outdoor planting, producing double flowers of clear, glowing crimson and blooms from June to late in the year.

No. 6. Bessie Brown is a charming, pure snow-white rose. The flowers are very large and it blooms profusely.

No. 7. Champion of the World is a rich, ivory pink, and without it no garden selection is complete. It is unequaled for size of flower, fragrance or beauty.

No. 8. Crimson Rambler, the last of the collection, is a bright crimson flower that covers the entire bush. It is valuable for decorative hedges, arches and screens.

We cannot properly describe this beautiful collection, but we will guarantee them to please any lover of flowers.

OUR SPECIAL OFFER.

This special offer is a sixty-cent proposition. Each subscriber sends us 60 cents and each subscriber will receive: 1st. The National Farmer and Stock Grower for one year; 2d. The set of Eight Hardy, Ever-blooming Roses. They are one-year plants, each plant with the name attached. 3d. A lovely picture by Paul De Long Pre entitled "American Beauties." This picture is 10½x14 inches and is a panel picture, reproduced from the original painting for which the artist received $2,500. This picture of American Beauties is truly unsurpassed in artistic excellence. The subscription to the paper will be credited as usual, the plants will be sent out at the proper time, and the picture will be sent on receipt of the subscription.

Club Membership and Prizes.

It is our intention to encourage the organization of rose-growing clubs by offering prizes to be competed for and awarded whenever twenty-five or more subscribers can be obtained in one community. If the club is formed, a flower show is the result, and we furnish premiums to be competed for by roses originally furnished by us. It will furnish a basis of a local flower show. We will furnish clubs of fifty the amount of $5.00 to be awarded in prizes. Clubs of 100 will receive $10.00 for prizes. Clubs of 150 will receive $15.00 for prizes, and in addition wherever a club is formed we will furnish the ribbons to be awarded—a suitable inscription on each. Rose clubs will make their own rules, set their time for exhibit, and are advised to connect with some other exhibit in their own community, and so enable them to include other flowers in the show.

The Rose Club Idea.

The rose-growing club idea has come to us just as we are issuing this edition of The National Farmer and Stock Grower. We hope our friends and patrons will help us to carry out the idea. We hope to start a thousand clubs. Don't wait to complete your club. Send in your own subscription and encourage others to do the same. It does not take long to get together a rose club. If it is impossible to raise a large club, we will make our prizes in proportion to the total membership. Whenever clubs are started they will be announced in the paper.

BLANK TO BE FILLED OUT.

The Hale Publishing Co.:

Gentlemen:—Herewith please find 60 Cents. On receipt of same please credit me with one-year's subscription to The National Farmer and Stock Grower; send me at once the picture "American Beauties" and put my name on list for the set of Eight Hardy Ever-blooming Roses to be sent as soon in spring as it is safe to do so.

Mrs. Gowdy's Fall.

Mrs. Gowdy is a deacon's wife, and if ever there was a woman foreordained to be a deacon's wife, it is Mrs. Gowdly, according to my thinking. She's got all of the gospel of St. Paul incorporated, according to my notion. I want it understood she is a lady and never uses a low expression of any kind. In view of what follows, remember that or I'll not tell my story, for it would be ill-fitting that I would seem to run down such a woman.

I am Aunt Sarah, the minister's wife, and that is how come I was at the dinner. It was Mrs. Gowdy's the deacon's wife's, dinner, and to it was invited the minister and his wife, the deacons and their wives, and all the church officers. If ever anybody did get up nice dinners, it's this same Mrs. Gowdy, and nobody ever happens to be engaged beforehand when they are bid to her table. So when we sat down to that dinner we were all there, and the men were so hilarious, any woman experienced in their ways would know that they scented a good dinner. And such it was— the best of its kind—but to my notion it's a sight too bad it didn't happen at the tail end of that scrumptious meal, which would have been more gratifying to our stomachs instead of happening at the very front end.

Mrs. Gowdy knows something about style and has 'Melia Barnstable (that's old Mary Barnstable's niece) to help her when she has extra people to dinner. I've always been used to having everything put on the table at once and everybody helping himself and passing it to his neighbor, and I can't deny that I like it some better than having just one thing at a time set in front of you. For then you never know what else is coming, and maybe you'll be eating too much of something you don't care extra much about and using up good space that you'll afterward begrudge when some special favorite of yours comes along. But mind, I don't mean no harm against Mrs. Gowdy.

Well, the first thing on the table was a biscuit wrapped in each of our napkins and a big bowl of soup in front of Mrs. Gowdy. Not expecting to find a biscuit in my napkin instead of heaped up on a plate in the middle of the table, I just naturally flirted open the napkin so as to get it all unfolded to spread over my bosom, and what should that biscuit do but shoot right across the table like a bullet and hit Mr. Dodge, the clerk. But that was nothing. In two seconds I'd clean forgot about my mishap, for Mrs. Gowdy had just started to dish up the soup and give it to 'Melia to pass around, when there was a crack of chinaware, and if that soup bowl didn't give clean away and break in two, and the soup pouring all over Mrs. Gowdy and the tablecloth. I s'pose 'Melia hadn't set up the bowl properly, and it was a thin bowl, too. Then I suspect Mrs. Gowdy had warned her to have the soup piping hot, for Mrs. Gowdy isn't the one to serve cold soup.

For a second time there was a stillness of the awful kind. And Mrs. Gowdy's eyes (they pop a little) kept getting poppier and poppier and then on that silence she exploded: "Blame it!" That bowl of soup breaking and pouring over the table may have been something of a surprise, but it wasn't a pinhead compared to that outburst. Then 'Melia came to her senses and began to sop up the soup and put on a clean cloth.

But all this time the deacon kept looking at his wife. He is something of a stern man, and finally he said: "Barbara, what did you say?" The deacon's wife looked him squarely in the eye. Her face was as red as any necktie there. It was her chance to crawfish, and I know the deacon was wishing she'd deny what she'd said; but there's nothing crawfishy about Barbara Gowdy. The deacon heaved a big sigh as if his heart was well-nigh broken, and I saw Mrs. Gowdy's lips began to tremble.

Then they all went on eating the things that 'Melia put on the table, and she did it helter-skelter without any directions from Mrs. Gowdy, for she just sat there, not paying attention to anybody and not touching a mite of food. None of the women ate much, either, but the men went right ahead making the most of everything and likely gaining by our lack of appetite. It wasn't till they were all waiting for her to adjourn then that she looked up and met all of the eyes, some condemning, some wondering and some sympathizing. Then she spoke up as sweet as ever:

"I want to ask all of you forgiveness for what I said when the tureen broke. I am surprised that such an expression could come from me. I've never in my life used it and I've never even thought it. It just said itself."

Then what one of the old deacons do but start to talk about the old Adam in the heart that made such words come forth, and I stopped him still.

"Maybe you've forgot, Deacon Blodgett," says I, "about the time our cows got in your corn field, before I was married to the minister here. If ever I heard anything plain it was some words you said, and the most mentionable among them was 'tarnation.' I won't soil my tongue nor the ears of the company with the worse ones. All I've got to say is, that any other one of us here, not excepting the minister himself, if he'd had his very best china bowl smash in his hands and pour over the finest tablecloth that it took Mrs. Gowdy full two hours to iron, to say nothing of spoiling her best clothes and having her hands burned and being all tired and nervous planning this elegant dinner for this company—there isn't a one of us that mightn't have said something as much worse than Mrs. Gowdy's expression as pitch is blacker than snow. All I have to say, there's nothing to forgive. So far as anyone here's concerned, she's never said it. And if ever anyone should feel like mentioning this to outsiders or even talking it over among yourselves, leave it to me to think up some worse words and actions on your parts."

And no one ever dropped a word. Mrs. Gowdy's name isn't Mrs. Gowdy at all or I wouldn't be telling this story."—Janet Thomas Van Osdel.

Grand Subscription Offer.

A MOST DELIGHTFUL PICTURE.

This glorious and beautiful picture is 6 x 8 inches and is mounted on a nice green mat which is 8 x 11 inches. It is just the right size for a panel picture. It is rich in colors and is ready to tack or hang on the wall. It is not necessary to frame this picture, but no picture in the world is better worth framing.

MOTHER AND CHILD.

The dark, warm colors of the room, enlightened by the glow of the candles; the chubby face; the restful, healthy, natural position of the child; his delicate, little hands, and the fond look of the mother, all go towards perfecting a picture that will be enjoyed and give happiness to any house it may enter.

We offer this picture as a subscription premium. Send us 25 Cents and we will send The National Farmer and Stock Grower for six months. We will also send one mounted copy of the MOTHER AND CHILD PICTURE, in colors, postpaid, and safe delivery guaranteed. Address, THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.:

Gentlemen:—Herewith please find Twenty-five (25) Cents to pay for six-months' subscription to The National Farmer and Stock Grower and one copy of the mounted MOTHER AND CHILD PICTURE.

My name is.....

P. O. Box..... Rural Route.....

Postoffice .....

Cement Workers' Handbook.

This book is designed to teach anybody how to work with cement; how to mix mortars of all kinds for all concrete purposes; how to make building blocks; how to build walls, floors, ceilings, walks, posts, cisterns, troughs, tanks, etc. It gives estimates of the cost of all kinds of mortars and concretes and all methods of house construction. It is a cloth-bound book of 100 pages and covers more than fifty most important subjects on cement and its uses and construction. This is a diamond of a book for wide-awake farmers. The price of the book alone is 50 cents.

For 60 cents we will credit one year's subscritpion to The National Farmer and Stock Grower and send a copy of the Cement Workers' Handbook. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

House on Fair Grounds.

Below is shown a cut of house that was erected on the Iowa State Fair Grounds by the Chicago House Wrecking Company last year. During the progress of the Fair it was visited by thousands of persons, who were surprised at the high-grade material and general appearance of the design. This house is what is known as No. 177 in this company's catalogue. It is twenty-seven feet in width by thirty-nine feet six inches in length, exclusive of porches. Considering the fact that they furnish the material complete for the exact duplicate of this house for $550, it is certainly an astonishing proposition and a remarkable bargain offering.

It contains six rooms and bath, which are as follows: Living room, dining room, kitchen, pantry, three bed rooms and a bath room, and is in every way a complete and modern home on one floor. The fireplace in the corner of the living room adds cheerfulness to the surroundings. All the rooms are of easy access from the living room of the house. There are no waste spaces where not needed, and the whole plan has been developed not only for convenience and beauty but in harmony with the general character of the bungalow pattern. For a summer or suburban home this class of house offers many advantages not possible in designs of different construction, and they especially recommend this design to people of good taste and moderate means as an ideal home at a comparatively small cost.

The bungalow pattern of construction was at first employed only in houses intended for temporary use, but their beautiful outlines and great convenience soon brought them into rapid favor as suburban and city homes. In this design they show one of the most pleasing examples of this deservedly popular style.

The material they furnish is all brand-new stock, as described in their material specifications. They also furnish free plans, specifications and list of material for the construction of this design.

They will furnish a complete plumbing outfit for this house for $97.50. Paint for the entire job, including hard oil finish for interior, two-coat work (including porch floor paint but no other floor or roof paint) for $19.70. This building can be heated with furnace, steam or hot water, as desired. The hot-air furnace they quote ae $83.05. The steam-heating plant would amount to $147.84. Or, if you prefer hot-water heating plant, which is by far the best, it would cost you $176.21.

The Chicago House Whecking Company, Thirty-fifth and Iron streets, Chicago, Ill., will furnish the design for this house, together with brand-new stock for use in erecting it, for $550. More information that will interest builders of not only dwelling houses, but barns, etc., can be obtained absolutely free of charge. When writing them, advise that you saw this design described in this publication. They advertise continually in this medium and a careful study of their "ads" we are confident will prove of interest to you. Write to the Chicago House Wrecking Company, West Thirty-fifth and Iron streets, Chicago, Ill., and ask for Catalogue No. 990. It contains a number of house plans, designs and estimates.

Your Vacation.

If you are one of those self-sacrificing mortals who cook for harvest hands and entertain city company during the heated term, it is high time you planned a vacation yourself. If the company has converted your home into a house party, just take it as a matter of course that your friends expect you to return the compliment. You have added much to their pleasure; it is only fair that they should initiate you into some of the advantages of city life.

But if for any reason you do not feel like doing this, strive to plan some other way to get into a new channel. We get accustomed to the old things, the old ways, and dread the effort of changing. Even the local Fair, the same one, is attended every year, partly because we see so many old friends, but mainly because we know all the ways and dread the effort of branching out into a new field.

Yet this should be the great incentive for making a change. The flaming bedquilts are all very neatly done, but they are the same ones we have seen for ever so many years back. Much of the fancy work is familiar. Even the trees and grounds lack the stimulus of novelty. While it is well to patronize local displays, something else is needed to bring out our own best efforts, aims and possibilities. New scenes enthuse as with new blood. New methods confront us and we do better work because of the comparisons made.

By using a little forethought a trip to a neighboring city may be made with very little expense. Car fare is cheap, and the rest attending a ride of a few hours through new scenes does much toward paying the bill. It may be that some special attraction will induce excursions, thus reducing the expenses.

The dress problem is not so great a one as formerly. The average farmer's wife has at least one dress good enough to wear on ordinary occasions, and with a dainty waist and fresh neckwear one may be presentable for the ordinary function at small expense.

Watch the advertising columns of the city papers and note the bargains of the season. Make a list of the must-haves in the family during the next few months and strive to do the necessary shopping in such an economical manner that your car fare will be saved. You can do this in almost every instance if the family supplies are extensive.

Even in the home stores you know how easy it is to pick up a bargain in summer remnants at this season. The same holds good to a still greater extent in the large cities. Shoe sales are frequent, and the saving in the cost of footwear for a family of considerable size is certainly worth thinking about. If you do not feel like risking a purchase by number alone, and it is certainly risky, take the measure of the foot or an outline of it. In this way the size may be very nearly approximated and the reduction in price makes the trip really a money saver. Barefoot sandals and other summer goods may be picked up in good quality for almost nothing, as the up-to-date merchant does not want to carry the old stock over. Yet even if they are a trifle antiquated in style next season, they are just the thing for every-day wear.

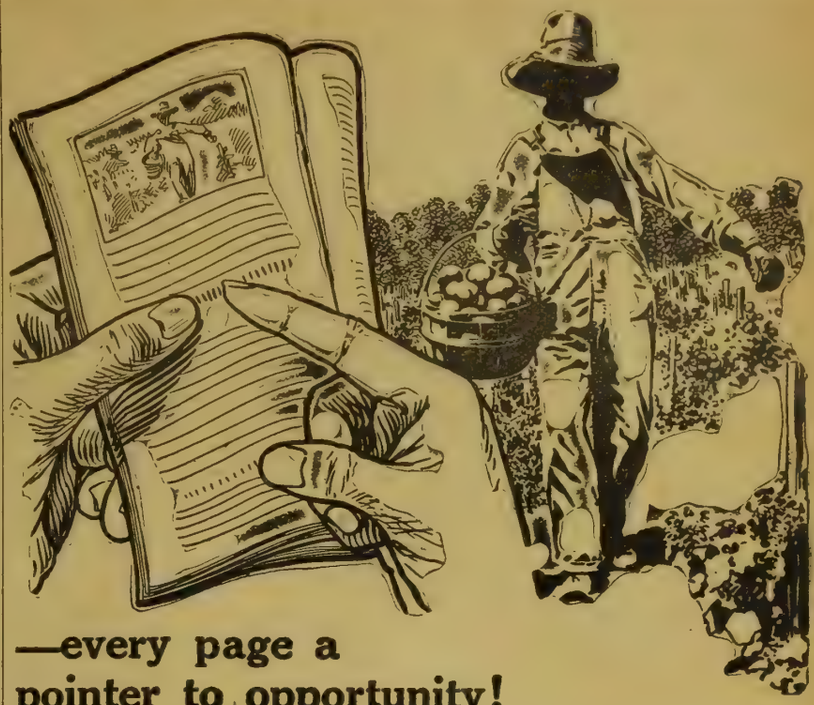
If a stranger in the city, get a map and study the streets. Find the location of the leading stores. Compare price lists and be able to shop to advantage. Look out for the special bargain sales, the clearing of the goods for a new season. And then study likewise the points of interest. If there are parks, learn their location and leading features of interest. Know in advance what you are to see. And then reduce your allowance of clothing to the minimum necessary, to avoid being overburdened. Throw aside thoughts of home duty. Resolve to enjoy yourself and to make the trip profitable in a two-fold measure. You can do it.—Bessie L. Putnam.

The Woman's Sphere.

Judge Bancroft Cox, in a recent speech in Cleveland against universal suffrage, concluded with this smiling peroration:

"Hail, then, to women—women, morning star of our youth, the day star of our maturity, the evening star of our old age. Bless our stars, and may they ever continue shining—in their proper sphere."

Look for paints on page 7.



—every page a pointer to opportunity!

This booklet is *bound* to interest every farmer who is looking for bigger profits, broader opportunities—a perfect story of a perfect opportunity land, so *completely* told that you'll have nothing to "guess" about when you've read it through. Its the *nearest* thing to being actually *on the ground* that you can do—and so *attractive* in the advantages that it shows, that you'll not be satisfied until you've *seen* this splendid country that it tells about. You'll be *glad* that you *wrote* for "Profitable Products of East Texas."

$365 grows to $12,000 in EAST TEXAS

Among the many interesting things told, for instance, is the story of B. E. Barber of Jacksonville, Tex. Just four years ago Mr. Barber bought 40 acres of land for $365 and started diversified farming. Last year he sold $340 worth of poultry. From an acre and a quarter he sold $246 worth of turnips. He had four and a half acres of Irish potatoes that netted him $724.50. These potatoes were planted in February and gathered May 20th. He had 3 acres of tomatoes that yielded from 600 to 700 crates to the acre, selling for 55c to $1.30 a crate. In these 4 years Mr. Barber has put *$12,000 in the bank.*

Why don't you go to this splendid country, where the ground is *good* to people—where soil, season and sunshine combine to *speed* you on the road to wealth; where land prices are *little* and profits are *big*. Take a trip down there on the low rate excursions offered twice each month via the Cotton Belt Route—that's the only way you can fully realize what an opportunity is waiting there for you. Write today for the free booklet and full facts about the low fares.

THE BOOK OF LIVE STOCK CHAMPIONS.

This is a valuable book and is of graet interest to all stockmen.

Send us One Dollar and we will send you the National Farmer and Stock Grower for two years, and we will send you post free by mail one copy of the **Book of Live Stock Champions,** issued in the year 1905. It contains pictures of 500 individual animals, the greatest champions in live stock history. This book is nicely bound in cloth and is our own publication. Every stockman should take pride in owning a copy. It begins with the World's Fair in Chicago in 1893; contains the grand champions at the Louisiana Purchase Exposition, 1904, and at International, State and American Royal Shows. It is a book of 240 pages, with pictures of one, two or three champions on a page. The pages are 6x9 inches. We have sold ten thousand of these books to stock farmers, breeders and Agricultural Colleges. To have a copy of this book on your table is a constant pleasure. Only a few hundred of these books remain on hand and it will not be printed again. Obtain a copy while you have an opportunity. Address, **Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

$3.77 Agent's Outfit Free

Every man or woman looking for a chance to make from $5.00 to $10.00 per day should write us at once. We have many hundred household specialties and new patented articles needed in every home. No previous experience necessary. The goods sell on sight. You make big money right from the very start. We ask no money, no deposit, no C. O. D. scheme. Send your name and address today sure. Address Royal Mfg. Co., 168 Royal Bldg., Detroit, Mich.

COMPLETE TOUR OF THE WOLD.

Send us 50 cents and we will credit you with one-year's subscription to The National Farmer and Stock Grower. You can also select as a free premium to be sent post free by mail **A Complete Tour of the World on Post Cards.** One hundred actual scenes in colors. Places of prominence and points of interest in all parts of the world, reproduced from original photographs taken in all parts of the world by noted travelers. These cards are equal to a book on geography and much more interesting. Don't miss this premium. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

PILES, FISTULA, BLEEDING, RECTAL, ULCER, Etc.

GALL STONES or any LIVER DISEASE. Write me ALL about it. Will tell of a cure FREE. Address ED. C. COVEY, R.F.D., Lansing, Mich.

$100 MONTHLY and expenses to trustworthy men and women to travel and deliver samples; big manufacturer. Steady work. S. SCHEFFER, Treas., A B 211, Chicago.

MASTER PAINTING POST CARDS.

Send us 50 cents and we will send you The National Farmer and Stock Grower for one year. We will also send you as a free gift or premium **Fifty Illuminated Post Cards.** The fifty cards are put up in a telescope box with leatherette covering and gold embossed top, known as the Edition de Luxe. These cards are reproductions of the most famous paintings by the great masters and are an art course in themselves. They are called the **Master Painting Post Cards.** We have never seen a set of Post Cards before that in any way compare with these. There are fifty of them, every one a reproduction of the most glorious painting in the history of the world. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Different Qualities of Grain.

Cash grain sold at St. Louis by sample is sold on the tables of the Merchants' Exchange. The grain is in car-loads on track subject to orders for delivery.

One-day's transactions will usually show all the grades except No. 1, which is seldom seen. The standard grade is No. 2, which represents the quality which is required when bought, without a lower grade is specified.

On August 31st, at St. Louis, grain was sold on the following basis, the report showing the change from the previous day:

SAMPLE WHEAT, in bulk, on track—Soft in better demand; prices steady to 1c. up. Hard quiet and steady.

No. 2 red sold at 99c. to $1.03½.
No. 3 red sold at 94 to 98c., mainly 95 to 96c.
No. 4 red sold at 84 to 93½c.
No. 2 Hard—Quote at 99c. to $1.02½ for yellow; $1.02½ to $1.04 for dark; $1.05 to $1.06½ for Turkey.
No. 3 hard sold at 95 to 97½c. (Turkey more.)

Thus it will be seen that wheat actually delivered sold from 85c. to $1.03½ a bushel, according to quality.

SAMPLE CORN on track—½ to 1c. lower and slow.

No. 2 corn, 59c.
No. 3 corn, 58 to 58½c.
No. 2 yellow, 59½c.
No. 3 yellow, 59c.
No. 2 while, 60 to 60½c., local.
No. 3 white, 59½c., destination.

It will be seen that corn was pretty much up to grade, there being no No. 4 on the market.

SAMPLE OATS on track—White stronger to ½c. higher on selections; demand fair. Mixed easier to ½c. lower.

No. 2 white, 35½c.
Standard, 34 to 34½c.
No. 3 white, 33 to 34½c.—poor car at 32c.
No. 4 white, 28½ to 32½c.
No. 2 oats, 30c. for ordinary—select bid, 31c.
No. 3 oats, 29½c. mainly—select oats, 30c.
No. 4 oats, 29c.

This will show that even inside of one grade there is a difference in quality. Select grades were advancing and inferior grades declining.

During the month of August, at St. Louis, cash wheat declined two to three cents a bushel; corn declined about six cents a bushel; and oats declined about seven cents a bushel.

Southern Cattle at St. Louis.

At the opening of September in the Southern cattle division, large runs were arriving. Several loads of good, fat, wintered beeves, 1,150 to 1,200 pounds, went at $5.70; and good cattle of 850 to 1,100 pounds were plentiful at $5.00 to $5.50. A pretty good class of tidy steers went around $4.80 to $5.00; and bulk of medium beeves sold at $4.50 to $4.70; and plain killers at $4.30 to $4.40 per 100 pounds. Few lots of good killing heifers went at $4.00 to $4.35; and good cows at $4.00. Some pretty fair Oklahoma cows sold around $3.50 to $3.75, while bulk of the stuff and mixed cattle were Arkansas and Mississippi canners and fair killing kinds at $3.00 to $3.75.

Rich Lands Very Cheap.

A magnificent system is the M., K. & T. Railway. It is one of the pioneer lines of the Southwest. In 3,000 miles of road there is not an unhealthy spot, neither is there any waste land. There are cheap lands, but at the rapidity these lands are selling they will not last long. People who inspect the country of the M., K. & T. stay there and send for their families. Get yourself posted by writing to W. S. St. George, G. P. A., 124 Wainwright Building, St. Louis, Mo., and ask for a copy of "The Coming Country." It is full of valuable and reliable information .

The Market For Apples.

At St. Louis, September 1st, apples were arriving on the Burlington, Frisco and Rock Island Routes. Notwithstanding all there is in favor of marketing apples in boxes, the hampers, boxes and irregular-sized packages were relatively cheaper and more difficult to sell than stock in barrels. Fancy Eastern Duchess at $3.50 to $4.00—soft, speckled, etc., less; Illinois, Arkansas and Missouri mixed green and red-streak varieties at $2.00 to $2.50 for No. 1, and $1.25 to $1.50 for No. 2; Jonathan, Orange Pippin and Grimes' Golden at $3.00 to $3.50 for No. 1, and $1.25 to $1.50 for No. 2; fancy Maidenblush at $4.00 to $4.50—all per barrel; bushel boxes or baskets Red-streak, Green, Pippin, etc., at 40 to 60 cents—windfalls less; bushel baskets Jonathan at 75 to 90 cents. Irregular packages, (boxes, berry cases and other miscellaneous and undesirable packages) at 35 to 40 cents. Sales—Half car New York Duchess at $3.50 to $4.00 per barrel, delivered; one car mixed varieties (144 barrels) at $3.15, delivered; one car Eastern mixed at $3.00, delivered; one car Missouri mixed varieties at $2.92½, delivered; one car Jonathan and Grimes' Golden, delivered, including fifty barrels at $3.25, fifty barrels at $3.30, and twenty-five barrels at $3.50.

School Handkerchiefs.

In this day of cheap handkerchiefs and cheaper materials for making the same any mother can supply her children with plenty of nice handkerchiefs, and there is no better way to learn the little girls to sew neatly than to give them some of these small articles to hemstitch. The piece bag will usually furnish enough material for a number of these articles, as they can be made from old soft white cotton or muslin, and if the lawn is figured the color can easily be boiled out and the material will be left soft and white. Any dainty and sheer material may be put to this use, and nice handkerchiefs are often made from the best breadths of summer dresses.

Be sure to give each child a clean handkerchief every morning, for unless they have one of their own they may borrow the handkerchief of another child, and the other child may have sore eyes or some other infectious disease that is easily transmitted through the common use of these articles.

Have a certain place where all the handkerchiefs can be thrown and put them to soak over night in warm borax suds before washing them, as the borax not only softens the water but it purifies and disinfects. In the morning pour off this water and put them in clean suds with a little borax added and rub them clean through this suds and put them in a tub or wash basin. Dissolve a little borax in boiling hot water and pour this over the handkerchiefs and let stand covered until the water is cold, then rinse them and hang out in the sunshine. When they are washed in this way they need no boiling and very little rubbing and the fabric is left soft and white.

It takes only a short time to hem quite a number of these small articles on the machine, and mark each child's set with his or her own mark, and hold each one responsible for their own belongings.

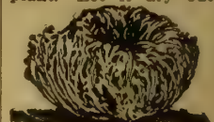
Every child should have its own handkerchief box, always in the same place in the drawer, and a little sachet bag put in will help to learn them to be dainty and neat.—Martha.

PRIZE PACKET POST CARDS.

Send us 50 cents and we will credit you with one-year's subscription to The National Farmer and Stock Grower, and we will also send you by mail as a free gift one set of **Prize Package Post Cards.** The Post Cards constitute a complete assortment. They are all kinds, elegant, beautiful, and would cost $1.50 if bought at retail at city stores. The set was printed for our use in five million lots. There is double and treble value in this offer. The cards are practically a free gift, postage paid by us. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

THE MEXICAN RESURRECTION PLANT.

This is a great and pleasing novelty. Without water it dries up and is apparently dead. Place it in a shallow tank of water and it revives to a beautiful, living, fern-like plant. Let it dry out again and it curls up like a ball and can be kept for years. It will revive again directly it is placed in water. It requires no soil, no nourishment, no attention.



We have adopted the Resurrection Plant as a subsciption premium to the **Universal Magazine.** The magazine is most interesting and is published monthly. It is an illustrated publication, with genuine stories, splendid poetry and home reading. Send 25 cents for one-year's subscription to the **Universal Magazine** and we will mail you one of these genuine Resurrection Plants as a free premium.

Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

The Date Book History of Live Stock and Agriculture.

The editor of The National Farmer and Stock Grower has collected historical items relating to agriculture and live stock raising and arranged them in the order in which the incidents happened. It is a record which is intensely interesting to all earnest farmers and progressive stockmen. The events recorded include much that is ancient and is brought down through the ages of progress to about the year 1906. This material is all arranged in a handy booklet of 100 pages; it is nicely illustrated and is a handy useful publication. We will be glad to send a copy, postage paid, to any of our readers on receipt of 25 cents, or we will credit one-year's subscription to The National Farmer and Stock Grower for 50 cents and we will send a copy of the Date Book History of Live Stock and Agriculture as a free premium. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

CREAM ON THE FARM.

How to Take Care of It so as to Bring the Best Results.

The Blue Valley Creamery Company of Chicago, Ill., and St. Joseph, Mo., is entitled to credit for this article. The company is trying to improve the quality of their butter, and to do so is trying to get the farmer to improve the quality of his cream.

"With little or no increase in investment or labor it is possible for our patrons to increase their earnings by simply giving a little more attention to the care of their cream. The only practical method in the hands of the farmer for checking the growth of the small organisms in the cream called bacteria, which cause it to sour and decay, is by cooling it down to a low temperature immediately after it comes from the separator.

"To show the value of quick cooling upon the keeping quality, a sample of milk was kept at 98 degrees Fahrenheit (the same temperature at which it was drawn from the cow) and it curdled in eighteen hours. The same size sample of the same milk was cooled to 70 degrees Fahrenheit and it did not curdle until forty-eight hours had elapsed. Another sample was cooled to 50 degrees, and it kept for ten days without curdling. Although these figures would not be the same for all samples of milk, it brings out the fact that the bacteria which cause milk to sour grow very slowly at low temperatures.

"To bring out the fact that it is possible to cool the cream much quicker by placing the can in cold water than by allowing it to stand in the air, a four-gallon can of cream at 98 degrees Fahrenheit was placed in water having a temperature of 64 degrees. The cream cooled to the temperature of the water (64 degrees) in two hours. Another can of the same size, containing the same amount of cream, at the same temperature, was allowed to stand in the air, having a temperature of 45 degrees (19 degrees lower than the temperature of the water), yet it did not cool down to 64 degrees until 6 hours had elapsed.

"A box, such as is shown in cut, will easily and efficiently solve the problem of keeping hand-separator cream in the best possible condition. This should be placed between the stock tank and the well, so that all water that goes to the stock tank must pass through the cream box. The tall, narrow, shot-gun can, which is about eight inches in diameter and twenty inches high, is to be recommended for this purpose, as cooling will take place much more rapidly in such a can. The cover of this can is very close fitting, and, therfore, should not be placed upon the can until contents have had a chance to cool and the animal heat and gases found in fresh cream have passed off. By stirring the cream, cooling will take place much more rapidly and the gases will be more quickly removed. This box can be constructed of tongued and grooved yellow pine, one inch and a half in thickness. A little cotton and white lead should be placed in all joints before boards are fastened together, as this will do away with any possibility of leaking after the box has once become water-soaked. This should also be placed on the flat sides of the one-quarter round pieces before they are nailed in the corners. The box may also be constructed of cement. The size of this box will depend on your supply of cream. Note the arrangement which provide for the cans being held down in the water, although they may contain only a small amount of cream. For patrons who have ice, this should be modified. It would then not be advisable to run the water through the box, as this would cause a waste of ice. Merely place ice in the water around the cans. In either case the box should be wel covered. With this arrangement each separation of cream should be placed in a different can, at least until the fresh cream has become cooled to as low a temperature as is possible. The practice of mixing warm fresh cream with the cream of previous skimmings, which has been cooled, is one of the greatest causes of poor quality of hand-separator cream. The cold cream is warmed up and it soon sours. By the time it has warmed up in this way half a dozen times it becomes very undesirable. When the day for shipping arrives, stir the cream thoroughly and pour it into the shipping can. Rinse the shot-gun cans with warm skim milk. Use as little milk for rinsing as possible, as a large quantity would not only make the cream very thin, but would raise the temperature to such an extent that the cream would reach the factory in poor condition. When the empty shipping can returns, remove the cover and invert can in pure air and sunlight until it is again wanted for the next shipment. Before can is used again, rinse with fresh cold water to remove any dust that may have lodged on the inside. A stiff brush, washing powder and hot water should be used for washing all dairy utensils, as undesirable flavors in butter are often traced to wash cloths and greasy soap. Milk pails, strainers and separators should be washed each time they are used and rinsed with fresh cold water before they are again used. Keep in the sun as much as is possible when not in use.

"Keep your separator in a sweet, clean place where you would not be ashamed to have your neighbors or friends find any of your cooking utensils or where you would be willing to have your bread made.

"Skim a rich cream; cream that tests 35 or 40 per cent. is preferable. Rich cream is of much better keeping quality than thin cream, as it is the milk which sours and goes off flavor first. There will be more skim milk left at home on the farm for feeding purposes and transportation charges will be reduced. We can handle thick cream with less help and less expense, which will enable us to pay you a higher price. Thick cream is better for all parties concerned."

In conclusion, the creamery managers say that what they are able to pay for butter-fat depends entirely upon the amount they receive for butter, and the only way to insure the quality of the butter is to improve the quality of the cream. We regard this as one of the most valuable articles ever appearing in The National Farmer and Stock Grower. It is worth keeping.

Farmers' Bulletin No. 87, issued by the College of Agriculture, Columbia, Mo., gives results of cooperative variety tests of corn, also the tests at the college. To derive the fullest benefit therefrom the way to do is to write for a copy.

Simpson-Eddystone

Black and White Prints

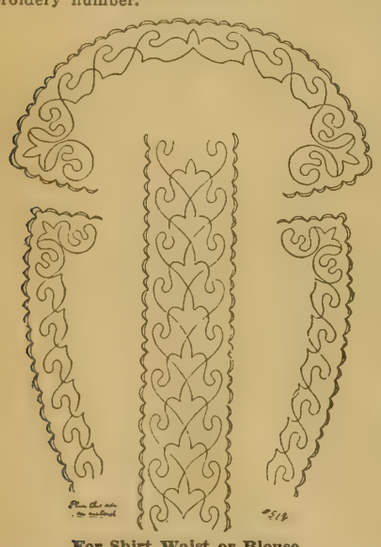
have been the recognized standard calicoes since 1842. The way to realize what stylish dresses can be made of these pretty cotton dress-goods, is to put them to the test. They are made in numerous artistic designs, printed with a tub-proof black on fine quality, well-woven, durable cloth.

Show this advertisement to your dealer when you order, and don't accept substitutes. If not in your dealer's stock write us his name and address. We'll help him supply you.

The Eddystone Mfg. Co., Philadelphia
Established by Wm. Simpson, Sr.

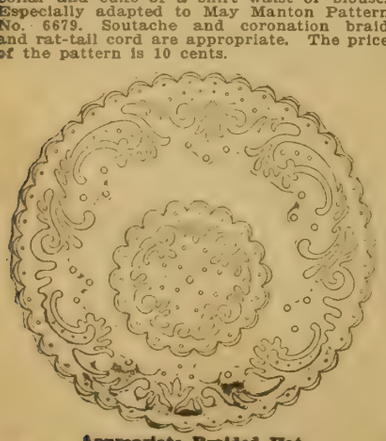
MAY MANTON EMBROIDERY.

These paper patterns require only a hot iron to insure a perfect transfer on cloth. The way to do it is to lay the material to be stamped on a padded ironing board or table, place the pattern over it with the printed side down and press over the entire surface of the paper with a hot iron, when a perfect outline will result. Please order by embroidery number.



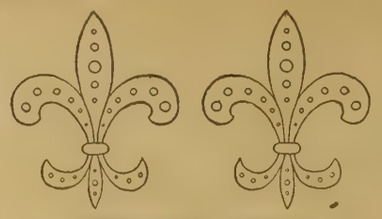
For Shirt Waist or Blouse.

No. 519.—Design for braiding the front, collar and cuffs of a shirt waist or blouse. Especially adapted to May Manton Pattern No. 6679. Soutache and coronation braid and rat-tail cord are appropriate. The price of the pattern is 10 cents.



Appropriate Braided Hat.

No. 520.—Design for a braided hat with scalloped edges. Brim and crown are given. Soutache and coronation braid and rat-tail cord are appropriate. The price of the pattern is 10 cents.



Attractive Panel Designs.

No. 516.—A Fleur de Lis design for the panels of a parasol or skirt or for any decorative object. The figures and dots can be worked in solid embroidery, or the dots can be embroidered and the figures outlined or braided with soutache, rat-tail cord or tubing. The price of the pattern is 10 cents.

For Sleeves and Waist.

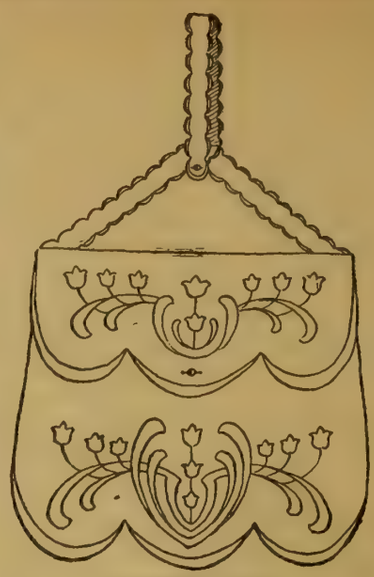
No. 530.—Design for embroidering the front and sleeves of a round-neck waist or overblouse. The price of the pattern is 10 cents.

Design For Braided Panels.

No. 527.—One panel twenty-three and a half inches deep and two panels eight and a half inches deep are given. Nine yards of braid will be required for the long panel and two yards for each shorter panel.
The price of the pattern is 10 cents.

Braided Band or Border.

No. 526.—Design for a braided band or border two inches wide. Three yards are given and eight and three-quarter yards of braid will be required for each yard. The price of the pattern is 10 cents.



Embroidered Pocket.

No. 529.—Elegant design for an embroidered pocket to be attached to the belt. The price of the pattern is 10 cents.

Wild Rose Sprays.

No. 548.—These sprays are very attractive when worked and can be used to ornament a variety of fabrics. The price of the pattern is 10 cents.

Please send all orders for these embroidery patterns to the **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Girls Who Talk and Sew.

One of the most graceful arts that a girl can acquire is to learn to converse and keep her fingers busy at the same time. There are girls who can talk well and girls who do needlework well, but they rarely combine the two acomplishments skillfully.

One of the secrets of the art is to avoid doing in public any piece of work which requires close attention. Be clever at accomplishing a good deal by always having on hand certain kinds of work, or work at certain stages, which admits of its being done more or less automatically, and let this occupy your fingers, which will busily do a lot for you, while you make yourself agreeable conversationally to one or more companions.

Remember that courtesy requires you to give the person to whom you are talking, or who is talking to you, your first interest and attention and that your work must be the secondary consideration. If you reverse the order you will be thought very stupid, will be avoided as an uninteresting young person, and had much better confine your work to hours especially set apart for it.

The first bale of new-crop cotton was received at St. Louis, August 29th, by express. The cotton was raised in the vicinity of Wetumpka, Okla.

Household Helps.

Children are more observing sometimes than adults, and the bits of household wisdom which they pick up here and there are worth listening to. Here is what one learned on a visit to a relative:

Sugar hastens the rising of bread and salt retards it. Consequently it is better to put the sugar in when you first set the sponge, but leave the salt out until nearly the last thing.

Instead of making the ordinary-sized bread pan full, divide the dough into two parts and place the small loaves side by side across the tin. They will finally run more or less together, yet will be lighter because of the division.

Cover the top of the loaf with milk before putting it in the oven, if you would have it brown nicely; cover with a coating of butter if you wish it to be especially tender.

When sweeping linoleum, use sawdust moistened with kerosene as an absorbent of dust. It will also clean and brighten the linoleum.

Sprinkle clothes with hot instead of cold water, and they will be more quickly of a uniform dampness.

Apple juice added to any fruit will cause it to jell more readily.

Corn and potatoes may be cooked in quantity in the roaster. They will be even more delicious than when boiled in the ordinary way.

In preparing sweet corn for the table, try turning back the husks and removing the silks, then replace the inner husks, examining to see that they are free from insects. Boil, and the flavor of the kernel will have an added richness.

If a granite kettle gets scorched, try heating some ashes and water in it. The food will usually be removed without scraping, a process which is always detrimental to the kettle.—Bessie L. Putnam.

A Fruit and Garden Paper.

Inquiries for a first-class publication devoted to fruit growing and gardening are answered by our adopting **The National Fruit Grower and Gardener** as a companion paper to The National Farmer and Stock Grower. The combination is a good one. We will send both papers one year for fifty cents. This is offering one as a subscription premium to the other. Don't fail to include **The National Fruit Grower.** It is very interesting, instructive and highly illustrated, partly in colors. Address, **Hale Publishing Co., 3550 Ave., St. Louis, Mo.**

To Launder Lace.

Only a delicate and experienced hand can successfully launder lace for it is one of the most troublesome and difficult things to wash and iron.

Never starch lace.

Wash it in tepid suds and rinse thoroughly in several clear waters. The last rinsing water which is used should be quite cold.

Never squeeze or wring lace dry but pat it out between the hands and then stretch out on some smooth surface, such as marble, glass or a mirror.

Iron it on the wrong side after placing a thin sheet of paper over it on a heavy flannel pad.

Press the lace heavily on the raised or heavy portion of the pattern, and work the small end of the iron into the various scrolls and designs.

Finish by running the iron lightly over the right side of the lace with a thickness of paper laid between the iron and the lace.—Exchange.

MAY MANTON PATTERNS.

Very Elegant Pattern Service, With Full Instructions For Ordering and Making.

This is the very best pattern service, and we are very much pleased to obtain it for our friends and patrons. Each pattern is new and original.

Fancy Yoke Blouse.

No. 6719.—The blouse that is made with a prettily-shaped yoke is always an attractive one. Here is a model treated in that way, but which can be tucked to the neck and shoulder edges, with the yoke omitted, if better liked; it can be made with the three-quarter sleeves illustrated, or with long ones, and it consequently is adapted to almost all waisting materials, both those of the odd blouse and those of the gown. The sleeves are tucked in an exceptionally pretty manner and sewed into the armholes, after which the yoke is applied over the waist. If a transparent effect is wanted, the material beneath can be cut away. The three-quarter sleeves are finished with pretty rolled-over cuffs that match the yoke, but the long ones are joined to deep-fitted cuffs of a plainer sort.

The blouse is made with front and backs. The sleeves are cut in one piece each, and the cuffs finish their lower edges. The yoke is without seams and the neck edge can be finished with or without the stock collar.

The quantity of material required for the medium size is 3¼ yards 24 or 27, 2¼ yards 36, or 2⅛ yards 44 inches wide, with 5½ yards of edging, 4 yards of insertion.

The Pattern 6719 is cut in sizes for a 34, 36, 38, 40 and 42-inch bust measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Boy's Suit.

No. 6703.—There is no suit that is better adapted to the small boy than this one made in blouse style with the big becoming sailor collar. It will be found appropriate for linen and for galatea, for madras and similar materials, and it also is well adapted to the suit of cooler weather made from serge, shepherd's check and similar materials. For dressy occasions the same model will be pretty made from silk, and ribbed silk is much liked, white for really formal occasions, dark color for those of more frequent occurrence.

The suit is made with blouse and knickerbockers. The blouse consists of front and back portions, the front being tucked to give the effect of a wide box plait, while the sailor collar is arranged over the shoulders. There is a standing collar at the neck edge. The sleeves are in one piece each, tucked at the wrists. The knickerbockers are made in regulation style, drawn up by means of elastic inserted in hems at the lower edges.

The quantity of material required for the medium size (four years) is 3⅞ yards of material 24 or 27, 3⅝ yards 32, or 2¼ yards 44 inches wide, with 4¼ yards of braid.

The Pattern 6703 is cut in sizes for boys of two, four and six years of age, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Girl's Box-plaited Dress.

No. 6716.—The dress that is laid in box plaits for its entire length is always a becoming one to the younger girls. This one is held at the waist line by means of a belt and can be made with the long sleeves illustrated or with short ones. It is closed at the front and finished with a Dutch collar showing square ends, but this collar can be cut on a rounded outline, or the neck can be finished with a standing collar, if preferred. When made in this way the dress has the practical advantage of being easily slipped on and off without assistance, but the back closings are preferred by many mothers, and the dress can be finished in this way, if liked, with the neck either high with a standing collar or in Dutch style, as indicated in the small back view. All materials that are used for little girls' dresses are appropriate, for this model will be found a good one for the wool materials of the cool days as well as for the washable ones. As illustrated, however, it is made of pale blue linen and the edges are simply stitched.

The dress is made with front and back portions laid in plaits. The sleeves are cut in one piece each and the long ones are gathered into bands, while the short ones are left free. When the neck is made high it can be finished either with a Dutch collar or standing collar. When it is made half low it is finished with a narrow yoke.

The quantity of material required for the medium size (eight years) is 6 yards 24 or 27, 3 yards 36 or 44 inches wide.

The Pattern 6716 is cut in sizes for girls of six, eight and ten years of age, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Empire House Gown.

No. 6706.—Empire house gowns are always graceful and always attractive. This one is absolutely simple yet it gives exceptionally desirable lines. The sleeves and the side portions of the body are cut in one in conformity with the latest style, and the trimming is arranged to exceptional advantage. All the pretty materials that are adapted to house gowns are appropriate. Figured foulard makes the one illustrated, and the trimming is banding, but gowns of this sort are made from India silk, from challis, from light-weight albatross and the like, and also from the beautiful muslins, lawns and batistes of mid-summer wear. Embroidered muslin with bands of either embroidery or lace would be exceedingly dainty. Flowered organdie would make a most attractive summer gown, and there are almost innumerable suggestions that might be made.

The gown consists of a short body lining or deep yoke, the front and back portions, the sleeves and tucked piece at the center back. These are all joined on indicated lines and arranged over the lining, which serves to support them perfectly and to keep the various parts in place. The closing is made invisibly at the left of the front. When high neck is desired a yoke can be added.

The quantity of material required for the medium size is 9 yards 24 or 27, 7 yards 32, or 4¾ yards 44 inches wide, with 3½ yards of banding.

The Pattern 6706 is cut in sizes for a 34, 36, 38, 40 and 42-inch bust measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Please be sure to give the size of pattern ordered and write your own name and address plainly that no mistake can be made to cause delay.

Kindly address all pattern orders to **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis. Mo.**

The School Clothes.

Never was it easier to evolve dainty frocks for little girls than now. The bits of embroidery which are picked up on the remnant counter have a place, portions of discarded waists and handkerchiefs supply charming figures in needlework for guimpes, and if one has the time and taste the crochet hook and tatting shuttle will quickly transform the bare thread into the most exquisite designs.

Gingham was never more popular than now, and certainly for everyday wear nothing gives better satisfaction. The plain colors trimmed with bias bands piped with a contrasting color are especially in favor. Those who can wear blue are exceedingly fortunate, for there are so many shades which combine with it. The linens in natural color are beautiful, but if one wants a cheaper material, and one which will wear even better, there are plenty of cotton goods in the natural linen color and finish. These with a piping of blue and a bit of blue embroidery are simply charming.

The white sailor blouses with collar and cuffs of blue are convenient for wearing with the skirt which has passed its duty as best, or one of your own discarded skirts may be cut over for the little one, redyed, if necessary, and no one will be the wiser. The miss who has one good school skirt with plenty of neat waists can always appear well dressed.

FREE TO YOU—MY SISTER

Free to You and Every Sister Suffering from Woman's Ailments.

I am a woman.
I know woman's sufferings.
I have found the cure.

I will mail, free of any charge, my home treatment with full instructions to any sufferer from woman's ailments. I want to tell all women about this cure—you, my reader, for yourself, your daughter, your mother, or your sister. I want to tell you how to cure yourselves at home without the help of a doctor. Men cannot understand women's sufferings. What we women know from experience, we know better than any doctor. I know that my home treatment is safe and sure cure for Leucorrhoea or Whitish discharges, Ulceration, Displacement or Falling of the Womb, Profuse, Scanty or Painful Periods, Uterine or Ovarian Tumors, or Growths; also pains in head, back and bowels, bearing down feelings, nervousness, creeping feeling up the spine, melancholy, desire to cry, hot flashes, weariness, kidney, and bladder troubles where caused by weaknesses peculiar to our sex.

I want to send you a complete ten day's treatment entirely free to prove to you that you can cure yourself at home, easily, quickly and surely. Remember, that, it will cost you nothing to give the treatment a complete trial; and if you wish to continue, it will cost you only about 12 cents a week or less than two cents a day. It will not interfere with your work or occupation. Just send me your name and address, tell me how you suffer if you wish, and I will send you the treatment for your case, entirely free, in plain wrapper, by return mail. I will also send you free of cost, my book—"WOMAN'S OWN MEDICAL ADVISER" with explanatory illustrations showing why women suffer, and how they can easily cure themselves at home. Every woman should have it, and learn to think for herself. Then when the doctor says—"You must have an operation," you can decide for yourself. Thousands of women have cured themselves with my home remedy. It cures all old or young. To Mothers of Daughters, I will explain a simple home treatment which speedily and effectually cures Leucorrhoea, Green Sickness and Painful or Irregular Menstruation in young Ladies, Plumpness and health always results from its use.

Wherever you live, I can refer you to ladies of your own locality who know and will gladly tell any sufferer that this Home Treatment really cures all women's diseases, and makes women well, strong, plump and robust. Just send me your address, and the free ten day's treatment is yours, also the book. Write to-day, as you may not see this offer again. Address

MRS. M. SUMMERS, Box H - - Notre Dame, Ind., U. S. A.

If colored material is used for trimming a white waist, always give blue the preference. It is a permanent color; then if the color does come out, as it usually will slightly in even the best of goods, it simply gives the white part a clearer color; but if it is red instead, the pinkish hue assumed by the waist is not pleasing. We blue clothes to make them look white; but any other color fails to impart the desired fresh appearance.

One-piece suits are in some respects decidedly convenient. They are so readily donned and there is no fear that waist and skirt will during the romps of the day tend to part company. They are cooler, too, in hot weather.

Strive for variety in planning the school dresses. Children tire not only of the same dress, but of the same pattern. When buying a pattern, strive to select one which will not only be becoming to the one for whom it was purchased, but will admit of several changes. Thus one economizing woman used a round-neck waist pattern open at one side first, as originally planned. Then a dress was fashioned by it with Princesse front, the side front being made narrower and a corresponding pleat being laid on the other side; while still a third suit was made open in the back, yet cut from the same pattern.

Select material which is alike on both sides and has no "up and down," if you would save cloth. It cuts to much better advantage. Two remnants may combine daintily into a complete suit, or, by adding a yard or two for trimming, an old dress may be remodeled into the present styles.

If time is a scarce article, watch the bargain counters. Ready-made school dresses are a boon to the busy woman, and at the close of the season they may frequently be purchased for little more than the cost of the bare material.

If you wish to dye the material of remodeled goods, carefully consult the color guide. Some colors cannot be satisfactorily obtained over certain others, and the manufacturer's directions should be implicitly followed. It rarely pays to color cotton goods, as the colors are not strictly permanent in sunshine. Ribbons may be transformed into good school ribbons with a few minutes' work, and what child does not like to appear in a ribbon of different color occasionally?—Bessie L. Putnam.

At the West Texas Fair, held recently at Kerrville, Edwin Houston took first prize on his exhibit of Berkshire swine, one hog weighing 550 pounds at twenty-two months old.

Paris does not eat much foreign meat; in fact, Paris is not a meat-eating town except for chicken.

Cows that do not have regular access to salt are not generally profitable.

The Universal Book of Original and Selected Poetry.

This book consists of One Hundred Pages, containing three hundred and ninety beautiful, interesting, pathetic, descriptive, humorous and delightful poems. These poems have been selected from the very best of the ancient and modern authors and the occasional pieces which have attracted favorable attention. It is a book to be kept by the bedside to compose one to sleep, a book to carry in the satchel or to read on the train and street car. It is a book for all people at all times. This is our own publication. It is not sold by anyone else. We issued the Universal Poetry Book for the purpose of using it as a subscription premium in connection with our own new successful paper, the Universal Magazine. The Universal Magazine is a nice, bright, cheerful, illustrated monthly magazine of thirty-two pages, three columns to the page, containing home reading, stories, patterns, fashions—a splendid publication. Anyone who will send us 25 cents to pay for one-year's subscription to the Universal Magazine can select one copy of the Universal Poetry Book as a free premium and we will send it prepaid. Address, THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

Grass Seeds at St. Louis.

Grass seeds are sold at the price stated per 100 pounds. Offerings scant, hence no sales upon which to base values. Timothy had bids all the way from $7.25 up to $7.75, and real nice seed would probably bring $8.00, if obtainable. Redtop sympathetically high and firm, and dealers anxious for it—fancy would probably bring $12—or perhaps more if offered. Clover scarce and nominally firm at $5.00 for poor to $12 and $13.50 for good—only small lots of old offering. Anyone wishing to get up-to-date grass-seed quotations should write A. J. Child & Sons, Commission Salesmen, 311 North Main street, St. Louis, Mo.

Town Fever.

On a recent visit to a farming section in which I had not been for a number of years, a marked change throughout the country struck me. Instead of the pretty, thrifty farm houses with which I had been familiar, there were either large, beautifully-equipped houses, built mostly after the style of city dwellings, or if there was an occasional farm house of former years, it had in most cases become neglected and had a general run-down appearance.

"What bad fairy had been at work here?" I asked in dismay.

My host laughed. "I knew you wouldn't like it," he answered Then went on: "You see when you stayed out here every farm in this neighborhood was lived in by its owner, and there wasn't a prettier bit of farming country in the United States. But Chicago folks took it into their heads that there was some style in farming and there begun the mischief for us. They'd come out and offer big prices, and if the first price didn't get it, they'd offer more. To most of the farmers it seemed a big figure, and when they got mostly cash down, they felt so rich that they retired from business and are down town now, most likely, helping to wear out the store benches. That accounts for the big houses. They belong to city folks who live here during the summer and keep hired help on the place the year 'round. The next thing you want to know is why some of the old places that are left are so shiftless looking. Their location not appealing to city buyers, they were continually passed by, and when the owners didn't get an offer, they just rented and followed their neighbors to town, for they had the town fever so bad they couldn't live any longer in the country. Most of these rented farms have changed hands every year or two, and so you see they get like this," nodding to one we were at that moment passing. In answer to my question concerning himself, he replied: "Oh, yes, I've had some of the best offers. You see the hills and valleys in my place are exactly what the city folks are looking for. But I've got a bit of an eye for beauty myself, and, besides, we've put our best into that farm for thirty years. Think I'd turn it over to anyone else now? It'd be helping to drive the nails in my own coffin. I'd be like all of my old neighbors—I couldn't rent a farm and I wouldn't go and buy another. I'd be eating my own head off from idleness.

"A couple of the fellows that have rented their farms are coming back to the country next year. They can't stand it any longer. There's Dick Prentiss owned as nice a farm as the most particular could want. He got a price that staggered him. He bought a house in town and put the surplus money away. Then he wanted to buy another farm. But his wife would have no farm at all unless it was the old one. So in sheer desperation he takes odd jobs by the day now—him that always did the ordering instead of being ordered. And Hank Miller has taken to working in the flour mill and kicking himself every day because he is doing such work when he might have been master of the best dairy farm about here. They're not working for money. They're working to keep from rusting. The others that haven't got even that much sense are twirling their thumbs and envying the farmers that drive into town. I tell you it was a violent epidemic of town fever they had around here, and I don't envy the ones that succumbed."—Janet Thomas Van Osdel.

Arabella Was True.

"Now, I wonder," thought Alphonso, "what Arabella is doing at this precise moment?"

(Arabella and Alphonso were married last May, and Alphonso, being a commercial traveler, was far from home.)

"I wonder," he repeated, "what she is doing?"

Then a brilliant idea struck him, and he visited the nearest spiritualist medium.

"What," said Alphonso, for the third time, "is Arabella doing?"

"She is looking out of the window," replied the medium, "evidently expecting somebody."

"That is strange?" said Alphonso. "Whom can she expect?"

"Ah!" continued the medium, "someone enters the house, and she caresses him fondly."

"It can't be!" cried the excited husband. "My wife is true to me."

"Now she lays his head on her lap and looks tenderly into her eyes."

"Villain!" roared the jealous husband.

"Now she kisses him."

"It's false!" yelled Alphonso. "I'll make you pay dearly for this!"

The medium saw that he had gone far enough.

"Now," he said, "he wags his tail."—Tid Bits.

What Napoleon Couldn't Do.

An incident connected with Napoleon when he was in exile at Elba is commemorated on the island to this day by an inscription affixed to the wall of a peasant's house.

A man named Giaconi was plowing, when the famous exile came along one day and expressed an interest in his work. Napoleon even took the plow handles and attempted to guide it himself; but the oxen refused to obey him and spoiled the furrow.

The inscription runs thus:

"Napolen the Great, passing by this place in MDCCCXIV, took in the neighboring field a plow from the hands of a peasant and himself tried to plow; but the oxen, rebellious to those hands which yet had guided Europe, headlong fled from the furrow."—Exchange.

Valuable Lands Cheap.

The Cotton Belt Route is advertising lands in Eastern Texas. These are not railroad lands, but the up-to-date, liberal management of the railroad company has helped to develop this country, and the result is happy and prosperous families in homes which cost but very little, and yet are producing good incomes. The railroad revenues are increased by the success of the farmers and will therefore be happy to send anyone a booklet entitled "Profitable Products in East Texas." Write for it to E. W. LaBaume, 1102 Pierce Building, St. Louis, Mo.

Haussmann & Dunn Company, Chicago, Ill., place their announcement in our advertising columns to supply our readers veterinary instruments which apply to the requirements of horses, cattle, hogs and other live stock. The merit of their instruments is attested by high-class awards at leading Expositions of the world. In writing this advertiser, please mention the publication in which you read the advertisement.

To Buy Groceries Right.

On page 5 will be found an advertisement of Montgomery Ward & Co., relating to their pure-food grocery catalogue. This firm is well and favorably known as a strictly reliable house, and hundreds of thousands of farmers will testify to this from having bought of them for many years. To get this catalogue, all you have to do is to write a postal card, saying: "Please send us your grocery catalogue as advertised in The National Farmer and Stock Grower." Address, Montgomery Ward & Co., Chicago Avenue Bridge, Chicago, Ill., or to Montgomery Ward & Co., Nineteenth and Campbell streets, Kansas City, Mo. The service is equally as good from either establishment.

Instruction in Painting.

Sherwin-Williams paints are sold all over the United States, but a short cut to the house is to write to Sherwin-Williams Company, 689 Canal Road, Cleveland, Ohio, and get a copy of the instruction book entitled "How to Paint Everything on the Farm." Don't hesitate to write for the book It applies to house painting, inside and out; includes color designs and colors to use. It also instructs in painting barns and outbuildings and the implements. A choice of colors and the best paints for all purposes are fully described.

For house-building or house-furnishing materials write for Catalogue 990 to the Chicago House Wrecking Company, Thirty-fifth and Iron streets, Chicago, Ill.

There is ways on a farm an abundance of ds and ends which will go to waste less care is taken. A quart of oice fruit one day and several an- ner—the fruit closet will soon be ed and the saving next winter ge.

When canning peaches and other uit in quantity, considerable juice bound to accumulate. Boil it wn to jelly, adding apple juice or me sour juice, as Damson plums, make it jell well.

Use only good cans. The Mason n, with a screw top, is preferred many. Others prefer the kind th glass cover and wire fastening. e latter is sometimes not strictly ht, but the defect can be easily medied by slipping a piece of ded paper under the wire which sses over the top of the cover fore adjusting the one at the side. has this decided advantage over e metal-top cover, there is no nger of corrosion. This renders especially nice for pickles and iced fruit.

Those who have grapes will find em delicious for pies or the pread" so much in demand for the nool lunch, if the pulp is first re- oved from the skin. Cook the pulp d pass through a colander to move the seeds, then add the skins d boil down with sugar until of the sired consistency.

Some prefer to can the grapes ole. Detach them from the stem, sh, and place in cans. Set the ns in a boiler of water, placing icks and cloths in the bottom to event breakage. It is better also wrap each can in a cloth, so that ey will not touch in boiling. Cover e grapes with a syrup, allowing a acupful of sugar to each quart of uit. Place the covers on the cans, t do not fasten them. Boil half hour and then seal. Grapes pre- red in this way retain the peculiar vor of fresh grapes.

If can rubbers are carefully shed and dried they can usually used with safety a second time for ything but tomatoes, which must ve new rubbers to insure safety.

Many prefer to use tin cans for matoes instead of glass, rarely, if er, losing a can. But when tin is ed, it must be a rule firmly ad- ered to, that the contents of the n should be removed as soon as it opened. Exposure to the air will duce corrosion at once, and that eans poisoning. Be sure that the ns are of good tin and the fruit ken out as soon as the can is pened.

Unless you have a dark closet, rap each glass can in brown paper keep it in darkness.

If the closet shelves are deep, it sometimes difficult to know just w much fruit of a certain kind you ve at all times. An ingenious ttle girl counted the number of arts of each kind of fruit, num- red and labeled the contents of ch shelf. And now when a can is moved she requires it to be cked off in the proper place. us at any time she can tell just w much of every fruit is still left.

Some advocate standing the cans an inverted position over night to t as to whether they are air tight. has sometimes seemed that this t was not only unnecessary, but so nnous that it started the seal, ich was originally air tight. In few minutes one should be able to l if the sealing is imperfect, and strain during that time will do no harm to the properly-sealed can.

If the cover of a Mason can puffs out in the center, you may be sure that it needs opening. A cover which has once done this can never be used again. Better get a new cover than risk a can of fruit in a defective receptacle.—Bessie L. Putnam.

A Girl's Influence on a Farm.

The girl had a father who found reading so difficult a task that he did little of it, while her mother, who loved reading, had even less time for it than the average farm woman. When illness compelled the girl to give up teaching, she devoted herself, heart and soul, to the work upon the farm. And she was needed there more than anyone realized. The farm journal that had been coming to the house for years and thrown away after the jokes were read, was carefully read by the girl, and it opened a new world to her. Her father never attended Teachers' Institutes or in any way gained new information along farming lines, unless he happened to glean something from a chance conversation with a neighbor. He had complained that the apple trees would have to come out, as he had had a poor crop for several years in succession. In the journal the girl found a probable reason and remedy. With her brother's help she dug up the ground around the trees and added fertilizer. Then following the directions her paper gave, she prepared a spray and gave the trees the first spraying they ever had. But it was not the last, for the trees bore that year, and the father was a convert, so that spraying now has its regular place in the farm work.

Then the girl decided that they could raise something in the fruit line besides apples. Even apples may become monotonous. But the family's verdict was that since they had done with only apples for twenty years there was no need of any addition to the orchard. The girl said nothing, but when she heard that a neighbor was looking for help with the house cleaning, she offered her services and received five dollars in payment. Then she got her nursery catalogue and sent to the nursery an order for four grapevines, two peach trees, two plum trees, two pear trees, two new apple trees, several red raspberry vines and fifty strawberry plants. When these were set out and had started to grow, the father became so interested in them that he refunded the girl her five dollars and she straightway invested it in more strawberry plants and some currant bushes. She made a specialty of her berry raising, and besides eating all they could every meal of the day during berry season and canning enough for winter use, she made a pretty penny from the sale of her fruit the first year the berries bore.

Cabbage, beans, beets, carrots, peas and potatoes were raised on the farm, but the girl saw no reason why they could not also have some of the less common vegetables, and so she raised oyster plant, egg plant, kohlrabi, cauliflower, head lettuce and celery. She also started an asparagus bed. When in doubt about the culture of anything new, she wrote to the farm journal and asked them about it, and you may be sure the journal gladly published an article along the line on which she was seeking information.

Then the poultry received her attention. The hens had been yielding enough eggs for the table and a surplus to be traded off for groceries. The mother became interested with the girl and they extended the poultry interests so that it was necessary to seek a new market for the eggs. The girl found it in a couple of hotels and several town families, who paid a high cash price for the large fresh eggs, buying them in most instances by the case. From spring up to June 1 of this year they have cleared one hundred dollars on eggs alone.

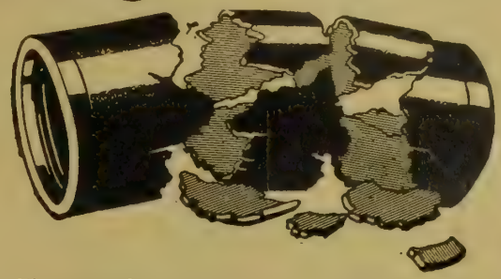
The girl has been doing just what any other intelligent girl with a little grit and energy can do. She knew things did not happen; that for every result could be found a cause. When there was a failure along any line, she looked for the cause until she found it and then applied the remedy. She knew if others raised fancy vegetables and made large sums of money from fruit and poultry, that she could do the same under right conditions. When conditions were not right, she strove to make them so. She reads and asks questions and puts into practical use whatever information she gains. Her life is one of the fullest, happiest, most useful lives of any woman I know.—Janet Thomas Van Osdel.

The Mile Trotting Record.

At Cleveland, Ohio, August 12th, driven by Charles Tanner, Mr. C. K. G. Billings' black gelding Uhlan established a new world's record by trotting a mile at North Randall track without a windshield in 1:58¾, beating Lou Dillon's without a windshield record by two and a quarter seconds and coming within a quarter of a second of equaling the record made by her with a windshield October 24, 1905, when she trotted a mile at Memphis in 1:58½. Uhlan's mile is considered the best yet made by a trotter to the sulky. Uhlan also went in 2:01 to a wagon.

At the Apple Growers' Congress, Edwin H. Riehl, of North Alton, exhibited a box of strawberries. The strawberries did not last long, because the apple growers like good strawberries, especially when strawberries are scarce and high.

Crash!!—another wax record gone to smash!



If you own a Phonograph or Graphophone (Edison or Columbia) never buy another wax record for it. Get one Indestructible Record from your dealer.

Or let us mail one to you;—35 cents (for the 2-minute) or 50 cents (for the 4-minute), postage free, and a catalog with it. Give it the hardest possible test. Lend it to the youngsters. Toss it on the table. Drop it on the floor. Kick it across the room. Leave it in the sun. Then play it and hear a finer, clearer, purer, stronger reproduction—better music in every way—than your machine ever gave out before. Play it every day for ten years and you will still have it, good as new. Almost too good to be true? Try it! Prove it! Send for one!

Six Good Records!

Here are six splendid records, selected from the big 40-page Indestructible Record Catalogue. We will mail them to you—postage free—if you mention this magazine.

We make this limited special offer so you can hear Columbia Indestructible Records on your own machine in your own home at your leisure. We know you will never buy another wearable, breakable wax record if you will play just one Indestructible Record on your own machine.

2 Minute—35 Cents

1348 Two Little Brown Eyes (Tenor Solo)
1351 Tell Mother I'll Be There (Sacred Mixed Quartette)
1330 By the Light of the Silvery Moon (Soprano Solo)

4 Minute—50 Cents

3032 Summer Reminds Me Of You (Tenor Solo)
3060 Sextette from "Lucia" (Band Selection)
3062 Come Where My Love Lies Dreaming (Mixed Quartette.)

Send for big 40-page catalogue listing all Columbia Indestructible Records—free.

Dealers Wanted—Exclusive selling rights given where we are not properly represented.

Columbia Phonograph Co., Box 251, Tribune Bldg., New York City.

Ladies' Handkerchiefs

Irish linen finish, hem-stitched, lace corner. Six in a box, quality guaranteed. Send us fifty cents and we will send you the nice, elegant, interesting monthly Universal Magazine for two years, and we will also send you by mail, postpaid, the box of handkerchiefs as described. The Universal Magazine is a nice, clean, thirty-two-page publication, three columns to the page, full of interesting stories, home reading, poetry, etc. Send us money order or new one-cent stamps. Address, HALE PUBLISHING CO., 3500 Vista Ave., St. Louis, Mo.

MAY MANTON PATTERNS.

Very Elegant Pattern Service, With Full Instructions For Ordering and Making.

This is the very best pattern service, and we are very much pleased to obtain it for our friends and patrons. Each pattern is new and original.

Outing Blouse.

No. 6712.—The outing blouse made with soft rolled-over collar and cuffs is the newest and latest. It is smart and becoming and it is comfortable. This one is made of white linen, and the collar and trimming are of striped blue and white, but such a blouse can be made from a variety of materials; galatea and madras are liked for hard usage, lawns and batistes are preferred by many women, and handkerchief lawn with figures of color is a favorite of the season. For collar, cuffs and trimming can be used any contrasting material or the same material braided or embroidered would be pretty, but striped linen on white is smart and makes a feature of the season. The sleeves can be made as illustrated or extended to the wrists and finished with straight cuffs, as preferred.

The quantity of material required for the medium size is 3½ yards 24 or 27, 3¼ yards 32 or 36, 1⅞ yards 44 inches wide, with ¾ yard 27 inches wide for trimming.

The Pattern 6712 is cut in sizes for a 34, 36, 38, 40 and 42-inch bust measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Kimono With Pointed Yoke.

No. 6720.—The kimono that is full below a smoothly-fitted yoke is one generally liked. It is graceful and becoming and it is easy to make. This one allows a choice of the short full sleeves or of long ones gathered into cuffs. In the illustration it is shown made of flowered oriental crepe with bands of India silk, but silks and plain crepes, crepe de Chine and challis, albatross and all materials of the sort are appropriate, while also lawns, batistes and the like are greatly in vogue. For the trimming can be used either contrasting material or ribbon.

The kimono is made with the yoke and the full portions that are gathered and joined to it. Both the short and long sleeves are cut in one piece each, but the long ones are gathered into bands. The trimming is applied over the neck, front and sleeve edges. If sacque length is preferred, the kimono can be cut on indicated lines.

The quantity of material required for the medium size is 9 yards 24 or 27, 7¾ yards 36, or 5 yards 44 inches wide, with 1⅞ yards of silk for trimming for the long kimono, 4¼ yards 24, 3½ yards 32, or 2½ yards 44 inches wide for the short kimono.

The Pattern 6720 is cut in three sizes—small, 32 or 34; medium, 36 or 38; large, 40 or 42 inches bust measure—and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Tucked-over Blouse.

No. 6711.—The overblouse with short sleeves that are cut in one with it is one of the prettiest garments of the season. This one can be utilized in a great many different ways, for it is equally well adapted to the gown made with skirt and blouse of one material and to the separate blouse to be worn with a coat suit and made from thin material in matching color, or from one of the favorite Persian silks, nets or chiffons. It is suited to all materials that are thin enough to be tucked, and it is exceptionally graceful and becoming, while meaning very little labor in the making. There is a peplum joined to the lower edge, consequently there is no bulk over the hips. In this instance China crepe is trimmed with oriental banding. Any guimpe that may be liked can be worn beneath.

The quantity of material required for the medium size is 2⅞ yards 24 or 27, 2 yards 36, or 1¾ yards 44 inches wide, with 1¼ yards of banding.

The Pattern 6711 is cut in sizes for a 34, 36, 38, 40 and 42-inch bust measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Costume For Misses.

No. 6701.—This costume is an exceptionally dainty and attractive one and includes all the latest features of the season. The skirt is drawn in at flounce depth but without exaggeration, and the waist gives the bib suggestion that is so well liked. The guimpe portions are cut in one with full draped sleeves. In this case the flounce and the bib are made of flouncing, the upper portion of the skirt and the guimpe are made from fine cotton chiffon, while the little undersleeves are of tucking, and there is trimming of banding around the neck edge and over the sleeves as well as on the skirt. Plain material could be used, however, with the edges trimmed to suit the fancy, or one material could be used for the skirt and the bib portions with another for the guimpe, and the pretty thin soft silks, such as foulard and the oriental sorts, are appropriate, as well as muslins. For a more dressy frock chiffon could be so made, and voile and marquisette are charming treated in such way with the guimpe only of contrasting material.

The costume consists of the waist portion and skirt. The waist portion is made with a short-fitted lining over which the guimpe portion with sleeves and the bib are arranged. There are undersleeves, which in this case are made of tucking, and which are sewed to the armholes of the lining. The upper portion of the skirt is five-gored and the flounce is straight. The closing is made invisibly at the back.

To make as illustrated for the sixteen-year size will be required 4¼ yards of material 24 or 27 inches wide, 3 yards 32, or 2⅝ yards 44 inches wide, with 4 yards of flouncing 18 inches wide, 6¾ yards of banding, and ½ yard of tucking. To make of plain material will be needed 6½ yards 24 or 27, 4¼ yards 32, or 3¾ yards 44 inches wide, with 1¼ yards 27 or 44 inches wide for the guimpe portions. For long sleeves will be needed 1¼ yards of tucking; for the yoke, ⅜ yard of all-over lace.

The Pattern 6701 is cut in sizes for girls of fourteen, sixteen and eighteen years of age, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Girl's Dress.

No. 6692.—The younger girls are wearing a great many dresses that show the favorite drawn-in effect of the skirts, and this one includes that novelty, while it is eminently graceful and attractive. The model is made of handkerchief lawn, and the bertha and trimming are of embroidery, while there is a little yoke of embroidered batiste; but if a lower neck is liked, this yoke can be omitted and the neck edge finished with a little frill of lace or in any other way to suit the fancy. All the pretty soft materials that shirr so successfully can be utilized, cotton chiffon, mercerized mull, sheer batistes and lawns are equally appropriate, while chiffon and marquisette can be used for dresses of the more elaborate sort. For the bertha, embroidery of lace or the material embroidered or trimmed with lace or banding would be found pretty.

The dress consists of the blouse and the skirt. The blouse is gathered at both upper and lower edges and is joined to the yoke. The skirt is straight, finished with hem and tucks, and is shirred at the upper edge and gathered on indicated lines, then drawn up to the required size and held by the band of trimming. The joining is made invisibly. The sleeves are in one piece each, shirred at their lower edges.

The quantity of material required for the medium size (ten years) is 5¼ yards 24 or 27, 4⅜ yards 32, or 3 yards 44 inches wide, with 1¾ yards of embroidery 5 inches wide for the bertha, ⅜ yard 18 inches wide for the yoke, 1¾ yards of banding.

The Pattern 6692 is cut in sizes for girls of eight, ten and twelve years of age, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Skirt With Pointed Tunic.

No. 6710.—The tunic that forms a point at the front and one at the back is one of the newest and prettiest. This one is arranged over a closely-fitted skirt that is finished with a straight flounce, consequently there is no bulk over the hips and the skirt gives just the long, slender, graceful lines that are essential to present fashions. This one is made of blue cotton voile that is woven with a border of blue and white dots, which makes the trimming, but every seasonable material is appropriate, for this skirt can be made from linen, from foulard, pongee or similar material, and it also can be made from lawn, batiste, marquisette and voile with equal success. For the heavier materials the skirt can be plaited; for the thinner and lighter it can be gathered. Bordered material can be used as illustrated, with the border cut off and applied over the tunic, or any banding can be made to take its place and applied over both tunic and flounce or over the tunic only with the flounce finished with a hem. Again, the skirt will be found an excellent one for two materials, for the flounce could be made of one material with the tunic of another and give an exceedingly smart result.

The quantity of material required for the medium size is 6 yards of bordered material 36 inches wide, or 7¼ yards of plain material 24 or 27, 6 yards 36, or 4¼ yards 44 inches wide, with 2 yards 24 or 27, 1 yard 36 or 44 inches wide for the gored upper portion, 1½ yards 24 inches wide for the bands.

The Pattern 6710 is cut in sizes for a 22, 24, 26, 28 and 30-inch waist measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Boy's Suit.

No. 6717.—The boy's suit that is made in Russian blouse style is a becoming and fashionable one. This model will be found appropriate for every material adapted to boy's wear. It can be made from linen, from chambray or from madras or similar material; it can be made from shepherd's check or from light-weight serge and from all fabrics of a similar sort, and it is just as appropriate for the silk that is fashionable for occasions of greater dress. White silk of the bengaline sort is pretty for very elaborate occasions, and dark browns and blues are liked for those of lesser importance.

The suit consists of blouse and knickerbockers. The blouse is made with fronts and back and finished with a round collar and is held by a belt. The sleeves are made in one piece each, tucked at the wrists. The knickerbockers are of the regulation sort and are finished with hems at their lower edges, in which elastic is inserted to regulate the fullness.

The quantity of material required for the medium size (four years) is 3¾ yards 24 or 27, 2⅝ yards 36, or 2 yards 44 inches wide.

The Pattern 6717 is cut in sizes for boys of two, four and six years of age, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Plain Blouse or Guimpe.

No. 6702.—The plain blouse or guimpe is always a serviceable and desirable one. It can be cut from fancy material, it can be utilized beneath one of the fashionable overblouses and as a waist with equal success, and this one can be made either high or low, with round or square neck, so that it suits almost all needs. Again, many women like to tuck the material first, then to cut from a plain pattern, and this model serves admirably for such treatment. The sleeves are the new ones of moderate fullness that are gathered into cuffs, and these cuffs can be made as illustrated or extended to the wrists, as preferred.

The blouse is made with front and backs. When it is extended below the waist line it can be gathered and stayed or finished with a casing, in which tapes are inserted to regulate the size. When the peplum is used the blouse is cut off and gathered at the lower edge and joined to the peplum. The sleeves are cut in one piece each and the cuffs are plaited.

The quantity of material required for the medium size is 3⅜ yards 18, 2¼ yards 24, 1⅞ yards 36, or 1¾ yards 44 inches wide. For the peplum will be required ⅝ yard 36 inches wide.

The Pattern 6702 is cut in sizes for a 34, 36, 38, 40, 42 and 44-inch bust measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Please be sure to give the size of pattern ordered and write your own name and address plainly that no mistake can be made to cause delay.

Kindly address al pattern orders to HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

Maine Moon Farmers.

From Portland, Maine, on August 29th, it was reported that there was a good prospect of more than 5,000 acres of well-ripened wheat being a total loss near Skamokawa because the farmers who own the land and crops will not touch the grain until the moon has changed.

The farmers are known throughout the Northwest as Moon farmers, and it is because of their superstitions that they are letting their magnificent crop of more than 100,000 bushels stand in the fields until the moon has changed.

It is one of their beliefs, adhered to as religiously as they must have cheese for breakfast, that if wheat is harvested when the new moon is turned down that the plump kernels of wheat will shrimp and be reduced in weight.

In order to store their grain with the least possible chance of its shrinking, they are sitting idly by and watching for the change in the moon. The close study of the sky map for the coming month shows that the next change will be nearly two weeks so that it will least affect the grain. By this time the wheat will be so ripe that when the header touches the stems of the straw the kernels of wheat will fall from the heads and be lost.

(Note.—This is very interesting and may be true or not. If there is a river town, village or postoffice in Maine, the map does not show it. Skamokawa is in Washington county, on the Columbia river, where they are more likely to get salmon than cheese for berakfast.—Ed.)

Two Bull's Eyes.

Senator La Follette was talking about two corporations that had been attacking one another in the press.

"They both scored," he said. "They made me think of two prisoners in Atlanta, one of whom had been convicted of stealing a watch the other of stealing a cow.

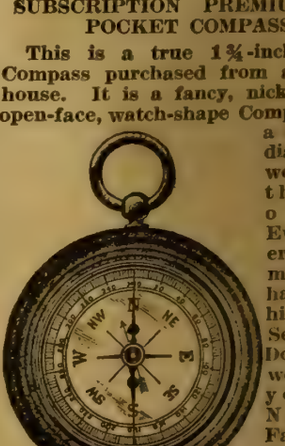
"These two prisoners hated each other, and as they passed one morning in the exercise yard the cow stealer said with a sneer:

" 'What time is it?'

" 'Milking time,' the watch stealer answered."

SUBSCRIPTION PREMIUM — A POCKET COMPASS.

This is a true 1¾-inch Pocket Compass purchased from a reliable house. It is a fancy, nickel-plated open-face, watch-shape Compass, with a silvered dial, and weighs less than one ounce. Every farmer or rancher should have one in his pocket. Send us One Dollar and we will send you The National Farmer and Stock Grower for one year, and we will also send you the Pocket Compass by mail postpaid. Address, THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.



THE MORTGAGE.

He bought in sixteen sixty-five a farm of stumps and stones,
His name was God Be Glorified, his other name was Jones;
He put a mortgage on the farm, and then in anxious pride,
"In twenty years I'll pay it up," said God Be Glorified.

The mortgage had a hungry maw that swallowed corn and wheat;
He toiled with patience night and day to let the monster eat;
He slowly worked himself to death, and on the calm hillside
They laid, beyond the monarch's reach, good God Be Glorified.

And the farm with its incumbrances of mortgage, stumps and stones,
It fell to young Melchizedek Paul Adoniram Jones;
Melchizedek was a likely youth, a holy, godly man,
And he vowed to raise that mortgage like a noble Puritan.

And he went forth every morning to the rugged mountainside,
And he dug, as dug before him, poor old God Be Glorified.
He raised pumpkins and potatoes down the monster's throat to pour;
He gulped them down and smacked his jaws and calmly asked for more.

He worked until his back was bent, until his hair was gray,
On a hillside through a snowdrift they dug his grave one day!
His first-born son, Eliphalet, had no time to weep and brood,
For the monster by his doorstep growled perpetual for food.

He fed him on his garden truck, he stuffed his ribs with hay,
And he fed him eggs and butter, but he would not go away;
And Eliphalet he staggered with the burden and then died,
And slept with old Melchizedek and God Be Glorified.

Then the farm it fell to Thomas, and from Thomas fell to John,
Then from John to Eleazur, but the mortgage still lived on;
Then it fell to Ralph and Peter, Eli, Absalom and Paul;
Down through all the generations, but the mortgage killed them all.

About a score of years ago the farm came down to Jim—
And Jim called in the mortgagee and gave the farm to him.
There's no human heart so empty that it has no ray of hope,
So Jim gave up the aged farm and went to making soap.

He grew a fifty-millionaire, a bloated, pampered nature,
He owned ten railroads, twenty mines and the whole State Legislature;
And thousands did his gruff commands and lived upon his bounty;
And he came home, bought back the farm, and the entire county.

—Sam Walter Foss.

A CHICKEN BOLD.

He was a fluffy yellow chick, not long out of the shell,
But oh! the wondrous deed he did you should have heard him tell.
When he was but a few days old, he wandered off afar
Beyond the coop, without once asking leave of his mamma.

In truth, a daring soul was he, for where a recent rain
Had left a pool he tumbled in—and tumbled out again,
And though a small log lay across and barred his way before,
He cried: "Oh, what a horrid hill!" and tried to scramble o'er.

Quoth he, when back: "I flew so far my head just fairly whirled;
I've climbed a mountain, sailed a sea and been most round the world."
Such news, be sure, quite startled his mamma and all her troupe,
But the traveler bold, that night, alas! was nursed for chicken-croup!

—Chicago News.

THE WASTREL.

Once, when I was little, as the summer dark was falling,
Among the purple upland fields I lost my barefoot way;
The road to home was hidden fast, and frightful shadows crawling
Along the sky line, swallowed up the last kind light of day;
And then I seemed to hear you
In the twilight, and be near you;
Seemed to hear your dear voice calling—
Through the meadows, calling, calling—
And I followed and I found you,
Flung my tired arms around you,
And rested, on the mother-breast, returned, tired out, from play.

Down the years that followed, though I trod strange paths unheeding,
Though I chased the jack-o'-lanthorns of so many maddened years,
Though I never looked behind me where the home-lights were receding,
Though I never looked enough ahead to see the inn of Fears;
Still I knew your heart was near me,
That your ear was strained to hear me,
That your love would need no pleading
To forgive me, but was pleading
Of itself that, in disaster,
I should run to you the faster,
And be sure that I was dearer for your sacrifice of tears.

Now on life's last summer time the long, last dusk is falling,
And I, who trod one way so long, can tread no other way,
Until at death's dim crossroads I watch, hesitant, the crawling
Night passages that maze me with the ultimate dismay.
Then, when Death and Doubt shall bind me—
Even then—I know you'll find me;
I shall hear you, Mother, calling—
Hear you calling—calling—calling;
I shall fight and follow—find you
Though the grave-clothes swathe and bind you,
And I know your love will answer:
"Here's my laddie home from play!"

—Reginald Wright Kauffman, in the Forum.

CARUSO ON THE FARM.

You wouldn't know the Desert Spring
These winter nights. It ain't the same
Ol' house o' mirth it was before
The phony-what-you-call-it came
The boys don't care for faro now,
Or poker, or for anything,
But jus' to set aroun' the horn
An' listen to Carusy sing.

"There ain't no doubt," says Pinto Pete,
"That this 'ere music has its charm
To subjigate the human breast
An' make an outfit stack its arms."
"The which is true," says Texas Jack,
"It's that puissant it appeals
To one until his cussedness
Jus' percolates through his heels."

There's one o' them selections where
Coyote says the girl is dead,
An' he is standin' by the grave,
His heart jus' like a chunk o' lead.
We can't quite savey what he says,
Our language bein' strange to his,
But you ought to see the outfit when
He tells them punchers how it is.

Jus' man to man with Alkali
A-settin' there agin the rim
O' that big horn, an' harrowin'
His bleedin' heart most out o' him;
The big tears rollin' down his cheeks,
An' human nature in the rough
Assertin' in a husky voice
He 'lows it must be awful tough.

An' Idaho, as had a some-
What similar bereavement once,
An' says to him he understan's
An' sad and melancholy grunts.
You wouldn't think as sympathy
Was in that hard an' seasoned crew,
But you ought to hear 'em when he says
He's got to blow his brains out, too.

Coyote says it is the tears
That's in his voice as makes it real,
Which may be true; at any rate,
It's wonderful to hear 'em squeal,
"Don't do it!" Alkali exclaims,
"Brace up, ol' man!" sob two or three,
An' Texas blubbers out about
There bein' others in the sea.

That's what has made the Desert Spring
Another place. The boys is tame,
It's nothin' like it was before
The phony-what-you-call-it came.
There ain't no shootin' now at all;
An' when some bad man comes along,
The boys jus' rope and hol' him while
Carusy tames him with a song.

—Clark McAdams, in Post-Disptach.

THE WEEDS OF WANDER LANE.

In Wander Lane the weeds grow tall,
And there I love to walk,
For somehow I do love them all
And love with them to talk.
They touch my hands as I go by;
They even touch my cheek;
Until on them I bend an eye
And with them stop and speak.

Down Wander Lane I often go,
And leave those flowers behind
That in my formal garden grow
And scent the squandering wind.
I love them all, but more I love
The weeds of Wander Lane,
That with their simple beauty prove
How queenly are the plain.

They rest the soul and rest the heart,
And strengthen both anew,
As one who, drinking long of art,
Doth yearn again for dew;
And, speeding back to brook and field,
In Nature's living might
Repowers himself, and finds unsealed
The fountain of delight.

In Wander Lane the weeds grow strong,
With no one's hand to rule;
They wear the dignity of song,
Untaught of any school;
Such dignity is theirs as bards
In Doric ages wore,
Content with sun and rain and shards,
And asking nothing more.

—C. G. Blanden, in Globe-Democrat.

SHE ONLY LOOKED.

She did not redden or deny
My entrance to her room;
She did not speak an angry word;
She did not fret or fume;
She did not frown upon poor me,
Her lover now as then;
She only looked at me the way
She looks at other men.

—Hindu Poem, translation by A. W. Ryder.

WOMEN'S EYES.

The world is full of women's eyes,
Defiant, filled with shy surprise,
Demure, a little overfree,
Or simply sparkling roguishly;
It seems a gorgeous lily-bed
Whichever way I turn my head.

—Hindu Poem, translation by A. W. Ryder.

Stock Up with Fresh Soda Crackers

Instead of getting a large package of ***loose*** soda crackers that soon grow stale—stock your pantry with small ***tight*** packages containing

Uneeda Biscuit

Fresh soda crackers every time you eat—the last as fresh as the first—because they are placed in moisture proof packages the moment they leave the oven.

NATIONAL BISCUIT COMPANY

He Could Stop It.

Physician—"Have you any aches or pains this morning?"

Patient—"Yes, Doctor; it hurts me to breathe; in fact, the only trouble now seems to be with my breath."

Physician—"All right. I'll give you something that will soon stop that."—Good Housekeeping.

The City and the Country.

"There's one thing about your suburbanites that I never could understand," said the city chap.

"What is that?" queried the commuter.

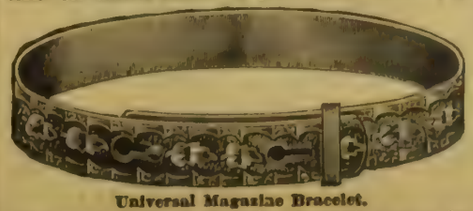
"I've noticed time and again," continued the city chap, "that when you fellows reach town in the morning, and again when you start for home in the evening, you have a happy look. Now, why is it?"

"Oh, that's easily explained," replied the other. "After the day's work in the city we are always glad to get out of it, and after a night in the country we are always glad to get back."—Chicago News.

The right way to start a flock of sheep is to buy a healthy lot of ewes when they can be bought cheap. They are selling cheap now.

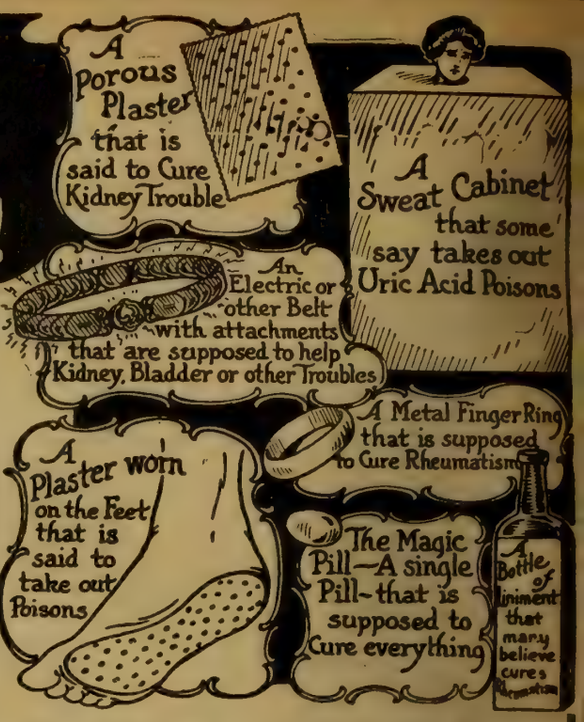
The Universal Magazine Bracelet.

This is all the rage. And Adjustable Bracelet. The most elegant design and perfectly finished. It is not solid gold, but it is washed and plated and will stand the acid test. Its match cannot be purchased in country jewelry stores for any price. It is a duplicate of the latest Parisian creation made expressly for the purpose of using it as a subscription premium to the **Universal Magazine**. The **Universal Magazine** is a nice, bright, cheerful, illustrated monthly magazine of thirty-two pages, three columns to the page, containing home reading, stories, fashions, patterns and poetry—a splendid publication for the money. To anyone who will send us a money order for 50 cents we will send the **Universal Magazine** for two years, and we will send one elegant **Universal Magazine Bracelet**, postage free, as a subscription premium. Money returned if not satisfied. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**



Universal Magazine Bracelet.

FREE TO VICTIMS
of KIDNEY TROUBLE, BLADDER TROUBLE AND RHEUMATISM.
FREE! FREE! Absolutely Free!



A Porous Plaster that is said to Cure Kidney Trouble
A Sweat Cabinet that some say takes out Uric Acid Poisons
An Electric or other Belt with attachments that are supposed to help Kidney, Bladder or other Troubles
A Metal Finger Ring that is supposed to Cure Rheumatism
A Plaster worn on the Feet that is said to take out Poisons
The Magic Pill—A single Pill—that is supposed to Cure everything
A Bottle of liniment that many believe cures Rheumatism

THE DAY OF WITCHCRAFT is passed. This is the 20th century. Throw away the idea of fetishes, mysterious contraptions, etc. If you have tried them you know they do not cure. Now try the common-sense, intelligent way. Place your case in the hands of a doctor of experience—who knows your trouble better than anyone else knows it—a doctor who is different from the doctors you usually know, the doctor of small practice who treats all diseases. Here is a doctor—Dr. T. Frank Lynott—a specialist in Uric Acid diseases. He is the doctor for you to have confidence and faith in. He makes a specialty of treating Kidney Trouble, Bladder Trouble and Rheumatism—Uric Acid diseases. He has spent his life in this specialty. He has the training in these diseases of a thousand ordinary physicians—**he has prescribed for over a quarter million sufferers** from these diseases. (Let him send you his Book of Cures giving names and addresses). Don't you want to benefit from this vast experience, this knowledge of **how you suffer,** how others like you were cured, and how **you** can be cured in your own home?

The way is easy — get in correspondence with this health-promoting man.

TEST THIS TREATMENT FREE AT DR'S EXPENSE

Dr. Lynott does not ask you to send him money. He does not ask you to pay him to TRY to cure you. He simply wants you to write him how you suffer so that he can send you a free treatment to test—a free proof treatment—by which you can soon enough tell if he understands your case and if he sent you the right remedies for your cure. THERE IS ABSOLUTELY NO CHARGE FOR THIS.

This free proof treatment MUST prove to you that your case is curable at Dr. Lynott's hands. That is the one object of sending it—to prove to you that if Dr. Lynott takes your case it means that he believes you curable, and he accordingly sends you his remedies. These remedies have been sent to a quarter of a million people in recent years, and the fact that every day new patients write to Dr. Lynott, proves that they MUST cure or the sufferers would not recommend others.

These remedies—the result of a generation of study and effort—will prove to you by a few days' use **in your own home** that the painful kidney aches can be permanently stopped; that the urine can be cleared and made healthy-looking; that the too frequent desire to urinate will grow less and less, and that soon the bladder will work normally again; and that the grinding, racking pains of rheumatism will subside, then entirely vanish.

That is the doctor's aim—to prove to you that this can be done. And he will charge you nothing for the proof. All you have to do is to write him a letter describing how you feel, or, simpler still, read the symptoms and then fill out the coupon and mail it to him. He will then SELECT the remedies SUITED TO YOUR CASE. He will send you a treatment to test, free of cost or obligation. You owe him nothing for it either now or in the future.

We know Dr. Lynott and his methods, and we vouch for his word. He will send you the free proof treatment as promised. He will aim honestly and conscientiously to cure you. We could mention the names of dozens of people who had given up all hope of health, who wrote Dr. Lynott for a treatment to test free, took it according to the doctor's simple directions, and were ultimately cured at their homes.

If so many others, why not you? He makes a specialty of treating kidney trouble, bladder trouble and rheumatism, and we believe he understands these diseases better than anyone else, and has better remedies. It must be so or else how could he have so many cures to his credit?

Prove It to Yourself That You Can Be Cured

Take nobody's word for Dr. Lynott's ability or for the value of his remedies—FIND OUT FOR YOURSELF! Column upon column of testimonials could be given, but what would be the use? The question would still be, can he cure YOU? But it is easy to find out if he can—send for a treatment to try free of charge. This free test treatment that he gladly sends to any sufferer, will prove it better than words.

He will send you the free proof treatment just as soon as he receives your address, and he will also include the names and addresses of the many people who have written him that he cured them. You can write them if you want to, but you will then have the free treatment in your possession, which, when you use it, will be the best evidence of what can be done for you.

There is nothing like satisfying yourself by personal test. So send for the free proof treatment.

Cure Yourself at Home — Take the Common-Sense Method

If you want the best treatment for your disease that the worlds of science and chemistry have discovered, and vastly better than you can possibly obtain elsewhere; if you want simple, safe and easily used home remedies; if you want a common-sense method of treatment free from fetish, "charm," or witchcraft mystery; if you want an intelligent opinion of your case and an intelligent book to read, telling plainly about your disease, then write Dr. Lynott. All know his high professional standing, his special fitness for the cure of kidney, bladder and rheumatic diseases (he received a Special Diploma for Urinary Diseases from the great University College, city of New York, now Bellevue and Cornell Medical) and his financial honesty and his ability to do as he promises are personally vouched for by us. If you are in earnest about wanting to be cured, fill out the coupon and get a free test of the famous Lynott treatment. It will not cost you more than the two-cent postage stamp you put on the envelope to mail the coupon.

Since it cannot cost you anything it would seem that every sufferer would write Dr. Lynott for the **free home test.**

Write Dr. Lynott Today — Send the Free Coupon

This offer to let you make a FREE HOME TEST OF DR. LYNOTT'S FAMOUS TREATMENT and his FAMOUS REMEDIES is open to any and every reader of the National Farmer and Stock Grower who has any of the symptoms given above. Any sufferer from a Uric Acid disease, such as kidney trouble, bladder trouble or rheumatism and its complications, does himself or herself a positive injustice not to take advantage of this liberal offer. It makes no difference what your age is, how many months or years you have suffered or how often you have tried before to be cured, you MUST try again. Submit your case to Dr. Lynott. You have no right to doubt until you have heard what he has to say—UNTIL YOU HAVE TRIED HIS METHOD OF CURE.

WRITE HIM TODAY. Address your letter or coupon to

DR. T. FRANK LYNOTT
3809 Occidental Bldg., CHICAGO, ILL.

Read These Symptoms Carefully!

These symptoms are important. They tell the exact degree of health or sickness. If you have one or more of them you ought to make a free test of Dr. Lynott's treatment. Which of the symptoms have you got? Fill out the coupon, give the numbers of the symptoms, and mail the coupon to Dr. Lynott today. He will select and send you a free treatment to test, he will write you a letter giving you his professional opinion of your case, and he will include his famous illustrated medical book, "How Can I Get Well?" which gives the ingredients of his famous remedies and his method of curing these Uric Acid diseases. There will be no charge for any of this. He does not send out one remedy only, but as many as are required, so in order to understand your case it is necessary for him to have either a letter explaining your case in your own words, or the coupon properly filled out.

THESE ARE THE SYMPTOMS.

1 Pain in the back.	10 Swelling in any part of the body.
2 Too frequent desire to urinate.	11 Palpitation or pain around the heart.
3 Burning or obstruction of urine.	12 Pain in the hip joints.
4 Pain or soreness in the bladder.	13 Pain in the neck or head.
5 Prostatic trouble.	14 Pain or soreness in the kidneys.
6 Gas or pain in the stomach.	15 Pain or swelling of the joints.
7 General debility, weakness, dizziness.	16 Pain and swelling of the muscles.
8 Constipation or liver trouble.	17 Pain and soreness in nerves.
9 Pain and soreness under right ribs.	18 Acute or chronic rheumatism.

FREE COUPON

DR. T. FRANK LYNOTT,
3809 Occidental Bldg., Chicago. Ill.

A FIRST-CLASS LOAD OF HEAVY HOGS. These hogs were marketed by S. C. Saylor, of Oakwood, Ill., a prominent stockman of Vermillion county, near the Indiana line, and were shipped to the Buffalo market, where they were sold at $9.65 per 100 pounds by CLAY, ROBINSON & CO. to the Jacob Dold Packing Company. The sale was made on August 24th. At that time the hogs that usually sold at the top of the market were mixed hogs, 200 to 225 pounds average, suitable for the butcher trade, but the extraordinary quality of these heavy hogs enabled the salesman to make a record with them, these being the first heavy hogs on the Buffalo market this season to sell at the extreme top price for butcher weights. There is a lesson to be learned from this transaction. The picture of the hogs shows how fat, even and splendid they were; the other requisites to such a transaction are a good buyer, an active market and a capable salesman. Our readers are aware that CLAY, ROBINSON & CO. are established at ten of the leading live stock markets. At St. Louis the selling service in the hog department is especially efficient.

Choice Light Native Cattle.

Included in recent cattle sales at Chicago were forty yearlings, 1,170 pounds average, sold at $7.00 per 100 pounds; twenty yearlings, 896 pounds average, at $7.15 per 100 pounds; twenty-eight steers and heifers, 900 pounds average, at $7.15 per 100 pounds; twenty yearlings, 1,090 pounds average, at $7.25 per 100 pounds; and twenty-five head, 965 pounds average, at $7.45 per 100 pounds. All these light, native, fat yearlings sold on one day. This indicates a remarkably strong butcher demand. The heaviest and best cattle on the market the same day averaged 1,564 pounds and sold at $7.75 per 100 pounds. Some cattle averaging 1,300 pounds sold at $6.25 per 100 pounds.

Onions on the Market.

Onion prices at St. Louis, October 1st: Fancy Red Globe at 60c. per bushel in bulk to 65c. in sacks, delivered; poorer offerings, No. 2, small, etc., from 40c. to 45c.; fancy white at 70c. to 75c—heated and inferior less.

5 Cents a Copy. Published Monthly by The Hale Publishing Co. 50 Cents a Year.

and Stock GROWER

Care of Grazing Grounds.

American farmers have only begun to study the care of their grazing grounds. Farmers in Europe have always had a high ideal for their pastures; but the Americans have been spoiled by having for centuries such vast grazing grounds that they did not have to be careful to make each acre produce the uttermost. However, the increased cost of feed for farm animals is forcing everyone to pay more and more attention to that part of the farm that alone holds out promise to being an offset to the high prices of commercial feed products.

An observation of many of the pastures one goes through will be sufficient to suggest some of the things that need to be done to improve our grazing lands or even to hold them where they are in point of productiveness. In a trip through a part of Massachusetts the writer was struck with the fact that some of the pastures were being greatly reduced in capacity by the increase of second-growth trees, which were in most cases only very small saplings. Yet they were growing in such numbers that they were taking absolute possession of considerable areas. That they would never be of value as forest trees was demonstrated by the fact that they were of inferior varieties. The same is true of many Western pastures which have been neglected. It is a small matter to grub out a new tree when it is a foot high; it is a difficult thing when it has grown for several years. One tree is not such a factor as are many hundreds, as we find in some pastures. In the early stages of sapling development a man can go over the pasture with a scythe and destroy a tree with a single clip of the implement he carries.

A little ditching will greatly improve some of our pastures. It is common to find the pasture including the wet parts of the farm, because the wet parts were the least easy to bring under cultivation. So to-day our pastures have in them a far larger proportion of undrained land than other parts of the farm. Running a ditch here and there through the wettest part will work wonders. If the ditches can be tiled, so much the better; but the open ditch is least objectionable in the pasture than elsewhere on the farm. Better an open ditch than nothing.

The rotating of pastures is a great step toward their improvement. A movable fence thrown across one corner of a pasture enables the piece of land enclosed to be put into some farm crop that requires the working of the ground. When in a few years the land goes back to pasture, a good has been accomplished that will show for many years. The gradual working over of the whole pasture area is possible under almost any system of farming.

Keeping the stock off the pasture in the early spring and the late fall, when the ground is soft, is one of the requisites for the preservation of the pastures in their best condition. An ordinary rain in summer does not soften a pasture sod very much, but in late fall and early spring the ground often becomes so soft that every footprint of a farm animal is an injury to it.

Health on the Farm.

People should be more healthy on farms than it cities; but this is not always the case. In fact, some of the most contagious of diseases have had larger runs in the country than in the cities. This is due to the better sanitation of cities.

It seems strange that where populations are dense the people should be able to create conditions of health superior to those existing in the country, where there is plenty of room for the disposal of sewage and the securing of pure water and pure food.

Now the farmer must imitate the citiizen in sanitary matters. What the citizen has had to work out in the science of sanitation the agriculturist can lay hold of and take without further effort than learning the trick.

The citizen has learned that bathrooms are a great help to the comfort and health of his family. He has made the bathroom possible by combining with others and building great water systems to supply an abundance of water for the bathroom. But the farmer can often accomplish the same result with less trouble. He often has a windmill or some other way of getting water into an elevated tank, from which it is distributed to his barns and his water tanks. It takes but a little extra piping to convey the water to his house and his bathroom, where it will be always available by merely turning a faucet.

This makes it possible for the farmer to have in his kitchen the same kind of a hot-water tank as is found in the home of the citizen. The medicinal value of a big supply of hot water is very great. Every doctor makes use of it.

After the water supply is secured, the indoor closet and the private sewer come naturally. The writer knows of one farmer than has an admirable arrangement of this kind. His indoor toilets are on two floors. The water is supplied from an elevated tank and a special windmill. The sewer is a private one, running off into an adjacent field, and the sewage goes into a good-sized box, where the solid portions rise and form a thick sludge. In this the sewage-destroying bacteria live and work, and the organic matter is destroyed. The water from this box is comparatively clean and flows into the soil of a plowed field without injury to it, and without offensive odor. The amount of water used per day by one family will not exceed fifteen cubic feet, even in summer time, and a small plat of ground will absorb that amount without appreciable effect except to improve it.

Farm sanitation requires attention to the well, where the well is used as a source of water supply, either for the people or the live stock. Observe how many of the wells near farm houses are so near barn-yards and privies that they are contaminated by the latter. It has been determined by investigations that usually a well within 100 feet of a privy or barn-yard receives some of the washings from those places, especially in times of heavy rains. Contaminated farm wells are great spreaders of disease.

Live Stock Scarce in Italy.

Writing from Genoa, Consul-General James A. Smith says that the Chamber of Commerce at Turin recently decided to invite the attention of the government to the shortage of live stock for slaughtering in Piedmont. While formerly this region was an exporter of live stock, the city of Turin alone is importing cattle to the extent of nearly $5,000,000 annually. The rapid growth of the cheese industry is given as the cause of this, the cattle raisers in that department finding it more remunerative to sell the milk for cheese making than to dispose of their stock for slaughter. The result is a rapid rise in the price of meat and consequent hardship imposed upon the citizens of that region, who find it increasingly difficult to provide for themselves and their families. The government is asked to adopt measures to render the raising of live stock for slaughter more remunerative. This is from the Consular Reports of the Department of Commerce.

Feeding Oats to Stock.

Stock-raising farmers should not ship oats to market if they can help it. Oats are more valuable on the farm than in market. At the time this article is written, September oats are quoted at 33½ cents a bushel, and it costs a freight bill to put oats in market.

This subject is brought up by reading about sheep feeding in South Dakota, and the result was that lambs fed a ration of oats while on rape pasture made a larger gain than did lambs fed a grain ration of corn on rape pasture, and oats were also superior to barley under similar circumstances.

We are also reminded of the statement made by Prof. Henry, in Feeds and Feeding, that horses nurtured on oats show mettle which cannot be reached by the use of any other feeding stuff. The same professor usually prescribes in horse feeding eight pounds of oats to each four pounds of corn.

In feeding hogs the ration is reversed, good results being obtained by using one-third oat meal and two-thirds corn meal.

In the dairy, ground oats in competitior with bran have been known to cause a production of 10 per cent. more milk, and to-day oats on the farm are cheaper than bran can be bought and delivered.

One thing is certain concerning oats at present, which is, that oats dumped on the market will bring low prices, whereas if oats are used everywhere it is possible to feed to advantage, there will be a better chance for the oats market to recover.

FREIGHT PAID PRICES ON NEW LUMBER

Here is a chance to BUY LUMBER at 30 to 60 per cent less than is usually asked for it. It is absolutely **brand new and first class in every particular and guaranteed grades.** We bought **50,000,000 feet** from lumber mills at half the usual prices and we are giving the public the benefit of it. There is absolutely no possibility for you to go wrong in this matter. **Never in twenty years has Lumber been offered at such low prices** as we name. If you do not take advantage of this chance, you are missing a splendid opportunity. We quote freight prepaid price.

Paying Crops and Weeds.

The weed question is uppermost in the mind of Prof. Alvin Keyser, of the Colorado Agricultural College, who says:

"Did you ever stop to think of the tax you are paying to keep up the weed crop? If the state should levy a tax on your crops, equal to 25 per cent. of the value, you would rebel in righteous indignation. Wouldn't you? Yet a good many of us permit a stand of 25 per cent. of weeds to occupy our fields and think we are doing pretty good farming, too.

Why not grow grain or alfalfa, or sugar beets or spuds, or some other good crop where that weed tax is now growing? The weeds give no return. They draw more heavily on the water supply and plant food supply than paying crops. Paying crops and weeds cannot occupy land at the same time. Let us grow paying crops and gets profits rather than pay taxes.

Pound for pound, the plant food required by crops and by weeds is almost the same, but weeds are better food gatherers. The greatest difference comes when the question of water arises. Weeds not only require more water but are able to get it. From 300 to 700 pounds of water are used in producing a pound of dry matter in our common crops. Weeds require even more. If it comes to a contest as to which will get it, the weeds win.

It is estimated from careful study that Colorado's crop was reduced over 25 per cent. in value last year through weeds alone.

Reform the weed."

Where Oats Are Raised.

Illinois cultivates 13 per cent. of the United States acreage in oats, and Iowa 12½ per cent.

Minnesota cultivates 8 per cent.; Nebraska, 7.6 per cent.; and Wisconsin, 6.7 per cent.

Indiana comes next with 5.5 per cent.; Ohio. 5.1 per cent.: North Dakota, 4.7 per cent.; Michigan, 4.4 per cent.; and South Dakota, 4.3 per cent.

Other states worth mentioning as producing oats are New York, 3.8 per cent.; Kansas, 3. 4 per cent.; and Pennsylvania, 2.9 per cent.

The average condition of the oat crop when harvested was 83.3 per cent., against 81.5 per cent. last month, 93.8 per cent. when harvested in 1909, 69.7 per cent. in 1908, and a ten-year average when harvested of 79.5 per cent., which indicates that we have raised the largest crop of oats and the best crop ever raised in this country.

The condition of Iowa oats when harvested was 100 per cent.

Parcels Post Wanted.

Generally speaking, we do not like monopolies, neither do we wish to see the United States government engaged in business in competition with the citizen; but there is one business which by common consent is conducted by the government, and that is the postoffice, and we believe in this country the postoffice is not yet fulfilling its mission.

We have urgent need of a parcels post system that will carry a package from one end of the country to another. From every city to every individual on a rural route, and from every rural route to every city. The rural free delivery only needs the parcels post to make it a paying branch of the postoffice instead of a losing one; therefore the sooner the parcels post system is inaugurated the better.

Much has been said about the Express Companies in this connection, but the fact remains that in countries where the parcels post systems are such as we desire, the Express Companies get along very well. What we need is the same service for American parcels that our own postoffice freely accords to citizens of foreign nations sending goods to this country. There are good parcel post rates from England, France or Germany to any part of the United States, and what we need is the adoption of these or favorable rates for our own citizens. The foreign rates were established in the belief that the American charges would soon be reduced, and it is very nearly time the change was brought about.

The farmers of this country have been begging for parcels post these many years—not a limited affair for a few miles, but a broad-gauge one from ocean to ocean. Let us have the parcels post at once—that is the cry that is going up from all farmers' organizations.

A Poor Policy.

Buying goods of foreign countries instead of buying from our own citizens and letting the foreign goods come in free of duty without contributing to the support of our government and adding taxes on our own people to make up the deficiency, is poor policy, no matter who advocates it, and the result is disaster; and that is what many people are advocating in their cry for more and more tariff revision downward. Last year, for no reason at all, the government took off the duties on hides, and we would certainly like to see a photograph of the American citizen who derived any benefit therefrom.

Organic Matter of Soils.

[By D. W. Frear, Colorado Agricultural College, Fort Collins.]

All cultivated soils and most virgin soils contain plant and animals' remains, called organic matter.

When in the last stages of decay, organic matter is called humus. Humus is dark in color and imparts that color to soil when present in sufficient quantities.

Organic matter is very light in weight. When partially decayed, and especially in the form of humus, it has the power to absorb and hold larger quantities of water than even the finest clays.

Humus is more plastic (sticky) than sand, and less plastic than clay, consequently it is very valuable in binding together sandy soils and loosening up clayey soils.

When organic matter decays, substances called organic acids are produced which act on the soil mineral matter and help to make it soluble, so that it is available to other plants. The food material which the organic matter contained is also broken down to its original form, and much of it is again built up into plant tissue.

Organic matter is gotten into the soil by crop rotation, by plowing under green crops, by manuring and by raising crops with extensive root systems. When added to soils in arid regions it should be well rotted. It is one of the most important soil constituents. The lack of it in soil is largely the cause of the decreased yields under the single, continuos cropping syetem.

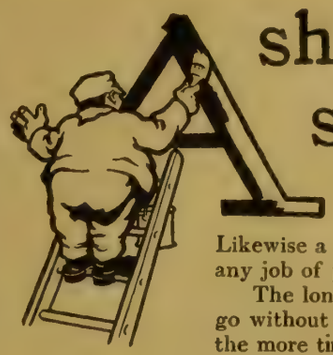
Proportion of Crop Land to Grass Land.

For every dollar that is made from cultivated crops there are two dollars made on grass. Grass alone, however, will not fatten for market, and cultivated crops alone will not be used profitably for raising stock. A stock-farm proposition that will not fail is three acres of grass to one of cultivated land.

Had No Witnesses.

"You are charged with stealing nine of Colonel Henry's hens last night. Have you any witnesses?" asked the Justice sternly.

"Nussah!" said Brother Jones humbly. "I 'specks I'se sawtuh perculiah dat-uh-way, but it ain't never been mah custom to take witnesses along when I goes out chicken-stealin', sah."—Central Law Journal.



A short horse is soon curried

Likewise a small job of painting is soon finished, and any job of painting is a small job if taken in time.

The longer your house and barns are allowed to go without repainting, the more paint it takes and the more time to apply it.

That's why delays are costly.

And also buildings, wagons and machinery needing paint and not getting it, soon need more than paint to make them right.

The moral is—keep things painted and use good paint in doing so. By good paint I mean paint that covers well, sinks in and stays on. Select your paint as you do your seed or your fertilizer—it is just as important. Find a name in the paint field that stands out, that has made a reputation on quality, that was making paint when you were a boy and is still at it and that has become the largest paint house in the world, and you can come pretty near trusting its products.

There is such a house and to save your time I'll mention its name—The Sherwin-Williams Company. You can get every kind of paint or varnish that your farm requires from a Sherwin-Williams dealer near you. Just mention the thing to be painted and you'll get the right paint—the kind that will last and protect.

You can get a most informing book free by addressing

THE LITTLE PAINT MAN, care of

Corn and Wheat Compared.

From a circular issued by the Agricultural Experiment Station of Missouri, signed by F. H. Demaree, we take the text, which gives comparison in cost of growing wheat, also of growing corn, and in addition thereto the results of rotating crops instead of growing the same crop on the same land each year. We quote as follows:

"Because of the comparatively large profit in the corn crop and the certainty of some return, we have had for several years past an excess in the corn acreage which has resulted in a general reduction in yield and injury to the ground by continuous cropping. The excess in corn acreage can also be accounted for in the fact that the depredation of the chinch-bug and Hessian fly a few years ago caused our farmers to lose interest in the wheat crop. Also very few men have stopped to figure the cost of production of the two crops and the returns from each.

From many figures the cost of producing an acre of corn is approximately $12 and wheat $8.00 per acre. The average production of wheat in this state for the last five years has been 12.7 bushels per acre, and corn 30.7 bushels per acre. The average price of wheat during the same period has been 86 cents and corn 47 cents per bushel. At these prices the value of an acre of wheat has been $10.92, and an acre of corn $14.42. which leaves a profit, when the cost of production is taken out, of $2.92 per acre for wheat, and $2.42 for corn, showing that, as a money crop. the wheat growers of this state have really made more money than those growing corn. The profit in either case is little enough, it is true, and could be greatly increased by growing a rotation of crops rather than either of these continuously.

At this Station, the two methods of cropping have been thoroughly compared, and in the past twenty years those plots growing corn continuously barely paid expenses, while those growing corn in rotation with other crops produced 80.2 per cent. more than the continuous-cropping ones. Wheat yields increase 28.4 per cent. during the same time due to rotation."

"Don'ts" For Farmers on Land Drainage.

Some of the bad methods often followed by farmers in draining land are outlined in a series of "Dont's on Drainage" by Prof. E. R. Jones, of the Soils Department of the Agricultural Experiment Station of the University of Wisconsin, as follows:

Don't dodge the wet spots in cultivated fields. A few dollars spent in drainage will make these spots yield valuable crops, and will make the cultivation of the whole field more convenient.

Don't be content with raising marsh grass on muck and peat marshes. Drainage is the step that begins their adaptation to tame grasses and other farm crops.

Don't condemn the muck and peat marshes on which timothy has died out once. Drain thoroughly and then apply barn-yard or commercial fertilizer. as is done on uplands. In other words, give the marshes a square deal.

Don't wait for nature to drain the wet lands without assistance. Nature alone did not remove the stumps and stones from the wooded, stony lands. Neither does she irrigate the arid lands of the West without the aid of man.

Don't let damaging water get onto land, if it can be prevented. An ounce of prevention is worth a pound of cure in drainage.

Don't think it takes a wizard to lay tile properly. Have a survey made sufficient in detail to show that there is sufficient fall. An intelligent use of this fall will then insure success.

Don't install a part of a drainage system to which the remainder of the system cannot later be joined with advantage.

Don't let the waste banks of ditches grow up to weeds. Get them sodded and make them both valuable and attractive.

Don't let outlet ditches remain idle when they should be working. Have surface ditches and tile to keep them busy.

Don't spend a dollar for small ditches or tile on a marsh until an outlet is assured.

Don't fail to give land drainage the attention and thought it deserves.

Fertilizer For Wheat.

The Indiana Agricultural Experiment Station recommends for wheat the application at seeding time of about 300 pounds per acre of a fertilizer containing two per cent. nitrogen, eight per cent. available phosphoric acid and two to four per cent. potash. Fertilizer can best be applied to wheat by using a drill with fertilizer attachment. The above formula is one that can be obtained from almost all fertilizer companies.

If the farmer wishes to mix his own fertilizer and thus save several dollars per ton, the Station recommends the use of 200 pounds per acre of the following mixture: 900 pounds steamed bone meal, 900 pounds high-grade acid phosphate and 200 pounds muriate of potash. These materials can be purchased from practically all fertilizer companies and can be easily mixed with a shovel on the barn floor. This mixture makes a considerably higher grade fertilizer than the 2-8-2 formula mentioned above, hence less is required.

When clover has been turned under for corn and the wheel follows the corn, there is quite often not enough nitrogen in the above fertilizers for the best results. A farmer should in this case use more nitrogen in his fertilizer, or, better still, top dress his wheat in the spring with 50 to 100 pounds per acre of nitrate of soda.

Corn Shipments From Africa.

The shipment in one vessel of 6,400 tons, or 67,000 bags, of corn from Durban to Mexico in August indicates the extent to which the export of maize has increased in South Africa.

During the first six months of 1910, 163,780,225 pounds of maize were exported, valued at $1,654,371, as compared with 16,222,578 pounds. valued at $182,708, in the corresponding period of 1909. It is expected that the calendar year 1910 will far surpass any previous year for the export of maize from South Africa.

The average price at which maize is being purchased in the principal producing sections of South Africa—the Orange Free State and Transvaal—is $1.70 per bag of 200 pounds for round yellow and $1.82 to $1.85 per bag for white flat.

In addition to the shipment mentioned. some very large cargoes are being sent to England.

This is from the report of the Vice Consul General Geo. L. Foster, at Cape Town, South Africa, to the Department of Commerce and Labor.

Ropp's Commercial Calculator is necessary, and it is profitable to carry in the pocket. We offer it as a subscription premium. See page 20.

POULTRY HOUSES, COOPS, ETC.

This is an up-to-date poultry book, written by H. A. Nourse, editor of the Poultry Herald. It was prepared during the past year and is the result of many years' study and experience. It is a book of newest plans for building poultry houses, with description of coops, fixtures and poultry utensils for the farm, village or suburban poultry keeper. It is a book of 100 pages, and is finely illustrated. It is worth its weight in gold. We are sending The National Farmer and Stock Grower for one year and the book Poultry Houses for 60 cents. Address, Hale Publishing Co., 2550 Vista Ave., St. Louis, Mo.

The Favorite Corn Husker.

This Corn Husker is more largely sold than any other on the market. We have therefore selected it as a seasonable subscription premium. It is made for the right hand. The hook sets at any angle to prevent glancing. Opening or closing the small end of the plate adjusts a fit to

any size hand and prevents chafing. The improved shape of the plate and leather makes this hook the favorite We will send The National Farmer and Stock Grower for one year and one Favorite Corn Husker for 50 cents. The Corn Husker is a free premium. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Paper For All Classes.

The National Farmer and Stock Grower is a little different when it is compared with all other farm papers. A farmer can read all the others and then turn to The National Farmer and Stock Grower and obtain considerable information that the others do not contain. We deal with real facts, obtained results and up-to-date methods. A millionaire farmer can derive some benefit from this paper, and so can the poorest farmer who is struggling hard to make an honest living.

Fetzer Grain Drills.

Right in the heart of Illiois is an establishment said to be the most modern implement factory in the world. It is the factory of the William Fetzer Company, originally established in 1858 at Dayton, Ohio, and at Springfield, Ill., in 1908.

The company manufactures grain drills, fertilizer drills, seeding machinery, transplanters, potato planters, disc harrows, rollers, etc.

To fully appreciate the Fetzer implements, the best way is to write for a very instructive and practical pamphlet entitled "More Grain Per Acre." Address, Wm. Fetzer Co., Box 42, Springfield, Ill.

Revenue From the Tariff.

Last year the tariff duties collected for the support of the national government amounted to three hundred million dollars. Every cent of the money was collected upon foreign goods, and every cent was necessary for the support of the government.

People who wish to do away with the tariff and establish what is called free trade do not understand that they would also have to raise this three hundred millions of dollars some other way after admitting sufficient foreign goods free and untaxed to cripple our own industries. They do not understand that we have either to collect revenue from goods and materials produced in foreign countries, or on goods and materials produced by ourselves.

The revenue has to be collected one way or another. We pay taxes here to city, county and state, and indirectly we pay the internal revenue taxes. The foreign producer and foreign manufacturer pay none of these taxts, and the only way they can be made to pay is to collect at the port of entry.

Those who are in favor of doing away with tariff duties should be made to understand their responsibilities, and they ought to state upon what plan of taxation the three hundred millions of dollars should be raised after admitting foreign goods free of duty.

Buying Grain on Grades.

Some grain growers insist that there is too wide a margin between prices paid at country elevators and those paid at central markets, since country grading was put in force. I am a firm advocate of the grading of all grain when it is offered for sale, and I believe that rule will ultimately result in much higher quality of grain being grown.

The pocketbook is a vital point with most people, so when from three to five cents per bushel is knocked off the current price on a wagon-load of grain, the grower immediately sits up and takes notice. The sooner all elevators adopt the rule to grade everything, so much the better for those growers who do produce good, clean grain. Last winter, and in fact all through the shipping season, farmers thought that they were being robbed when buyers told them that not much corn would grade above No. 4. The matter was carried so far that some grain buyers bought individual cars of grain subject to grade after the cars reached central market. As returns came in, grading sheets showed such uniformly low rates that growers became disheartened, but it opened their eyes as to the real quality of the corn they were growing.

There has not been much complaint about awarding grades this season on small grains because the quality has run uncommonly high, and the condition is such that not much is lost in deterioration. The objection to grading comes most strenuously when quality is poor, but this is precisely the time when handlers must protect themselves. I am in favor of sharp grading at country elevators. The thing for growers to do is to be able to identify established grades. If they will do this, they can keep the market practically under their own control; and cleaner and better supplies will have a tremendous influence in fixing prices in both home and export markets.—L. C. Brown.

Keyless Locks Are O. K.

Nine-tenths of the common key locks in use can be worked with a button hook, piece of wire, horseshoe nail and with many other appliances, but the keyless locks manufactured by the J P. Miller Keyless Lock Company defy the skill of the local expert. See card on page 4.

Buying Young Hogs.

A Livingston county, Illinois, correspondent writes: "I have a big crop of corn this season, and am thinking of buying young shotes and feeding them out. Do you think it would pay?"

Long ago I got over thinking I was capable of offering advice on feeding operations. Too much depends upon the feeding quality of the young stock and much depends upon the feeder himself. However conditions now are on the side of the feeder. A big crop of corn is in sight; prices for hogs alone should show a nice profit, if the young hogs can be bought at right prices. But if young hogs can be bought, why not feed cattle and let the hogs follow the steers? The thing in the way of heavy feeding operations this season is the scarcity and high price of feeding stock. Were there large supplies in the country there would be a general resumption of feeding of both cattle and hogs all over the corn belt. In Central Illinois the new crop of corn is now selling around 45 cents. It certainly looks as if there was a comfortable margin for feeders this season if the right kind of young stuff can be had.—L. C. Brown.

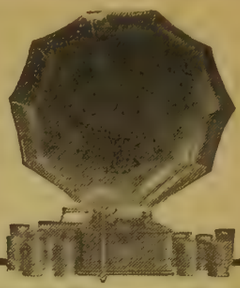
Weevils in Grain.

A subscriber in Adams county, Illinois, writes: "For two or three years I have found weevil in my wheat bins. Is there any way to get rid of them?"

All bins in granaries where weevil have worked should be thoroughly cleaned out and fumigated every year before new grain is stored; but if this is neglected and weevils are found working in the grain, then the best thing to do is to kill the weevil by fumigation. Use bisulphide of carbon by simply pouring the liquid on the grain. Use one pound for every fifty bushels of wheat, and pour the liquid into the corners of the bins. No matter how deep the bins may be, the fumes from this liquid will penetrate clear to the bottom, providing blankets are spread over the grain for three or four hours. Ths stuff will explode, so one should be careful not to have lanterns or pipes around while the fumigation is going on. The bisulphide can be had at most any drug store in one-pound cans. All insect life will be killed within three or four hours, after which the blankets may be removed and the building well aired.—L. C. Brown

Going Some on Hogs.

"Twenty per cent. of the hogs on sale this week have been consigned to Clay, Robinson & Co. What's doing this? We have topped the market seven days out of eight. Perhaps that is the reason."—Clay, Robinson & Co., National Stock Yards, Ill., September 27th.



FREE LOAN

Yes, An Absolutely Free Loan, the World's Greatest Phonograph, Our New No. 10 Model, 1910 Outfit, Now Offered on a FREE LOAN.

WHEN WE SAY FREE LOAN, WE MEAN FREE LOAN. We will ship you a machine without a cent down, and without any C. O. D. payment to us, so you can take it right to your home and play the music there. Practical Barn Plans.

This is the name of the best book out. Every farmer needs it. It contains drawings, pictures, plans, specifications and everything necessary and up-to-date for a barn, stock shed, wagon shed, corn barn, smoke house, ice house, silo, dairy barn, or any other conceivable outbuilding on the farm. Not only one plan of each, but many of each are shown with all the latest inventions and contrivances for saving time, money and labor.

Each and every plan in the book is accompanied by a lengthy written description, explaining and giving the details of the drawings, and so worded and arranged, numbered and indexed, that it must be readily understood by anyone who reads it.

The price of this book is One Dollar, and we include one-year's subscription to The National Farmer and Stock Grower. Address, **Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

Care of Fall Pastures.

Pastures and meadows have killed out this season to an alarming extent, and in many regions the seeding done during the fall of 1909 and last spring has either failed altogether or given only partial stands. Under the stress of such conditions it will not do to overstock pastures this fall, thus laying the fields open to further disastrous winter damage. After the long dry siege fresh growth is springing up in pastures, and under the stimulating influence of warm fall rains stands in these old fields will thicken up and stronger and thicker growth will be had next season, providing injury is not done to the plants this fall. Stock attack this fresh fall growth ravenously, frequently biting deeper than is good for the plant. For this reason the very energy which is stored in all plants during late fall growth is destroyed, and weakened plants must take their chances with winter and early spring conditions. Fall pasturing is a menace to good pastures or meadows, and it should be permitted only in a limited way.—L. C. Brown.

Fall Plowing of Corn Lands.

Most people recognize the value of fall plowing for grain crops; but very few, however, follow the practice with their corn crops. Many feel that they must leave the corn land until spring in order to be able to get onto the land the manure that is made during the winter. It has been found, at the Minnesota Experiment Station, that from twelve to fifteen loads per acre of barnyard manure, taken directly from the barn, can be applied to fall-plowed land and disced in in the spring, so that it will not interfere in any way with planting or cultivating the crop. This makes it practical to plow corn land in the fall and still get the manure made during the winter onto the corn crop.

There is a great advantage in this practice, especially in dry years. Plowing the coarse manure under, so that the straw lies between the furrow slice and the subsoil, makes it very difficult for moisture to move up from the subsoil to the furrow slice. On this account, land that has been manured and plowed in the spring, the manure plowed under, is very likely to dry out. By manuring on top of the land, and discing manure into the surface, the manure helps to form a surface mulch and to check evaporation of moisture, and when it does rain, the elements of fertility in manure are washed down into the furrow slice, where the plant roots can get them, instead of being washed down into the subsoil out of reach. The experts at the Minnesota University Farm heartily recommend fall plowing of the land for corn.

"Better Wheat" Campaign in Oklahoma Means Millions to Farmers.

The enthusiastic reception accorded the "Better Wheat" train which is being operated in Oklahoma by the Rock Island Line's Agricultural Commissioner, Professor H. M. Cottrell, in conjunction with the Oklahoma Agricultural College, marks an epoch in modern agriculture.

At each station large crowds await the coming of the train with samples of seed wheat to be tested by the experts.

Lectures are given by Prof. Cottrell and a corps of able experts on every phahe of wheat growing. At some points more than a thousand people were in attendance pledging the planting of pure wheat.

The use of mixed seed last year resulted in a loss of more than $2,000,000 in Oklahoma.

Boards of trade, grain dealers, bankers, merchants, in fact every interest, has co-operated to avoid a repetition of this condition, and the estimate that the campaign will have the direct result of adding several millions to the value of next year's wheat crop in Oklahoma is conservative.

Professor Cottrell announces somewhat similar campaigns with reference to other crops and sections for the future, and this "Better Wheat" plan has served as a stimulus for the sort of wide-spread co-operation that means far-reaching benefit.

Corn Exports to Mexico.

Mexico has a duty of 25 cents a bushel on imports of corn from foreign countries, which went into effect October 1st. In order to save the duty, 40,000 bushels were bought on the St. Louis market and left September 22d on a special train to arrive before the duty went into effect. Last year, out of a total of 36,802,374 bushels exported from the United States, Mexico received 3,258,158 bushels. It is expected that the duty imposed will have the effect of reducing corn exportation to Mexico; but that is by no means certain. In any event, Mexico collects the duty for the support of the Mexican government, and there is no opportunity for advocates of free trade to change it.

The Grading of Oats.

The crop of oats is selling low, probably because the crop is large and of superior quality. At St. Louis, 75 per cent. of the arrivals grade as No. 2. Then there is 10 per cent. of oats classed as standard, a grade that is better than No. 3 but not good enough for No. 2; of No. 3 grade there is about 10 per cent., leaving about 5 per cent. to class as No. 4, or no grade. This is a remarkable showing for oats. This information is obtained from official sources.

Grading of Corn.

Of the old corn now arriving at the St. Louis market, about 75 per cent is graded No. 2, 20 per cent. is graded No. 3, and about 5 per cent. is graded No. 4, or called sample grade, it being practically an inferior no-grade corn and is only sold by sample.

No. 2 white corn is often sold higher than yellow corn when bought by the mills to grind to make high-grade corn meal; but yellow corn is preferred by the feed dealers.

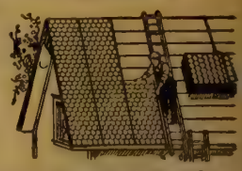
Coyotes Eating Melons.

It is reported from Pierre, South Dakota, that melon fields are being raided by coyotes, these animals beaking the rind and taking a few bites out of the heart of the melon. One farmer explains that the raids occur because the late frost killed all the wild fruit along the Missouri river, including the plums, of which the coyotes are very fond. This South Dakota country is famous for wild grapes, plums and rose bushes.

Seed Ears Should First Be Nubbed.

The first operation in properly shelling seed corn is the removal of the small kernels from the tips of the ears and the round thick kernels from the butts. The former are less productive than the other kernels of the ear. The round butt kernels are as productive as the other kernels of the ear, but do not plant uniformly in a planter.—From Farmers' Bulletin No. 415, issued by the United States Department of Agriculture.

Get a Steel Shingle Roof That's FIREPROOF!



At manufacturers' wholesale factory-to-farm cost the world's **BEST** roof is yours! Cuts fire insurance cost **10 to 20 per cent!** A $10,000 Guarantee Bond against lightning, which absolutely protects you.

Pasturing Fall Grain.

An Adams county, Illinois, correspondent writes: "Do you advise pasturing off, during October, grain sown in September? Recent rains will insure a quick and heavy growth of both pastures and fall grain."

I do not recommend turning stock onto growing grain during the fall. The very object of early fall seeding is to get a heavy and vigorous growth. This insures a well-spread root system and besides sufficient top growth to afford a winter protection. When for any reason fall growth is meager, the plants are slow to start in the spring and conditions are not nearly so favorable for getting a strong foothold early, which is so essential to the crop. True, I have seen fields which had been pastured moderately come out all right, but it is placing an unnecessary hazard upon the crop. If pasturing is done at all, let it be done during the early spring. Even this practice is not common and should be allowed only under the most favorable conditions. —L. C. Brown.

Stick to Heavy-yield Sorts.

It is surprising how some farmers stick to certain varieties of grain, even when such varieties are outclassed by others, and repeatedly proved so by near-by fields. For instance, in one region in Northern Illinois, Swedish Select oats are grown almost exclusively. In this particular region the highest yield of this variety was 55 bushels per acre, while a field of Silver Mine, grown in the same region, yielded 80 bushels per acre. In an adjoining county, Swedish Select made 70 bushels per acre, while other sorts made as high as 102 bushels per acre, and the average yield of all the fields in one threshing run was around 60 bushels per acre. Swedish Select is rather a hardy sort; it possibly will do better under hard conditions than some other sorts, but in many regions it was outyielded this season by "Silver Mine," "Big Four," and "Lincoln" by 20 to 30 bushels per acre. The point is this: Most varieties of grain do best under certain conditions; these conditions may vary, even in different townships. But when we find a variety of grain which is especially adapted to these conditions, why not fall into line? Never have I observed so great a difference in the yield of small grain crops as I have this season. And so many of them have been grown under such comparable conditions that results, as measured by yields, should be a pretty safe guide for future crops.

On one farm five varieties of wheat were grown. Soil fertility, drainage and other factors were as nearly uniform over all the fields as could be made. The preparation of seed-bed and time of seeding were practically the same. The yield of these five crops proved (under the ideal conditions of the season at least) which one was best suited.

I believe it is time we paid more attention to these outstanding results, observing especially which varieties do best under normal conditions and which are most likely to do best under adverse conditions.—L. C. Brown.

The Nurse Crop and Alfalfa.

"The theory that a nurse crop will prevent the weeds choking the alfalfa is apparently, as a rule, not well founded. In the first place, alfalfa should not be sown on foul land; and in the second place, proper disking and harrowing, at near intervals for four or six weeks before sowing, will disturb or kill far more weeds than can any nurse crop. Besides, the oats or barley sown as a nurse will when cut leave weeds in good growth, or dormant and ready to spring up as fast or faster than the alfalfa. No nurse crop is ever used with fall sowing. When ground has been thoroughly prepared for the preceding crop, and then properly cared for and made ready for alfalfa by the preliminary weed destruction, it will be found advisable to sow alfalfa alone, even in the spring."—From Coburn's "The Book of Alfalfa."

Selling the Best Groceries

We Employ Every Facility and Adopt Every Method to Insure Highest Quality

We operate what is undoubtedly the largest and most successful retail grocery store in the world. Our business for the first three months of 1910 exceeded one million dollars in this department alone. This tremendous volume of business has grown from almost nothing because of our exceedingly low prices and our splendid qualities. With the growth of the business we have adopted the most advanced methods and our grocery and food products measure up to the highest standards required by the national and state pure food laws.

You can't buy such groceries as we sell from day to day anywhere else in the world at such low prices as are quoted by us. You can't get better qualities anywhere, no matter what price you pay. We can save you one-third on the prices you pay in the average retail store, and at the same time give you better goods, more satisfactory groceries than you can possibly get of the small retail dealer.

Our Stocks are Always Fresh

The enormous volume of our business insures freshness in every article sold by us. Groceries of every description pass through our hands so rapidly that there is no opportunity for them to become stale or shelf worn. Our volume of business being so large, we go to the first sources of supply and therefore get the goods direct from the producer or manufacturer, which is also an insurance of freshness and quality. Much of the merchandise sold by us, especially in manufactured articles such as baking powders, flavoring extracts, sodas, washing powders and many others of this character, are put up by us in our own modern laboratories. Goods not manufactured by us are subject to analysis by our chemists and so you see we surround the sale of groceries with every safeguard which makes for quality and purity.

We Have No Open Stocks

Our groceries are not kept in open bins, boxes, barrels and cases sitting around the floor as you are accustomed to see them in the country grocery store. Instead our grocery department is operated on the package basis and almost all bulk goods are put up by automatic weighing, packing, bottling and boxing machinery. The original packages as they come from the producer and manufacturer are emptied into great hoppers and pass through automatic weighing machines into sacks, boxes, cans or bottles without being touched by human hands. Receiving merchandise of guaranteed quality it is so handled in our house that it passes on to you in the same fresh, wholesome, sanitary condition. Ask any customer of our grocery department about the kind of goods we send on our orders and they will unite in telling you that they never bought better groceries anywhere at any price.

Write Today for Our Free Grocery Catalogue

We issue a new grocery catalogue every 60 days. We have a new one now, just from the printer's hands, and we will be glad to send you a copy free and postpaid by return mail if you will write us a letter or a postal card and ask for it. It quotes everything in groceries and shows you how you can reduce your grocery bills at least one-third and in many cases one-half. This free book will show you how to solve the high-cost-of-living problem. It will show you how to get better, fresher, more satisfactory groceries at a big saving in price. We want to send you a copy now and if you will write us a letter or a postal card and say: "Please send me your latest grocery list," addressing your letter or postal card to us at either Chicago or Kansas City, whichever city is nearest to you, we will send the book at once, postpaid.

FOUR BIG PAPERS 80 CENTS.

The National Farmer and Stock Grower; Twice-A-Week Republic of St. Louis, the best semi-weekly in the Southwest; Farm Progress, the biggest semi-monthly farm paper printed; and Woman's World, a monthly woman's paper, sent to any address, a year, for only 80 cents. Regular subscription price, $1.50—bargain price, 80 cents. Send orders to the St. Louis Republic, St. Louis.

Our East St. Louis Branch.

"One of the marvels of our competitors has been the rapid strides made by our house at above market and its steadily-increasing trade since established less than twenty months ago. The secret, however, is easy to understand when you consider that our East St. Louis branch is a part of the Clay, Robinson & Co. organization, which exists solely for the purpose of furnishing the best service in the selling of live stock that can possibly be provided. We wish we might impress upon every shipper to above market the fact that the facilities provided by our house there for converting your consignments into the largest possible amount of cash and getting the proceeds to you without loss of an hour's time cannot be excelled. With full confidence that you will join with hundreds of other well-pleased patrons in expression of satisfaction we invite consignors to the National Stock Yards to put their business through Clay, Robinson & Co."—Live Stock Report.

Hand Shelling is the Best Method.

Shelling seed corn carefully by hand is profitable. The greater the acreage planted the greater the profit. Into a shallow pan or box each ear should be shelled separately, rejecting any worm-eaten or blemished kernels. If the supply from the one ear appears good and contains no poor kernels, it is poured into the general supply and another ear shelled in the same way. —From Farmers' Bulletin No. 415, issued by the United States Department of Agriculture.

The Deceitful Snake.

Pietro had drifted down to Florida and was working with a gang at railroad construction. He had been told to beware of rattlesnakes, but assured that they would always give the warning rattle before striking.

One day he was eating his noon luncheon on a pine log when he saw a big rattler coiled a few feet in front of him. He eyed the serpent and began to lift his legs over the log. He had barely got them out of the way when the snake's fangs hit the bark beneath him.

"Sun of a guna!" yelled Pietro. "Why you no ringa da bell?"—Everybody's.

TRAPPER'S GUIDE FREE

Tells you when, where and how to trap. Tells you of Animal Baits that are as important to a trapper as traps. Reveals trapping secrets and gives methods that will increase the catch of any old trapper and quickly make successful trappers of the inexperienced.

Tells how to prepare skins and how to get the most money for them.

The book also contains the Game Laws of all the States and Canada and gives other information worth many dollars to any trapper. It will be sent to you free if you write at once.

Packers Not in Control.

At a meeting of the National Live Stock Exchange held recently at St. Louis, the President delivered an address in which he stated that he was surprised that there was so much hostility to the packers and that very much of it was misrepresentation.

The point we wish to call attention to is the one wherein he stated that the commission interest representing the stock grower is an important factor in determining the price of cattle, hogs and sheep. He said:

"We are the equal in every particular of the packers' agent and in many battles come out victorious. No one knows better than the commission man that the packer cannot arbitrarily fix the price. How often have we seen the packers on the wrong side of the market? How often have we seen them start out bears and wind up bulls? How often have we seen them in a scramble to fill orders at much higher prices than prevailed a few hours earlier in the day? Would these conditions exist if the packers could arbitrarily determine the value? I do not hesitate to say that so long as the open market is maintained and the commission man has the confidence of the producer as he has today, the packer will never be able at his caprice to determine the price."

That is the exact situation. There are numbers of elements that go to make up the market, and the great packers, as distinct from smaller packers; the shippers on orders, and the local butchers, are a considerable element, but not all of it. There are so many and more independent elements in the market today as there ever were in the history of the trade. We are glad to see that the President of the National Live Stock Exhange has spoken by authority. The packers do not control the live stock markets of the country, and they are not able to maintain any combination that can do it successfully.

Feeding Hogs in the South.

A farmers' bulletin issued by the United States Department of Agriculture is entitled the same as the heading to this article.

It begins by saying that pork can be made as cheaply and perhaps more cheaply in the South than in any other section of the country. And yet we could name one shipping point in Illinois that ships to market in one year more hogs than are shipped to market by the states of Alabama, Louisiana and Mississippi collectively. In fact, we have just read of an Indiana farmer who sent seven car-loads of choice steers and seven car-loads of hogs of his own feeding to market in one day, realizing $22,000 for the shipment.

Corn, however, is too high in the South to profitably feed it alone; but the corn ration can be cut down and forage crops be substituted. The hogs can be raised on grazing alone and finished on corn. The bulletin contains so much readable and instructive matter which can be read and studied by all who are interested. We advise our friends to send to Hon. James Wilson, Secretary of Agriculture, Washington, D. C., for a copy. It is Farmers' Bulletin No. 411.

Cold Storage and Refrigeration.

In the field of refrigeration recent inventions have greatly simplified matters. For many years all available ice machines were only suitable for large operations. It was either a large plant or none; either the first cost of the plant or the operating expenses after it was erected was sufficient to prevent profitable operations. Refrigeration began by cooling all the products with ice, whereas to-day in the commercial field cooling directly with ice is a back number.

Formerly, when a creamery was constructed, refrigeration used to be one of the difficulties and large expenses to overcome, whereas to-day the cost of cold storage is practically nominal after the improved system is installed.

If a fruit grower desired to have cold storage on his own farm, or if a co-operative company of fruit growers desired to construct cold storage for their own benefit, a few years ago, they were unable to see any economy in the operation expense, whereas to-day modern refrigeration is so simple and inexpensive that fruit storage houses are being erected at railroad stations in the fruit-growing centers and conducted with profit, simply by holding fruits off a glutted market.

It is the same with nursery goods. The temperature in their storehouses is absolutely under control wherever there is any occasion for it. A farmer can store eggs for himself or for a community.

It is the same with meat-packing plants. The refrigerator system began in the great centers, because it had to be conducted on the extensive basis entirely unsuitable to small operators, whereas to-day the country meat packer is multiplying in numbers, simply because the system has been improved in efficiency and at the same time reduced in cost.

This subject involves such variety of construction it is not possible to explain it satisfactorily in a newspaper article. We have made arrangements for a cold-storage and refrigerator information to be furnished any of our subscribers who may desire to have it, providing they will mention the purpose for its application. Anyone desiring such information should address Information Department, National Farmer and Stock Grower, 3550 Vista Ave., St. Louis, Mo.

The Fort Worth Reporter said: "A bunch of Texas wagon hogs, twenty-three in number, was sold on the Fort Worth market at a price that brought the owner over $34 per head. They averaged 352 pounds. Mr. Winslow, a farmer living near Anneta, in Parker county, fed them, and, according to his figures, made a big profit."

Cash Grain at St. Louis.

On September 30th the grain at St. Louis was sold at the prices given below. This is for actual grain sold either by grade or sample and paid for in real money:

Cash oats—White easier and mixed ½ cent lower; in poor demand from local and outside shippers.

Quote No. 2 red wheat, $1.00 to $1.04; No. 3 red, 95 to 99½ cents; No. 4 red, 85 to 93½ cents; No. 2 hard, 95 cents to $1.00; No. 4 hard, 85 to 95 cents.

Quote No. 2 corn, 51⅛ to 51¾ cents; No. 3, 51¼ to 51⅛ cents; No. 2 yellow, 51½ to 52 cents; No. 3 yellow, 51 cents; No. 2 white, 51½ cents; No. 3 white, 51 cents; No. 4 white, 50 cents (nominal).

Quote No. 2 oats, 31 to 31¾ cents; No. 3, 29½ to 30 cents; No. 4, 29½ cents; No. 2 white, 35 cents; No. 3 white, 33½ to 34½ cents; No. 4 white, 31½ to 33¼ cents.

The Market For Wheat.

The wheat market is declining in the face of statistical conditions which favor higher prices.

On September 30th, 1910, No. 2 cash wheat sold at St. Louis for $1.00 to $1.04 a bushel, against $1.20 a year ago.

On September 30th, at Chicago, in the speculative market, the September option closed at 93½ cents, against $1.20 a year ago.

On September 30th, at Chicago, the December wheat option was quoted at 97⅞ cents a bushel, against 99⅞ cents a year ago.

On September 30th, at Chicago, the May option of 1911 was quoted at $1.02⅛ at the close, against $1.02¼ a year ago.

These figures speak louder than words. The indications are that the world's supply of wheat is considered sufficient for all purposes, or, what is equally important, the world is unable to pay a strong price for it. Later on we may see a change for the better; there is no certainty, although the market has been boomed before with less reason than the present statistical position warrants. The better movement when it comes will be in the May option.

Announcement was made at El Paso, Texas, on September 24th, by Morris & Co., the beef packers, of the purchase in Mexico of one and a quarter million acres of land, which is to comprise one of the largest ranches within a few miles of that city on the Mexican side of the river.

An Alfalfa Bulletin.

Press Bulletin No. 178, issued by the Oklahoma Experiment Station at Stillwater, Okla., contains a condensed lecture on alfalfa. It has four headings: "Why Grow Alfalfa?" "Choice of Soil." "Preparation of Seed-bed." "Fertilizing Alfalfa, Seeding, etc." This is intended for free circulation in Oklahoma, but they generally favor farmers in any state, providing there are any remaining on hand.

Growing More Rye.

In regions where rye will do well I believe that farmers have not always made the most of the crop. Prof. Boss, of Minnesota, has been making careful comparisons of barley and wheat, and has found that the farm value of rye in Minnesota for ten years has been $10 per acre, as compared with $9.85 for wheat. This covers the grain only. The rye straw is worth $2.00 to $3.00 per ton more than wheat. Minnesota is preeminently a wheat-growing state and likewise most of it is also adapted to rye. For this reason farm values of the two crops covering so long a period is worth careful consideration. Rye does not prosper in all regions, besides many still sow low-grade varieties. Most failures of the rye crop may be traced to one of these causes. Rye can be grown with profit on a much larger acreage in Illinois. Yields in the Northern region of the state have run up as high as forty-five bushels per acre this season, and the crop has sold at profitable prices.—L. C. Brown.

Its Economy and Power Startle the World!

The Engine Runs on COAL OIL at a Fraction of Cost of Gasoline.

Thousands of these marvelous engines—in actual use today—prove beyond question that kerosene is the engine fuel of the future. The success of the "Detroit" Engine is absolutely unparalleled.

Demand is overwhelming.

Kerosene (common coal oil) runs it with wonderful economy. Kerosene generally costs 6 to 15c less per gallon than gasoline—and gasoline is still going up. Runs on any engine fuel. Only three moving parts. Light and portable. Does work of engines weighing four times as much. Runs everything.

The Amazing "DETROIT"

The Kerosene Wonder—on 15 Days' Trial—Direct From Factory

Any engine you want, from 2 to 20 H. P., sent on 15 days' free trial—tested immediately before shipping and ready to run. If dissatisfied—every dollar you have paid us for the engine cheerfully refunded. Prices lowest ever known for high-grade, guaranteed engines.

The New Book is Ready—WRITE! Tells all about these new wonders that mark a new era in engines. Special introductory price on first "Detroit" engine sold in each community. Quick action gets it. Address

Detroit Engine Works, 383 Bellevue Ave., Detroit, Mich.

FOR THE FRUIT GROWER.

Someone in the family ought to be a fruit grower; and yet it is very hard to interest the stockman in fruits. We will do our best, however, by placing a good fruit book in the hands of our readers. The book entitled Amateur Fruit Growing was written by Samuel B. Green, a practical man and one of the best authorities on the subject. There are 134 pages, written with special reference to the growing of fruits for the home and the market. We will send the book entitled Amateur Fruit Growing and The National Farmer and Stock Grower one year for 55 cents. Send a money order to Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

QUESTIONS AND ANSWERS ON MILK AND MILK TESTING.

By CHAS. A. PUBLOW, A. B., M., D., C. M., and HUGH C. TROY, B. S. A.

A book that no student in the dairy industry can afford to be without. No other treatise of its kind is available, and no book of its size gives so much practical and useful information in the study of milk and milk products.

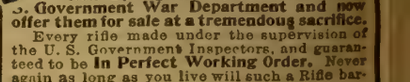
During recent years the rapid advancement in dairying has opened up new fields, and the demand for men to cary on the work is greater than is the supply of qualified men. The production, care and marketing of clean milk, the preparation and sale of sour milk drinks, the inspection of dairy herds and their surroundings, cow testing associations and the inspection of milk and its products for adulteration, have all created more opportunities for the young men who can successfully do the work.

It is well known that practically all these positions are awarded to the men who make the best records in competitive examinations. All these facts were kept in mind when the authors prepared this work. Not only has much new material been incorporated, but every question that can arise is asked and answered in so simple a manner that even the dullest reader should have no difficulty in getting a clear understanding of the subject.

Illustrated, 5x7 inches, 100 pages, Cloth. Net, 50 cents.

ORANGE JUDD COMPANY,
439 Lafayette Street, New York.

$25 SPRINGFIELD RIFLE FOR $1.95



We purchased all the regulation Springfield Rifles from the U. S. Government War Department and now offer them for sale at a tremendous sacrifice.

Every rifle made under the supervision of the U. S. Government Inspectors, and guaranteed to be In Perfect Working Order. Never again as long as you live will such a Rifle bargain come your way.

These rifles cost the U. S. Government $18 a piece to manufacture.

The Springfield Rifle is a marvel of accuracy. Every rifle has a long range adjustable sight and is equipped with bayonet and cleaning rod. Shoots a 45-70 caliber cartridge. Just the thing for big game. With a Springfield rifle you can bring down a deer at 300 yards. The accuracy of the sight makes it possible to draw a bead as fine as a hair. Excellent Shot Gun. Every gun is well oiled, bright and free from rust. Sent by express on receipt of $1.95. Ammunition: 45-70 Caliber Cartridges, ball 40c; scattered shot, 50c; packed 20 in a box. Write for Catalog illustrating hundreds of money-saving government goods bargains.

Sol Hirsch & Sons, U. S. Dept., 101 St. Louis, Mo.

Agricultural Blue Book.

This is our own publication, and is a copyright work of great merit and convenience. It is called "The Agricultural Blue Book and Live Stock Breeders' Directory." It is designed to be useful to farmers and to business men in all sections of the country.

The Farming Section.

The Agricultural Blue Book contains 128 pages devoted to names and addresses of live stock breeders, experimental and general farmers, dairymen, horticulturists, etc. This farm list numbers 150 to 180 to the page—about 22,000 in all. All the names and addresses have been carefully verified. In each instance the principal occupation and class of stock raised are stated. It is fully up-to-date and represents the owners of about twelve millions of acres of land, who conduct their own farming operations. In various lines of business the value of this Agricultural Blue Book cannot be overestimated.

The Business Section.

At the request of many of our patrons we have also included a Business Section, consisting of thirty-two pages. This contains a list of firms who do business with agricultural people. This list is arranged alphabetically by states. It gives the name, address, occupation, and class of manufacture, etc. A general farmer, stock raiser, dairyman, poultry keeper, ranchman, fruit grower, will find this book to be valuable and interesting.

Ready For Delivery.

The Agricultural Blue Book is just out and ready for delivery. The size is 6x9½ inches, elegantly bound in blue cloth with gilt title. The price is $2.50 per copy. If the buyer is not satisfied, he can return the book and the money will be refunded. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Death of Col. Isaac Elwood.

During the month of September Colonel Isaac Elwood died at his residence in DeKalb, Ill., at the age of 77 years. He was a well-known pioneer in agriculture and live stock raising, being at the same time an Illinois farmer, a Texas ranchman and a fence-wire manufacturer. He was born at Salt Springville, New York state. As a young man he went overland to California, and on his return settled in DeKalb. In 1874 he began the manufacture of barbed wire and from that time became known throughout the West. Colonel Elwood was a leader of men in many good works for the betterment of mankind, especially in educational institutions. He was a member of the leading agricultural societies and live stock associations.

The Market For Corn.

The high cost of living should not be charged to corn. On September 30th, at St Louis, No. 2 cash corn was selling at 51¾ cents, which is 11¼ cents lower than cash corn sold or at this time last year.

The September Chicago option for 1910 was closed out at 49¾ cents a bushel, against 59 cents a month ago and 61½ cents a year ago.

The December corn option closed at at 48⅝ cents on September 30th of this year, and last year the price was 58 cents.

The Chicago people on September 30th closed the May, 1911, option at 51⅝ cents, against 60¼ cents a year ago.

These figures show that for the present it is better to feed corn to stock than to ship it to market.

The Market For Oats.

As stated elsewhere in this issue, oats are selling too low to pay back to the farmer the cost of cultivation, let alone a profit. A year ago, on September 30th, the September, 1909, option at Chicago closed out at 48 cents a bushel, and this year the September, 1910, option was closed out at 31½ cents a bushel. Last year, on September 30th, cash oats sold in St. Louis at 40 cents, and this year at 31½ to 31¾ cents a bushel.

As to the future, there is little encouragement. On September 30th the Chicago option for December was quoted at 31¼ cents, which looks as though the trade believes prices will stay low. The quotation for May, 1911, delivery was 34 cents, and even this quotation has declined 7 cents a bushel in the past two months.

Preference For Mares or Geldings.

"Remember that the Southern buyers demand horses that are young, serviceably sound and broken to single hanress when they pay high prices, and will pay from $10 to $15 more for mares than geldings. Just the reverse obtains with the Eastern buyers at this season of the year, as they will pay more for geldings."—Extract from circular of Campbell & Reid and Western Sale Stables Company, National Stock Yards, Ill.

The Mule Trade.

"The mule trade is about the same as it has been the past three weeks. Nice, tasty, cotton mules are selling readily on arrival; good sugar mules and miners from 15 to 15½ are selling good. Plain, thin mules are selling bad, and big mules that are common are selling bad. Be very careful and get your mules with class and you will have no trouble in selling them to advantage."—Extract from Holland, Nugent & Maxwell Bros.' circular.

Cement Block Machines.

The simple cement block machines first put upon the market were extravagant in cost, far beyond any excuse for the prices asked, and this had the effect of turning away the minds of many people who wished to use concrete in simple ways. Others who were ingenious made their own cement block machines, and so the work has progressed.

Builders and contractors do a large majority of their work by first constructing the moulds and filling them in with concrete. But there yet remained the demand for a machine that would manufacture cement blocks of all moderate sizes economically and turn them out rapidly. This want has been supplied by a Swiss machine which, being manufactured in the United States, is recommended by the United States government as being the most complete and satisfactory cement block machine made. Any of our readers having cement construction in view will be placed in communication with the manufacturer by addressing this office.

Dried Fruit at St. Louis.

Offerings light; market dull and steady in price. Apples—Evaporated rings at 6 to 6¼ cents for prime to 6½ cents for fancy, and poor stock 4½ to 5½ cents; waste, 1½ cents; chops, 1¾ cents. Sun-dried—Prime quarters at 4¾ cents; poor to fair do. at 4 to 4½ cents. Peaches—Sun-dried halves, 4 to 4½ cents.

FARM AND RANCH LANDS.

ALABAMA.—12,000 acres of cut-over pine lands in Baldwin county, Alabama, nearly thirty-five miles southeast of Mobile. Soil a sandy loam with clay subsoil. A colony now being developed on land adjoining, and the lands being sold at $20 per acre. Four or five miles distant, on apparently the same kind of land, a superior quality of tobacco is being grown, and the lands are selling at prices ranging from $20 to $30 per acre. Good water, delightful climate. Price, seven dollars and fifty cents ($7.50) per acre. **T. H. Jones,** 513 Roe Bldg., St Louis, Mo.

CALIFORNIA

The Land of Opportunity and Plenty

California Farm Land set to deciduous fruits pays back the original cost and yields a profit in five years. Mild climate, no sunstroke and thunder storms. You can work out of doors all the year round; even eat strawberries in December.

Write for free information about any part of the State to the

California Development Board,

San Francisco, California,

It is a State Organization, with the Governor as President,

and has nothing to sell.

Address your letter to Bureau No. 30.

FLORIDA.—50,000 acres of moderately level land in Northwest Florida. Railroad passes through the tract, with location for a town on the property. It is within sixty miles of the city of Appalachicola and its fine harbor. Soil a sandy loam with a clay subsoil, adapted to the growing of truck garden, fruits, pecans, grapes, etc. Near to this property is one of the regions where is grown the famous Sumatra leaf wrapper tobacco, so there seems to be no reason why this same tobacco could not be grown on this land.

There is estimated to be now on the land about 3,500 feet per acre of yellow pine timber, or a total of about 175,000,000 feet. It is claimed that there are no swamps or wet land, except a small acreage along the creek.

This property is well located as to climate, soil and purposes for which it can be used for a subdivision and colonization proposition.

Price, six dollars ($6.00) per acre. **T. H. Jones,** 513 Roe Bldg., St. Louis, Mo.

MISSISSIPPI.—27,000 acres on two railroads, in Jackson county, Mississippi. A sandy loam soil with red clay subsoil; moderately level, yet sufficiently rolling to drain and cultivate well. Good water, delightful climate. Here can be grown cotton, corn, oats, potatoes, both Irish and sweet, and nearly all kinds of garden truck, besides figs, Satsuma oranges, grapes, berries of many kinds and the excellent and profitable paper shell peas. Some believe that this coast region of Mississippi, Alabama and Florida will rival California when it is developed. Price, six dollars ($6.00) per acre. **T. H. Jones,** 513 Roe Bldg., St. Louis, Mo.

MISSOURI.—1,700 acres of "cut-over" hardwood timber lands, located in Reynolds county, Missouri, nearly 125 miles south of St. Louis. Not a solid body, but in tracts of 40, 80, 100, 200, 320 and 960 acres. About 25 to 40 per cent. can be used as farming land, remainder as orchard and pasture land. Some of it hill land, some rolling, some smooth. Excellent water, very healthful climate. Good land for growing poultry, stock and fruit, especially apples, peaches, grapes, strawberries, blackberries, etc. The timber is chiefly oak and hickory, and it is estimated that there can now be cut nearly 3,500 feet per acre. Price, $5.00 per acre. **T. H. Jones,** 513 Roe Bldg., St. Louis, Mo.

MISSOURI.—4,120 acres of rich, cut-over well-drained bottom land, within one mile of railroad station. Located in the rich productive region of Stoddard county, Southeast Missouri. This is the locality where such great crops of cotton, wheat, oats, corn, timothy, red clover, alfalfa, potatoes, and, in fact, nearly all kinds of grains, grasses and fruits and vegetables grown in the United States are produced as well. The land is very rich and the region is developing rapidly. It will cost about $10 per acre to get the land ready for plowing. Good markets and shipping facilities. Will be sold in farm tracts at $25 to $30 per acre. Many consider this better than the rich lands of Illinois selling at $200 per acre. **T. H. Jones,** 513 Roe Bldg., St. Louis, Mo.

NEW MEXICO.—136,000 acres of slightly rolling, well-drained land, in one body now used as a good stock ranch. This land located about twenty miles from Roswell, New Mexico, and nearly ten miles east of the Pecos river. It is estimated that four-fifths of the land would be well adapted to agricultural purposes, it being about the same quality and characteristics of thousands of acres now in farms in the Panhandle of Texas, and which is being sold at $10 to $20 per acre. Much of this land situated in the valley is a black, alluvia soil, well adapted to agricultural purposes. This property is, however, now used and well adapted as a stock ranch. Since stock growing is so profitable, it certainly is a good proposition to so continue to use it. Nevertheless, it might be subdivided, sold into small farms and cultivated, especially following out the methods of dry farming.

The ranch is well supplied with water holes and a number of wells and windmills. It is also fenced with a substantial fence of five wires.

There are prospects of a railroad being built through the land.

Price, six dollars ($6.00) per acre. Reasonable terms. **T. H. Jones,** 513 Roe Bldg., St. Louis, Mo.

The Call of the Southeast

To the man looking for a home, where productive lands, favorable climate and abundant rainfall make the best paying farm locations in America the Southeast is now the unequalled section. Land from $5.00 to $40.00 an acre near to the heart of the country and close to the best markets. The largest returns from alfalfa and other hay, wheat, corn and all truck crops. Lands unsurpassed for stock and poultry raising, and dairying. For fruit growing no region is more profitable. The Southeast has opportunities for every kind of farming. **The Southern Railway** will help you to find the desired location. Send for publications to.

M. V. RICHARDS
Land and Industrial Agent, Southern Railway
1344 Pennsylvania Ave., Washington, D.C.

TENNESSEE.—Send for booklet on farming and full description and prices of lands for sale in the valley of East Tennessee, the healthiest climate and best lands in the country. Address, **East Tennessee Real Estate Company,** Morristown, Tenn.

TEXAS RANCH FOR SALE: 68,000 acres, 25 per cent. of which is first-class agricultural, the remainder is rolling and good grazing land, divided into fourteen pastures, watered by thirty-two wells, equipped with windmills, three large tanks and permanent running water, situated within five miles of the town of Del Rio, in the counties of Valverde and Kinney, bordered on the south for five miles by the Southern Pacific Railroad, with a large warehouse and loading pens in the ranch on the railroad. The Orient Railroad is building from San Angelo to Del Rio, and will run almost through the center of this ranch. There are adequate improvements for a first-class ranch. Price, $5.00 per acre; $100,000.00 cash, and good time on the deferred payments at 6 per cent., interest payable annually. Address, **T. B. Jones,** Box 27, Del Rio, Texas.

CASH FOR YOUR FARM OR BUSINESS,

No matter where you live. Write me today if you want to buy or sell any kind of Real Estate or business. **FRANK P. CLEVELAND,** 7910 Adams Express Building, Chicago, Ill.

We can sell your property; send description. **Northwestern Business Agency, Minneapolis.**

WESTERN CANADA'S 1910 CROPS

Wheat Yield in Many Districts Will be from 25 to 35 Bushels Per Acre

Land sales and homestead entries increasing. No cessation in numbers going from United States. Wonderful opportunities remain for those who intend making Canada their home. New districts being opened up for settlement. Many farmers will net, this year, $10 to $15 per acre from their wheat crop. All the advantages of old settled countries are there. Good schools, churches, splendid markets, excellent railway facilities. See the grain exhibits at the different State and some of the County fairs. Letters similar to the following are received every day, testifying to satisfactory conditions; other districts are as favorably spoken of:

They Sent for Their Son

Maidstone, Sask., Canada, August 5, 1910.

My parents came here from Cedar Falls, Iowa, four years ago and were so well pleased with this country they sent to Coeur d'Alene for me. I have taken up a homestead near them, and am perfectly satisfied to stop here. LEONARD DOUGLAS.

Wants Settlers' Rate for His Stock

Stettler, Alberta, July 31, 1910.

Well, I got up here from Forest City, Iowa, last spring in good shape with the stock and everything. Now, I have got two boys back in Iowa yet, and I am going back there now soon to get them and another car up here this fall. What I would like to know is, if there is any chance to get a cheap rate back again, and when we return to Canada I will call at your office for our certificates.

Yours truly, H. A. WIK.

Will Make His Home in Canada

Brainerd, Minn., August 1, 1910.

I am going to Canada a week from today and intend to make my home there. My husband has been there six weeks and is well pleased with the country, so he wants me to come as soon as possible. He filed on a claim near Landis, Sask., and by his description of it it must be a pretty place. My brother-in-law, Mr. Frank J. Zimmer, lives there and it was through him that we decided to locate in Canada.

Yours truly,
MRS. RICHARD HENRY EBINGER.

Send for literature and ask the local Canadian Government Agents for Excursion Rates, best districts in which to locate, and when to go. Address

J. S. Crawford
125 W. 12th St., Kansas City, Mo.
C. J. Broughton
412 Merchants Loan & Trust Bldg., Chicago, Ill.

Amatite ROOFING

It has a rough surface of *real mineral matter* on the weather side. It is evident to anyone that it is no more necessary to paint such a surface than it is necessary to paint a stone wall. Stone needs no paint; neither does Amatite. It is strong enough in itself to bear the brunt of rain and wind and sun without a coat of paint.

To paint Amatite would be a waste of time and trouble.

Amatite will last for many years without any care whatever. It is made to be *trouble proof* as well as *weather proof.*

No paint is good enough to make a durable roof; a thick layer of pitch, faced with a real mineral surface, is far better—*and that means Amatite.*

A Free Sample will be sent on request to nearest office.

BARRETT MANUFACTURING CO.

New York, Chicago, Philadelphia, Boston, Cincinnati, Minneapolis, Cleveland, St. Louis, Pittsburg, New Orleans, Kansas City.

To Avoid the Hessian Fly.

A timely circular relating to the Hessian Fly has been issued from the Illinois Agricultural Experiment Station, and it applies equally to other states. The circular goes into the life history of the fly, the nature of injuries to wheat caused by it, for which we have not space in this issue, but we will state the preventive measures and advise farmers to study them carefully for the reason that the Hessian Fly is due to be in greater force next year unless very considerable work is done to prevent it.

Prevention of Injuries.

1. If volunteer wheat appears on the farm, plow it up and cover it well, rolling if necessary, when it is three or four inches high, and avoid disturbing this buried wheat for a fortnight thereafter.

2. Burn chaff, screenings and other waste left from threshing wheat grown in infested fields this year.

3. Choose for wheat, wherever possible, ground not in that crop last year.

4. Put the soil in the best possible condition for a thrifty growth of the wheat plant, fertilizing as may be necessary.

5. Select for sowing varieties of wheat with a hard straw, and especially those which will stool or tiller freely from the root.

6. Sow as late as in the general judgment of the region is safe in view of the possibility of winter-killing.

7. Burn the stubble of fields which have been infested by the fly, mowing it first, if necessary; or plow the stubble under in summer as soon after harvest as practicable.

Resources of California.

To answer inquiries concerning the development of California and to explain the wonderful opportunities and resources of the Golden State there is an institution called Bureau 30 of the California Development Board, of which the Governor of California is President. See page 9, and, if interested, write for free information, and do not hesitate to ask direct questions. Address, Bureau 30, California Development Board, San Francisco, Calif.

Won the Sweepstake Prize.

In February of the present year The National Farmer and Stock Grower received a subscription from Mr. J. T. Boyd, of Rardin, Coles county, Ill., and we sent him as a premium two pounds of Johnson County White Seed Corn raised by the grand champion corn grower, Mr. L. B. Clore, of Indiana.

Mr. Boyd sowed the seed and from the resulting harvest he selected twelve ears, which he exhibited at the County Fair. With these ears he won first prize in class and the sweepstakes prize also. The actual cash money won was $13. We have requested Mr. Boyd to exhibit them at the Illinois State Fair, and, if winning there, to carry them forward to the National Corn Show. It will be remembered that we offer substantial awards if these win prizes at any State, Interstate or National Show.

From Our Premium Corn.

In April, 1909, Mr. Hiliary Downs, of Hunter's Depot, Ky., paid us one dollar for subscription to The National Farmer and Stock Grower, which paid for two years. We sent him one single pound of Pascal's Yellow Dent Grand Champion Corn as a premium, which he planted. With the corn raised therefrom last year he won first premium at his County Fair.

In the year 1910 he did not receive any seed corn from us, but from the seed of his own raising, originating with the single pound of Pascal's corn, he reports that he won first prize and sweepstakes prize at the County Fair of 1910, also a second prize at the Kentucky State Fair of 1910.

This is a grand record for prizes won in two years by ears of corn originating from one pound of seed.

The Favorite Cow.

Mr. J. H. Monrad, expert journalist, representing the sterling market paper, the New York Produce Review and American Creamery, writing from the Hamburg Dairy Show, said:

"The red Angler cow from which the red Danish has been evolved was represented with some very fine heads, but the favorite is now unquestionably the heavier Friesians (Holstein-Friesians), weighing from 1,200 to 1,600 pounds and averaging a yield of 8,000 pounds of milk a year (but often doubling this); they seem to fill the German craving for dual-purpose cows."

Highest at South Omaha.

On Wednesday, September 7th, the South Omaha house of Clay, Robinson & Co. sold for D. R. Whitaker, of Cheyenne, Wyo., seventy-nine steers, averaging 1,295 pounds, at $6.80 per 100 pounds. This was the highest price ever paid for grass beef cattle on the Omaha market.

Sire Not "Half" the Herd.

This is one of those old chestnutty sayings that has been with us so persistently that we have come to believe it, notwithstanding the fact that it is not true, says Pacific Dairy Review. The fact is that when we speak of herds, the sire is the whole herd. As the sire is, so must the future be. There is no half-way business about it. The man who breeds to poor sires will have a poor-bred herd, just as sure as the man who breeds to good sires is sure to have a good herd. The sire may be half of the first generation of his descendants, depending upon his prepotency, but a dairy herd is not a matter of keeping everlastingly at it, and sooner or later the whole herd must be like the sire, either all good or all bad.

Barbed Wire and Fencing

SPECIAL SALE AT WRECKING PRICES

A great opportunity. Now is the time to buy. Save 30 to 50 per cent. We bought the contents of a large boat disabled in Lake Huron, containing 20,000 kegs of Wire Nails, 500 tons of Barbed Wire, many cars of Fencing and other Wire Products. We give our customers the benefit of our wonderful operations. The Barbed Wire and Fencing is the best manufactured. It is unimpaired except that it may be somewhat dulled, but it is not damaged; practically as good as you get from high-priced dealers.

Galvanized Barbed Wire, 2 and 4 point, put up on reels, per 100 lbs., **$2.00;** painted, **$1.60.** Galvanized Barbed Wire, 80 rods to the reel, per reel, **$1.50;** painted, **$1.43.** **Electric Weld Square Mesh Fencing.** The best on the market. 26 in. high, 6 in. stays, heavily galvanized, per rod, **18½c** 12 in. Square Mesh Poultry Fence, per rod, **7c.** 12 in. Graduated Diamond Mesh Fencing, per rod, **8c.** Other heights at proportionate prices. **Smooth Galvanized Fence Wire,** No. 9 gauge, per 100 lbs., **$2.00;** No. 11, **$2.25;** No. 12, **$2.50;** No. 14, **$2.75.** Poultry Fence Staples, per 100 lbs., **$2.50;** Galvanized, per 100 lbs., **$2.75.**

MIXED WIRE NAILS, PER KEG, $1.00

5,000 kegs of Mixed Wire Nails that are rusty but are sold just as they come, no guarantee as to assortment. Per keg, **$1.00.**

New Regular Wire Nails; 8D, per keg, **$2.00;** Boat Spikes, per 100 lbs., **$1.50;** Railroad Spikes, per 100 lbs., **$1.75;** **Mixed Iron Bolts,** good assortment, new, per 100 lbs., **$3.00;** **Mixed Rivets,** per 100 lbs., **$2.00.** **B. B. Phone Wire,** per 100 lbs., **$2.85.**

Ask for Our 1000-Page Illustrated Free Catalog L. F. 990.

Here's the Great "Price Wrecker." 10,000 illustrations. Shows everything from a needle to a locomotive. It's free.

CHICAGO HOUSE WRECKING CO., CHICAGO, ILL.

Dairy and Creamery Notes.

The mammoth cheese which is to be made for the National Dairy Show will weigh nearly 4,000 pounds, instead of 2,000, as previously announced. It will be made on a flat car and taken to Chicago with appropriate ceremonies. It will be the largest cheese ever pressed.

Visitors at the National Dairy Show will this year be able to purchase dairy products there. This will prove a novel feature to city people who can see the articles produced and then carry them home as souvenirs.

The dairy buttermakers and market milk and cream producers should communicate with the National Dairy Show Association, 1305 Unity Building, Chicago, for premium lists on dairy butter and milk and cream.

Cheesemakers will be interested in learning that the prizes on cheese at the coming National Dairy Show have been greatly increased. Premium lists will be mailed on application to the National Dairy Show Association, 1305 Unity Building, Chicago, Ill.

The Buttermaker and the National Dairy Show.

The buttermaker in the local creamery can do his patrons no greater educational service than to inform them about the National Dairy Show to be held in Chicago, October 20th-29th, and to advise them to attend. There is no other place where they can get so much valuable information in so short a time. The buttermaker also serves his creamery well in doing so. Increase in knowledge on the part of the patrons of a creamery is conducive to closer co-operation and harmony of effort.

AMAZING DETROIT KEROSENE ENGINE STATE FAIR EXHIBIT.

One of the great attractions secured by the management of the Missouri State Fair is the unique exhibit of the Amazing Detroit Kerosene Engine in use as a Farm Power Plant. This extremely simple and economical engine runs as successfully on common lamp oil (kerosene) as on gasoline.

No engine in recent years has aroused such widespread interest as the Amazing Detroit, the Kerosene Wonder.

One of the smallest Detroit Kerosene Engines will be shown performing eight different operations, viz.: Running a cream separator, a barrel churn, a water pump, a wood saw, a corn sheller, a food mill, an electric light storage battery outfit and a washing machine.

Every farmer, stockman and dairyman, and all the women folks, will find this exhibit a remarkable object lesson as to the almost unlimited uses to which the Detroit Engine can be applied. The Detroit Kerosene Engine is manufactured by the Detroit Engine Works, 383 Bellevue Avenue, Detroit, Michigan.

The Dairy Calf and the Dairy Cow.

Whether born in the spring or fall, the calf that is to grow into a dairy cow needs special attention. She will not thrive on the same kind of treatment the beef calf should receive. Or, if she does thrive on it, she may thrive too much and develop beef-making qualities rather than milk-producing qualities.

There are only a few calves that are born fit to become dairy cows. These are usually from the pure-bred dairy lines of cattle or from some of the other lines having special outcroppings with dairy attainments.

The greater number of calves should be made into veal soon or into beef later. It is a waste of time to develop a calf into a milch cow merely because it is a female of the cattle race. There are millions of cows now that have been produced from such calves, and they are worse than no cows, as they produce no profit but entail a large amount of labor on the people caring for them.

The owner of the dairy calf should know enough about forms of dairy cows to be able to determine the probable result of raising and properly feeding the animal out of which he proposes to make a dairy cow. That being done, the matter of proper feeding is next.

The owner can afford to feed whole milk to the calf he is raising for the dairy, for a good start counts for a good deal. After a few weeks he may substitute oil meal for the butter-fat in the milk, but he should not attempt to do this till the digestive processes of the calf are working to perfection.

Overfeeding must be avoided, and a limited supply of milk is better than giving all the milk a calf will drink. Even old farmers spoil calves by giving them too much milk at each feeding, especially if the milk is cold. As soon as the amount of milk fed is greater than the calf can digest, it goes through undigested, and a case of scours is present that it will be difficult to cure. Scours kill multitudes of calves every year. The surest way to prevent scours is to feed milk sparingly and have it warm enough not to interfere with the digestive processes in the stomach.

A growing calf should be encouraged to eat oats and clover hay. The stomach of the calf is better adapted to digesting grain than is the stomach of the cow. Grain that would pass through a cow whole is fully digested in the stomach of the calf. This is because in calfhood the food does not have to go through four stomachs to be utilized, as it does in the case of the cow, which must have a digestive apparatus suitable to digesting large quantities of dry hay.

The dairy calf must never be stunted. If she is stunted, this stunting will show its effects for a long time, and its effects may never be overcome. The growth habit should be made continuous, for this means a rapid development of the calf into a cow of large capacity.

The breaking of the cow to milk should be gradual, and the calf while still young should be accustomed to the pressure of the hand as if in the act of milking. This will be a great help later on when she begins to give milk.

Credit Subscriptions.

We desire to invite attention to our blank form at the end of this item, which can be filled out for subscriptions on credit. This is an invention of Uncle Piper, our subscription editor, who has guaranteed that every one of them will be paid when they are due. The subscription price of this paper is $1.00 for three years, and the bill for the subscription is sent to the subscriber at the end of the first year. When the bill goes out Uncle Piper generally slips in a list of handy premiums for the subscriber to select one, providing he pays the bill promptly, and the general result is that the bill is soon paid. When it comes to getting subscriptions from intelligent, high-class farmers, Uncle Piper is at the head of the class.

Uncle Piper.

SUBSCRIPTION BLANK.

To the Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Gentlemen: — You are hereby authorized to enter my name as a subscriber to The National Farmer and Stock Grower for three years. At the end of the first year I will pay One Dollar for the three-year period. This order is given with the understanding that I am at liberty to stop the paper at any time by paying the subscription to that date.

Buying Canadian Creameries.

It is reported that an American Syndicate is buying up Canadian creameries with a view to shipping the cream to the United tSates under the reduced duty of five cents a gallon. To do this, however, it is not necessary to buy the creameries; all they have to do is to buy the milk, separate the cream and feed the skim milk to the Canadians.

Changing the Milk Standard.

The Milk Reporter calls attention to the reduction of the milk standard by the New York authorities in regard to solids in milk. Formerly any milk showing under 12 per cent. solids was considered adulterated, and milk dealers were tried and convicted whenever solids in milk were shown to be less. The new standard is 11½ per cent., and the Milk Reporter argues that as the state experts were wrong in the first instance, and that many innocent men have been convicted of adulterating milk who were innocent and blameless, the fines should be refunded and the convictions set aside.

The New York experts set the standard at 12 per cent. total solids, when Prof. H. C. Sherman, of Columbia University, New York, is authority for the statement that: "The milk of a single healthy cow in normal condition may sometimes contain as little as 10 or as much as 18 per cent. of solids, while in extreme cases even these latter limits may be passed."

An Educated Cheese.

Andrew Carnegie, while eating with appetite and courage the dishes cooked by the young girls of a cooking school, said:

"I have no fear before the experimental dishes. He who has eaten in France learns to eat boldly.

"Think of the French cheeses alone!

"Why, one afternoon in a restaurant in the Boulevard des Italiens I heard a guest shout angrily:

"'Waiter, look here; this cheese is walking all over the table!'

"'Ah, have no fear, monsieur. It won't escape,' the waiter replied. 'If it goes too far, just call 'Jules, Jules!' It always answers to its name.' "—Exchange.

Dairy and Creamery.

A co-operative creamery at Sheldon, Ill, in which about sixty farmers were interested, has failed for want of milk. If this is the only reason, it don't say much for the farmers who took stock in the enterprise.

William Peterson, of Jersey City, was convicted in Special Sessions, Staten Island, last week, of selling oleomargarine for butter and sentenced to pay a fine of $300 or go to jail for six months. He was caught by State Detectives in the restaurant of J. Adams, in New Brighton, where he sold ten pounds of the olemargarine for butter at 23 cents a pound.

Particular attention has been given by the management of the National Dairy Show this year to the question of prizes, medals, diplomas, etc. Cash prizes are larger in nearly all departments, and the medals and diplomas will be real works of art. A high standard of excellence is aimed at, so that the recipients will prize them for their intrinsic worth as well as for the honor which is associated with them.

The Carmine Creamery Company, of Carmine, Fayette county, Texas, has been incorporated by Joe Wagner and others. Carmine is splendidly situated in a good dairy country, on the Houston and Texas Central Railway, and if the surrounding farmers will do their duty and provide a nice quality of cream, they may be assured of the result.

During the month of July, 1910, Consul Paul Lang states, 30,510 gallons of cream, from the Sherbrooke district, Province of Quebec, were imported at the United States Custom House at Derby Line, Vt. The shipments were for manufacturing into butter. The price of butter in Canada in July was 22 cents a pound, while in the United States it was 29 cents. The duty on cream is five cents a gallon, and the duty on butter is six cents a pound.

At the New York State Fair, the gold-medal butter exhibited by S. H. Northrup, of Richville, St. Lawrence county, was scored 97.66 points out of a possible 100; and the silver-medal butter exhibited by Jno. W. Hooker, of Sinclairville, Chautauqua county, was scored at 95.66. The packages exhibited were made from milk received from not less than five individual dairymen.

A crusade against adulterated milk by City Chemist Buckland and State Food Inspector Meyer is stirring up the milk sellers of St. Louis and will produce good results. The adulteration of milk by chemicals is indefensible, and we hope all offenders will be convicted.

The Union Dairy Company of St. Louis, Mo., has opened another creamery and receiving station at Troy, Ill. This method of establishing stations wherever there is a supply of milk is cutting down the shipments on the open market to the larger cities.

At the New York State Fair, the exhibit of cheese winning the gold medal was scored 99.07 out of a possible 100, and was exhibited by Leslie R. Wells, of Hannibal, Oswego county. The silver-medal award went to O. N. Heath, of Rodman, Jefferson county, on a score of 99.04.

Choosing a Milker.

Choosing a good milker requires some care and a careful study of the cow all around. There are several essential points to be considered. It is not so much the breed as it is the other good points of the animals. The cow with widely-spaced ribs, an authority says, is one of the signs of a good milker. And strange to say, look for evidences of refinement. The milk-giving capacity, a large udder, is also one of the things to give attention to. The cow with a soft skin, and a silky coat of hair, is generally a good milker.—Exchange.

In a hotel in Montana is the following notice: "Boarders are taken by the day, week, or month. Those who do not pay promptly are taken by the neck."—Lippincott's.

TWO KINDS OF
CHEAP
CREAM
Separators

There are two kinds of cheap cream separators.

One is the **seemingly** cheap kind; cheap in first cost, cheap in design, cheap in construction, cheap in efficiency, cheap in durability, and cheap in everything but merit.

The other is the **really** cheap kind; cheapest in proportion to actual capacity, orginal in design, ideal in construction, perfect in efficiency, lasting for twenty years, and barely beginning where the other kind leaves off.

That's The
DE LAVAL KIND

which compared with other cream separators is simply in a class by itself.

The De Laval Separator Co.

165-167 BROADWAY, NEW YORK

Address,
J. G. TRUMAN, Manager, BUSHNELL, ILL.

POLAND CHINAS — Of national reputation for size and bone. They are sired by 1,000-lb. Boars and are out of tretchy, prolific Sows.
J. P. VISSERING, Box 1, Godfrey, Ill.

SCOTCH COLLIE PUPS

For Sale: Male, $7.00; female, $5.00; also a yearling dog, all good ones, eligible to register. C. H. MILES, Lawrenceville, Ill.

O. I. C. AND CHESTER WHITE HOGS,

all ages, from First Premium Boars at Illinois and Iowa State Fairs. 150 September Pigs, eight weeks old, at $10.00 each; three for $25.00. Very cheap. Send for free catalogue. W. A. HINKLE, R. R. 7, Decatur, Ill.

BIG HORSE SALE.

November 15th and 16th, 1910.

Sixty Head of High-class Registered Saddle Stallions, Mares and Geldings.

Among this number will be two sons of the great Bourbon King, No. 1,788; two by the great Highland Gay, No. 1,149; one by Highland Denmark, No.730; one by Chester Dare, No. 10, and many others of like breeding. We will offer a number of extra fine, well-broke, combined Geldings and Mares, also some fine registered Saddle Brood Mares and Fillies. The sale will also include ten fine large Mule Jacks, well broke, and guaranteed workers. This is an extra fine lot of Jacks.

Write for catalogue. It will be ready October 25th.

This is a rare opportunity to buy what you want at your own price. Defects and blemishes will be pointed out.

BARHAM & BUTLER, Milan, Tenn.

TAMWORTHS FOR SALE. The Bacon Hog, the largest and most prolific breed. Early to mature, economical feeders and unsurpassed as range hogs. Boars, Sows and Pigs not akin from best strains. My herd won over 100 ribbons at four State Fairs the past year. A few choice Pigs from imported stock; sire and dam winners at Royal Show, England, 1907.
CHAS. FORD,
Mortonsville, Woodford County, Kentucky.

ELECTROTYPES FOR BREEDERS.

A Valuable Premium For Our Friends and Subscribers.

The National Farmer and Stock Grower does not engage in job printing, and all work of that kind is sent out. We can help our friends and patrons by furnishing an electrotype, by which they can have their printing done at home.

Very few stockmen have good letter paper and envelopes, but every farmer or live stock breeder ought to be in style. It costs very little to have well-printed envelopes and letter heads, especially if we furnish the electrotypes.

Any farmer, breeder, stock raiser, dairyman or poultry fancier who will send us a dollar to pay for same will be credited with one-year's subscription to The National Farmer and Stock Grower. We will also have set up in type his name, address, class of stock raised, with one cut of cattle, hogs, horses, sheep or any breed of poultry, and we will have an electrotype made of same from which he can have any number of envelopes and letter heads printed in his own town at a very low price. The electrotype will last a lifetime and his printer will always be able to furnish a supply of letter heads and envelopes on short notice. We will send the electrotype properly mounted and ready for use.

Maple Shade Stock Farm,

E. D. ROBINSON,
PROPRIETOR,

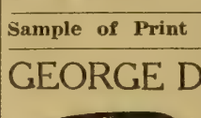
Sample of Print From Electrotype.

GEORGE DANFORTH,



BREEDER AND DEALER IN
HOGS.
"The Good Kind."
GRASMERE, N. H.

Sample of Print From Electrotype.

This display explains what we mean. We have set up a sample card. The electrotype will do for the letter head and envelope also. We will try to do as well for any farmer or live stock breeder. Send in one dollar and your full name, rural route, the class of stock raised, name of farm and correct postoffice address and we will try to please you. Address, **Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

Registered Boars by the Car-load.

The Fort Worth Daily Live Stock Reporter says: "The biggest sale to one man of registered boars ever made in the United States at one time was made in Sherman, Texas, when James D. Hestand, of that city, sold a car of registered Duroc-Jersey boars to Col. Cecil A. Lyon, to be shipped to the latter's hog ranch at Damsite, Hardeman county. All of the boars are young stock, and the cost of the car-load will approximate $2,000.

Dan Patch Electric Railroad.

Attention is invited to the advertisement of the Dan Patch Electric Railroad, of which Mr. M. W. Savage, of Minneapolis, Minn., is President. Mr. Savage is well and favorably known as the owner of the International Stock Food Company, and of the greatest breeding farm for light harness horses in this country. The Dan Patch Electric Railroad is already in operation from Rochester to Minneapolis, 130 miles. Mr. Savage wishes you to understand all about this project and to join him in it. He offers to send you two books, which will be found mentioned on page 19.

Blooded Stock Notes.

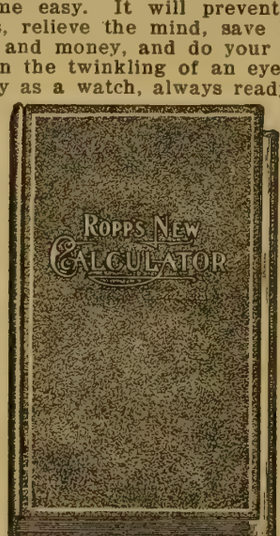
Trumans' Pioneer Stud Farm are just receiving thirty-six magnificent Shire horses, which arrived direct from England on S. S. Minneapolis. They will be offered at an auction sale to be held October 27th, when they will place before the American public the most select lot of Shire mares ever offered in this country. Send for catalogue at once and address at Bushnell, Ill.

Messrs. Barham & Butler, of Milan, Tenn., will hold a special sale of saddle horses, mares and geldings by auction on November 15th and 16th. This sale will include some of the very best saddle stock on this continent. They are breeders who are well and favorably known for excellent quality of stock and honorable dealings.

Mr. Elmer Gimlin, of Taylorville, Ill., a breeder of White Wyandotte fowls, who is one of the leaders amongst poultry specialists, is very much pleased that the St. Louis Fair is to be revived and enlarged. He was a winner at the last St. Louis Fair.

Ropp's Commercial Calculator.

This is a standard book and a revised, enlarged and improved edition. There are millions in use. **Ropp's Commercial Calculator** is especially valuable to farmers. By its regular use many hard problems become easy. It will prevent mistakes, relieve the mind, save labor, time and money, and do your figuring in the twinkling of an eye. As handy as a watch, always ready and



reliable. Anyone who will send 50 cents for one-year's subscription to this paper, The National Farmer and Stock Grower, can select one copy of **Ropp's Commercial Calculator** as a free premium. Address, **Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

Aberdeen-Angus Herd Book.

Volume 19 is out. To members the price is $1.00; to non-members, $3.00. Charles Gray is Secretary, 817 Exchange avenue, Chicago, Ill. Volume 19 contains 12,000 pedigrees and is very completely indexed, including a list of all members up to date, arranged alphabetically and by states as well as by counties. This volume contains obituaries of Turlington W. Harvey, B. R. Pierce and John Evans, Jr., eminent members of the Aberdeen-Angus fraternity, recently deceased. It contains the Standard of Excellence of the breed and very much other valuable information.

Honey Sold at St. Louis.

The various grades of honey on the St. Louis market were quoted as follows, October 4th: Comb, choice, 15 to 16c.; amber, 13 to 14c.; extracted or strained, choice Southern, in barrels, 6½c., and in cans, 7 to 7½c.; California, in cans, 8c. for amber, and 8½ to 9c. for water white; all old or candied, 1c. per pound less.

Best Fox, Cat, Deer, Wolf and Coon Hounds. Send for free list at once. Prices low for quality. Address,

BLUE GRASS FLOCK OF SHROPSHIRES.

Registered Rams and Ewes of best breeding and quality. Dense fleeces of good length. Animals that will improve any flock. Best imported Rams at head of flock. Prices reasonable.
WILARD MILLER, R. F. D. 2, Anita, Iowa.

The Land of Goshen.

In a copyright article by Frank G Carpenter, the noted traveler and descriptive writer, he commences an article upon the Land of Goshen as follows: "I write from Zagazig Egypt, September 10. Come with me this bright Sunday morning for a look at the old land of Goshen, where the Israelites settled when they first came into Egypt. I am writing this in the center of it, not far from the road down which Joseph was carried by the caravan of Ishmaelites, or Bedouins, who had bought him of his brothers and were on their way to sell him to Potiphar. It was over that same road that the ten sons of Jacob, Benjamin having been left at home, came down here to get corn: and it must have been about here that they had their dealings with Joseph, who was then the chief officer of Pharaoh and the premier, as it were, of his administration. You all know how he came into Egypt and grew to be the greatest man of the country. He was so influential that he was able to give Goshen to Jacob and his family, and it was at his advice that they all moved here and settled. That was the beginning of the Israelites in Egypt, and they remained here in Goshen for generations before they were finally enslaved and forced to make bricks by the Pharaohs.

The land of Goshen is to-day one of the finest parts of the Nile Valley. I came here from Cairo, and my whole way was through rich crops of cotton, sugar cane and clover. There was green to be seen everywhere, and I could ride from here twenty miles more to the eastward before reaching the desert. The railroad from Cairo to the Suez Canal goes directly through Goshen. It strikes the canal at Ismalia and then branches off north and south, running along the line of the canal to Suez on the Red Sea and to Port Said on the Mediterranean. The first section is over the road which led from Arabia to Memphis and Heliopolis, which cities have since been replaced by Cairo, the capital and metropolis of Egypt. The town of Zagazig, where I am stopping, is one of the chief cities in the delta. It is on the fresh-water canal and on a big irrigation canal which leads to the Nile. It is famous as a cotton port and to-day camels are coming into the town with bales on their backs, and long trainloads are starting out for Alexandria and Port Said, from whence the cotton will be shipped off to Europe.

This cotton is a feature of the landscape which was absent in the days of the Pharaohs. When Joseph came down into Egypt, the only cloth that the people had was made of flax and wool. The cotton plant was not known to exist, and it was as late as the middle ages when the people gave credit to a story that cotton of India came from a sheep which grew on the end of a bush, and which now and then bent down to eat the grass which grew all around. That cotton plant was supposed to thrive in Hindustan, and it was not until centuries later that the real cotton seeds were planted in Egypt. To-day Goshen is covered with cotton. There are many plantations near Zagazig, and I have seen thousands of acres of this crop throughout different parts of the Egyptian delta. It is the chief money crop of the country, and it will bring in upwards of one hundred million dollars this year."

R. C. Sacra, of Purcell, Okla., died at the Ardmore Sanitarium on September 9th. He was an old-time cattle raiser and had a ranch in the Indian Territory in what is now Johnston county, Oklahoma. He was one of the organizers of the Round Up System under the auspices of the Northwest Texas Cattle Raisers' Association.

THE GREATEST LIVE STOCK COMMISSION FIRM IN THE WORLD.

is an accurate knowledge and correct judgment of live stock and market conditions throughout the country. Having our own houses at the ten leading markets, North, South, East and West, we are at all times reliably informed upon conditions everywhere.

This enables us to advise you how, when and where to ship in order to realize most money for your stock. Each week our views of market conditions and prospects, current quotations, etc., and all news from every source that we consider likely to benefit raisers, feeders or shippers of live stock, appears in condensed form in our sixteen-page illustrated weekly paper

The Live Stock Report

In addition to the markets the paper contains a great deal of instructive miscellaneous matter. It is well printed on book paper and freely illustrated with halftones from photographs. It has been called "The greatest aid to the profitable feeding and marketing of live stock in existence." The fact that the paper has attained an average circulation of over 30,000 speaks for itself, as does also our guarantee printed blow.

We want you to have this paper--for your good and ours. We want it enough so that we are willing to stand most of the expense of furnishing it to you. If you will pay the postage only--50 cents per year--we will do the rest. Fair enough, isn't it?

GUARANTEE If after receiving the "Report" one month you are not more than satisfied, we will cheerfully refund your 50c. upon demand. *You Can't Lose--Except By Not Subscribing.* SPECIAL--Every subscriber to the "Live Stock Report" will receive free our beautiful "Flower Girl" Souvenir Calendar for 1911--to be distributed in December.

Practical Farming and Gardening.

This is a book of 500 pages, 6x7¼ inches to the page. It is a complete farmer's instruction book. The feeding chart is worth a ten-dollar bill to any stock farmer. Soil fertility, drainage, grain crops, gardening, truck growing, fruits, forestry, pruning, grafting, budding, injurious insects, plant diseases, spraying, cattle, sheep, horse raising and feeding, treatment for diseases, silos and silage, poultry, handy rules and farm cookery, are a few of the subjects. There are eighteen three-column pages of index. If you look for something you find it. We have adopted this book as a subscription premium. Send One Dollar and we will send you **Practical Farming and Gardening**, postage paid, and The National Farmer and Stock Grower for two years. This is a grand offer. Address, **Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

The Sow and Her Value.

It does not do to make money too easy on the farm, but it is well once in a while to show that with a few hogs money can be made on small capital.

W. E. Durkee, a Logan county farmer in the great state of Oklahoma, believes he has made a top-notch record in raising hogs. Fourteen months ago he paid $12 for a sow that shortly afterwards brought a litter of nine pigs, three of which later on were killed for meat and six were sold for $105. From a second litter of nine pigs Mr. Durkee sold eight for $116.47, keeping the extra hog. The sow now has a third litter of nine pigs, weighing about fifty pounds each and worth not less than $4.00 apiece.

Counting the sow's progeny that he did not sell as being worth as much as those that were sold, Mr. Durkee has received in fourteen months $324.45 from an original investment of $12. The sow has brought him a gross income of $23.17 for each of the fourteen months.

There is a feed bill, but not a large one, to come off this gross total, but the showing will stand it and leave a good profit besides.

Asking Questions of Brood Sows.

"In considering the efficiency of brood sows, Henry Wallace gives the following advice: "Go over those that have had pigs the present year and ask them the following questions: How many pigs did you have this year? Were they even in size and form? Were they all good ones, or did you have two or three choice pigs and were the rest quite inferior? How did you take care of these pigs? Are you a good suckler? Are you good-natured? Are you a good mother, or are you of the nervous, fidgety kind, always worrying and fretting for fear somebody will hurt you and your precious piglets? If the brood sow, on being interrogated, cannot give satisfactory answers to these questions, it is not worth while to scold her or give her a moral lecture. Just turn her into the fattening pen, for there is where she belongs."—From Coburn's "Swine in America."

Who Robs the Farmer?

"The farmer who makes a practice of raising grain exclusively, hauling it to the elevator and selling it, is robbing himself, or, in other words, depleting the fertility of the soil.

"Every year as the crop is gathered and sold off the place it is left with decreased productive power for the future. It is like mining or digging out the value of the soil and shipping to the market. It is selling your farm virtually through the elevator.

"Soiling the corn by the hog route or through any other live stock is retaining the fertility. By a proper stream of diversified farming and rotation of crops you can build up and improve instead of destroying the productiveness."—American Swineherd.

Methods of Feeding Hogs.

In feeding hogs, strange to say, the Agricultural College experts are discovering that the farmer knew the best methods of feeding hogs in the first place. Hogging down corn, feeding cattle whole corn with hogs following, and feeding dry-ear corn, are three methods that are hard to beat, and were discovered on the farm.

A Real Service.

In discussing the work of the I. H. C. Service Bureau, recently established by the International Harvester Company of America, M. R. D. Owings, the advertising manager, in whose department the Bureau is located, said:

"The Bureau is to render real service—broad, general and beneficial. I believe that the work will gradually cause the farmers to put more thought into the raising of crops. This thought is sure to lead to many new and complicated problems, questions will be asked that were never asked before. This, in turn, will cause our experts, the Agricultural Colleges and Experiment Stations, to tackle real and complicated mysteries, the final solving of which will benefit agriculture more than can be estimated.

"You may remember the pupil who gave the teacher a problem the teacher could not solve. But the teacher took the problem home, sat up with it all night, and in the morning brought the answer to the pupil. 'Gee! I didn't think you could do it,' exclaimed the pupil. 'The whole neighborhood, and teacher, too, tried it last winter and had to give it up.'

"There was a wiser pupil, and a wiser teacher; in fact, the whole neighborhood was wiser. We grow by doing things that never have been done. The Service Bureau undoubtedly will make all of us wiser—farmers, professors, and citizens generally. And we hope that all will send in their problems with even more freedom than the pupil carried his problem to the teacher. The Service is free and for everybody, and when I say free, I mean free absolutely. There are no strings attached."

Address Service Bureau, International Harvester Co., Chicago, Ill.

Feeding Lambs For Market.

At Brookings, South Dakota, in winter feeding of lambs that averaged 87½ pounds when put up to feed, they made a gain of 31⅓ pounds per head in sixty days, or .51 of a pound per head per day—that is over a half pound gain per head per day. The lambs were fed with a grain mixture consisting of 100 pounds of oats, 100 pounds of shelled corn and 25 pounds of linseed meal. Of this mixture the lambs at first were fed one pound per lamb per day, which was increased to two pounds per day. They did not consume more than two pounds of prairie hay per lamb. The result was that these lambs gained 23.4 pounds per head in the sixty days, which is .38 of a pound of gain per lamb per day.

The gain made by the hay-fed lambs was good, but the gain by the alfalfa-fed lambs was extraordinary.

With the alfalfa hay and grain mixture the cost of each pound of gain was only 4.2 cents, and with the prairie hay and grain mixture the cost of each pound of gain was 5.3 cents.

The alfalfa-fed lambs gained 79 pounds more than did the ten lambs fed on prairie hay. The figures derived from this experiment, if studied and remembered, will help many a lamb feeder to compound his ration.

The experimenters say that alfalfa hay with a grain mixture and a little linseed meal was markedly superior to any other grain or forage ration.

AGENTS WANTED

We want men who are not actively engaged in business to act as our agents. We pay liberal cash commissions. Write for our catalogue and full particulars.

Sell Oats Higher.

No farmer should sell a bushel of oats at present prices unless forced to do so by the pressure of absolute necessity.

Oats are of a superior quality an the crop is larger than a great cro harvested last year.

Under ordinary circumstances farmer can feed oats to better advan tage than a sale would be at 45 cent a bushel in market, and he ca surely feed it to good advantage a the present price of about 35 cent out of which will have to come th freight bill and commission for sal

There is very little market specu lation in oats; nobody is liable t buy up oats and store them an corner them; the grain has its ou lets, and they are regular and no spasmodic. Oats are cheap, there fore the consumption will increase and farmers should, wherever pos sible, help to increase the consump tion, which they are perfectly able t do. Oats furnish by far the health iest food for man and for horses, an to-day on the farm oats furnish th most economical food for all pur poses.

The annual meeting of the Na tional Mohair Growers' Association will be held at El Paso, Texas, Octo ber 29th to November 6th, 1910 during the El Paso Fair. All entrie must be made with F. C. Knollen berg, 518 Trust Bldg., El Paso Texas, before October 15th.

Great Horses of History.

An article on this subject appears in the October Scrap Book, published monthly by the Frank A. Munsey Co. It is for sale in all book stores at 10 cents a copy.

The Scrap Book mentions two horses which were sacrificed on the field of battle during the Wars of the Roses in England. The great Earl of Warwick, familiarly known as the King-maker, sacrificed his war charger to indicate that he would rather die than retreat. This had been done in the earlier battles of the world. The first time the Earl of Warwick did so was at the battle of Towton, where his opponents, the Lancastrians, were gaining the upper hand. The Earl, after hearing that his uncle was slain and his men defeated, cried out in prayer for the souls of those who died in the battle; and then, drawing his sword and kissing the cross at the handle, said to his men: "Whoever chooses to return home may, for I shall live or die this day with such as like to remain with me." After this speech he dismounted and killed his horse with his own sword.

The second time was at Barnet, his last field, when he rode his favorite black Saladin, an animal of great size and beauty. Lord Lytton gives a dramatic account of the incident in his romance, "The Last of the Barons:"

"He kissed the horse on his frontal, and Saladin, as if conscious of the coming blow, bent his proud head humbly and licked his lord's steel-clad hand. So associated together had been horse and horseman that, had it been a human sacrifice, the bystanders could not have been more moved. And when, covering the charger's eyes with one hand, the Earl's dagger descended, bright and rapid, a groan went through the ranks. But the effect was unspeakable! The men knew at once that to them, and them alone, their lord entrusted his fortunes and his life, and they were moved to more than mortal daring."

In history the place filled by the horse has been second only to that of man. One of the most famous horses in the world was Alexander's celebrated charger, Bucephalus, which was purchased by Philip, Alexander's father, for thirteen talents—about $12,500. He was so wild and unmanageable that Philip was about to send him away, when the young prince offered to tame him, agreeing, in the event of failure, to forfeit the price of the horse.

He began by turning his head to the sun, as he had remarked that the horse was frightened at his own shadow. He tamed him completely, although his wild spirit would never allow any but Alexander to ride him. He would kneel for his master to mount, and the love and sympathy between the man and the horse were perfect. Alexander built the city of Bucephala as his mausoleum when Bucephalus died, at the age of thirty.

Horses Watered in Boston.

Boston horses to the number of 79,667 were watered in July at one watering station by the Massachusetts Society for Prevention of Cruelty to Animals. The men stand near a hydrant with buckets of water ready for the passing teams of two, four and six-horse teams and single horses without any delay, but a great refreshing kindness to the heavily-loaded horses that look for the water as they pass by. Of course, many of these horses were watered over and over again, making a larger total, yet it is stated on good authority that work horses are increasing in Boston and other cities.

Horse and Mule Notes.

Recent Boston horse quotations were as follows: "The best heavy draft horses at $350 to $475; medium-weight drafters at $250 to $350; coach horses, drivers and combination horses at $125 to $300."

The Chicago Drovers' Journal announces the death of Mr. H. D. Snyder, of Millersburg, Ohio, who was a professional buyer, dealer and feeder of market horses. On February 17th, 1907, he offered a consignment of twenty-one head of top-finished heavy drafters at auction at the Chicago market that sold at a range of $385 to $530, and matched pairs at $720 to $940, the offerings making a new high market average of $422.15 per head. This record still stands as the best sale of twenty-one head of drafters ever made under the hammer for commercial use.

General Farm Notes.

In Greece, near Thessaly, the farmers are trying to raise Egyptian cotton with a fair measure of success. Greece usually imports 2,500 bales of good middling American cotton, 5,000 to 7,000 bales Turkish, and 500 bales Egyptian.

The Bureau of Manufactures of the Department of Commerce reports that the cotton crop of Adana, Turkey, will amount to 100,000 bales this year, as against only 60,000 bales in 1900. The average weight per bale is 200 kilos, or 440 pounds, though bales pressed by the new presses of a German company weigh 315 kilos, or 693 pounds.

At the Dry Farming Congress held at Spokane, Mr. Anders L. Mordt, of Guymon, Okla., will deliver an address upon "The Dry Farming Situation in the Southwest."

Uhlan's Wagon Record.

On September 9th, the world's trotting record in an exhibition mile by a horse to a wagon and without windshield was broken by the gelding Uhlan, 1:58¾, driven by C. K. G. Billings, of New York. Uhlan was paced by a runner and negotiated the mile in 2:01¼. The time by quarters was as follows: First, :30¾; second, 1:00½; third, 1:32½; fourth, 2:01¼. This is considered a better performance than when Uhlan made his sulky record of 1:58¾ at Cleveland under more favorable conditions.

Stallion Trotting Records.

The recent lowering of the mile trotting record of stallions is an interesting incident and causes some inquiry. The following data we believe to be correct, and it shows the lowering of the record from the first to the last:

Year.	Name of Stallion.	Time.
1858	Ethan Allen	2:28
1859	Geo. M. Patchen	2:23½
1868	Fearnaught	2:23¼
1868	Geo. Wilkes	2:22
1871	Jerry Gould	2:21¼
1874	Smuggler	2:20¾
1874	Mambrino Gift	2:20
1876	Smuggler	2:15¼
1884	Phallas	2:13¾
1884	Maxie Cobb	2:13¼
1889	Axtell	2:12
1890	Nelson	2:10¾
1891	Allerton	2:10
1891	Nelson	2:10
1891	Allerton	2:09¼
1891	Palo Alto	2:08¾
1892	Kremlin	2:07¾
1893	Arion	2:07¾
1893	Directum	2:05¼
1900	Cresceus	2:04
1909	Cresceus	2:02¼
1910	Harvester	2:01¼

KENDALL'S SPAVIN CURE

"ONLY SURE REMEDY"

Gadsden, Ala., Apr. 25, 1909.

Dr. B. J. Kendall Co.

Gentlemen: Please send me copy of your TREATISE. I have been using your Spavin Cure for 20 years, and find it is the only sure remedy, it is the best liniment I can get for horse and man. Yours truly, W. J. McBee.

That tells the whole story, and it is the experience that hundreds of thousands have had in the past 40 years, and it's the experience you will have—"it is the only sure remedy"—

For Spavin, Ringbone, Curb, Splint, Swellings and All Lameness

Sold By Druggists—$1.00 a Bottle, 6 bottles for $5.00. Keep it on hand always. Be ready for the emergency. Kendall's stops the pain, starts the circulation, penetrates and removes the cause of the disorders. Ask for a free copy of "A Treatise on the Horse." If not at dealers write to—

DR. B. J. KENDALL CO., Enosburg Falls, Vt.

DISTEMPER IN COLTS

Your colts positively cannot have Distemper, Pinkeye, Influenza, Catarrhal Fever or other similar diseases if you use Craft's Cure in time. If the disease is started it will not fail to cure in any case. Safe at all times and under all conditions. Go to your Druggist get a bottle

if it fails you get your money back. If he can't supply you write us. 3 valuable Horse Books, free. Write Wells Medicine Co 173d St., LaFayette, Ind.

Make Seed-corn Gathering a Special Task.

At corn-ripening time, drop all other business and select an abundance of seed corn. The process is too important to be conducted incidentally while husking. When selecting seed corn, give the process your entire attention. Get the very best that is to be had and preserve it well, and your increased yields will return you more profit than any other work you can do on your farm.

The only proper way to select seed corn is from the stalks standing where they grew, as soon as ripe and before the first hard freeze.—From Farmers' Bulletin No. 415, issued by the United States Department of Agriculture.

QUESTIONS AND ANSWERS ON BUTTERMAKING.

By CHAS. A. PUBLOW, A. B., M. D., C. M., Assistant Professor of Dairy Industry in the New York State College of Agriculture at Cornell University.

This book is entirely different from the usual type of dairy books, and is undoubtedly in a class by itself. The entire subject of buttermaking in all its branches has been most thoroughly treated, and many new and important features have been added. The tests for moisture, salt and acid have received special attention, as have also the questions on cream separation, pasteurization, commercial starters, cream ripening, cream overrun, marketing of butter, and creamery arrangement.

The arrangement of the contents in the form of questions and answers makes the book particularly valuable. Practical buttermakers, short course students and all persons interested in buttermaking, especially those who wish to prepare themselves for civil service examinations, will find most useful help in the questions and answers contained therein.

The book is certainly one of the most useful contributions to dairy literature in recent years.

Illustrated, 5x7 inches, 100 pages, Cloth. Net, 50 cents.

ORANGE JUDD COMPANY,
439 Lafayette Street, New York.

Non-committal.

"Senator," asked the beautiful girl, "are you a regular or an insurgent?"

"I must decline, my dear young lady, to answer that question. It is my hope that the two wings of the party will have come together before it is necessary for me to again seek an election."

HORSE AND MULE SALESMEN.

MULE DEPT.—Ed Conway, Lan Morris.
AUCTIONEERS—Tim Holland, Ike Howard.

Write us for market information.
Address,
HOLLAND, NUGENT & MAXWELL BROTHERS.
P. O., National Stock Yards, Ill.

Clever Horse Trade.

It was night. Wild cries of "Fire!" Fire!" affrighted the peaceful neighborhood. A blaze had broken out in a barn. "There's a horse in there!" yelled somebody.

"You go and turn in an alarm," said a stranger, who seemed to have discovered the fire. "I'll take the horse out."

The stranger rushed into the barn, whipped off his coat, threw it over the animal's head, and led it out into the alley. Presently the Fire Department appeared and put out the flames, and the obliging stranger led the horse back to its stall. But it was discovered subsequently that it was a different horse. The police were looking for the stranger.—Chicago Tribune.

At the Chicago market recently J. A. Shaw, of Gibson City, Ill., marketed three head of 1,800-pound draft horses of his own feeding, which sold for an average of $333 per head, or $1,000 in all. He had others on sale, but these three were the best.

The Clearing House Show.

While attending the American Royal and the different State Fairs held during the month of October and early in November, remember that the greatest show of all remains in the International Live Stock Show to be held at Chicago from November 26th to December 3d. All the best exhibits at the State and Interstate Shows will be there—a contest of champions. All the prizes are listed in the preliminary classification, which can be had by addressing B. H. Heide, Secretary, Union Stock Yards, Chicago, Ill.

Sheep Market at St. Louis.

On September 30th, best lambs brought $6.75 per 100 pounds, while other good ones sold at $6.25 to $6.65; fair to medium grades at $5.50 to $6.15; best culls at $4.25 to $5.00, and little common ones at $3.00 to $4.00. There was but little demand for the poorer grades of lambs. Most of the mutton sheep sold at $4.00 to $4.15 per 100 pounds, and breeding ewes at $4.25 to $4.75; best stockers at $3.25 to $3.75; fair offerings at $2.25 to $3.00; and common, old, cull sheep at $1.25 to $2.00. Bucks are still selling at $3.00 per 100 pounds.

Clay, Robinson's Service.

By shipping cattle, hogs or sheep to Clay, Robinson & Co. at any market in which they are established, shippers obtain the benefit of a line of service that will advise them and protect them in their purchases. They issue combined reports, special reports and special circulars for cattle, hogs and sheep. The packers are not any better posted than the customers of Clay, Robinson & Co. See page 11.

A First-class Commission House.

In consigning live stock for sale at the St. Louis National Stock Yards, remember the Evans-Montague Live Stock Commission Company. It is a successful firm, highly competent and persevering in the interest of their customers. The Evans-Montague Commission Company solicit consignments of cattte, hogs and sheep for sale on the market, and desire stockmen to take notice that the company has special buyers who select and buy stock and feeding cattle for their patrons. Address, Evans-Montague Commission Company, Box 68, National Stock Yards, Illinois.

WESTERN
Range Horse Sales

are being conducted by

Campbell & Reid and Western Sale Stables Co.,

NATIONAL STOCK YARDS, ILL.

The successful fall season of 1910 will be closed by sales on

THURSDAY, OCT. 6 and 20,

and a final sale on

THURSDAY, NOV. 3.

Consignments are already secured for these sales, and buyers will find an excellent supply of Mares, Geldings, Colts and Fillies and a few carloads of Mules at each sale.

Please address
J. J. SEARCY, Sale Manager,
NATIONAL STOCK YARDS, ILL.

Hog Market and Prices.

At the St. Louis market, on September 30th, good shipping hogs sold largely at $8.05 to $9.20 per 100 pounds; butcher hogs at $8.95 to $9.10; light-weight mixed packers at $8.90 to $9.10; heavy packers at $8.50 to $8.85; plain heavy hogs on the rough order at $8.25 to $8.50; and old, rough sows and stags at $8.00 to $8.50. What little pigs weighing around 100 pounds and less arrived sold rather slow, as there was not much of a demand for them.

The Great Horse Firm.

The auction sales of horses at the St. Louis National Stock Yards every Monday and Tuesday in the year are conducted by the Holland, Nugent & Maxwell Bros. Commission Company.

This is a first-class commission firm, and they have made extraordinary sales. In an interview with Mr. T. H. Holland, held recently, he said: "We occupy more time and devote more energy and solicitation to bring buyers to the market than we do to soliciting consignments. That is the secret of our success in business. When the right kind of buyers are in the market the shippers are sure to be satisfied with the results." Address, Holland, Nugent & Maxwell Bros., National Stock Yards, Ill.

Horses at Auction in Russia.

The American horseman, Frank Caton, recently held the most successful auctions of trotting-bred colts and fillies ever known in Russia. It consisted of twenty-three head of two-year-olds and five other horses, twenty-eight in all, which fetched an average price of 1,385 roubles ($692.50) per head. Of the twenty-three two-year-olds fifteen were half-bred (American-Orloff) and eight pure-bred Orloffs. The half-bred ones averaged 1,827 roubles ($913.50) per head, while the pure-bred Orloffs averaged only about half as much—951 roubles ($475.50). The top price of the sale was 4,250 roubles ($2,125) for one of the half-bred two-year-olds.

American Awarded Medal on a Rupture Device.

Mr. F. J. Stuart, an American in St. Louis, was recently awarded a medal and diploma showing certificate of merit of the first class by a London institute. Mr. Stuart is the inventor of the STUART PLAS-TR-PAD for rupture. Letters patent have been granted by many governments on this form of Hernia support, and medicine applicator. The purpose of this support is to securely hold the rupture in place, and also supply a soothing and healing remedy thereto, which will be taken up and absorbed by the pores to heal and relieve the parts of pain. When patent was granted in Great Britain, Mr. Stuart also obtained the Medal and Diploma. Truss wearers will no doubt appreciate an invention of such exceeding worth as to merit such notice. By addressing Mr. F. J. Stuart at St. Louis, Mo., those interested will probably be furnished full information.

Western Range Horses.

The season is nearly over for the great sales of Western range horses and mules conducted at the St. Louis National Stock Yards by Campbell & Reid and Western Sale Stables Company. The sales take place every two weeks and always on Thursday.

The October sales will be held on Thursday, 6th, and on Thursday, 20th. The November sale on the 3d will close out the season. The horses offered for sale are put up at auction and sell fairly at bidders' prices. The offerings range from colts and fillies to matured mares and geldings. The numbers at each sale range from 800 to 2,000 head. Further particulars can be had by addressing J. J. Searcy, Manager, National Stock Yards, Ill.

Whole Milk and Sweet Milk.

For feeding hogs skim milk is better than sweet milk. This has been demonstrated a number of times, but seldom so well as it was by the Agricultural Experiment Station of Nebraska.

A number of pigs were divided into three lots. Lot number one was fed on skim milk. Lot number two was fed on milk containing 3.5 per cent. fat. Lot number three was fed on milk containing 5 per cent. of fat. Lot number one, or those receiving skim milk, averaged a gain of 36 pounds in thirty days. Lot number two, or the ones receiving about 3.5 per cent. fat, averaged a gain of 28 pounds in thirty days. Lot number three, or those fed on milk containing 5 per cent. fat, averaged a gain of 25 pounds in thirty days. For longer periods of feeding results were much more in favor of skim milk. In many cases where the feeding period was long there was a loss in weight on those fed on milk rich in fat.

In an experiment carried on by another Experiment Station it was found that on corn meal alone it required 416 pounds of dry matter to produce 100 pounds of gain. When skim milk was fed in conjunction with corn it only required 293 pounds of dry matter per 100 pounds gain. The cost of feed per 100 pounds gain was $5.80 when corn meal alone was fed, and when skim milk was fed in conjunction with corn meal the cost of 100 pounds gain was only $4.60. The Ottawa Experiment Station found the value of 100 pounds of skim milk equal to 54.6 pounds of corn for hog feeding purposes. With dressed pork worth seven cents per pound, 100 pounds of skim milk were found to be worth thirty-eight cents. At the present price of corn and hogs it is very evident that skim milk is one of the principal sources of revenue from the dairy cow.

In feeding skim milk the proportion of grain to milk should be increased as the hog gains in weight. For hogs weighing twenty to sixty pounds the mixture should be one part of grain to seven to ten parts of skim milk. For hogs weighing sixty to one hundred pounds the ration should be one part of grain to about five parts of skim milk. For hogs weighing one hundred to one hundred eighty pounds the ration should be one part of grain to about two or three parts of skim milk. If the supply of skim milk is limited, the proportion of skim milk may be reduced and good results still be had. It was impossible to get satisfactory results under the old whole-milk creamery system where the skim milk was returned to the farm sour and cold and when it was fed cold at one time and warm another. Scours and unsatisfactory gains are the results from such feeding. The milk should be in the same condition from day to day. This is made possible only by the use of the hand separator. Not only does the hand separator remove all of the butter-fat from the milk, but the skim milk may be fed in the best possible condition, warm and sweet.

Trumans' Horses Home.

Under date of September 23d, Mr. J. G. Truman, of Trumans' Pioneer Stud Farm Bushnell, Ill., wrote the editor of The National Farmer and Stock Grower as follows:

"Our horses arrived home from the Wisconsin State Fair apparently none the worse for their trip. We won in addition to several first prizes no less than three championships on Shires and one on Hackney stallions.

"We have had a very nice trade the last few days, selling an imported Shire stallion to Edward Grimm, North English, Iowa; two imported stallions to Mr. G. W. Wilson, Wilbur, Washington; a pair of imported Percheron mares to Al. Dean, Hume, Illinois; and the Hackney mares, Trumans' Beauty and Trumans' Nancy Connaught to Mr. William DuPont, Montpelier, Virginia.

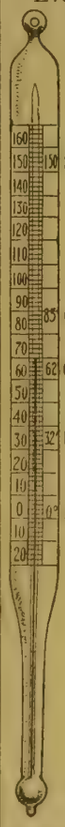
"Our last importation of Percheron stallions are now in first-class condition, as are also our Shires, and we were never in a better position to supply our trade with first-class stallions at reasonable prices than at the present time. We are making attractive prices in order to move a lot of horses next month to make room for our regular September and October importation.

"Our catalogue will be mailed to any of your readers upon application."

"Dazey" Dairy Thermometer.

This thermometer is offered as a subscription premium in connection with The National Farmer and Stock Grower. It is one of the discoveries of Uncle Piper, the subscription editor of this publication.

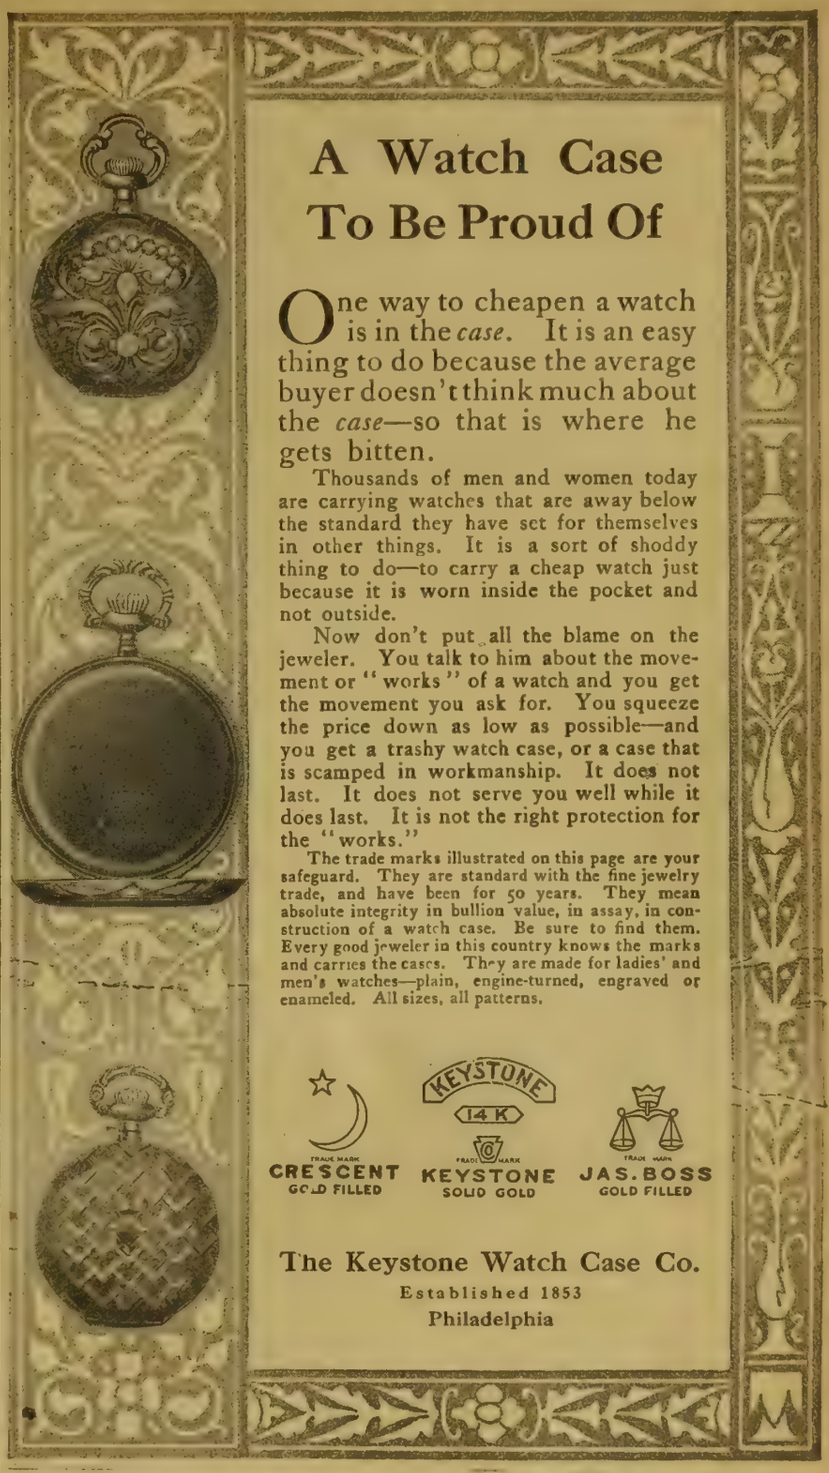
Every farmer ought to have a dairy thermometer for home use. We have found one —the best of all. It is 8½ inches long. It is high grade, and with care will last for many years. The temperature of cream regulates to a great degree not only the time required in churning, but the quality of the butter. If the cream is churned when at the proper temperature, the result is generally nicely-granulated butter. When the temperature is wrong, the work is uncertain, troublesome, and the butter is inferior. Uncle Piper used to be on a dairy farm in Texas. He did not manage it, however. He would buy a dairy thermometer and demanded that it be used; but She Who Run the Ranch said No! Now Uncle Piper is trying to force the dairy thermometer on other people because he could not properly introduce it into his own family. Send us 60 cents and we will send you The National Farmer and Stock Grower for one year. We will also send you securely packed, postpaid, safe delivery and quality guaranteed, one "Dazey" Dairy Thermometer. Address, The Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.



The Railroad Claim.

Up in Minnesota Mr. Olsen had a cow killed by a railroad train. In due season the claim agent for the railroad called.

"We understand, of course, that the deceased was a very docile and valuable animal," said the claim agent in his most persuasive claim-agentlemanly manner, "and we sympathize with you and your family in your loss. But, Mr. Olsen, you must remember this: Your cow had no business being upon our tracks. Those tracks are our private property, and when she invaded them she became a trespasser. Technically speaking, you, as her owner, became a trespasser also. But we have no desire to carry the issue into court and possibly give you trouble. Now, then, what would you regard as a fair settlement between you and the railroad company?"



A Watch Case To Be Proud Of
One way to cheapen a watch is in the case. It is an easy thing to do because the average buyer doesn't think much about the case—so that is where he gets bitten.
Thousands of men and women today are carrying watches that are away below the standard they have set for themselves in other things. It is a sort of shoddy thing to do—to carry a cheap watch just because it is worn inside the pocket and not outside.
Now don't put all the blame on the jeweler. You talk to him about the movement or "works" of a watch and you get the movement you ask for. You squeeze the price down as low as possible—and you get a trashy watch case, or a case that is scamped in workmanship. It does not last. It does not serve you well while it does last. It is not the right protection for the "works."
The trade marks illustrated on this page are your safeguard. They are standard with the fine jewelry trade, and have been for 50 years. They mean absolute integrity in bullion value, in assay, in construction of a watch case. Be sure to find them. Every good jeweler in this country knows the marks and carries the cases. They are made for ladies' and men's watches—plain, engine-turned, engraved or enameled. All sizes, all patterns.

"Vall," said Mr. Olsen slowly, "Ay bane poor Swede farmer, but Ay shall give you two dollars."—Everybody's.

The St. Louis Seed Market.

When farmers ship seeds to market, with the exception of cow-peas, they are usually sold at a price per 100 pounds. Recent prices paid at St Louis were as follows: Prime timothy seed, $8.00 to $8.25 per 100 pounds; choice bright recleaned timothy, $8.50 to $9.00 per 100 pounds; fair grade red clover, $9.00 to $9.50 per 100 pounds; prime red clover, $11.50 to $12 per 100 pounds; choice recleaned red clover, $14 to $14.50 per 100 pounds; prime alfalfa, $15 per 100 pounds; choice recleaned alfalfa, $18 per 100 pounds; fancy blue grass, $18 to $20 per 100 pounds; choice orchard grass, $16 to $17 per 100 pounds; German Millet, $1.50 to $1.60 per 100 pounds; cane seed, $1.40 to $1.50 per 100 pounds; New Era cow-peas, $1.25 per bushel; Whippoorwill peas, $1.50 per bushel.

This list of prices was furnished us on September 30th by A. J. Child & Sons, of 511 North Main street, St. Louis, Mo.

A Reliable Remedy

FRAZIER'S DISTEMPER CURE. A trial will convince any horse owner that this remedy absolutely cures and prevents Distemper, Influenza, Pinkeye, Coughs, Colds and all Nose and Throat Diseases. No remedy acts the same, no treatment the same. $1.00 bottle holds three times the quantity of the 50 cent size. Send for our free 32-page horse booklet. Sold, guaranteed and recommended by all druggists.

THE SEWING AWL.

A Most Useful Premium For Subscribers to The National Farmer and Stock Grower.

A farm on which there is not a sewing awl is in difficulties when work is most pressing. It is surprising how useful this little implement is. It is the Myers Famous Lock Stitch Sewing Awl. It is the only sewing awl made with a groove running the full length of the needle and has what is known as a diamond point. In order to sew leather or any heavy, thick material without breaking or cutting the thread it requires a needle with the groove running the full length of the needle. You might just as well have no groove in the needle as to have it only part of the way. With the Myers Awl you can sew old or new harness, saddles, carpets, canvas, tents, rugs, quilts, shoes, grain bags, and many other things. You can use any kind of thread in the Myers Awl, and it makes a lock stitch same as a sewing machine. It is very simple; a woman can use it as well as a man. It is one of the most practical devices ever invented. They are put up with two needles; one is straight and one curved, with a small screw-driver and wrench combined. Also a reel of waxed thread with each awl ready for use. Every teamster and farmer should own a Myers Lock Stitch Sewing Awl, as there is use for one in almost every household. The Myers Awl is nicely finished, the metal parts are nickel-plated, the needles and wrench are kept in the hollow handle, which has a screw top.

Anyone who will send One Dollar cash to pay in advance for two-years' subscription to The National Farmer and Stock Grower can select one of Myers' Lock Stitch Sewing Awls, which we will send by mail, postage paid, as a free premium. Address, **Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

Hammond's Handy Atlas of the World.

This great Atlas contains 107 pages, 6x8 inches, is printed in colors and is bound in a durable red-cloth cover. It contains seventy full-page maps of every state and territory, with new railroads and towns. Every country in the world is shown by maps of the latest plates. We use this Atlas as a subscription premium. For sixty (60) cents paid in advance we will send one copy of **Hammond's Handy Atlas** post free by mail and credit one-year's subscription to The National Farmer and Stock Grower. Address, **Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

A Few Egg Observations.

The waste from the spoiling of eggs runs into the millions of dollars every year, in the United States alone. In other nations the loss is even greater, owing to the ignorance of cold-storage methods.

The use of water glass by every farmer that produces eggs for market would result in much saving of eggs. They should be treated as soon as laid.

The men that own cold-storage warehouses and those that rent space of them make great fortunes every year by purchasing millions of dollars' worth of eggs in the summer and selling them in the winter. The time will come when every farmer will have his cold-storage facilities and will save that profit to himself.

It has been found by investigation that some eggs are infected with bacteria when laid. Ovaries of hens were opened and a small proportion found to contain bacteria of different species. The infection began as early as the secretion of the white of the egg and before the shell was secreted. Therefore the shell did not keep out the bacteria. This occurred only in diseased ovaries. Most ovaries of fowls are germless.

It is a mistake to suppose that eggs cannot be entered by bacteria. The bacteria are smaller than the pores in the shells. The pores are minute holes, so small that liquids will not pass through them, but germs will. The fowls in producing the eggs secrete a sort of mucilage that covers the eggs, fills the pores and keeps out the germs.

It is desirable to let an egg dry with the mucilaginous coat on it, as in that case the germs will not get in for a long time. Dirty eggs have to be washed. The washing takes off the mucilaginous covering. This opens the pores for the entrance of germs. Therefore, a washed egg spoils more quickly than an egg that has not been washed. Moral: Keep the nests and eggs clean or use the dirty eggs in the family.

Cold is the greatest factor in the keeping of eggs. An egg kept just above the freezing point will remain good for a long time. The bacteria in eggs do not multiply at that temperature, or do so very slowly.

The scientists have fixed fifty-five degrees Fahrenheit as the point at which the bacteria in eggs begin to multiply. With the increase in temperature comes increased multiplying of bacteria, till about 100 degrees is reached. At that point it does not take long for an egg to spoil.

Bacteria can be kept away from eggs to some extent by frequently renewing the nest material. Many times has the nest material of old nests been submitted to bacteriologists for examination. Frequently they have been found swarming with bacteria, some of which find their way through the pores of the eggs. It is not a difficult matter to keep this nest material always fresh and clean. A broken egg left in a nest is a disease breeder.

A Few Remarks on Poultry.

Luck hovers around a clean poultry house. Your poultry is your capital; better take care of it and it will take care of you. There is money in chickens. Yes, in spite of many words to the contrary, and the busy housewife can add quite a little to her stock of pin money by the care of a few hens. I am not talking about the large poultry ranches, where hundreds of thousands are kept, but the average farm flock, where 50 or 100 hens may be kept very profitably and where the care devolves upon the women of many duties. The good hen always does her best. She may not be bred right to do as well as some other good hen or she may not be fed as well or attended as intelligently as the other, which are all of course factors in well doing; but none of these are chargeable to her; she does the best she can under the circumstances. If she falls short of our expectations, it is up to us to investigate and see if the fault lies in her or in something out of her province and perhaps in ours.

Everyone cries at the poultryman that the hens must be tested in order to determine which are paying; but the testing will be done blindly and often at a loss if first the hens are not well and abundantly fed. It is impossible that we may tell what may come out of a hen unless we have made liberal provisions as to what has gone into her. The hen is an investment The amount we shall be able to make out of her depends entirely upon how much of feed and care and hen sense we put into her. She may be bred ever so well and be capable of doing a great and profitable work; but if her ways have fallen into the hands of an ignorant, stingy or careless person, her birthright of royalty is reduced to scrub conditions.

One of the duties of the poultryman is to find the difference between hens. You will find weeding to do in the flocks as well as in the fields. It's a mistake to imagine that the good hen is going to be profitable with haphazard, indifferent care. The poultryman who knows what each hen is doing usually takes better care of each hen. Close attention to details is the secret of profitable poultry raising to-day. We must always keep this in mind: The large producing hen is the result of unceasing effort. Those people who are not well acquainted with the poultry conditions as they exist to-day do not appreciate the possibility of the laying hen from a financial standpoint.

This is an age of large records. Scarcely a week passes that does not herald the remarkable performance of some poultryman's flock. These records are very important. They show the inherent capacity of the hen, the ability of her owner in feeding and caring for her. They also show the purchasing possibility of her product. The last is often overlooked. When the yearly income from any of these flocks is computed in groceries, musical instruments, clothing, college education, or any other luxuries or necessities in the home, it makes no mean showing. The laying hen is certainly a factor worthy of consideration.—Mrs. B. F. Wilcoxon, Hillsdale, Wyo.

Poultry Notes.

A member of the American Poultry Association was suspended from membership for one year because he exhibited a Columbian Wyandotte at the Chicago Show and it was discovered that the tail feathers had been colored artificially.

At a show held at Utrecht, in Holland, there were 2,650 exhibits in all, and Wyandottes with 268 entries far exceeded all other breeds on exhibition

Six hundred new members were admitted to the American Poultry Association at the meeting held at St. Louis, August 16th to 18th.

The Uneeda Biscuit.

The invention of the moisture-proof packages has saved many a housekeeper money and trouble. Soda biscuits as now put up by the National Biscuit Company are a staple article of diet and fill out the refined table requirements with a crisp article that never deteriorates. The Uneeda Biscuit is sold in five-cent packages which contain as many of this quality if sold by the pound. They are always fresh and always enjoyable, and now you know why it is that no market basket is filled to perfection without a package or two of Uneeda Biscuit.

EYES CURED

WITHOUT THE KNIFE

Grateful Patients Tell of Almost Miraculous Cures of Cataracts, Granulated Lids, Wild Hairs, Ulcers, Weak, Watery Eyes and All Eye Diseases—many have thrown away their glasses after using this magic remedy one week. Send your Name and Address with full description of your trouble to the H. T. Schlegel Co., 4455 Home Bank Building, Peoria, Ill., or fill out the coupon below, and you will receive by return mail, prepaid, a trial bottle of this magic remedy that has restored many almost blind to sight.

FREE. This coupon is good for one trial bottle of Schlegel's Magic Eye Remedy sent to you prepaid. Simply fill in your name and address on dotted lines below and mail to the H. T. Schlegel Co., 4455 Home Bank Building, Peoria, Ill.

Gains in Chicken Feeding.

In the Petaluma Poultry Journal of September 14th, J. W. Shade, of San Bernardino, gave the following as his results on feeding poultry in crates. He said:

"Below is our scale of gain in weight of our crate-fattened stock. We fatten about 150 birds a week:

"White Leghorns average a gain of eight pounds to the dozen.

"Brown Leghorns average a gain of ten pounds to the dozen.

"Rhode Island Reds and Wyandottes average a gain of twelve to fifteen pounds to the dozen.

"We use 40 per cent. rolled barley. I had, as an experiment, four birds in the crates for thirty-seven days, and they gained two pounds seven ounces to the bird.

"I put a White Wyandotte in the crate at 1¼ pounds, and in twenty-one days it weighed 2¾ pounds."

Extremes in Fruit Results.

We have in mind a small fruit farm which did not return to the owner the cost of pruning, spraying, gathering, shipping, freight and commissions. In the first place, the frost injured what it did not destroy; the rains delayed ripening until the glut set in, and the little shipments of selected fruit did not result so well as the culls sold at home at a nominal price for canning purposes.

On the other hand, we learn upon very good authority that one Oscar Wotring, a superintendent of a Portland cement plant in Pennsylvania, allowed himself to plant twenty peach trees in his front yard, at a cost of a cent each. He wanted to see whether, if they were sprayed, they would die, as all the peach orchards of the neighborhood then were under the ravages of San Jose scale. The trees this year bore their second big crop.

An enterprising young milkman offered Wotring $100 for his crop, the offer being accepted cash down in advance. Since then the milkman has picked 284 baskets of choice fruit, which he has sold at an average of $1.06 a basket, or a total of $293.16. Last year, when the peaches were scarce, and netted more than double this year's prices, Wotring got $140 for his crop, and the man who bought them picked 222 baskets.

The English Customs Duties.

So much has been said of English free trade it is often assumed that all articles are admitted duty free. Tariff duties are levied on cigars, cocoa, coffee, fruits, condensed milk, confectionery, sugar, tea, tobacco, etc., some of them being United States products. England raises by tariff (customs duties) $170,450,000 a year, whereas the customs duties of the United States amount to $300,000,000 a year. England admits wheat, corn, oats and beef, mutton, pork, free of duty, but taxes tea, coffee and sugar as these commodities enter the country.

Sex of Geese.

The book "Money in Broilers and Squabs" says of the sex of geese:

"When six or seven months old, or at maturity," says Mr. Newman, "you can usually, by observation, tell the ganders from the geese. The male, in most cases, grows some larger than the female. The goose is deeper in the body, a trifle slimmer in neck and smaller in head. The call of the gander is loud, long and shrill, while that of the goose is merely an answer to it.

"There is a curious plan to determine sex adopted in Cambridgeshire. All the geese are shut in a stable or a pig stye; a small dog is then put in. It is said, and we believe with truth, the geese will all lift their heads and go to the back of the place, while the ganders will lower and stretch out their necks, hissing all the time."

Electric Railroads are Proving to be Big Money-Makers

I Am Building the Dan Patch Electric Line and Offer You This Opportunity to Invest With Me in This Great Enterprise

The First Electric Line to Tap the Wealth of Our Golden Northwest.

M. W. SAVAGE, Pres.

I Will Give You $1000 in the Voting Stock, Absolutely Free, in Addition to a 10 Share Investment, and I Believe this Free Stock Will Increase to Over $2000 Cash Value. Smaller Investments Will Receive Same Proportion of Free Stock.

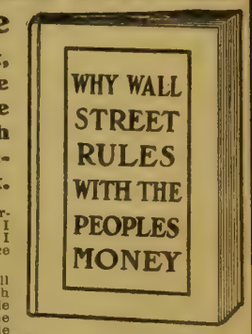
I BELIEVE I can show you the best electric investment opportunity that ever came to your notice—I firmly believe it and I have backed up my belief by a $100,000 investment myself. I don't want you to say "yes" or "no" until you give me a chance to talk with you a little while.

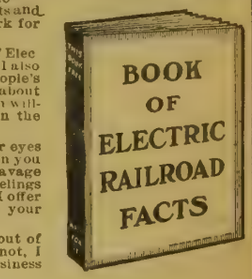
If you've got some money that you want to place where it will bring you big returns, or if you want to invest a little each month out of your income, give me your careful attention for a little while until I can lay before you an investment proposition that strikes me as a great big money maker for the people, and the indisputable facts bear me out in my judgment—I want you to have all the facts and then I believe you will want to put your money where it will work for you and you only.

Now, the first thing to do is to send you my big 40-page "Book of Electric Railroad Facts," which I'll mail you free and at the same time I also send you my other book called "Why Wall Street Rules With the People's Money." When you get these two books which contain all the facts about the Dan Patch Electric Railroad and about me, personally, then I'm willing for you to sit in the quiet of your home and pass judgment on the whole proposition.

I just want you to have these two free books that will open your eyes about banks and Wall Street and investments in general; and when you get these two books I'll stake my chances on whether you'll say "Savage is wrong" or "Savage is right," and it won't interfere with our feelings or friendship if you never invest a dollar or never write me again. I offer you these two books free—I want to show you how you can make your money work and earn for you.

Now just a minute, while I give you a few facts. Perhaps nine out of ten readers of this paper know me already, but to those who do not, I want to say that I've been doing a national and international business out of Minneapolis for the past 22 years.





My business is now the largest of its kind in the world—made so by the continued patronage of nearly three million, thinking, progressive, hard working farmers and stock-raisers. These people are my friends and customers—thousands have already invested in my new enterprise—some from your own State and from every State in the Union and every Province in Canada. I have built up a number of big enterprises here in the Northwest and now I'm building the biggest of them all. It is known as the People's Electric Railroad, owned and controlled by the people.

Dan Patch Electric Railroad

The Dan Patch Electric Railroad runs from Minneapolis to Rochester, and back from Lakeville to St. Paul—130 miles.

I am not merely "thinking" of building this Railroad, I am really building it now. The Northern Section is now in successful operation—great crowds tax the capacity of our magnificent cars—3000 tons of steel rails are being delivered and laid on the Northfield Division and grading has commenced on the last division south.

I am working to make this the best constructed and biggest dividend-paying Electric Railroad in the country. High-class Electric Roads from New York to Spokane are great money-makers. I tell you all about it in my Big Book. This is the second time I have given the people a chance to share with me—my other new enterprise paid 8 per cent the first nine months and 10 per cent again this year.

Now is your chance to share with me in this enterprise—the greatest of them all. I will give you $1000 in voting stock in addition to a small investment. I want to send you the estimated net profit statement, showing how your investment can rapidly increase in cash value. This information is contained in my Big Book of Electric Railroad Facts. I want you to have it even though you never invest a dollar, and I am especially anxious for you to have my new Book, "Why Wall Street Rules With the People's Money."

Don't be backward about sending for these books. I want you to have them and they won't cost you a cent—they are free—some of these Wall Street secrets will open your eyes. I want you to see how the people's money works for Wall Street. I want to show you how to make your money work for you and for no one else.

M. W. Savage, President Dan Patch Electric Railroad Minneapolis, Minn.

Dear Mr. Savage:—I don't know whether I'll invest any money or not, but would like to have you send me your two Books—without any obligation on my part—"Book of Electric Railroad Facts" and "Why Wall Street Rules With the People's Money."

Send For The 2 Books Now.

MAIL ME THIS "FREE BOOKS" COUPON

I personally guarantee to protect your stock equally with my own and that it will make exactly the same per cent of profit. This is truly a people's road that is owned and controlled by the people.

I have just published a splendid photograph, 15x21 showing our splendid cars crowded with people arriving at Washburn Park Station. I will send you one free with the books—I want to tell you about this investment opportunity and how 4000 small investors have made it possible to build and operate this line without the help of Wall Street.

Real Thing.

Fred, aged three, had been a naughty boy, and his mother had punished him. He felt very much hurt and complained to his auntie about his mamma's spanking him. Auntie said: "It is not you that mamma spanks, but a little devil inside of you, who makes you do naughty things."

After sitting very still for five minutes he said: "It beats all how it hurts me when that devil gets spanked."—The Delineator.

Cotton Boll Weevil in Alabama.

The Mexican cotton boll weevil entered the state of Alabama about August 20th, being surely recognized in the fields of Mobile county near Wilmer. The movement may continue until November, unless atmospheric conditions are unfavorable. There will be no damage to crops this year, but look out next year!

Poultry Notes.

Eggs of American breeds average about twenty-four ounces to the dozen; the Mediterranean class from twenty-two to twenty-six ounces; and the Asiatics from twenty-four to thirty ounces.—Produce Review.

The Petaluma Poultry Journal says: "Selling other people's eggs to your own private trade is often like retailing other people's tales. The eggs are often unfriable as the stories are often unreliable.

England and France have many great shows where only eggs and dressed poultry are exhibited. It is time for poultrymen of this country to follow suit, as such are here seen only at certain Experiment Stations.

For house-building or house-furnishing materials write for Catalogue 990 to the Chicago House Wrecking Company, Thirty-fifth and Iron streets, Chicago, Ill.

"A busy writer estimates that, if all the school children in the country were placed in line, there would be 11,000 miles of them. Not to speak of a few hundred miles of boys who are supposed to be in school, but who in reality are 'playing hookey.'"—Denver Republican.

I WAS A Heavy Drinker

Consumed quart of whiskey every 24 hours.

CURED IN 3 DAYS

If you know anyone who drinks alcohol in any form, regularly or periodically, let me send my FREE book, "Confessions of an Alcohol Slave."

I drank beer at first, then gradually developed into a drinker of strong liquors. When drinking heavily I wouldn't hesitate to pawn my coat or break a saloon window to get spirits. For long periods I would drink over a quart of whiskey, rum or gin daily. And some mixed drinks and beer additionally!

I damaged business, health and social opportunities, made family miserable, lost real friends and became an unworthy, unwelcome burden upon all except the saloonkeepers, who cheerfully took my money for the poison they gave me.

For 16 years I kept it up, and I was regarded as a hopeless case. Various "cures" did me no good. But now I have **a joyful message** for drinkers and

Mothers, Wives, Sisters

While drifting from bad to worse, as all slaves of King Alcohol do, I unexpectedly **found a true cure.** It was (and is) genuine. It saved my life. **My health was quickly restored.** I became and am a respectable man, enjoying every benefit of freedom from the accursed alcohol. I speedily and naturally lost all desire for drink. I took less and less. I began to prefer tea, coffee, and other non-alcoholic liquids; the **craving for liquor ceased,** I could sleep perfectly, my stomach became well and I recovered from other ailments which I now know were due to my indulgence in strong drink.

WONDERFUL

My cure lasted 3 days; if I had relied upon will power or faith I would still be a drunkard, because an alcohol slave has **no will power while drinking.** I rejoiced so greatly at having found a true cure that I decided to devote my life to removing the curse from others. My success has been marvelous. During eight years **I have personally attended to over 6000 men and women who were addicted to drink;** the list includes very many persons notable in all walks of life, including those of brains and those of physical energy. If I were permitted to mention names of those who have been saved through this *quick, permanent cure* the public would be astonished. They include senators, congressmen, public officials, great lawyers, bankers, clergymen, noted merchants, skilled mechanics, trusted managers and clerks, farmers and others in all vocations.

I tell about the secret in my book, which I send FREE to every person (or relative or friend) who takes alcohol in any form to excess. My one purpose in life is to **cure the drunkard.** I rejoice in every cure, each victim has my sympathy. What I promise is absolutely guaranteed. My remedy is for either **steady or periodical drinkers.** Think of it—**a complete and permanent home cure between Friday night and Monday night**—or any other 72 hours!

Men or Women, Any Age, Quickly Cured.

To relatives, friends or employers I say—if you want to cure a drinker in the quickest time and permanently, with or without his knowledge and with absolute safety, read my book—changes despair to joy.

ABSOLUTELY FREE

I will send you my book, in plain wrapper, promptly, postpaid. It tells of my own career and the wonderful discovery and gives valuable advice. No other book like it. I especially appeal to those who had wasted money on treatments or remedies which have no lasting effect. Remember, **it costs nothing** and you will always be glad that you wrote. Correspondence strictly confidential. Cut this out if you cannot write to-day. **Address:**

EDWARD J. WOODS,
534 Sixth Ave., 515 A, New York, N. Y.

Could Not Talk French.

In the dining room of a hotel at Nice, on a huge placard posted over the mantelpiece, you can read the following:

"Our English visitors are kindly requested to address the waiters and servants in English, as their French is not generally understood."—Tit-Bits.

Broom corn is now selling at $70 to $100 per ton.

CONCERNING FENCE POSTS.

Results of Experiments and Investigations in the State of Iowa.

Washington, D. C., September 20.—The United States Department of Agriculture estimates that the farmers of the single state of Iowa use every year $1,400,000 worth of new fence posts, which cost the equivalent of $600,000 for setting them in the ground. Further, the Department's officials believe that a part of this expenditure might be saved.

The opportunity for economy is found, first, in using the kinds of posts which, taking into account both cost and durability, are cheapest in the long run; and, secondly, by treating the posts to prevent decay, particularly those which decay most quickly. When a farmer sets a post which will have a comparatively short life, he loses not only through having to buy a new post, but also because of the additional labor involved in setting it. It is true that in both cases no money outlay may be involved, for he may set the posts himself, after getting them from his own wood-lot. Of the posts used last year in Iowa, seventy per cent., it is estimated, were grown on the farms where they were used, or were obtained from other farmers or wood-lot owners, and only thirty per cent. were bought from lumber dealers. Nevertheless, the farmer is out his labor and the part of the product of his wood-lot which is used up, even though he does not pay out any cash.

The facts concerning the use of fence posts in Iowa were brought out by an investigation which the Department of Agriculture has been making through inquiries sent to farmers. Several thousand replies have been used in compiling the figures, which, combined with statistics issued by the Iowa State Board of Agriculture as to the number of farmers and the acreage, furnished the totals. According to these totals about 10,000,000 posts are called for yearly to build and repair fences on 209,153 farms, of an average size of 158½ acres each.

The average life of a fence post is stated to be fourteen years, and the average cost 13.7 cents. There is, however, a great difference in the lasting properties of different woods. Osage orange lasts more than five times as long as willow does, and for length of service it heads the list of post timbers in the state. The comparative life of other posts is shown in the following list, ranging from the longest period to the shortest: Red cedar, locust, white oak, Northern white cedar (or arborvitae), catalpa, black walnut, butternut, red oak and willow.

The average cost of posts varies for different woods, and for the same woods in different localities. Red cedar is most expensive, at an average of 26¾ cents each, and willow, the cheapest, at 6 cents.

Taking into consideration the time a post will last, and the cost of buying it and setting it in the ground, the conclusion must be drawn that the osage orange post is the most economical in Iowa, followed by white oak, locust, catalpa, red cedar, black walnut, butternut, willow, white cedar, and red oak, in the order named.

Comparatively few posts of some of these woods are used. Catalpa and butternut together do not constitute one per cent.; while white oak exceeds forty per cent. From white oak, the highest, the numbers used range down in the following order: White cedar, osage orange, red cedar, willow, black walnut, locust, butternut and catalpa. A few posts are cut from other woods. Nearly or quite one-half of all the posts were round, indicating that most of the trees cut were too small to split.

The low place attained by black walnut and butternut, generally rated high in lasting properties, is probably due to the fact that the posts were round and small, and therefore largely sapwood, which decays quickly. The life of such posts would be much extended by giving them preservative treatment. Preservative treatment increases the life of all wooden posts and more than doubles the period of usefulness of those which are mostly sapwood. The two million dollars spent yearly by Iowa farmers in buying and setting fence posts might be materially lessened by putting into practice the well-known methods of wood preservation. It costs much less to treat a post than to buy a new one and set it in the ground, and in addition much wood could be saved for other purposes. The Department of Agriculture has made a special study of practical methods of preserving farm timbers, so that it is able to inform interested inquirers how to do this for themselves.

OUR ROSE PREMIUMS.

This is only a reminder of our rose premiums. We have contracted for a half million one-year plants true to name and to be delivered at the proper time. We therefore keep our patrons in mind of them.

Our Special Offer.

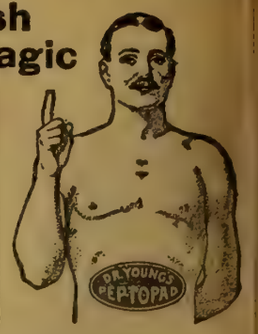
This special offer is a sixty-cent proposition. Each subscriber sends us 60 cents and each subscriber will receive: 1st, The National Farmer and Stock Grower for one year; 2d, The set of Eight Hardy, Ever-blooming Roses. They are one-year plants, each plant with the name attached. 3d. A lovely picture by Paul De Long Pre entitled "American Beauties." This picture is 10½x14 inches and is a panel picture, reproduced from the original painting for which the artist received $2,500. This picture of American Beauties is truly unsurpassed in artistic excellence. The subscription to the paper will be credited as usual, the plants will be sent out at the proper time, and the picture will be sent on receipt of the subscription. Address, **Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

The Sale of Grapes.

At St. Louis there appears to be a liberal supply of grapes. In the wholesale market they were selling as follows. October 3d: Climax baskets New York Concords at 24 to 25c. and Niagara at 26c.; pony baskets Delaware at 15c. and pony baskets Niagara at 11 to 12c. Sale: One delayed car New York Concords (three days overdue) at 22c., delivered.

Stomach Troubles Vanish Like Magic

FREE to Every Man or Woman



Would you like to eat all you want to, and what you want to, when you want to, without a chance for trouble in your stomach?

Would you like to say **farewell** for the rest of your life to Dyspepsia, **Indigestion,** Sour Stomach, Distress after eating, Nervousness, **Catarrh of the Stomach,** Heart Fluttering, Sick Headache and **Constipation?**

Then send me 10 cents to cover cost of packing and I will mail you absolutely free one of these wonderful Stomach Drafts. They regulate the bowels, relieve soreness, strengthen every nerve and muscle of your stomach, relieve you at once and make you feel like a new man or woman. So write today, enclosing 10 cents for the postage, etc., and get one of these wonderful Stomach Drafts that are celebrated because they cure where medicines fail. Write Dr. G. C. Young, 419 National Bank Bldg., Jackson, Mich.

Paints For the Farm.

Nothing can be mentioned that a farmer can buy which has a wider range in quality than paint. The best way in buying paint is to obtain it from a first-class manufacturer, thereby securing that which is guaranteed to be the best. Sherwin, Williams & Co., 689 Canal Road, Cleveland, Ohio, will send you something worth reading about paint and will tell you the name of the dealer in your nearest town who handles their paints. You can safely trust your painting to their hands. Write them a card at once.

Fall pastures are very fine in Missouri, and if cold weather will stay away a reasonable time, grazing will be remarkably good.

I Cured My Rupture

I Will Show You How To Cure Yours FREE!

I was helpless and bed-ridden for years from a double rupture. No truss could hold. Doctors said I would die if not operated on. I fooled them all and cured myself by a simple discovery. I will send the cure free by mail if you write for it. It cured me and has since cured thousands. It will cure you.

Fill out the coupon below and mail it to me today.

Free Rupture-Cure Coupon

CAPT. W. A. COLLINGS,
Box 613 Watertown, N. Y.

Dear Sir:—Please send me free of all cost your New Discovery for the Cure of Rupture.

Improving Table Poultry.

[By A. V. Meersch.]

For some time I have been urging the importance of encouraging the improvement of table strains by adopting some of the methods that have brought the laying strains into such prominence. Frankly, I think it must be admitted that outside a small corner of the matter of our table poultry we do not produce enough of the right stamp and we do not make the most of our opportunities. You will hear one man declaring he has killed chickens weighing four pounds each at the age of twelve weeks, and you wonder how on earth he manages it, because if his statement be true, there must be something profitable about chicken production on these lines. Possibly his feeding may have a good deal to do with the weight attained; but the real solution of the problem is to be found in that word "strain," which means a family of special merit inside a pure breed of fowls.

See what it has done for egg production! Has it not helped considerably to improve and level up the productiveness of our flocks? Has it not, indeed, truly revolutionized the business of egg production and enabled us to say: "Keep pure-bred fowls for egg production, because you will find among them strains that have been bred for laying?"

But there is little of this in the table-poultry branch. There is the Houdan breed, of course, which in one particular country is bred expressly for table purposes; but even now over here they are turning it into an exhibition fowl, and its fair fame may be sacrificed to appearances, unless something is done to encourage the breeding of table strains. It is rather for the sake of beginners, the inexperienced and the little breeders that some effort should be made to bring the table strains more into prominence, for one finds people trying to produce early table chickens with all manner of unsuitable breeds and strains. A public growing competition, designed to show which are the best breeds, crosses and strains for growing first-class table chickens in the shortest time and at the lowest cost would do for the table business what the laying competitions have done for the egg business.

Poultry Notes and Notions Then and Now.

[By A. V. Meersch.]

I was turning over the pages of a very old poultry journal the other day and found considerable amusement in some of the advice given to correspondents, which, in view of our advanced ideas and superior advantages, seem sadly out of date, as indeed it was, for it was in the middle of the last century, when there were no Wyandottes, Leghorns and Orpingtons and laying strains and trap nests. One man was advised to keep Spanish as the best breed for egg production, and though such advice may seem outrageous in the present year of grace, it was no doubt accurate enough at the time, for in those days Spanish were good layers, not so consistent perhaps as our modern White Wyandottes and White Leghorns, but quite good enough to encourage their owners to write to the papers and brag about their laying records.

I have no doubt many people will regard this as an example of the fancier's depravity in spoiling a useful breed, and I do not think anyone can deny that the modern Spanish fowl is the result of persistent breeding for some particular exhibition point. But I would ask what were the utility men doing all this time to let the fancier spoil this and other useful breeds? Nothing whatever, and for the very good reason that there were no utility men as we know them at the present day. Then the utility men used castoffs and supported the belief that cross-bred or mongrel fowls are best. The real utilitarian who breeds pure stock for utility purposes is a comparatively modern development. Had he been in existence sixty years ago we might still have had the first laying strains of Spanish and Cochins and Hamburgs; but as he only came in with the Wyandottes, the Leghorns and the Orpingtons, he has naturally started to work on the best available material. The birth of the modern utility breeder was a more important event in the poultry industry than most people imagine. It made the market poultry keeper independent of the fancier, and the latter can do as he likes with his own now, and no one need grumble, for the utilitarian has thoroughly learned the significance of that little word "strain."

The corn husker we are advertising is the best in the market. It also helps to place The National Farmer and Stock Grower in the hands of the men who do the work—"the men behind the plows." See page 5.

On page 4 we are advertising a book entitled "Farm Blacksmithing." It is a cloth-bound book and well worth having.

Poultry and Farm Paper Club.

We are often asked which is the best poultry paper in the United States, and the answer is **The Reliable Poultry Journal.** There are

other excellent poultry papers, but the one we take home to read and one the family is determined to read is **The Reliable Poultry Journal.** We have made arrangements whereby we can send **The National Farmer and Stock Grower** and **The Reliable Poultry Journal,** both papers, one year, for fifty cents. This is a bargain that is good now, but this advertisement may not appear again. Address, **Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

I Guarantee to Cure ECZEMA TO STAY CURED!

DR. J. E. CANNADAY, THE DOCTOR WHO TREATS NOTHING BUT ECZEMA.

It is also called SALT RHEUM, SCALD HEAD, TETTER, ITCH, WEEPING SKIN, MILK CRUST, PRURITUS—these are different names, but all mean one thing—ECZEMA.

I prove every word that I have said—I give to every sufferer

A FREE TRIAL

Just to show you that you need my treatment. It is yours for the asking. If you have been to other Doctors, if you have taken patent medicine, and used lotions and salves till you are disgusted, write to me—I will send you ABSOLUTELY FREE OF CHARGE, A TRIAL TREATMENT. There are no strings to this statement. There is not one cent to pay—not a penny accepted. I know what my trial treatment will do; I know that it will convince you more than anything else on earth that you need my treatment.

Don't Miss This Chance for a Cure

If you are SUFFERING FROM ECZEMA you can only be cured one way—REMOVE THE CAUSE. What is the cause? ACID IN THE BLOOD. How do you remove it? By cleansing the blood of the ACID.

My treatment is soothing—relieves the dreadful itching at once and cures the disease quickly. You don't have to take treatment for months and months. ONLY ONE CASE IN TEN needs the second treatment—ONE IN FIFTY needs the third—think of that!

What Eczema Is

Eczema is a disease of the blood and affects all parts of the body—the face, lips, ears, hands, feet, genital organ, etc.

SYMPTOMS.—Yellowish red eruption; the pimples or patches may swell and the itching is so great the person will scratch the top off, then they bleed and dark scales form; there is an oozing of matter. In some the skin cracks and bleeds. Itching is terrible; a person suffering will scratch till they bleed. Scales form on parts of the body, where the clothing comes in contact.

Ten Years Guarantee

I positively Guarantee that every case cured by me will stay cured 10 YEARS! It must be good or it could not be sold this way.

Strong as Rock of Gibraltar

I am a graduate from two leading medical schools. I am the holder of a GOLD MEDAL taken in Competitive Examination. Does this not show that I am fully qualified? I will send you my book, showing endorsements of business men of all classes. Also testimonials and pictures from cured patients everywhere. Some of them may be YOUR NEIGHBORS.

MY BOOK

Is the most complete book ever sent out. I explain every form of the disease plainly and fully. I show pictures of many severe cases, which are extremely interesting. I send you names of thousands who have been cured and are grateful.

969 Park Square
Sedalia, Mo.

Reliable Beyond Question

This is a statement from the bank of my home town, where I have done business for years.

THIRD NATIONAL BANK,

SEDALIA MO Jan. 4-1910.

TO WHOM IT MAY CONCERN:—

Dr. Cannaday, of our city is a physician, making a specialty of ECZEMA. We have handled his business exclusively for one year and eighty four days. His patients deposit their money with us, in their OWN NAME, to be paid to the doctor, if his treatment is satisfactory. If we remember correctly, we have been called upon by only FOUR of his patients for their money, and it seemed then, that the fault was more with the Express Companies than with the treatment failing.

Considering the number of cases he treats, we regard his success as remarkable. We consider him perfectly reliable, and assure those placing their money with us a fair, square, business deal.

Yours truly,

The Essence of Good Table Manners.

Some years ago I was at a farm house for dinner. There was a little fellow about five or six years old at the table. When the dessert, which was apple pie, was brought on, George lifted up the top crust of his piece, lowered his head and licked out the filling with his tongue, cat-and-dog fashion. "Now, Georgie," said his mother, "that isn't the way to eat pie." Georgie grinned and said: "Gimme another piece, ma." The second piece he ate as he did the first, with the same faint remonstrance from his mother. A short time ago I again came in contact with George, now a six-footer. He is a fine-looking fellow until he gets at the dining table and then he is awkwardness personified. He uses knife and fork as though they were the hardest instruments in the world to wield. And as I look back and remember the pie scene the blame seems to fall upon his mother. George was a loving, tractable little lad, and if his mother had said: "Let me help you, dear," and then guided him in the eating of pie until it became an easy performance to him, he would then and there have learned how to manage it. Like a little animal he took to the easiest way, and though she told him it was not the right way, she did not take the trouble to show him a better way. Now George is a decidedly unpleasant addition to any dinner table, for his manners are shocking, to say the least.

Some people say there is too much "fuss" about table manners. Perhaps there is. Perhaps there are a needless number of forks and spoons and frills used at elaborate dinners. But because a person is not quite sure how to handle the various courses and the different pieces of silver at an elaborate dinner, he is not set down as an ill-bred or ill-mannered person. It is when the diner makes himself offensive to other guests that such adjectives are applied to him. In our eating, perhaps more than in any other part of our daily routine, we are closely related to other people, and our manner of eating affects them. So it is essential that every child should be taught the first principles of right eating. In brief, teach him to cut his food in small particles and carry it in small quantities to the mouth. Teach him to masticate the food with the lips closed and to allow what he already has in his mouth to be swallowed before taking a second mouthful. Instruct him not to talk while his mouth is full of food. Lead him to chew quietly and without smacking of the lips or clicking of the teeth. Show him how to eat his soup noiselessly from the side of the spoon, and do not allow him to scrape the soup plate or to hit the spoon against the teeth. Forbid him to sop his bread or cake in a cup of milk or coffee. There is no need of it while he has good teeth. It is only a habit, but hard to break, and disgusting enough to those who sit at the table with him. If he is given tea or coffee to drink, teach him to drink it from the cup, first removing the spoon, and keep him from pouring tea or coffee into his saucer. Train him to hold the knife and fork between the thumb and first fingers instead of grabbing them between the fists, as though they were ball bats. Tell him if there is occasion to blow his nose or attend to his person in any manner, that he must excuse himself from the table while doing it. Get him into the habit of placing his knife and fork neatly on one side of his plate when he has finished his meal. Once a boy or girl has acquired these table habits, which take into consideration the comfort of his fellow-diners, there need be no fear that his manner of dining will be offensive at any table to which he may be asked.—Janet Thomas Van Osdel.

Work For the Child Who Does Not Go to School.

The opening of school takes from many homes all of the children except one who is too young to begin school work. This little stay-at-home, bereft of his playmates, and, as the late fall and winter advances, compelled to give up many of his out-door sports, is apt to wander forlornly about the house at a loss for something to do all by himself. In response to this need I have made out a little plan of work which will interest children at the same time that it leads them to constructive thinking. The plan consists of a number of devices, each of which may be tried on a different day when the child is in need of entertaining. Provide a pad of paper, a pencil, a box of colored crayons, a blunt shears, a twelve-inch rule, a box of toothpicks, a box of shelled corn, a ball of cord and a coarse needle. Do not allow the child to play with these things at any and all times, but keep them together in a box or drawer and have them taken out only when he is working out some of the devices planned for his lonely moments.

1. Give him a page from an old magazine and have him prick with a pin all the letters "c."

2. Arrange the corn in piles, putting three grains in each pile. Vary this and on different days have him count the grains into piles of four each, five each, etc.

3. Trace circles, using a spool or a cent as a guide. Write 1 in the middle of each circle. Cut out and use for pennies when playing store.

4. Soak corn until it becomes soft, then string until you have a chain twelve inches long.

5. Select a perfect maple leaf and trace the outline, then color as nearly as possible the color of the leaf.

6. Make a fence of toothpicks, putting the picks about an inch apart.

7. Prick with a pin the letters "a" in the page of an old magazine. Follow this out with other letters on different days.

9. Cut a piece of cord three feet long and knot it every four inches.

9. Find an oak leaf, trace its outline, then color in natural colors.

10. Draw a ladder twelve inches long and draw the rounds one inch apart. Draw other ladders on different days and put the rounds at different distances apart.

11. Cut out a large picture from some advertisement. Paste it upon cardboard. When dry, cut into irregular pieces. Place these pieces in a box or envelope. This makes a cut-up puzzle which will furnish the children much amusement in putting it together. On other days use other pictures for the same purpose, but be careful to keep each cut-up picture separate.

12. Draw a square eight inches each way and divide into one-inch squares.

13. Tie the toothpicks in bundles of five each, then count the bundles.

14. Copy the face of the clock and place the hands at six o'clock.

15. Trace an outline of your hand, then draw in the fingernails and color all a flesh color.

16. Trace an outline of the sole of the shoe or of the bare feet. Then fill in and color.—Janet Thomas Van Osdel.

All Free

This Beautiful Doll's Fur Set included in the BIG FREE OFFER

Six Different Presents

Completely Dressed Life Size Doll
Doll's Push Cart
Fur Muff Fur Cap Fur Stole
and Doll's Chatelaine Watch

WILL MAKE ANY LITTLE GIRL SPEECHLESS WITH DELIGHT

NOT ONE BUT ALL SIX ARTICLES GIVEN AWAY NOW

IF you have a little girl who wants a beautiful Doll, imported from Germany, and the other five presents, now is your opportunity. Our Bisque Doll is nearly two feet high, jointed legs and arms, curly waxen hair, trimmed hat, with large plumes, ribbons and lace, opens and closes her eyes, stylish sateen dress with yoke. O. C. FINNEY, Treas., 107-111 Clinton St., Dept. 30 CHICAGO, ILL

"No man ever invented anything as intricate as the bung-hole in a barrel without pausing to figure what he would do with an income like Thomas A. Edison's."—Exchange.

THE 500 QUESTIONS ANSWERED

This is all about swine, and is a book by L. H. Cooch. There are 526 questions and 526 answers. They are natural questions and practical answers. The questions relate to breeding, mating, feeding, pasturing, fattening, management, diseases, etc., of swine. It is a complete veterinary authority on all swine diseases. The answers to questions on feeding alone, properly attended to, will put enough pounds on one pig to pay for many books. We are sending The National Farmer and Stock Grower for one year and the 500 hog question book for 60 cents. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Cement Workers' Handbook.

This book is designed to teach anybody how to work with cement; how to mix mortars of all kinds for all concrete purposes; how to make building blocks; how to build walls, floors, ceilings, walks, posts, cisterns, troughs, tanks, etc. It gives estimates of the cost of all kinds of mortars and concretes and all methods of house construction. It is a cloth-bound book of 100 pages and covers more than fifty most important subjects on cement and its uses and construction. This is a diamond of a book for wide-awake farmers. The price of the book alone is 50 cents.

For 60 cents we will credit one-year's subscription to The National Farmer and Stock Grower and send a copy of the Cement Workers' Handbook. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

The Conservation Idea.

On September 21st it was reported from Washington that President Taft had withdrawn from settlement 70,383 acres of public land in two states.

California lands withdrawn, approximating 1,327 acres, are believed to be valuable for power purposes. Those in Colorado are in the Glenwood Springs land district and amount to about 69,055 acres. They are coal lands. Heretofore, except in mining regions, it mattered but little what was under the land; the settler acquired the title. At the present time the policy is different. We are practically at the end of the distribution of public lands. In other words, the crop of land is exhausted. Hereafter to obtain land it will be necessary to buy it. In this great undeveloped country there are some cheap lands remaining, becoming less and less in quantity and higher and higher in price. At this time it is most important to investigate the surroundings fully and clearly before starting out to find a home. Many a man has expended the money that would buy a farm by starting out first and investigating afterwards. At this time all the cheap lands are being advertised and full particulars can be obtained. The railroads do the work. They wish to fill up their country, they ascertain full particulars, and anyone can go direct to the right spot without wasting his substance. These railroad immigration departments are serving a useful purpose by economizing the time and the money of the investor.

The Cost of Flour.

According to the St. Louis Republic, in the year 1835, which is seventy-five years ago, flour declined in price and was sold at $6.00 per barrel in stores and at $5.75 from wagons. Just at this time, in the year 1910, a splendid article of flour can be bought at $4.00 to $5.00 a barrel.

The Price For Range Cattle.

On Wednesday, September 7th, Wallis Huidekoper, of Twodot, Mont., marketed seventeen head Western range grass cattle at $7.35 per 100 pounds. These steers were marketed at Chicago; the sale was negotiated by Clay, Robinson & Co., and the price obtained was the highest of the season for a load of range cattle. The cattle were dehorned grade Shorthorns. A sale like this requires the grand combination, good stock, superior salesmen and a first-class market.

Horticultural Notes.

The Oregon Hood River Apple Growers are reported to have sold to a New York firm about five hundred car-loads of apples, or 250,000 to 300,000 boxes, a transaction involving an outlay of $450,000. The sale was announced September 10 as being the largest apple deal on record.

In the year 1860 fire nearly destroyed Landreth's Seed Store, on Main, near Walnut, street, in St. Louis. This is from the Missouri Republican of that time. The Landreth store is not at St. Louis in the year 1910.

On September 10th unfavorable crop reports were sent out from Paris in regard to the vintage prospects of the Burgundy region, also from Haute Garonne, a well-known wine district in the south of France. The trouble this year is mildew, and if unfavorable weather continues next year's crop will not mature.

Mr. E. S. Osborne, of Rochester, N. Y., advances the idea that there are too many varieties of apple trees. In his own catalogue there are 116 varieties, and 95 per cent. of the sales were from fifty varieties.

A New York nurseryman mentions Baldwin, King, Northern Spy, Northwestern, Greening, Styman's Winesap, Wealthy and Yellow Transparent as the seven leading varieties of apples.

The National Nurseryman says: "It appears as a result of the season's experience that the Fruit Producers' Exchange was a material aid in handling in a profitable manner the large peach crop harvested in Georgia the past season. Lime-sulphur, too, played an important part in warding off rot and curculio. Georgia peach growers are feeling encouraged."

The Edison Concrete House.

A complete set of moulds for the Edison Concrete House will be exhibited at the Real Estate and Building Show to be held at the Coliseum, St. Louis, Mo., October 24 to 31. It is also stated that a house made of poured concrete constructed by use of moulds will be exhibited also. Farmers who can arrange to come in to this show will find that the time is not wasted.

PLAN FOR ORCHESTRA IN EVERY COMMUNITY.

Lyon & Healy Start a Nation-Wide Movement of Importance in Musical Development.

The music house of Lyon & Healy, Chicago, has started a movement to establish in every community, however large or small, an amateur symphony orchestra, fully equipped with high-grade instruments. The plan is to arrange that the instruments pay for themselves, thus relieving the individual members from any obligation.

The movement has the hearty approval of Frederick Stock, Director of the Thomas Orchestra, of Chicago, and other men of high attainment, who acknowledge the amateur orchestra to have been a stepping stone to success in their art.

These master musicians realize that the famous orchestra leaders of the future must come from the ranks of the amateurs of to-day. They recognize that Lyon & Healy's plan to encourage the establishment and support of amateur symphony orchestras throughout the country may mark an epoch in the history of music in America. The keynote of the plan is organization. The details have been worked out with care and thoroughness.

A booklet entitled "Delightful Evenings," which outlines the plan, has been published by Lyon & Healy, and it will be sent free to anyone interested. Address, Lyon & Healy, Dept. Z 3137, Chicago, Ill.

as high as a man's head

and thicker than wheat—that's the way rice grows on the Grand Prairie of Arkansas. From a single stool a dozen stalks will spring, each bearing a plump head of grain. One seed planted in the soft earth multiplies three and four hundred times. One acre of rice there produces more bushels and more money than *four acres of wheat* elsewhere. Men who never grew rice before in their lives—have gone down there and now are making fortunes in

Arkansas Rice

41 acres makes $3,936

A. D. Bunn—a Doctor of Stuttgart—last year planted 22 acres of Honduras Rice and 19 of Japan. The Honduras made 81 bu. to the acre. In his own words: "I sold a part of this for seed at $1.25 and the rest at 96¢ per bu., averaging $1.10. The Japan made 114 bu. an acre, which sold at 90¢. My total income was $96 per acre from the 41 acres."

Arkansas Rice is raised on high, healthful land, by the same method used for wheat—the only difference being that for a part of the time the land is flooded with water; this difference makes it the *surest* staple crop, for you are *independent* of weather—neither a dearth of rain nor a deluge can effect your yield.

The best way to judge an opportunity is to look into it yourself. Take advantage of the low fares offered twice each month via Cotton Belt Route to *go down there*. Nothing that you can read will *convince* you as will the things you'll *see* when you get there. Land values have almost *doubled* since last year but in the *newer* districts you can still buy good land at a price that the *first year's* crop will *pay* for.

"The Rise of Rice" tells you everything that can be told in a booklet—gets to the bottom of things. Brimful of facts and chuckful of pictures—interesting from first to last. Write for *your* free copy today.

Roofing Guarantees.

When a maker guarantees his roofing, it merely means that he puts his claims for it in writing, and if there is any dispute afterwards, there are thousands of ways in which the maker can evade responsibility if he chooses.

The makers of Congo Roofing, however, have devised an interesting plan which gives the buyer absolute protection. With each roll of roofing is furnished a Surety Bond issued by the National Surety Company of New York, guaranteeing the faithful performance of the guarantee by the manufacturers. This gives to any possible complainant a Court of Appeals to which he can go, over the head of the manufacturer. In fact, this guarantee bond so pledges that if the manufacturers of Congo Roofing should go bankrupt or close out their business, the Surety Company would still continue to guarantee the reliability and satisfaction of Congo Roofing. The guarantee on the three-ply is for ten years.

A copy of the Guarantee can be obtained by addressing the United Roofing and Manufacturing Company, Philadelphia, Chicago and San Francisco.

A Tip To Horse Owners.

The horse with a clear eye and good sight has a full marketable value, but the animal that suffers from moon-eye or other defect in vision is not worth much. This any good horse breeder or dealer can testify to. Look up the advertisement of the Visio Remedy Association appearing in this issue. Order a bottle of their guaranteed remedy and see if it won't make your blind or half-blind horse worth twice as much as he is at present.

The KKK Medicine Company, 201 Main street, Keokuk, Iowa, advertise in our columns for responsible men as salesmen to represent them in their own vicinity. The advertisement gives particulars.

THE BOOK OF LIVE STOCK CHAMPIONS.

This is a valuable book and is of great interest to all stockmen.

Send us One Dollar and we will send you The National Farmer and Stock Grower for two years, and we will send you post free by mail one copy of **The Book of Live Stock Champions**, issued in the year 1905. It contains pictures of 500 individual animals, the greatest champions in live stock history. This book is nicely bound in cloth and is our own publication. Every stockman should take pride in owning a copy. It begins with the World's Fair in Chicago in 1893; contains the grand champions at the Louisiana Purchase Exposition, 1904, and at International, State and American Royal Shows. It is a book of 240 pages, with pictures of one, two or three champions on a page. The pages are 6x9 inches. We have sold ten thousand of these books to stock farmers, breeders and Agricultural Colleges. To have a copy of this book on your table is a constant pleasure. Only a few hundred of these books remain on hand and it will not be printed again. Obtain a copy while you have an opportunity. Address, **Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

$3 a Day Sure Send us your address and we will show you how to make $3 a day absolutely sure. We furnish the work and teach you free, you work in the locality where you live. Send us your address and we will explain the business fully, remember we guarantee a clear profit of $3 for every day's work, absolutely sure. Write at once. ROYAL MANUFACTURING CO., Box 1627 Detroit, Mich.

Helping the Cook.

"Have you a young chicken? I am rather green at cooking."

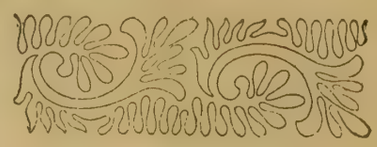
"Such being the case, madam," said the green grocer, "don't you think you'd better have an old, experienced fowl?" — Courier-Journal.

St. Louis cantaloupe market, October 1st: Fresh car Colorado Burrell Gems sold at 85 cents to $1.10 per flat crate, and clean-up of car Rocky Fords standard crates at $1.75, delivered in jobbing way. Home-grown dull at 15 to 25 cents per bushel, loose.

The grain movement is heavy; hence the reduction in prices.

MAY MANTON EMBROIDERY.

These paper patterns require only a hot iron to insure a perfect transfer on cloth. The way to do it is to lay the material to be stamped on a padded ironing board or table, place the pattern over it with the printed side down and press over the entire surface of the paper with a hot iron, when a perfect outline will result. Please order by embroidery number.



A New Braided Border.

No. 536.—Design for a braided border, six inches wide. One and one-half yards are included in each pattern. The price of the pattern is 10 cents.

Athletic Sofa Pillow.

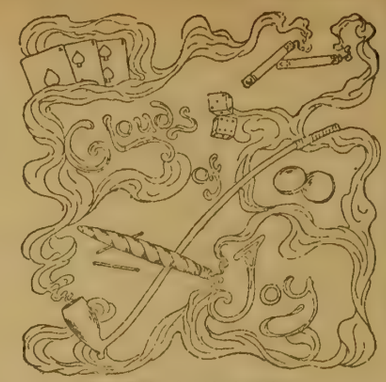
No. 537.—A design for embroidering a sofa pillow. This will give great satisfaction. The price of the pattern is 10 cents.

Beautiful Sprays in Embroidery.

No. 534.—Design for embroidering sprays of clover leaves. Five sprays and five separate leaves are given. The price of the pattern is 10 cents.

Elegant Center Piece.

No. 533.—Design for a center piece twenty-two inches in diameter. The scalloped edges are to be buttonholed, the design can be outlined or couched with coronation or rat-tail cord. Price of the pattern is 10 cents.



Joy Ride in Embroidery.

No. 535.—Design for an embroidered cushion cover or pillow top, seventeen inches square. The price of the pattern is 10 cents.

Naval and Military Emblems.

No. 532.—Design for embroidered emblems and chevrons. The eagles are two inches long; the anchors with single stripes are two and a quarter, the anchors with three stripes two and a half inches long; the stars are two inches wide, the separate chevrons one and a half inches in depth. The price of the pattern is 10 cents.

Please send all orders for these embroidery patterns to the **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Thunder and Lightning.

A bishop came to visit a church where a colored minister was presiding. Loudly and with much gesticulation the preacher proclaimed Salvation. When he had finished, he approached the bishop and asked how he liked the sermon.

The bishop answered: "Why, pretty well; but don't you think you spoke too loud?"

"Well," said the preacher, "it's this way: What I lacks in lightning I tries to make up in thunder."—Ladies' Home Journal.

A FEW FACTS.

Frazier's Distemper Cure is a remedy of proved merit. It has been used with remarkable success for a quarter of a century. A business of such dimensions cannot be built up alone upon advertising. The remedy must possess real merit to stand the test of time. The drugs used in its manufacture are very costly, the best and absolutely pure. We believe in the policy of honest goods and for this reason have never lowered the high standard of excellence or changed in any degree the original formula to meet the advanced cost of production. We have held steadily to maintaining the virtues of "Frazier's." This remedy is absolutely pure and does not contain any poisonous or narcotic drugs mentioned in the pure food and drugs act. Send for our free thirty-two-page horse booklet. Binkley Medical Co., Dept. H, Nappanee, Ind.

USED MANY YEARS, SPLENDID RESULTS.

594 E. Chester St., Jackson, Tenn., Oct. 1, 09.

THE MEXICAN RESURRECTION PLANT.

This is a great and pleasing novelty. Without water it dries up and is apparently dead. Place it in a shallow tank of water and it revives to a beautiful, living, fern-like plant. Let it dry out again and it curls up like a ball and can be kept for years. It will revive again directly it is placed in water. It requires no soil, no nourishment, no attention.

We have adopted the Resurrection Plant as a subscription premium to the **Universal Magazine.** The magazine is most interesting and is published monthly. It is an illustrated publication, with genuine stories, splendid poetry and home reading. Send 25 cents for one-year's subscription to the **Universal Magazine** and we will mail you one of these genuine Resurrection Plants as a free premium.

Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

ABSORBINE AMONG THE TRAINERS.

Absorbine is a great favorite among the trainers and is in constant use by them. Whenever they need a remedy for getting the horse in condition for the race, relieving inflammation of any kind, or treating bruised, swollen tendons, they apply Absorbine and the horse goes to the race sound. Harry Benedict, of East Aurora, N. Y., reported under date of June 5, 1910, as follows: "I have used Absorbine for a long time; in fact, ever since it has been on the market, and I think it is one of the very best remedies known to veterinary science. It does all it claims to do. I use quite a little of it." A splendid preparation to use in case of bog spavin, big knee, bruised and swollen tendons, capped hock, etc. On sale at druggists, $2.00 per bottle, or sent direct upon receipt of price. Write for descriptive pamphlet, sent free. W. F. Young, P.D.F., 206 Temple street, Springfield, Mass.

DEAFNESS CURED.

"I have demonstrated that deafness can be cured."—Dr. Guy Clifford Powell.

The secret of how to use the mysterious and invisible nature forces for the cure of deafness and Head Noises has at last been discovered by the famous Physician-Scientist, Dr. Guy Clifford Powell. Deafness and Head Noises disappear as if by magic under the use of this new and wonderful discovery. He will send all who suffer from Deafness and Head Noises full information how they may be cured, absolutely free, no matter how long they have been deaf, or what caused their deafness. This marvelous treatment is so simple, natural and certain that you will wonder why it was not discovered before. Investigators marvel at the quick results. Any deaf person can have full information how to be cured quickly and cured to stay cured at home without costing a cent. Write today to Dr. Guy Clifford Powell, 6953 Bank Building, Peoria, Ill., and get full information of this new and wonderful discovery, absolutely free.

Order jewelry today, when sold send us $2 and we will send you the watch, ring and chain. Satisfaction guaranteed.

ALTON WATCH CO., Dept. 838, CHICAGO.

Development in the Southeast.

Those who have followed the trend of agriculture in the Southeastern States are aware that a very great advance is taking place there along all lines. This advance is especially marked in some directions and is showing that the Southeast is not merely a country for cotton growing or for some special line of farming, but compares most favorably with any portions of the country for farming of all kinds. Mr. M. V. Richards, Land and Industrial Agent of the Southern Railway, is quoted as saying in all his observations there has never at any time, in any section, been such a forward movement in agriculture as that which has been made within the last few years there and is in progress today. "There is not a state in my territory in which steadily greater attention is not paid by the state governments and by the people to advancing the interests of the farm, to the promotion of the best class of agriculture. Every state has now the most efficient Agricultural Colleges and Experiment Stations, several have adopted the District's Agricultural College System, the institute work is thorough and is having practical results. We have run during each year the last few years from four to a dozen special farmers' trains, and have found that in every locality farmers not only came out to the meetings in large numbers, but were thirsting for information, and that the teachings of the practical men with these trains, and also the instruction of the colleges and stations of the workers of the United States Demonstration Farm Bureau are eagerly followed. The result is that where formerly farming was of a careless character the best methods are being adopted, and that the yield of all crops is growing better and better.

Where commercial fertilizers were depended on entirely the growing of legumes and the making of pastures and the keeping of stock are being introduced. You have seen what an advance has been made in corn production. Something of the same kind of an advance is under way in wheat growing. We are able to make as large crops of corn and wheat as any region, and as our lands are much cheaper than those of other sections, we have special advantages to growing these crops. We have found that we can make the best pastures, and that the cost of making beef and pork is so low that we should be able to control much of the market of the land. We shall certainly soon be feeding our own part of the country. In every state alfalfa has been introduced with the greatest success and the yields and profits from growing it are so great that I hesitate to name them, lest the story look ridiculous. We have probably some millions of acres of good alfalfa land that is not now utilized to any great extent. The apple districts of the Southeast are coming into their own. Our people are learning that by proper packing of their splendid fruit, grown on lands that cost but a few dollars an acre, their market and their profits are as good as those of any fruit district.

"With the advance in agriculture by better methods among our own farmers and the tendency to cut the big pastures into small farms, there has come a great movement of people from the North. They are coming from every Northern State, scattering throughout the Southeast. Fortunately we have the lands, and at the prices which give them the opportunity they are seeking. It has been slow work to convince the Northern farmer of the really great, unusual value of the most Southern farm lands, but it seems that they are now convinced in large numbers."

For full particulars concerning opportunities in the Southern States address M. V. Richards, Land and Industrial Agent, 1344 Pennsylvania Ave., Washington, D. C.

Hints For the Needleworker.

Many lovers of fancy work feel that they cannot spare the time to embroider waists, sofa pillows, etc.

How many know that any Wallachian or braiding design, and many others, can be quickly worked by outlining in fine chain stitch, using crochet or knitting silk? A Wallachian design for a pillow recently seen was made upon plain linen colored gingham and had the flowers worked with No. 538 red Corticelli knitting silk and the cover in No. 554 green. Plain colored gingham makes lovely centerpieces worked in white and colors.

A daintily-embroidered towel can be quickly made by marking groups of three or four disks upon the ends of a fringed or hemstitched damask or huckaback towel. Use a No. 50 cotton spool for the only edge of the disk and a small pearl button for the center. Work the smaller disks in Wallachian stitch in pink or blue knitting silk, and from the outer edge of this to the edge of the larger disk work in a shade lighter.

Knitted or crocheted lace made from Barbour's linen thread, No. 40, makes an elegant finish for plain towels. Crocheted in the old-fashioned "black" patterns, it is "up-to-date" just now. Remnants of table linen make handsome towels at a slight cost. A yard and a quarter of 72-inch table damask that was purchased at the bargain counter made four fine towels.

The sides were narrowly hemmed by hand and two had five-inch borders of Battenburg lace. The other pair had four-inch crocheted lace.

Upon one end of each towel was worked a large initial.

Drawn work is not to be recommended upon towels, unless it is the closely-woven work, as it soon wears out. Where notches or scallops are worked upon towel ends, often they are cut out. Work over the edge again in buttonhole stitch, or in single crochet. This makes a permanent edge.—Mrs. H. L. Miller, Circle, Mont.

Mule Feeding at Chicago.

Mule feeding is becoming popular with several of the Chicago Stock Yard folk who have farms and operate them as side issues. They find the fattening of mules for market a profitable venture and are going into this line on a big scale. Harry W. Keil and George M. Nicoll are conspicuous among the mule feeders, and both have made a success of it in the past. A load of mule colts arrived at the yards, October 3d, consigned to George M. Nicoll, and they attracted wide attention from friends of the latter. These colts will be shipped to Mr. Nicoll's farm at Glen Ellyn, Ill. Mr. Keil also bought two loads recently, which he will feed at his farm at Harrodsburg, Ind.

October 1st, at St. Louis, home-grown sweet potatoes were selling as follows: Bermuda at 40c.; Yellow Nansemond at 40 to 50c.; and Red Nansemond at 50 to 60c. per bushel box, loose.

On October 1st, at St. Louis, one car-load of Colorado Elberta peaches sold at $1.00 to $1.10 per crate.

GRAND SUBSCRIPTION OFFER.

A Most Delightful Picture.

This glorious and beautiful picture is 6x8 inches and is mounted on a nice green mat which is 8x11 inches. It is just the right size for a panel picture. It is rich in colors and is ready to tack or hang on the wall. It is not necessary to frame this picture, but no picture in the world is better worth framing.

Mother and Child.

The dark, warm colors of the room, enlightened by the glow of the candles; the chubby face; the restful, healthy, natural position of the child; his delicate, little hands, and the fond look of the mother, all go towards perfecting a picture that will be enjoyed and give happiness to any house it may enter.

We offer this picture as a subscription premium. Send us 25 cents and we will send The National Farmer and Stock Grower for six months. We will also send one mounted copy of the **Mother and Child Picture**, in colors, postpaid, and safe delivery guaranteed. Address, **The Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

YOU CAN INTEREST HIM.

Any Man Over Fifty.

You can interest any man over fifty years of age in anything that will make him feel better, because while he may not as yet have any positive organic disease, he no longer feels the buoyancy and vigor of twenty-five nor the freedom from aches and pains he enjoyed in earlier years, and he very naturally examines with interest any proposition looking to the imprrovement and preservation of his health.

He will notice among other things that the stomach of fifty is a very different one from the stomach he possessed at twenty-five. That greatest care must be exercised as to what is eaten and how much of it, and even with the best of care, there will be increasing digestive weakness with advancing years.

A proposition to perfect or improve the digestion and assimilation of food is one which interests not only every man of fifty, but every man, woman and child of any age, because the whole secret of good health, good blood, strong nerves, is to have a stomach which will promptly and thoroughly digest wholesome food, because blood, nerves, brain tissue, and every other constituent of the body is entirely the product of digestion, and no medicine or "health" food can possibly create pure blood or restore shaky nerves, when a weak stomach is replenishing the daily wear and tear of the body from a mass of fermenting half-digested food.

No, the stomach itself wants help and in no round about way either; it wants direct, unmistakable assistance, such as is given by one or two Stuart's Dyspepsia Tablets after each meal.

These tablets cure stomach trouble because their use gives the stomach a chance to rest and recuperate; one of Stuart's Dyspepsia Tablets contains digestive elements sufficient to digest 3,000 grains of ordinary food, such as bread, meat, eggs, etc.

The plan of dieting is simply another name for starvation, and the use of prepared foods and new fangled breakfast foods simply makes matters worse, as any dyspeptic who has tried them knows.

As Dr. Bennett says, the only reason I can imagine why Stuart's Dyspepsia Tablets are not universally used by everybody who is troubled in any way with poor digestion is because many people seem to think that because a medicine is advertised or is sold in drug stores or is protected by a trade mark must be a humbug, whereas as a matter of truth, any druggist who is observant knows that Stuart's Dyspepsia Tablets have cured more people of indigestion, heartburn, heart trouble, nervous prostration and run down condition generally than all the patent medicines and doctors' prescriptions for stomach trouble combined.

Is It a Joke?

A friend has just been telling me about a joke (?) played on a newly-married couple. After the wedding ceremony the bride and groom succeeded in escaping to their carriage and eluding the crowd of young people who were waiting to "do all sorts of things" to them. Foiled of their prey, a few of the more reckless led the way to a small flat that the couple had partly furnished and to which they expected to return in a few days. By means of a skeleton key the crowd let themselves in and played havoc with everything on which they could lay hands. The carefully-pressed and folded drsses of the little bride were tossed about, the sleeves knotted and in general made unpresentable. Trunks were upacked and contents strewn about or hidden in impossible places. Everything they could lay hold of the crowd put out of place. There was probably no irreparable damage done, but when the couple returns to their new home. what a sight will meet their eyes! And they had so carefully put their house in order. The young marauders who did the work undoubtedly call themselves friends of the newly-married couple. They think they have played a clever trick, and will laugh over it for months to come. In reality they have done something that any boor could think of. They have taken something away from the sweetness of this great occasion in the life of these two young people. So is there really anything funny about it? Is bringing unnecessary burdens and tangles into the lives of other persons a joke? Would we relish having the tables turned on ourselves? It seems that the person who can see the wonderfully funny side to it must have a distorted sense of humor.—Janet Thomas Van Osdel.

Not to be Trusted.

J. Curtis Sturtevant, at a dinner at Palm Beach, illustrated with a story the modesty of children, says the St. Louis Globe-Democrat.

"One warm February morning here in Florida." he said, "I was motoring with a young lady, and by a stream we got out to gather flowers. After a while a boy came up and said:

" 'Hey, mister, is that your girl over there?'

" 'Yes, I suppose so,' said I.

" 'Well, tell her to go home,' said he. 'Us fellers wants to go in swimmin'.'

"I told the young lady of this odd request, but she had not yet finished her bouquet, and she said, with a laugh, I must tell the boys she wouln't look. She'll shut her eyes.

"This they were duly told. And they consulted gravely on it. Then the spokesman returned to me and said:

" 'The fellers says they dassent trust her.' "

Egg Preservation.

[By R. M. West, University Farm, St. Paul, Minn.]

The primary principle to be observed in the preservation of eggs is the protection of the interior from contact with the air. The most effective way of doing this is to immerse them in a water solution of sodium silicate, usually known as "water-glass." Sodium silicate can be obtained from any druggist at from 45 to 60 cents per gallon. One gallon should be sufficient for about fifty dozen eggs.

Mix one part of the sodium silicate with from ten to twelve parts of water. Some water-glass is so thick that, with this dilution, the eggs will float. In such a case, add enough more water to make them settle to the bottom of the liquid.

Use only clean water, from which the air has been removed by boiling. Be sure that it is cold before mixing it with the water-glass.

Pack the eggs in a jar or clean wooden keg, and add the preserving solution in sufficent quantity to cover the eggs. No part of the shell should be exposed to the air.

The packed eggs should be kept cool. The cellar is the best place for storing them. Pack only strictly fresh eggs. Stale eggs will not keep for any length of time under any conditions, and they may affect the fresh eggs which are packed with them.

Do not wash eggs before packing them. Washing removes from the shell the mucilaginous coating which nature provides for their temporary preservation.

Eggs preserved in this way retain their original fresh flavor perfectly; they are not discolored; the yolk retains its normal consistency for several months.

Other methods of preservation, though less satisfactory in their results, will keep eggs for from three to four months in such condition that they may be used for cooking purposes. A preserving mixture which has given fair results is made up of 3½ pounds of fresh lime mixed with 4¾ pounds of salt, and the whole dissolved in eight gallons of water.

Eggs may also be preserved fairly well for a few months by packing dry in a mixture of equal parts salt and sawdust.

Children's Clothes.

The economical mother watches the remnants of woolen fabrics in the stores, and thus is often able to buy short lengths of goods at very low prices, and combinations are so much worn it is impossible to be out of date. If the mother understands renovating and remodeling, and money is not plentiful, the school dresses can always be managed from old garments of their own or from those of an older member of the family, and it is a thrifty, praiseworthy economy. Unless the small girls wear aprons to school, it is better to make their dresses to be worn with a guimpe made of wash material, and often a dress that is entirely outgrown can be made over so it can be worn with a separate waist.

A little woolen dress that was still quite good but entirely outgrown was ripped apart and all the pieces carefully pressed and a new waist and sleeve lining were cut and made to fit the little girl. The skirt was cut apart six inches from the bottom and enough plaid goods inserted to make the skirt the right length, and a new yoke, belt and cuffs were made of the plaid, and it looked as nice as a new dress.

Woolen garments that are worn to school soon become soiled, and boys' coats and pants and woolen dresses can easily be cleaned and the colors brightened by putting them in warm borax suds and allowing them to remain for half an hour before rubbing them out, and it is best to make a strong lather and stir in enough borax to soften the water before putting in the garment. There is nothing better than the borax suds for washing their flannels, hose and yarn gloves and hoods, as it leaves the goods soft, and they can be cleaned with very little rubbing.

When you buy new shoes for the children, rub them with a dressing made of equal parts of beeswax, tallow and pitch, which is applied warm to the leather and renders it waterproof, and put patches of stout muslin on the heels and toes of their new stockings, and they will last twice as long, and these patches will not be uncomfortable to the feet if they are put on smoothly and cross stitched without turning under the edges.—M. A. H.

French Wheat Crop Short.

On September 22d the French goverment report estimated wheat 262,899,748 bushels, against 355,573,052 in 1909; rye, 44,576,896 bushels, against 51,7773,994 last year. Market experts figure that France will be compelled to import 82,350,000 bushels of wheat to meet the home deficiency.

Lyon & Healy

PIANO

Pure in Tone

IT'S A WONDERFUL STORY—the determination of Lyon & Healy, the world's largest music house which had already conquered the world with the Lyon & Healy Harp, to produce in their own factories a piano that would fittingly represent them:

FIRST—Came the rearrangement of the great Lyon & Heal factory, opposite Union Park, Chicago

SECOND—Came a long series of private tests of the new model Lyon & Healy Pianos.

THIRD—Came the public introduction of the new scal Lyon & Healy Piano.

Such a triumph!

Here is a piano on which the cost of labor is double that of an ordinary piano; the cost of materials is 50% more than on ordinary pianos. Here is a piano that 180 dealers in all parts of the world secured the representation of in less than one year, a record without parallel.

There is really nothing like the Lyon & Healy Piano.

It bears a world-standard name.

It represents the experience gained conducting for 46 years the world largest music house. It is sold like Lyon & Healy products, at such a small margin that it practically sells itself. bears the strongest guarantee writte

Rice Culture.

Farmers who are becoming interested in rice culture should write the United States Department Agriculture, Washington, D. C., and ask for a copy of Farmers' Bulletin No .417. This is by Mr. S. Knapp, Special Agent of the Department, and it is a very satisfactory presentation of the case. With the bulletin and the article entitled "Rise in Rice," which can be obtained free by addressing E. W. LaBeaume, 1302 Pierce Bldg., St. Louis, Mo., the entire rice situation is before him.

MAY MANTON PATTERNS.

ery Elegant Pattern Service, With Full Instructions For Ordering and Making.

This is the very best pattern service, and e are very much pleased to obtain it for ur friends and patrons. Each pattern is ew and original.

Semi-Princesse Dress.

No. 6676. — Semi-Princesse gowns are uch in demand and are always pretty and ttractive. This one includes a novel flat ertha and sleeves that are among the newest and prettiest. Flowered organdie is the material illustrated, and it is trimmed with lace banding and made with yoke of net, but every seasonable material that can be made full is appropriate, and the list includes silks and light-weight wools as well as cottons. Foulard so made would be exceedingly smart and useful, and marquisette and voile are charming treated after such a style, while lawns and batistes are just as well adapted to the treatment as is the organdie illustrated.

The gown consists of the blouse and skirt, with the panel that is cut in one with the bertha. The blouse is slightly full with a yoke that is joined to its upper edge. Also the flounce is straight, but the upper portion of the skirt is cut in ix gores, and the panel is joined to the ront edge of the skirt and arranged over he blouse. If low neck is liked, the yoke an be omitted. The sleeves can be made ver linings that serve as a foundation to eep the puffs perfectly in place, or without, as liked, and they can be made either three-quarter or full length.

The quantity of material required for the edium size is 10½ yards 24 or 27, 9 yards 2, or 6¼ yards 44 inches wide, with ⅛ ard 18 inches wide for the yoke, 1 yard if ng sleeves are used, 14 yards of banding; idth of skirt at lower edge, 4 yards.

The Pattern 6676 is cut in sizes for a 32, 4, 36, 38, 40 and 42-inch bust measure, and ill be mailed to any address by the ashion Department of this paper on receipt f 10 cents.

Boy's Blouse.

No. 6649.—A great many boys prefer the ouse to the outing shirt for general wear. is comfortable and it is becoming, and it altogether desirable. This one can be made from flannel or from cotton or from linen. It is absolutely simple and plain, genuinely masculine in effect, and is finished with the patch pocket that is always both useful and smart. Madras is the material illustrated, and the blouse is finished with a collar of the same, but whether the collar shall be in contrast or to match is entirely a matter of individual preference.

The blouse is made with fronts and back and is finished with a box plait, at the center of which buttonholes re worked to effect the closing. The patch ocket is arranged over the left front. The leeves are made in regulation shirt style, ith overlaps and straight cuffs. The lled-over collar finishes the neck edge. The quantity of material required for the edium size (fourteen years) is 3⅝ yards 4 or 27, 2¼ yards 36 inches wide.

The Pattern 6649 is cut in sizes for boys twelve, fourteen and sixteen years of age, nd will be mailed to any address by the ashion Department of this paper on eceipt of 10 cents.

Plain Fitted Corset Cover

No. 6707.—The closely-fitting corset cover a necessity under closely-fitting gowns. his one is shapely at the same time that is simple. It can be made as illustrated or cut off at the waist line, as preferred, and the neck can be made round or in V-shape. Mercerized batiste is the material illustrated, and the trimming is lace with beading, but all the materials that are used for undergarments are appropriate for the corset cover. Cross-barred and embroidered muslins are liked by a great many women, but nainsook, lawn and batiste make the standard fabrics. ther lace or embroidery can be used as rimming, or the neck or armhole edges can embroidered with some dainty little sign.

The corset cover is made with fronts, cks and under-arm gores. The front edges finished with hems, and the closing is de with buttons and buttonholes. The quantity of material required for the medium size is 1 yard 36, ¾ yard 44 inches wide, with 1½ yards of insertion, 2½ yards of beading, 3½ yards of edging.

The Pattern 6707 is cut in sizes for a 36, 38, 40, 42, 44 and 46-inch bust measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Boy's Suit.

No. 6703.—There is no suit that is better adapted to the small boy than this one made in blouse style with the big, becoming sailor collar. It will be found appropriate for linen and for galatea, for madras and similar materials, and it also is well adapted to the suit of cooler weather made from serge, shepherd's check and similar materials. For dressy occasions the same model will be pretty made from silk, and ribbed silk is much liked, white for really formal occasions, dark color for those of more frequent occurrence.

The suit is made with blouse and knickerbockers. The blouse consists of front and back portions, the front being tucked to give the effect of a wide box plait, while the sailor collar is arranged over the shoulders. There is a standing collar at the neck edge. The sleeves are in one piece each, tucked at the wrists. The knickerbockers are made in regulation style, drawn up by means of elastic inserted in hems at the lower edges.

The quantity of material required for the medium size (four years) is 3⅞ yards of material 24 or 27, 3⅜ yards 32, or 2¼ yards 44 inches wide, with 4¼ yards of braid.

The Pattern 6703 is cut in sizes for boys of two, four and six years of age, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Seven-gored Tunic Skirt.

No. 6675.—The tunic skirt takes many variations. This one is exceptionally graceful and attractive. It is lapped at the front edges to give the one-side effect that is so much liked, and includes a full-length box plait at the back. One of the pretty striped linens is the material illustrated, but the skirt will be found appropriate for almost all seasonable ones, for the thinner silks, such as foulard and pongee, and many of the light-weight, washable materials are made in such style, as well as the heavier linens, poplins and wool fabrics. It can be finished, as illustrated, with a few buttons, or the tunic portion could be trimmed with banding or with braid applied over a stamped design.

The skirt is made with seven gores, the tunic and the box plait. The tunic is cut in one piece and arranged over the skirt, while the box plait conceals the edges at the back.

The quantity of material required for the medium size is 12½ yards 24, 9 yards 27, 8¼ yards 32, or 5¾ yards 44 inches wide; width of skirt at lower edge, 3 yards.

The Pattern 6675 is cut in sizes for a 22, 24, 26, 28, 30 and 32-inch waist measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Child's Dress.

No. 6671.—Simple one-piece dresses are exceedingly fashionable for the little folk, and this one is just as smart and charming as it can be, while it represents the least possible labor. Both the front and back are tucked to give a double box-plait effect, but the plaits below the belt are pressed to position only, so allowing pretty flare and comfortable freedom for young legs. There is a distinctly novel collar finishing the neck, and the closing is made invisibly at the left of the front for little girls, at the right of the front for little boys. White pique is the material illustrated, and the collar is finished with embroidered scallops and dots, but the dress will be found just as well adapted to thinner materials of the warm weather as it is to the heavier piques, linen and the like. It would be very dainty made from white linen or embroidered muslin, and it would be very serviceable made from blue chambray or linen. It is smart made from white pique, and the same material in colors is equally appropriate. With a colored frock the collar and sleeve-bands and belt could be of white. Any pretty tie can be worn, as it is tacked to position only and can be removed when the dress is laundered.

The dress consists of front and back portions that are tucked on indicated lines. The collar is cut in four sections and joined to the neck edge, and the sleeves are in one piece each, gathered into bands.

The quantity of material required for the medium size (four years) is 3¼ yards 24 or 27, 2⅞ yards 32, 2⅛ yards 44 inches wide, with ⅝ yard banding for sleeves, 1 yard of edging.

The Pattern 6671 is cut in sizes for children of two, four and six years of age, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Please be sure to give the size of pattern ordered and write your own name and address plainly that no mistake can be made to cause delay.

Kindly address all pattern orders to **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

FREE TO YOU—MY SISTER

Free to You and Every Sister Suffering from Woman's Ailments.

I am a woman.
I know woman's sufferings.
I have found the cure.

I will mail, free of any charge, my home treatment with full instructions to any sufferer from woman's ailments. I want to tell all women about this cure—you, my reader, for yourself, your daughter, your mother, or your sister. I want to tell you how to cure yourselves at home without the help of a doctor. Men cannot understand women's sufferings. What we women know from experience, we know better than any doctor. I know that my home treatment is safe and sure cure for Leucorrhoea or Whitish discharges, Ulceration, Displacement or Falling of the Womb, Profuse, Scanty or Painful Periods, Uterine or Ovarian Tumors, or Growths; also pains in head, back and bowels, bearing down feelings, nervousness, creeping feeling up the spine, melancholy, desire to cry, hot flashes, weariness, kidney, and bladder troubles where caused by weaknesses peculiar to our sex.

I want to send you a complete ten day's treatment entirely free to prove to you that you can cure yourself at home, easily, quickly and surely. Remember, that, it will cost you nothing to give the treatment a complete trial: and if you wish to continue, it will cost you only about 12 cents a week or less than two cents a day. It will not interfere with your work or occupation. Just send me your name and address, tell me how you suffer if you wish, and I will send you the treatment for your case, entirely free, in plain wrapper, by return mail. I will also send you free of cost, my book—"WOMAN'S OWN MEDICAL ADVISER" with explanatory illustrations showing why women suffer, and how they can easily cure themselves at home. Every woman should have it, and learn to think for herself. Then when the doctor says—"You must have an operation," you can decide for yourself. Thousands of women have cured themselves with my home remedy. It cures all old or young. To Mothers of Daughters, I will explain a simple home treatment which speedily and effectually cures Leucorrhoea, Green Sickness and Painful or Irregular Menstruation in young Ladies, Plumpness and health always results from its use.

Wherever you live, I can refer you to ladies of your own locality who know and will gladly tell any sufferer that this Home Treatment really cures all women's diseases, and makes women well, strong, plump and robust. Just send me your address, and the free ten day's treatment is yours, also the book. Write to-day, as you may not see this offer again. Address

MRS. M. SUMMERS, Box H - - Notre Dame, Ind., U. S. A.

End of the Chicken Hawk.

A chicken hawk that hovered over the Demarest Farm, near West Livingston, N. J., August 20th, finally descended in a flock of Plymouth Rock and Bantam fowl that were eating a pick-up supper. The hawk clutched a young bird and was about to carry it off when the head of the house, a game roster, engaged it in battle.

The hawk held its own with the rooster until a turkey gobbler came wobbling to the fight and pitched into the hawk. At that moment also a lame Maltese cat, Gimp, streaked across the yard and grabbed the hawk by the back of the neck. Presently the hawk was dead.

The rooster did a war dance. The cat took itself off for dry cleaning. The gobbler stalked back to his harem. John Demarest, the farmer's son, carried the rumpled hawk to the village grocery store for exhibition.

To Buy Groceries Right.

On page 7 will be found an advertisement of Montgomery Ward & Co., relating to their pure-food grocery catalogue. This firm is well and favorably known as a strictly reliable house, and hundreds of thousands of farmers will testify to this from having bought of them for many years. To get this catalogue, all you have to do is to write a postal card, saying: "Please send us your grocery catalogue as advertised in The National Farmer and Stock Grower." Address, Montgomery Ward & Co., Chicago Avenue Bridge, Chicago, Ill., or to Montgomery Ward & Co., Nineteenth and Campbell streets, Kansas City, Mo. The service is equally as good from either establishment.

Winter Skirts.

Dance frocks for the debutante, and those for the theatre, are made with short skirts. Skirts for the older woman touch the floor, or train slightly, but both classes preserve the effect of the "shackle." Some smart houses have put out skirts with eight or ten narrow gores, and an occasional "picture" skirt is shown which is full and gathered into a corded and round or pointed waist. But these are the exception. —Harper's Bazar.

Six Different Presents.

These are advertised by O. C. Finney, Dept. 30, at 130 Clinton street, Chicago, Ill. It is perfectly safe to answer this advertisement, especially as Christmas is approaching and a bisque doll nearly two feet high comes in good for little girls. Mr. Finney will do everything he promises. See page 22.

The Game Laws.

Anyone who will write to the Remington Arms Company, 229 Broadway, New York, can obtain a handy copy of the game laws of 1910. He will also receive description of the famous auto-loading shotguns and cartridges to match. The Remington guns win the prizes.

SUBSCRIPTION PREMIUM — A POCKET COMPASS.

This is a true 1¾-inch Pocket Compass purchased from a reliable house. It is a fancy, nickel-plated, open-face, watch-shape Compass, with a silvered dial, and it weighs less than one ounce. Every farmer or ranchman should have one in his pocket. Send us One Dollar and we will send you The National Farmer and Stock Grower for one year, and we will also send you this Pocket Compass by mail postpaid. Address, THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

Process of cure is natural, so no further use for trusses. We prove what we say by sending you Trial of Plapao absolutely FREE. Write TODAY. Address—PLAPAO LABORATORIES, Block 57, St. Louis, Mo.

Carrots For Insomnia.

Eat carrots for insomnia. A large, properly-cooked carrot for supper will induce sound and refreshing sleep.

That was the opinion given recently by a well-known London doctor.

"Carrots differ from other vegetables in that they contain a large amount of various sugars," he said. "Properly cooked, they are sweet and pleasant to the taste; they are also carminative—that is, they promote digestion.

"In its sleep-producing qualities the carrot is closely allied to the onion, and as a supper dish for insomnia patients it is to be strongly recommended.

"It has also been averred that the carrot is excellent as a nerve tonic and a mental stimulant. There can be no doubt as to its peculiar properties for inducing sleep, but they should not be eaten raw. They are very indigestible uncooked."

A lady who is an enthusiastic vegetarian gives one of the best recipes for cooking this vegetable.

"Carrots are best cooked 'conservatively,'" she said. "By this I mean they should be cut in strips and allowed to simmer, with butter, in a double cooker. No water should be added.

"By this method all the valuable juices and properties of the carrot are retained instead of being thrown away with the hot water, as is done when they are boiled.

"For supper this dish is most appetizing—a poached egg is a tasty addition. It is a meal which I know from experience induces slumber.

"The many good qualities of carrots are overlooked by the public. They not only induce sleep, but are excellent for the complexion, as a consequence of their tonic effect on the blood."

Arkansas Rice the Best.

A few years ago Arkansas rice was unknown, and but for the enterprise of the enlightened management of one of the great railroads one of the richest and most prosperous farming sections would have been held back many years. Arkansas rice, irrigated by wells owned by farmers, is one of the sure things in agriculture. Arkansas rice is not raised in swamps, but on high, rolling and healthy land, near to market, with good transportation. There are low rates offered twice a month. Farmers are paying for their lands with the first-year's crops. See card on page 23 and write for a copy of the booklet "The Rise in Rice." Address, E. W. LaBeaume, G. P. A., 1302 Pierce Bldg., St. Louis, Mo.

Instruction in Trapping.

The fur trade has been built up by fur dealers instructing hunters and trappers how to treat and handle their skins. The Trappers' Guide sent free by F. C. Taylor & Co. has done wonders in this direction. Every trade has its secrets, and how to obtain the most for furs is no longer a secret when you have their Trappers' Guide in your possession. Write for it, addressing F. C. Taylor & Co., Fur Exchange Buiding, St. Louis, Mo.

Packing in the West.

The model abattoir and packing plant recently completed in Spokane, Wash., for the E. H. Stanton Packing Company began operations October 3d, giving employment to several hundred men. The plant cost half a million dollars and starts with facilities for handling 1,500 hogs, 350 sheep and about 400 cattle daily.

According to the Missouri State Board of Agriculture, the hogs are in good condition, but they are only 7(per cent. of what there ought to b in numbers.

A Most Satisfactory Light For Country Homes.

The most perfect light of to-day or illuminating country homes is cetylene. A few years ago home wellers considered the usual conenience of city homes beyond them. ut to-day nearly every city convenince is within the reach of the odest farm house, as well as the ost expensive country seat, and not he least among them is the cheering low of acetylene.

The engraving shows the residence f Mr. F. D. Graves, proprietor of the Kinker Farm Dairy at Villa Ridge. llinois, which is lighted throughout y acetylene, and to use Mr. Graves' wn expression as to the satisfaction f this wonderful light, we quote as ollows:

"My light plant was installed June 4th, 1908, and has given excellent atisfaction. In fact, I consider it he most dependable light on the narket."

Mr. Graves also lights his barn rom the same plant which is used or lighting his residence, and is nore than satisfied with the results.

We have investigated a number f country homes in which acetyle•e s being used, and in every instance ve have been advised to the effect hat the owners would not think of iving up the lighting system for a reat many times the original cost if hey could not purchase another.

Acetylene is also used to some xtent for cooking purposes, and for hat reason is especially desirable or summer use, as the housewife an eliminate the hot kitchen to a rge extent by installing a cooking pparatus suitable for cooking a ght meal, such as breakfast, lunch, c.

The apparatus is usually put in ne basement and connected with gular gas pipe, leading to wherever e lights are wanted. Any meanic can conceal the piping in old ildings, as well as in new buildgs, and the work can be done thout materially inconveniencing e occupants.

Artistic brass gas lamps are aced in the various rooms, the me as are used in cities where tificial or natural gas is available. fact, acetylene affords the same nvenience as city gas for the ason that it is ready for use at all nes. It is merely necessary to rn on the burner key and apply a atch. Or, for a small additional pense a spark-lighting system can be attached to the lamps, eliminating the match entirely. Where this is done, acetylene affords the same convenience as electricity, although the light is far superior, resembling sunlight more than any other form of illuminant known.

We heartily recommend to our readers who are interested in securing a better light for their homes to investigate acetylene at once.

In this connection we invite attention to the article entitled "A Light Making Machine," on page 30, and after reading it to write for free booklets to Union Carbide Sales Company, 157 Michigan avenue, Chicago, Ill., Dept. O-56.

A Woeful Calf Tale.

The Gainesville Bugle, of Georgia, presents the following:

"If you owned the yard that had brought the prize in a recent Chautauqua as being the prettiest and most neatly kept in the city, wouldn't you, like the proverbial handsome man, who sat up all night to nurse his face, dream of how you would safeguard the aforementioned yard?

Well, there is a citizen in Gainesville, who owns just such a yard, and who is as proud of it as a young and prosperous father is of twins. He dreams of it, and is always thinking and arranging some new idea with which he will improve and keep it. Now, the beginning of the humorous situation of our tale happened a night last week during the wee, tiny hours when the milkman is assorting his bottles and preparing for his unearthly-hour trip. This gentleman who owns the yard was awakened by the loud and unceremonious bawling of a gentle calf—accent on the 'alf—and with a bound he was out of bed. Fearing that if he turned on the light he would be discovered and the trespasser flee from justice, he refrained from doing same, and crept cautiously down stairs in his pajamas or whatever kind of night clothes adorned his personality. About half way down the flight he stumbled over a chair carelessly left in the way, and with unuttered curses against said obstacle he pulled his toe back into joint and once more bent his footsteps in search of the midnight marauder. As the night was rather dark, he also stumbled against another cruel chair placed on the porch, and this is what did the damage, for the calf, hearing the commotion, started in a brisk run down the most fashionable thoroughfare. The citizen, not wanting to lose a valuable piece of stock, immediately set in pursuit, and after chasing the crafty animal for the distance of three blocks, he finally managed to hang onto its tail, and thereby hangs another minus the i but plus the e. Quickly grabbing the horns, he started the calf towards home.

For it must be borne in mind that he was the proud owner of a highly-pedigreed calf just this size and color.

It seemed to be IT all right.

With blistered feet, sore toes, worried mind, and with dank, dark revenge upon the calf in his mind, the yard-calf owner arrived at the small cow-lot in the rear of his home about 2:30 a. m. The crestfallen calf was placed inside and was bidden good-night with a fond kick from the sore toes of its supposed-to-be owner, and with that affectionate farewell he turned his tired footsteps toward the hay, in which he reposed himself until morning.

Now, in the morning is where we conclude our little drama of the cow lot—or whose calf ate the grass: Upon arising that morning, the citizen went into the cow-lot to see if the treacherous calf was still safely stowed away as he left him, and he did, but what a scene greeted him when he stopped at the barn-gate, for there was his next-door neighbor leading out a brindle calf by a rope, his calm and serene brow covered with an expression of anger, which took on more play as he saw the near-calf thief's approach.

"You're a nice one, ain't you?"

"Why, what's the matter, neighbor?"

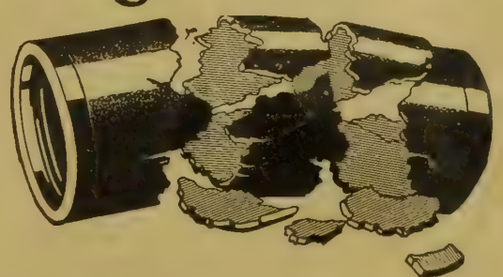
"Matter, hell, why on earth didn't you let me know you had my calf locked up here, and kept me from running all over the neighborhood hunting the blasted heifer?" After which the successful calf-chaser went into his breakfast with a look like the little boy that fell off'n the house.

"He ain't goin' to do it no more."

Hogging Off Corn.

One of the features of economical pork production is "hogging off corn." Results at the Minnesota Experiment Station show that more pounds of pork can be produced per acre when corn is hogged off than when the corn is husked and fed to hogs in a yard. There is also a saving of labor by following this practice, as the hogs can husk the corn more cheaply than can the farmer.

Crash!!—another wax record gone to smash!



If you own a Phonograph or Graphophone (Edison or Columbia) never buy another wax record for it. Get one Indestructible Record from your dealer.

Or let us mail one to you;—35 cents (for the 2-minute) or 50 cents (for the 4-minute), postage free, and a catalog with it. Give it the hardest possible test. Lend it to the youngsters. Toss it on the table. Drop it on the floor. Kick it across the room. Leave it in the sun. Then play it and hear a finer, clearer, purer, stronger reproduction—better music in every way—than your machine ever gave out before. Play it every day for ten years and you will still have it, good as new. Almost too good to be true? Try it! Prove it! Send for one!

Six Good Records!

Here are six splendid records, selected from the big 40-page Indestructible Record Catalogue. We will mail them to you—postage free—if you mention this magazine.

We make this limited special offer so you can hear Columbia Indestructible Records on your own machine in your own home at your leisure. We know you will never buy another wearable, breakable wax record if you will play just one Indestructible Record on your own machine.

2 Minute—35 Cents

1348 Two Little Brown Eyes (Tenor Solo)
1351 Tell Mother I'll Be There (Sacred Mixed Quartette)
1330 By the Light of the Silvery Moon (Soprano Solo)

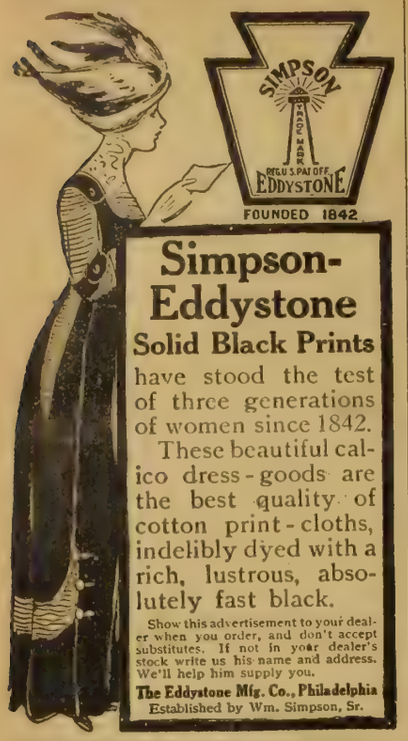
4 Minute—50 Cents

2032 Summer Reminds Me Of You (Tenor Solo)
3060 Sextette from "Lucia" (Band Selection)
3062 Come Where My Love Lies Dreaming (Mixed Quartette)

Send for big 40-page catalogue listing all Columbia Indestructible Records—free.

Dealers Wanted—Exclusive selling rights given where we are not properly represented.

Columbia Phonograph Co., Box 251, Tribune Bldg., New York City.



SIMPSON

A Fruit and Garden Paper.

Inquiries for a first-class publication devoted to fruit growing and gardening are answered by our adopting **The National Fruit Grower and Gardener** as a companion paper to The National Farmer and Stock Grower. The combination is a good one. We will send both papers one year for fifty cents. This is offering one as a subscription premium to the other. Don't fail to include **The National Fruit Grower.** It is very interesting, instructive and highly illustrated; partly in colors. Address, **Hale Publishing Co., 3550 Ave., St. Louis, Mo.**

Our Country School Teachers.

The prosperity of our country schools is the greatest factor in American rural life. The foundation of the country school is the country school teacher. The quality of the teacher determines the value of the country school.

In this respect conditions are very much against the country school. The personnel of the teaching force in the country is very much poorer in equipment than is the case with city and village schools. This is due to the factors that enter into the case and not to a difference in the moral or mental qualities of the teachers. In fact, many of the teachers now teaching country schools will ultimately be found in the city schools.

The men in the cities that employ teachers refuse to accept teachers without experience, and this experience cannot be gained in the city schools. Therefore, the inexperienced go out into the country schools and make their mistakes there. Sometimes these mistakes are very serious, but they have a good reflex influence on the teacher when she finds out that they are mistakes. But the country children pay the penalty. One of these penalties is that often the country child drops out of school years before it should.

Most of the country teachers are girls. They do not expect to stay in the country school, but plan to leave it in two or three years, as soon as they have the two or three-year experience required by the city School Board. It is no wonder then that the country school teacher never comes to feel that she is a fixture and that she is the one that is destined to shape the educational ideas of the community in which she is teaching.

In country schools teachers are changed often. This is the despair of County Superintendents, for it makes good consecutive work very hard to get. The work is demoralized most of the time, and much of the possible progress of the pupils is lost because of the large amount of aimless teaching. In the city schools there is a definite programme that is followed year after year, under the close supervision of a superintendent, who watches always to see that there is no break in the steady forward movement of the students as they progress from grade to grade. But in the country schools the harm resulting from the frequent change of teachers is not neutralized by a vigilant superintendent always present to direct the teaching programme of the new teacher. The aggregate loss to the country children from this cause is something enormous.

Under existing laws the simplest way to improve conditions is to strengthen the offices of the County Superintendents of Schools wherever that system exists. There should be more Assistant Superintendents to make sure of a better co-ordination of all the teaching work being done in the country schools. But consolidation of country schools offers a more effective means of improvement.

In the Garden.

If some of the cucumbers have eluded your watchfulness and become ripe, do not discard all save those used for seed as worthless. They make the nicest of sweet pickles.

Pare, cut in transverse half an inch thick, and soak in salt water over night. Allow two teacupfuls of brown sugar to each quart of cider vinegar used, adding cinnamon and other spices to suit taste, tied in a cloth so that they will not come in direct contact with the fruit. Cook until clear and tender yet still firm enough to retain their shape perfectly. Seal in the usual manner.

Leave the parsnips in the ground as long as possible. Just at the last of the pleasant weather before winter sets in they should be gathered and stored, being careful not to bruise them.

Keep the strawberry bed free from weeds and soil light A wheel hoe is excellent for this, if they have not become matted.

Train the runners in the way they should go and you will have a nice promise for next year. There is no fruit more tempting than the strawberry; no reason why every land owner should not have at least an abundance for family use.

Cover the rhubarb well with horse manure at the beginning of winter. This will keep the roots warm, and when the spring days come the mulch can be raked away and the soil will be enriched for a strong, tender and speedy growth.—Bessie L. Putnam.

Among the Flowers.

Geranium slips for winter blooming should have been started in August; but if this has been neglected, cut some off now and place them in a glass of water in a sunny window. They will root quickly and may then be transferred to the soil.

Coleus also root readily by this method. And if you have a magnificent scarlet salvia which you dislike to see a prey of the frost, start a few slips for window plants.

A Light Making Machine with a Strange Appetite

Crushed Stone and Water Once a Month

and it will supply you with enough home-made gas to run thirty-five lights. Just the thing for a farm or a country place of any sort.

Makes a cheap exceptionally brilliant light—more economical than kerosene and quite as convenient as electricity. Already there are 185,000 of these machines furnishing light for as many homes.

* * *

You can set one in one corner of your cellar or in an out-building. Then all you need to do is to feed it the curious crushed stone known as "Union Carbide," —a few pounds once a month.

The machine does the rest—automatically it brings the carbide a little at a time in contact with plain water.

The water liberates genuine acetylene gas stored in the carbide. This it does only when the lights are burning. Makes just enough acetylene to supply the lights in use and stops working when the lights are shut off.

* * *

You can have a cluster of lights in every room in the house—one in the cellar,—one in the attic,—one on the front porch,—one at the back door,—one in the shed,—one in the barn yard,—two in the horse barn (or garage, if you have one), and four in the cow barn.

With an installation of this kind, you would have positively the most efficient and safest light equipment money can buy.

The "Union Carbide" which comes to you in sheet steel hundred pound drums won't burn and can't explode.

The fixtures are permanently attached to walls and ceilings—the light flame is so stiff, wind does not affect it.

Every burner can be equipped to light with the pull of a chain—no matches required; and in addition to all this, the gas is not poisonous.—You could sleep all night in a room with an open burner and suffer no harm.

* * *

Considering these advantages, is it any wonder that the engineers of the National Board of Fire Insurance Underwriters have pronounced modern Acetylene Light Safer than any of the illuminants it is displacing?

The cost of a plant depends upon the number of rooms, barns and buildings you wish to light.

Write us how many and we will send you an estimate free, together with an intensely interesting booklet telling all about the light for home use and how it has been used successfully by Cornell University to grow plants—same as sunlight. Just address Union Carbide Sales Co., 157 Michigan avenue, Chicago, Ill., Dept. O-56.

Cover the bulb bed with a covering of thoroughly decayed fertilizer from the cow stable; that is, if you do not reset the bulbs. They do better if separated once in two or three years, and the surplus will make some friend happy or be sufficient to establish another bed. Just before winter, cover the bed with leaves or evergreen boughs. This will save them from the alternate freezing and thawing, so detrimental to plant life.

Be chary of enriching the soil about the roses now. It is likely to start a new growth, which will readily succumb to the cold weather.

The marigold is so hardy that if protected from the first frosts it will continue to bloom long after the other annuals have faded.

Keep the tuberose bulbs where there will be no danger of low temperature. A very little chill will destroy the embryo flower stem already formed in the mature bulb. And as the same bulb never blossoms a second time, being valuable thereafter only for producing new bulbs, success in growing blossoms demands careful attention to this point. —Bessie L. Putnam.

Barbed Wire and Fencing.

For bargain prices on barbed wire and fencing save 30 to 50 per cent. by writing to Chicago House Wrecking Company, West Thirty-fifth street, Chicago, Ill., and asking for Catalogue No. 990. The firm is strictly reliable.

SELECTED POETRY.

THE STRANGER.

Serious-minded little maid,
Wondering and half afraid,
Half inclined to speak with me,
Half disposed to let me be;
Hesitating yet, and shy,
Half a twinkle in your eye,
Half in doubt and half in fear,
Staying neither far nor near.

How I wonder what you see
With those eyes that question me;
What the instinct bids you know
If I may be friend or foe;
Fawnlike, full of grace and sweet,
Ready with fast flying feet
In the orchard's deepest shade
To find cover, little maid.

Grave and curious little lass,
Like a wild bird in the grass,
Still intently watching me,
With your wings half spread, to see
If my smile bodes good or ill.
Willing to make friends and still
Undecided if to stay
Here and near or fly away,

Serious-minded little maid,
When, with smiles and unafraid,
O'er the lawn you come to me,
Stranger to you though I be,
When your curious eyes have tried
Soul with mine and, satisfied,
Looked still into mine and smiled,
Blessed am I, litle child.

Blessed am I to be just
Worthy of your childish trust,
More than conqueror of kings
When the wild bird of your wings
Bids you fly not forth, but see
Something tender, kind, in me;
Oh, the gladness you have laid
At my heart's gate, little maid!
—J. W. Foley.

ST. PETER AT THE GATE.

(Reprinted by request.)

St. Peter stood guard at the golden gate
With a solemn mien and an air sedate,
When up to the top of the golden stair
A man and a woman ascending there,
Applied for admission. They came and stood
Before St. Peter, so great and good,
In hopes the City of Peace to win—
And asked St. Peter to let them in.

The woman was tall, and lank, and thin,
With a scraggy beardlet upon her chin;
The man was short, and thick, and stout,
His stomach was built so it rounded out.
His face was pleasant, and all the while
He wore a kindly and genial smile.
The choirs in the distance the echoes woke.
And the man kept still while the woman spoke:

"Oh, thou who guardest the gate," said she,
"We two come hither beseeching thee
To let us enter the heavenly land,
And play our harps with the angel band.
Of me, St. Peter, there is no doubt—
There is nothing from heaven to bar me out;
I have been to meetings three times a week,
And almost always I'd rise and speak.

I've told the sinners about the day
When they'd repent their evil way;
I have told my neighbors, I have told them all
About Adam and Eve, and the primal fall;
I've shown them what they'd have to do
If they'd pass in with the chosen few;
I've marked their path of duty clear—
Laid out the plan for their whole career;

I've talked and talked to 'em loud and long,
For my lungs are good and my voice is strong.
So, good St. Peter, you'll clearly see
The gate of heaven is open to me;
But my old man, I regret to say,
Hasn't walked exactly the narrow way—
He smokes and he swears, and grave faults he's got,
And I don't know whether he will pass or not.

He would never pray with an honest vim,
Or go to revival, or join in a hymn,
So I had to leave him in sorrow there,
While I, with the chosen, united in prayer.
He ate what the pantry chanced to afford,
While I, in my purity, sang to the Lord;
And if cucumbers were all he got,
It's a chance if he merited them or not.

But, oh! St. Peter, I love him so!
To the pleasures of heaven, please let him go!
I've done enough—a saint I've been—
Won't that atone? Can't you let him in?
It's my grim gospel, I know 'tis so,
That the unrepentant must fry below;
But isn't there some way that you can see,
That he may enter who's dear to me?

It's a narrow gospel by which I pray,
But the chosen expect to find some way
Of coaxing, or fooling, or bribing you,
So that their relations can amble through.
And say, St. Peter, it seems to me
This gate isn't kept as it ought to be;
You ought to stand by that opening there,
And never sit down in that easy chair;

And say, St. Peter, my sight is dimmed,
But I don't like the way your whiskers are trimmed.
They're cut too wide and outward toss;
They'd look better narower, cut straight across;
Well, we must be going our crowns to win,
So open, St. Peter, and we'll pass in."

St. Peter sat quiet and stroked his staff;
But spite of his office he had to laugh;
Then said with a fiery gleam in his eye:
"Who's tending this gateway—you or I?"

And then he rose in his stature tall,
And pressed a button upon the wall,
And said to the imp who answered the bell:
"Escort this lady around to hell!"

The man stood still as a piece of stone—
Stood sadly, gloomily, there alone;
A life-long settled idea he had,
That his wife was good and he was bad.
He thought if the woman went down below,
That he would certainly have to go—
That if she went to the regions dim,
There wasn't a ghost of a show for him.

Slowly he turned, by habit bent,
To follow wherever the woman went.
St. Peter, standing on duty there,
Observed that the top of his head was bare.
He called the gentleman back and said:
"Friend, how long have you been wed?"
"Thirty years" (with a weary sigh),
And then he thoughtfully added: "Why?"

St. Peter was silent. With head bent down,
He raised his hand and scratched his crown;
Then, seeming a different thought to take,
Slowly, half to himself, he spake:
"Thirty years with that woman there?
No wonder the man hasn't any hair!
Swearing is wicked, smoke's not good.
He smoked and swore—I should think he would—

Thirty years with that tongue so sharp!
Ho, Angel Gabriel! Give him a harp!
A jeweled harp with a golden string,
Good sir, pass in where the angels sing!
Gabriel, give him a seat alone—
One with a cushion, up near the throne;
Call up some angels to play their best;
Let him enjoy the music in rest;

See that on finest ambrosia he feeds,
He's had about all the hell he needs;
It isn't just hardly the thing to do,
To roast him on earth and the future, too."

They gave him a harp with golden strings,
A glittering robe with a pair of wings,
And he said, as he entered the Realm of Day:
"Well, this beats cucumbers, any way!"
And so the Scriptures had come to pass,
"The last shall be first and the first shall be last."
—Joseph Bert Smiley.

AN ADVERSE CRITICISM.

We read the blamedest book last week, and
wife and I agree
It didn't show a grain o' sense, so far as
we could see.
And we've decided, after this, to have a
keerful look
At that there "finis" chapter, before we buy
a book.

'Twas all about a common chap whose
weekly pay was small,
Who seed a gal he fancied, and went around
to call.
And 'stead o' being headed off, he found it
all O. K.—
Her parents said: "Good evenin'!" and the
gal, she let him stay.

He went along and courted, for a year, or
mebbe more.
And didn't do no great things, like we'd
seen in books before.
We looked to see him harm the gal, or leave
her in the lurch,
But, no—in chapter 21 he went with her to
church.

And then he got a little raise and bought a
house and lot,
And worked along, like you or me, a-
keeping on the trot.
And wife and I said: "Now look out—a
mortgage will appear!"
But, no, he kept his payments up on time
from year to year.

And then we thought a villain would step
in and wreck their lives—
But, no, the gal turned out to be the very
best of wives.
And children came, and promised well, and
started in to school,
And nary one was sinful, nor humpbacked,
ner a fool.

And then we said: "The man some day will
be a millionaire,
And won't know how to entertain, ner dress,
ner comb his hair."
But, no, he just did fairly well, and chapter
43
Told how, at 70, he died—the same as you
or me.

The wife had got too old to be a heroine,
we thought.
And yet, she might do something rash, as
story people ought.
But, no, in just a year or so, although she
seemed right brave,
She pined away, and followed of her hus-
band to the grave.

And nothin' in the story told of scandals er
of shame,
Ner shortages, ner suicides, ner men and
maidens game.
And when we read to "finis," I just
grumbled to my wife:
"The blamed thing ain't a book at all—it's
nothin' more than life!"
L. D.

THE UNRETURNED.

O the ships go out to the farthest shore,
And the ships come home again;
The dew that dries on the morning rose
Returns in a drop of rain—
But the joy of a day that I smiled away,
I call to it in vain!

O the primrose hides, in a cup of rust,
Her gold on the winter lea;
And comes, her pilgrim staff abloom,
With flowers that used to be—
But the golden smile of a little while
Will never came back to me!

O the stars go out with the break of dawn,
And the stars are full and bright
When the sun has turned his face away,
And the world has need of light—
When the glad world beamed I dreamed—
I dreamed;
And now the night—the night!

O the birds forsake the coloring wood,
And the birds come home to sing;
The breath of the fallen rose returns
On the wind of the swallow's wing—
But the harps I know of the long ago
Lie mute in the soul of spring!

O rose that blooms in a garden wild,
O bird in a lonely tree,
I know the gifts of my heart lie deep
In your far-off mystery,
And bloom and sing in eternal spring—
Though they never come back to me!
—Alpysius Coll, in Appleton's Magazine.

HE'S SO CARELESS.

He'll leave his boots and shoes around
With mud and dust bespattered;
His papers I have always found
About the carpet scattered.
His ties and collars strew the room,
His shirt studs he'll deposit
With care where they will meet my broom
In sweeping out the closet.

His pipes are simply everywhere;
My furniture he scratches.
And really does not seem to care
Where he may throw his matches.
My sewing basket holds his keys,
And we have had some clashes
Because in spite of lectures he's
So careless with his ashes.

He's no exception, I suppose;
I've heard of other cases.
It's pretty hard, though, goodness knows,
When things aren't in their places.
There's only one thing that he can
Take care of, and it's funny,
But I have never known that man
To leave around his money.
—The Ragtime Muse.

Haste and Waste

Stop and think for a moment the next time you are about to buy soda crackers.

Instead of hastily buying soda crackers that go to waste because broken, soiled or soggy, buy

Uneeda Biscuit

in separate five-cent packages. Soda crackers in large packages soon become broken, stale and unpalatable. On the other hand, Uneeda Biscuit in handy, moisture proof packages are *always* fresh, clean, crisp and whole—*not one wasted.*

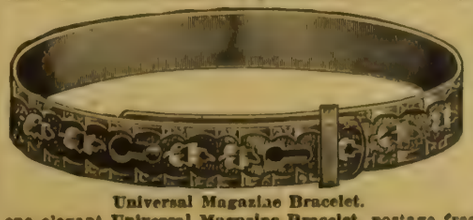
NATIONAL BISCUIT COMPANY

The Universal Magazine Bracelet.

This is all the rage. And Adjustable Bracelet. The most elegant design and perfectly finished. It is not solid gold, but it is washed and plated and will stand the acid test. Its match cannot be purchased in country jewelry stores for any price. It is a duplicate of the latest Parisian creation made expressly for the purpose of using it as a subscription premium to the **Universal Magazine.** The **Universal Magazine** is a nice, bright, cheerful, illustrated monthly magazine of thirty-two pages, three columns to the page, containing home reading, stories, fashions, patterns and poetry—a splendid publication for the money. To anyone who will send us a money order for 50 cents we will send the **Universal Magazine** for two years, and we will send one elegant **Universal Magazine Bracelet,** postage free, as a subscription premium. Money returned if not satisfied. Address, **HALE PUBLISHING CO.,** 3550 Vista Ave., St. Louis, Mo.



Universal Magazine Bracelet.

Stomach and Lung Troubles

Rheumatism, Kidney and Liver Troubles

Weak Circulation and General Debility Have Been Cured By Magnetic Shields

In Hundreds of Cases After All Other Treatment Had Failed.

We Prove It To You

By the Words of Those Who Say They Have Been Cured With Magnetic Shields

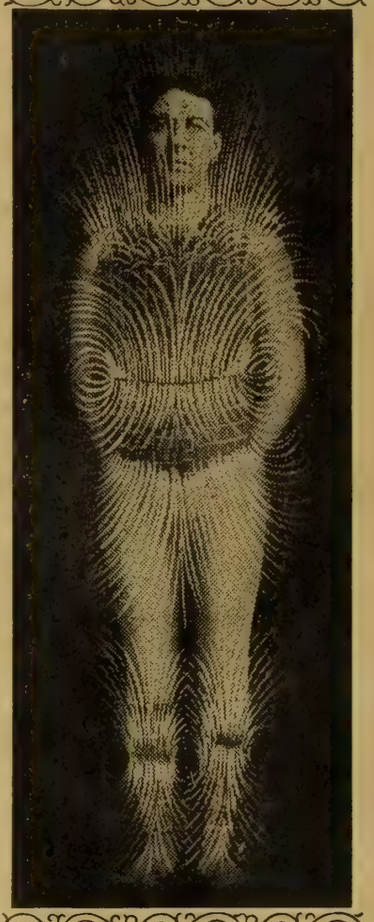
All we wish is an opportunity to show you the evidence, and after you have seen what wonderful work has been accomplished by Magnetic Shields, **YOU ARE TO BE YOUR OWN JUDGE** as to whether or not you want to use Magnetism in your own case, the same as others have. We do not urge anyone to buy Magnetic Shields; we simply give you the facts, and after considering the facts you follow your own inclination. It is your duty to investigate. It will cost you nothing to get the facts, and you will obtain much valuable information, free of charge, upon the subject of Magnetism, if you send statement of your case.

You Have Everything To Gain

By a careful, thorough investigation, for Magnetic Shields have done all we claim for them and a great deal more, or we certainly would not ask you to make an investigation and use the result of that investigation as the basis from which to judge of the merit of Magnetic Shields as a curative agent.

We Make Shields For Every Part of the Body For the Treatment of Every Form of Disease

The accompanying cut shows how Magnetism is radiated from the Lung Shield, Belt and Lower Leggins into all the vital organs, as well as lower extremities, giving new life and activity to the circulation from head to foot, thus strengthening all the vital organs and large nerve centers and assisting nature in the work of eliminating diseased conditions by reason of the better circulation of blood that is established as soon as the Shields are applied. This set of shields contains over eight hundred powerful Magnetic Storage Batteries, that are guaranteed to hold their power and will never have to be recharged.



Read the Truth

More Forcibly Expressed in These Letters Than Any Statements We Could Make

"GOD BLESS DR. THACHER!" PARALYSIS OF LOWER HALF OF BODY OF SIXTEEN YEARS' STANDING

THACHER MAGNETIC SHIELD CO., CHICAGO, ILL.

Dear Sirs: It would take a large amount of space to give a history of my case from start to finish, but for the sake of suffering humanity I will give a few words to help along, if possible, the great work you are doing for the afflicted. In 1883 I was taken with malarial fever of typhoid form, causing complete muscular paralysis. By the aid of the best medical skill in the East, I became, after several years, able to sit up and use my arms, but my lower limbs remained paralyzed until after I put on the Magnetic Shields in 1899, sixteen years afterward. My case is a noted one in New York State, and all the medical fraternity decided I would never be able to walk again. Dr. C. I. Thacher said I could and would walk again, and he was right and all the rest were wrong. It is needless to say that I had spent money freely all these years without receiving results, until I found the Magnetic Shields. We who have been restored by its wonderful power begin to realize the great work being accomplished by Dr. Thacher, and we would be unjust to our Creator and to our fellow-beings, as well as being very ungrateful, if we did not use all our efforts and powers in spreading the grand truth, bringing greatest joy and hope to the chronic invalid, deliverance from disaster, transition from the old life to the new. I am one of the thousands who, with all my heart, can say fervently: "God bless Thacher and his great work." All personal letters, inclosing stamp for reply, will be promptly answered for those wishing minute data of my case. Yours truly, CLARENCE D. SMITH, R. F. D. No. 6, Rome, N. Y.

SERIOUS COMPLICATION OF LUNG, STOMACH AND KIDNEY TROUBLE. A MARVELOUS CHICAGO RECOVERY

DR. THACHER:

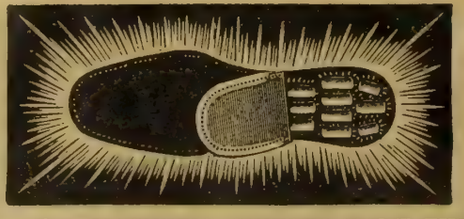
Dear Sir: It gives me great pleasure to testify to the perfect cure I have gained by using your wonderful Shields. After suffering fifteen years with stomach troubles, although doctoring the greater part of the time, I kept getting worse until I was the victim of a severe complication of stomach and kidney trouble, which a year and a half ago all seemed to go to my lungs. Had dreadful pains, lost my appetite, could not sleep, became so very weak I could hardly walk across the floor, and not able to do my work. At times when my pains were not so severe I would try to read, but could not for more than five minutes at a time, as I was very nervous. My family and friends thought I could not live another month. I was getting tired of taking medicine. Nothing helped me. I happened to see your advertisement in the paper, which read: "Magnetism Cures Without Medicine." I thought "While there is life there is hope." So just one year ago today I put on your wonderful Magnetic Vest, Leggins and Insoles. The result was a miracle, for in two days I felt relieved; in a week very much better; in three weeks entirely cured.

Words cannot express how thankful I am to you for your kind advice; also for the treatment, to which I owe my life. May you live long for suffering humanity's sake. May your great and sure cure be known a great deal better than it is today.

Yours respectfully,
MRS. O. RAY, 2316 Ridgeway St., Chicago, Ill.

IF YOU MUST SEE WITH YOUR OWN EYES, AND MUST HAVE PROOF ON YOUR OWN BODY BEFORE YOU CAN BELIEVE—

TRY THESE FOOT BATTERIES



THEY WILL CONVINCE YOU

They will convince nearly any living person that MAGNETIC SHIELDS MAKE THE BLOOD CIRCULATE. They are regular little blood pumpers. They do what all the medicine on earth cannot do. THEY WARM THE FEET and keep them warm. They are the greatest comfort and luxury of modern days, though they are the smallest MAGNETIC SHIELDS we make. They cost the least of any Shield we make, but they do splendid work. They are good for rheumatism, sore or tender feet or any unnatural condition in the feet, and can be worn on any part of the boly to test their power and relieve pain. Foot Batteries are $1.00 per pair or three pairs for $2.00 for single power, or $2.00 per pair an three pairs for $4.00 for compound or double power, postpaid. Send size of shoe when ordering Foot Batteries. Send for information and proof of the value of FOOT BATTERIES and all other Shields. It will cost you nothing to investigate. Our Book, "Plain Road to Health," Free.

THACHER MAGNETIC SHIELD CO., Inc., Suite 272, 169 Wabash Avenue CHICAGO, ILL.

and Stock GROWER

Won a Frisco Scholarship.

James A. Partney, of Chilton, Mo., was the winner of the first prize in the Frisco Corn Contest for Carter county. This entitles him to the $100 scholarship of the Fourteen-weeks' Short Course in Agriculture at the University of Missouri offered by the Frisco Railroad Company.

The seed from which the corn winning this scholarship was grown was one pound of Johnson County White, bred by Mr. L. B. Clore, the great champion of all corn growers, and was furnished James A. Partney as a subscription premium by The National Farmer and Stock Grower.

Won a Second Premium.

Last spring Clarke Reibel, of Arbela, Scotland county, Mo., received one pound of Johnson County White Corn from the office of The National Farmer and Stock Grower as a subscription premium. This seed came from the farm of Mr. L. B. Clore, of Indiana, the grand champion seed corn grower of America. With this one pound of seed corn the young man grew a fine stand of corn, and,, exhibiting ten ears of it at the Missouri State Fair, he won a second premium. Under the terms of our offer Mr. Clarke Reibel has received an additional premium of $10 from this office. The National Farmer and Stock Grower will be glad to hear from any other exhibitor who has won State Fair prizes with corn raised from seed furnished by this office. We are anxious to pay any and all premiums to which our subscribers are entitled.

Decreased Exports.

Exports from the United States which are falling off include many farmers' products; for instance, the report shows a decrease in the value of exports of wheat, flour, corn (including corn meal), oats, barley, cattle, sheep, hogs, fresh beef, pickled pork, bacon, hams, shoulders, lard, oleo oil, oil cake and oil-cake meal; and while cotton shows an increase in value, the quantity shows a decline of nearly one and one-quarter billion pounds when compared with last year.

All this need not agitate the farmer. When exports are greatest it is because prices are so low there is no profit to the farmer. The people of the United States will soon be able to buy, eat or manufacture all our farm products, providing there is no detrimental change in tariff laws.

The English Wheat Crop.

The outlook for the wheat crop of England is not bright. Heavy downfalls of rain during July and August blighted the crops materially. The average rainfall for an English summer is 6 inches, but for 1910 it has been 8.15 inches. While the average sunshine is six hundred hours, this year it has been four hundred and twenty-six hours. The average warmth is 60 degrees, and this year it was 53.3 degrees. The crop has suffered from these disadvantages.

Influence of the Manufactures.

Our attention has been invited to the fact that 52.8 per cent. of all exports from this country were manufactured goods. This is the first time that manufactures have led raw materials, but it will not be the last. The exports of raw materials cannot keep pace with manufactures.

In eight months ending with August, manufactures contributed 15 per cent. of the exports in 1880; 21 per cent. in 1890; 35.5 per cent. in 1900; 44 per cent. in 1908; 48 per cent. in 1909; and, as already mentioned, over 52 per cent, in 1910.

The rate of progression is significant. This increase is under the often-condemned protective tariff, which is supposed to put up prices at home, whereas they are lower abroad. That is one of the misrepresentations of the free trader. If a manufacturer seeks a new market and makes a mistake and has to sell his goods at a sacrifice, the sacrifice is mentiontd as a crime, whereas the loser is simply taking his medicine. All trade and all extension of trade is done through enterprise and sacrifice. When trade is built up, foreign prices are our prices with freight added, and more, if possible.

What we wish to say, especially at this time is, that the farmer really depends for his prosperity upon the prosperity of the manufacturer who is a producer like himself. Farmers should be advocates of the tariff, first upon their own raw materials, and then upon manufactured goods. The manufacturers have a selfish policy, which is free admission of raw materials and a duty on foreign manufactures, and they work as hard for one as the other. The result was free hides, which has done no American industry any good unless it be the so-called Leather Trust, but it did do lots of good for the foreign hide dealers who put up the price the 15 per cent. that was taken off in duty. The United States government was deprived of the revenue for the benefit of the foreigner.

The position of the farmer politically is not a good one. In some states he cannot vote for the party advocating protection because of other issues. Furthermore, the farmer when he advocates free trade gets the duties taken off raw materials, which in the end will place the farmer at a disadvantage.

What we need is a National Farmer Protective Association to act with manufacturers to perpetuate the tariff policy and then to counteract the influence of the manufacturers in their desire and intention to admit competitive raw materials, such as grain, cotton, hides and wool, untaxed.

Think of the Old Man.

After we get through trying to keep the boy on the farm and trying to send him to college, at the same time it will be a good idea to try and make the farm attractive to the old man. The old gentleman has the town fever and is getting awful tired of running the farm short-handed.

Bees and Alfalfa.

"Alfalfa-raisers find it to their advantage to have a few stands of bees. As the original cost in slight and the bees provide their own food, go after the raw material for the manufacture of honey, demand but slight attention and make such bountiful returns, bee culture has come to be a valuable 'side line' for the farm. As blooms are to be found in alfalfa districts every day from early May to late October, the bees have a constant opportunity for service.

"Alfalfa honey is white and clear, in an extremely delicate comb, has a delicious flavor and an aroma that is delightful. One authentic report from a Western Kansas county is of a single hive that contained nearly two hundred pounds, and of another having ninety-six pounds. The owner of these had twenty-five acres of alfalfa, which in one year yielded him over one hundred tons of choice hay, besides the honey. The next year he increased his apiary to fifty stands.

"While the average yield per hive elsewhere varies from fifteen to thirty pounds, the average in the alfalfa-growing territory is far higher. Thus the financial returns of alfalfa may be greatly increased and in some instances doubled by having, say, two colonies of bees for each acre. Or, if only a part of the alfalfa-raisers in a neighborhood kept bees this ration could be trebled by those who do. Unlike other trespassers on neighbors' fields, the bees do the neighbors a distinct favor by fertilizing their alfalfa." — From Coburn's "The Book of Alfalfa."

No amount of care and cultivation will make a crab tree bear pippins

It's the same with paint. All the formulas, fine machinery and painstaking care in the world will not make good paint unless the ingredients are pure and of the best quality.

My people do not have to take anybody's word on raw material—they produce it. They have their own linseed oil plants, lead mines and zinc mines. They are paint makers from start to finish—not mere assemblers—and when they say their paint for your house, barns, machinery, fences, wagons and every other farm purpose is the best for you, it isn't a guess. They know.

Have you a copy of our Farm Book? It gives just the paint or varnish for everything about a farm that needs paint and tells how to apply it. You had better send for a copy of this book and then locate a Sherwin-Williams dealer. The book has the information, the dealer has the right paint and you have the time and the ability to do the work. The result will be a farm in the pippin class.

English Sale of Hackneys.

At Howden, in Yorkshire, on September 12th, fifty-six head from the stud of W. Burdett-Coutts brought $15,775, an average of about $280. Most of the animals sold were undeveloped colts and fillies, of which twenty were weanlings and yearlings, and for some of these the prices were particularly gratifying. One filly foaled this year brought $500, while the average for ten head was $200. For one of the yearling colts the high bid was $1,400, and the average for ten head was $320. Fragility, a fourteen-year-old brood mare, topped the sale at $1,800. These are paying prices for young stock, and the high bidding for brood mares is evidence that English breeders so regard them.

"Neither wealth nor rank will ensure happiness. Without love and charity, and peace of mind, you may be rich, and great, and powerful, but you cannot be happy."—Lord Avebury.

"If a man write a better book, preach a better sermon, or make a better basket than his neighbor, though he build his house in the woods, the world will make a beaten path to his door."—Emerson.

Grading Seed Grain.

A Ford county, Illinois, correspondent writes: "In cleaning oats for seed, is it necessary to grade out all the small grains? I understand that these small oat grains will grow and produce as good crop as the large berries."

One of the best oat growers in Illinois tells me that he always grades out all the under-size berries, and usually it causes a shrinkage of about 20 per cent. This grower produces uncommonly heavy crops, and some part of his success no doubt is due to the high-grade seed used. Some varieties of oats produce a larger percentage of small berries than others. I do not consider this a good feature. Large, uniform berries are desirable, and all seed stocks should be graded until nothing else remains. In fact, all seed stocks should be critically graded, and only the heaviest and largest berries used. —L. C. Brown.

The Crop of Oats.

For the first time in the history of the oats crop it makes a grand total of 1,096,396,000 bushels, against 1,007,353,000 bushels last year. Excepting these two years, the average crop of oats has not exceeded 800,000 bushels. The honors of the 1910 oats crop belong to the state of Illinois, with an average of thirty-five bushels per acre and a total production of 170,088,000 bushels. The next is Iowa, with an average of 37.5 bushels per acre and a total production of 162,540,000 bushels. No other state raised half as many oats as either one of these two.

Notwithstanding the alleged high cost of living, oats are selling low. In the history of the United States oats have sold as low as 14¾ cents a bushel, in 1896, but oats look low to us in 1910 at 31½ cents a bushel.

So far as the farmers' influence on the market is concerned, the entire situation is in the hands of the owners of the oats in Illinois and Iowa. These are stock-raising and stock-feeding states. Oats fed to any kind of stock at a cent a pound is far better than selling to the speculator to be dumped on the grain market. The quality of the oats crop is good; it ought not to be sacrificed. The farmers are not helpless in this matter. It is expensive to keep oats in elevators, and, as a matter of fact, the right thing to do is to feed it to stock. The Board of Trade figuring the consumption of oats to be as usual is at time of this writing quoting oats at 32 cents a bushel for next December delivery, and for May, 1911, delivery at 35 cents. If they know their business on the Board of Trade, the farmer who has oats to sell had better figure in some other direction for the disposal of his crop.

Our Cotton Imports.

The raw cotton that is imported does not pay any duty. In other words, the sixteen million dollars' worth of raw cotton that was imported from foreign countries into the United States of America in the fiscal year 1910 did not pay anything towards the support of this government. In actual figures, this country imported 86,037,691 pounds of cotton that was valued at $15,816,138.

Most of the cotton imported was from Egypt; but cotton also arrives from Peru, British India, China, Hayti, Mexico, Dutch East Indies, Java, Sumatra, Venezuela, Santo Domingo, Panama and Nicaragua.

If The National Farmer and Stock Grower had sufficient influence to bring it about, every pound of foreign cotton imported into this country would pay a duty of two cents a pound to the United States Treasury, thereby, as the saying is, "Killing two birds with one stone." Our government would be supported that much and incidentally the American cotton grower would receive an amount of protection to which the industry is entitled.

We are aware that the United States produces 11,649,000 bales of cotton, against 7,863,000 bales produced in the balance of the world. these being official average figures for five years; but we are also aware that strenuous efforts are being made in all countries where cotton can be grown, and eventually the United States will receive much larger imports. It will not be an easy matter to get Congress to place a two-cent duty on foreign-grown cotton, but in our opinion it certainly ought to be done. The American cotton grower pays taxes for the support of county, state and federal governments. Why the foreign-grown cotton should come in untaxed has not been made clear to us.

Where Cotton is Manufactured.

In an article published by the United States Department of Commerce and Labor, the conclusion refers to cotton consumption, saying:

"American cotton consumed in our own markets is rapidly increasing, having grown from 1,100,000 bales in 1870 to a little less than 2,000,000 bales in 1880, 2,600,000 bales in 1890, 3,600,000 bales in 1900, and over 5,000,00 bales in 1908 and 1909; while the share which Southern mills take of this total has increased from less than 10 per cent. in 1870 to practically 50 per cent. in 1909, and figures published by the Bureau of Statistics indicate that the amount of cotton consumed by Southern mills in the cotton year 1910 actually exceeded that consumed by Northern mills."

Take Care of the Fodder.

An unusually large acreage of corn has been put in shock this fall. R cent rains have revived the pastures, so altogether there will be an abundance of feed for winter. Corn has gone into shock in excellent condition. I never could see any economy in allowing fodder to stand out in shock all winter, and hauling it in as it was wanted for feeding, threby losing anywhere from 25 to 50 per cent. of its feeding value. Nice, well-cured, sweet-smelling fodder will take the place of $15-a-ton hay. Put the fodder under cover, either in shed, barn or stack. Get it in before the leaves become so weather-beaten that much of the feeding value is lost. Never have I seen as leafy and as well-cured fodder. Now take care of it.—L. C. Brown.

Frosted and Soft Corn.

"Untimely severe frosts sometimes damage the corn crop so that its marketable value is considerably lowered; but in this event, as in other cases, the hog comes to the rescue. Soft corn is considered excellent for swine, and especially for the young; in fact, many breeders believe they can obtain better gains from soft corn than from the sound, hard grain. In soft corn the maturing of the grain has been checked, thereby arresting the development of the starch content or fat-producing element. When used, it is advisable to add, for finishing, some corn that is well matured. Immature corn that is frozen and even somewhat soured may be fed to hogs; but if there is on hand a greater quantity in that condition than can be used on the farm before warm weather sets in, it should be disposed of while the weather is cold. Ordinarily it may be used in cold weather without danger, but it should not be carried over into the warm season, as it will ferment and become unfit for use."—From Coburn's "Swine in America."

"Work is not man's punishment. It is his reward and his strength; his glory and his pleasure."—George Sand.

"Habit is habit; not to be flung out of the window, but coaxed downstairs a step at a time."—Mark Twain.

Get this Genuine Alectride Tool Grinder on Free Trial

Sharpen your tools at my expense. I want to show you that the ancient grindstone is a back number and that the emery wheel is a menace. I want you to try positively free this genuine Alectride Farm Tool Grinder. Alectride is the only true abrasive. **It will not draw the temper from steel;** it will sharpen the dullest tool in from 3 to 5 minutes, when the grindstone would take half an hour. Alectride **never** wears out. It does not glaze over. I want to send a few of these machines out on **Free Trial** in every part of the United States. I want to put one in every locality. I want you to clip off and send the coupon at the upper right hand corner of this announcement and I will mail at once circulars explaining every detail of the ofier I am making here.

I Don't Want You to Send Me a Cent of Your Money. I Don't Want Any Promise

I merely want to place this Genuine Alectride Grinder on your farm for a few days. Sharpen your dull axe, your dull scythe, your dull corn knives, your dull cold chisels, or hatchet, or any dull tool you have. See how quickly and how easily it is done. See how Alectride (made of the substance of precious stones) sharpens your tools in from one-fourth to one-twenty-fifth of the time required by a grindstone and does not heat nor draw the temper. Do all this—give this machine the most severe tests—then unless you think that you positively cannot get along without this Alectride Tool Grinder, send it back at our expense. We'll ask no questions. We'll take it back without a word, and we'll pay the transportation charges. Now send the coupon. Let us tell you all about this wonderful abrasive and our free trial offer.

Remember—Alectride is really manufactured precious stones. It is even *harder* than the hardest diamond. Alectride will scratch a diamond and cut glass like a knife cuts an apple. Send the coupon today and get full explanation of our **Great 10 Day Free Trial Offer.** Do this now. Do not delay.

Century Manufacturing Co. **East St. Louis, Ill.**

Favorite Corn Husker.

Clark's Corn King with its new self-shedding hook. The spear point enters the husks easily. The slant bend turns the husks for shedding, and the rounded, curved and beveled edges throw out the husk and prevent clogging. As this is the most approved husker hook on the market, we have selected it as a seasonable subscription premium. The hook sets at any angle; two positions for a thumb hook and five positions as a palm hook. Opening and closing the small end of the plate makes the adjustment perfect for any width of hand and prevents chafing. The strap passes through the leather tongue and the first ring and over the hand to the opposite ring and back through the first ring. Be sure and have the strap enter the ring from the outer side. It brings the pulling strap underneath, forms the sinch draw and gives you the full benefit of the sinch lock, which is the same as a half-hitch. The strap then passes to the last ring and then to the buckle; the half-hitch forms one fastening and the buckle holds the end of the strap. We will send The National Farmer and Stock Grower for one year and Clark's Corn King Husker for 50 cents. The Husker is a free premium. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

"As high as we have mounted in delight,
In our dejection do we sink as low."
—Wordsworth.

General Farm Notes.

At Abilene, Kas., municipal bonds were selling slowly when offered to the bankers, so the authorities split them up in two-thousand-dollar lots and sold them to farmers, who took them quickly.

Parlin & Orendorff Machinery Co. have a six-story fire-proof building under construction at St. Louis to cost $250,000. This leading machinery manufacturing company have always had a branch establishment at St. Louis of considerable proportions. The new location is on the east side of North Broadway, near Benton street. There will be a driveway through the building, and the rear abuts on the railroad tracks.

Mississippi this year will have corn to sell. Heretofore the state of Mississippi has imported corn, but the crop of 1910 is the largest in the history of the state. Some plantations have reached 100 bushels per acre on small areas. For the first time the Railroad Commission has been asked for rates for outward corn shipments.

The wheat growers of the East Indies centering on Karachi, an important seaport, are agitating for the construction of elevators. They received $1.35 per 100 pounds last year, say 81.6 cents a bushel, and they are now disposed to hold wheat but cannot do so very well by their present method of keeping it in sacks covered with tarpaulins.

Farmers who do not believe they have enough land to cultivate are informed that near San Diego, in Southern California, there is a colony with an average land ownership of 2½ acres, and if you will take their word for it they are not doing badly. It is the extreme southern settlement of the United States.

The members of the Boys' Club in Louisiana are getting great results by using scientific methods in corn raising. A Liberty Hill lad in Bienville Parish got first prize for 117¾ bushels from one acre. A member of the Lincoln Parish Boys' Corn Club raised 129 bushels to the acre, and L. A. Shaw, Jr., of Union Parish, beat them all and got first prize by securing a yield of 143.14 bushels per acre.

Reliable Stump Puller.

Last year Mr. Lewis Brown, of Bewelcome, Amite county, Miss., purchased a Triple Power Stump Puller of the Hercules Mfg. Co., as advertised on page 10. Upon being

asked how he was getting along with it, he said: "I find the stump puller to be exactly what is represented. I have no trouble in pulling stumps, trees or anything else I hitch to if I get the machine anchored sufficiently." Signed Lewis Brown, Bewelcome Miss.

National Live Stock Association.

The annual meeting of the American National Live Stock Association is called to meet at the Byers Opera House, Fort Worth, Texas, Tuesday, Wednesday and Thursday, January 10th, 11th and 12th, 1911. Quite a number of important subjects will come before the meeting, especially in regard to railroad rates, which are likely to be advanced all along the line. Full particulars in the matter of railroad rates to the convention can be had of T. W. Tomlinson, Secretary, 909 Seventeenth street, Denver, Colo.

The Corn Situation.

From a farming standpoint the corn situation is unsatisfactory except that it has put a stop to the "back-to-the-farm" clatter. Nobody wishes to go back to the farm to raise 45-cent corn. It takes a farmer to do that.

Corn has declined about 16 cents a bushel since July 30th. The large crop is working down the price. A year ago, December corn was quoted at 59¼ cents; this year 46¾ cents. A year ago, May corn was quoted at 61¼ cents; this year, 49½ cents. A year ago, July corn was quoted at 60¾ cents; this year 50⅛ cents. There you have the present and the future. We give the closing quotations October 31st of each year.

There is nothing more to be said except that buyers do not expect to pay more than 46 to 49½ cents for corn at Chicago for the next two months. They may be mistaken, but not much. There is a disposition on the part of farmers to hold corn and feed it. It is a good disposition.

The Market For Apples.

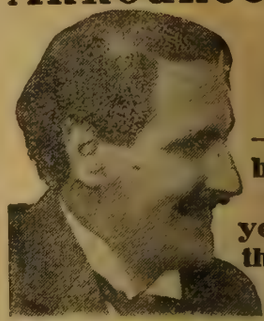
At St. Louis, November 1st, apples were being sold as follows, per barrel: Eastern mixed varieties at $2.00 to $2.25 for No. 2 to $2.75 to $3.00 for No. 1. Western mixed varieties at $1.75 to $2.50 for No. 2, to $2.90 to $3.35 for fancy; Ben Davis at $2.00 to $2.25 for No. 2 to $3.00 for fancy. Winesap at $2.25 for No. 2 to $3.00 to $3.50 for choice to fancy; fancy Gano and Missouri Pippin at $3.00 to $3.25; fancy Roman Beauty at $3.50 to $4.00; York Imperial at $2.25 to $2.50 for No. 2 to $3.50 to $3.75 for fancy; Baldwin at $2.25 for No. 2 to $3.50 for fancy; and No. 1 Greenings at $3.25 to $3.75; Jonathan and Grimes' Golden at $3.50 to $4.50 for choice to extra fancy, and $2.25 to $2.50 for No. 2; fancy Kings and 20-ounce Pippin at $4.15. Bulk Ben Davis, York Imperial, Winesap, etc., at $1.00 to $1.25 per barrel measure for drops, and at $1.75 to $2.25 for hand-picked, and by weight at 75c. to $1.00 per 100 pounds for drops to $1.25 to $1.50 for hand-picked. Arkansas Black selling at $1.35 to $1.50 per box. Northwestern boxed apples sold at auction thus: Grimes' Golden at $1.15 to $1.75; Jonathan, $1.35 to $2.15; Lawyer, $2.25 to $2.40; King David, $1.60 to $2.55; Hoover at $1.55 to $2.30; Aiken Red, $1.25 to $1.45; Rome Beauty, $1.20; Winter Banana, $1.15 to $2.25; Bellefleur, $1.10 to $1.20; Greenings, $1.15.

Expediting Wheat Growth.

It is reported that by treating the seed in a manner not yet explained wheat in England has been matured in nine weeks from seeding, whereas eighteen weeks usually elapse between planting and harvest. The process is the invention of Mr. J. J. Melville,a scientist. It is secret for the present but arrangements are being made to treat seed for farmers. The information, so far given, appears to be well authenticated. A farmer sent his own seed to be treated and received it back after treatment, sowed it three months after the usual planting season and caught up with the usual harvest. Mr. Melville is reported as claiming that he can treat any seed with beneficial results.

"Great geniuses have the shortest biographies."—Emerson.

I Want to Send You My Personal Announcement for 1911



—"Please be sure to send me your name this time."

SPECIAL, extraordinary propositions, such as I've got for you right now, don't come but once a year—the first farmer in each neighborhood to write me gets a big 1911 opportunity—worth while in most practical money saving ways. Don't stop to think it over now. But take your own time and use your own best judgment after you give me the chance to tell you my propositions and send you just the books you want.

Which One of these Four Big Books Do You Want—Or You Can Have them ALL?

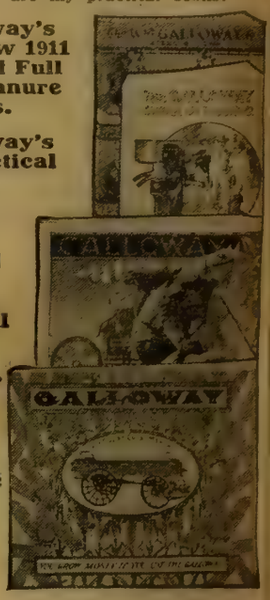
Let me tell you how the Farmers and the Law of Volume and a lifetime of actual farm and manufacturing experience have made it possible for me to divide the profit-melon squarely in half with you—make prices based on over 40,000 factory capacity—and do the biggest direct-selling business in implement history. Here are my practical books:

1. Galloway's Grand New 1911 Catalog of Full Line of Manure Spreaders.

2. Galloway's Most Practical Gasoline Engine Catalog Ever Published

3. Galloway's "Oil Bath" Cream Separator Catalog

4. Galloway's Divide the Profit-Melon General Line Catalog.



I don't have to include in my prices to you the expense or salaries of big boards of directors—nor of traveling salesmen—nor brokers', jobbers' and retail agents' profits, or commissions. No middlemen at all come between you and me. All of that is cut right off the top of my prices on all Galloway Machines of highest quality, longest guarantee. My profits are small on every sale, but the Law of Volume is my friend as well as yours. These books and advertisements are my only salesmen. But this is the cheapest way for you and for me to get together. So just write me today, the most convenient way. A pencil does it all. Put it up to me by sending me your name. That's the idea. Will you do it—now?

How to Drain Farm Lands.

In addition to other necessary elements, soil must contain a certain percentage of water in order to yield the largest possible returns. A perfectly dry soil is dead, and worthless for producing crops. On the other hand, a soil completely saturated with water will produce nothing but aquatic plants, and hence is worthless for cereals and other valuable products.

Surface drainage is accomplished by open ditches, which in addition to receiving and removing water from the surface of land contiguous to them, may, if sufficiently deep, act as receiving drains for water which percolates through a porous substratum through which the ditches are excavated, and under such conditions facilitate underdrainage as well as carry off water from the surface.

Underdrainage is that which directly affects the soil and puts it in condition for plant production. The use of drain tiles for this purpose introduced in England about the year 1810 has increased to such an extent, and the art of using them has been so perfected, that the tile drain is now regarded as the best type of underdrain. Well-burned clay pipes of circular form, one to two feet long, are laid through the soil in a continuous line upon such a grade that any water which finds its way into them will be carried by gravity to some lower point, thus conveying the surplus away. The water enters the lines of tile through openings left between the ends of the "joints," as they are commonly called.

The drain being surrounded by soil, the spaces of which are filled with water, the water in the soil flows by gravity through the crevices between the ends of the tiles, thus entering the drain, and passes off more or less rapidly, according to the grade upon which the line is laid. The process does not leave the soil without moisture, but only removes the surplus, leaving just enough moisture to keep the soil in a fertile condition.

In order to get the best results in a system of drainage, the work should be laid out with a leveling instrument. No one can be relied upon to guess a grade correctly, nor can any one arrange a system of grades with economy and at the same time get the best possible work out of the system, without first knowing the facts as determined by a dependable leveling instrument. The slight grades upon which lines of tiles may be laid with satisfactory results are a surprise to many; indeed, they were regarded as entirely impracticable until the experience of recent years proved the contrary. Lines of drain tiles laid on a grade as low as one-half an inch per 100 feet in firm soil will operate successfully, providing the lines are not too long, while drains laid on grades of one to two inches per 100 feet may be counted by the hundreds of miles, and their successful operation is attested by thousands of acres of cultivated lands. It is not difficult to impress upon the mind of anyone who will give the matter attention, the fact that such work must be laid out with accuracy, and this can not be done without the aid of a dependable telescope farm level.

The success of thousands of farmers in draining their lands with modern methods emphasizes the fact that every farmer should by all means have a dependable farm level. This little instrument will pay for itself in the saving effected by eliminating several-days' fee for the surveyor or civil engineer, and the owner will be equipped for life with an instrument which will enable him to do his own terracing, ditching, irrigation work, drainage work, road building, leveling, house foundation work, running fences, laying out orchards, etc.

We are glad to be able to advise our readers that the market now affords an absolutely reliable telescope farm level at a price within the reach of all, thus filling a long-felt want among land owners.

Iowa Farm Census.

The Census of 1910 announces that there are 216,807 farms in Iowa, against 228,622 reported at last census, ten years ago. The total land in farms is 33,905,000 acres. Of the farms, 105,698 are cultivated by owners, 1,918 by managers, 26,531 by part owners, 621 by owners and tenants, and 82,039 by tenants. In ten years farms operated by owners decreased 10,490, and farms operated by tenants increased 2,303. The farms, including buildings, are now valued at about $96 per acre, against $43 ten years ago. The land, without considering value of buildings, is estimated about $82 an acre, against about $36 per acre ten years ago. According to the estimate of Director of the Census Durand, Iowa land has advanced 117.3 to 122.7 per cent. in ten years; the value of buildings increased 88.8 per cent.; value of farm machinery increased 64.4 per cent.; and expenditures for labor increased 51 per cent. The land reported in farms constitutes 94.7 per cent. of the area recorded in the state. Farms purchasing additional feed for live stock were 81,269, indicating the great extent that Iowa is a stock-feeding state.

Cement Block Machines.

The simple cement block machines first put upon the market were extravagant in cost, far beyond any excuse for the prices asked, and this had the effect of turning away the minds of many people who wished to use concrete in simple ways. Others who were ingenious made their own cement block machines, and so the work has progressed.

Builders and contractors do a large majority of their work by first constructing the moulds and filling them in with concrete. But there yet remained the demand for a machine that would manufacture cement blocks of all moderate sizes economically and turn them out rapidly. This want has been supplied by a Swiss machine which, being manufactured in the United States, is recommended by the United States government as being the most complete and satisfactory cement block machine made. Any of our readers having cement construction in view will be placed in communication with the manufacturer by addressing this office.

The Subject of Furs.

Hunting and trapping has always been a side proposition to farming, and just at this time furs and skins are good property. This is evidenced by the fact that on page 16 we have cards of seven fur dealers who wish to communicate with shippers of furs and skins; furthermore, they wish to receive the furs in such condition that consignments will justify being paid for as goods properly prepaid for market. Considerable education is necessary for the trapper, or he will find that his offerings are not in market condition, and that is the great point in securing a good price. Our readers who write to these firms will receive instructions in trapping, instructions in preparing skins for market, also price lists for all merchantable skins in any part of the United States.

Thousands of farmers have written to us for a catalogue.

Olds Gasoline Engines

have been selected in most instances by those who most carefully investigated the engine question.

There is just one possible combination that could account for the steady growth in 30 years of our sales of engines to these unprejudiced farmers and that is high quality and right prices.

Our catalogue tells things that you should know about engines.

Read it through carefully—you won't regret the little time it takes.

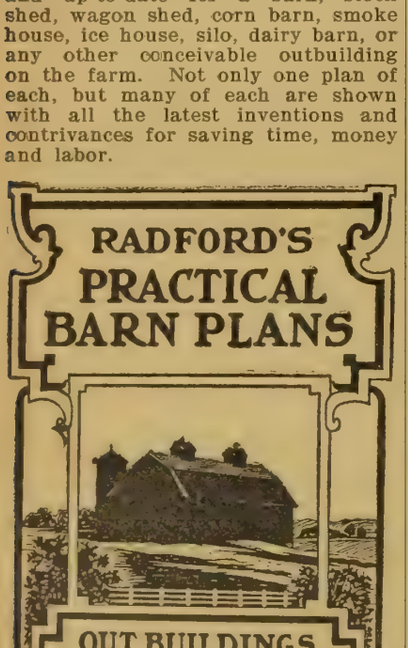
Practical Barn Plans.

This is the name of the best book out. Every farmer needs it. It contains drawings, pictures, plans, specifications and everything necessary and up-to-date for a barn, stock shed, wagon shed, corn barn, smoke house, ice house, silo, dairy barn, or any other conceivable outbuilding on the farm. Not only one plan of each, but many of each are shown with all the latest inventions and contrivances for saving time, money and labor.



Each and every plan in the book is accompanied by a lengthy written description, explaining and giving the details of the drawings, and so worded and arranged, numbered and indexed, that it must be readily understood by anyone who reads it.

The price of this book is One Dollar, and we include one-year's subscription to The National Farmer and Stock Grower. Address, **Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

Better Seed Grain.

The discriminating demand for seed grain this last season indicates that growers are paying more attention to high-class quality as well as adaptability to particular regions. Too frequently we conclude that because a particular variety does well in a given region that it should do well in other regions where conditions may or may not be similar. Practical grain growers now recognize that several factors enter into the production of a grain crop, and of these factors none is perhaps more important than the adaptability of the seed.

Show corn or show wheat or oats are usually beautiful samples, and they demonstrate what is possible through improvement; but for the purposes of seed stock one should be governed by field results rather than by the physical appearance of a dozen or more ears, or by the appearance of a few quarts of hand-cleaned wheat or oats. I believe, just as I have stated many times, that different sets of conditions are met with on nearly every farm, and there is always more or less risk in using fresh seed from whatsoever source; but whenever it is advisable or necessary to buy fresh seed, then the sensible thing to do is to use seed grown under as near similar conditions as your own as is possible. This reduces the chances of failure, at any rate. This very matter of adapted seed was strikingly illustrated this season in the oat crop. Many growers have brought in fresh seed during the last two or three years, trying to find something superior to the common sorts. The results of the crop show that the old stand-by sorts, such as "Silver Mine" and "Big Four," because of many years of adaptation, outyield the newer sorts in many regions and produced grain of superior quality. With these results before them many will sow larger acreages of these older sorts next season in Northern Illinois.—L. C. Brown.

Permanent Crop Plants or Annual Crop Plants?

The crops grown on the farm naturally resolve themselves into two classes: The crops that have to be produced from the seed annually and those that come from the plants that live for more than one year. Some farmers can grow one kind best, while other farmers can grow the other kind best. Some of the failures in farming come from a mistake in this matter. It is not so much a matter of taste as of equipment and of capital.

Science and knowledge are now required in the growing of almost any kind of a crop. But it is probable that the crops that are produced on plants not annuals give a greater chance to the farmer to make his own work go a long way.

Among the farm crops produced on plants living for more than a year are several varieties of vegetables. Thus, a horseradish bed will produce cheerfully and largely every year with proper manuring and thinning out. It generally takes care of the weeds itself. There is no one moment when the crop must be harvested or be lost. It gives considerable latitude in this matter.

There is rhubarb, which will also take care of the weeds in its vicinity if it is but given a chance to get its leaves above the weeds. It will shade them so much that they disappear. The harvesting of its stalks depends largely on the convenience of the grower. But it needs to be well supplied with manure and moisture.

All kinds of fruit trees present an opportunity for the farmer to develop a kind of production that will go on from year to year, and that will not be too exacting of the farmer as to the exact amount done each year. He can fertilize a little each year or put on a good amount once in several years. Also he can do his pruning in the winter, when work with field crops is at a standstill.

Every farm should have some of the permanent crop features unless there are excellent reasons for not having them. One of the strong reasons why they should be grown more now than ever before is the uncertainty of being able to secure extra farm help. The permanent plants go right on growing whether there is a hired man in sight or not.

The writer realizes that the taste of some farmers does not lie in this direction, and such will follow their inclinations in spite of all advice. But changing market conditions are making it more and more necessary for the farmer to have more than one line of crop production.

In addition, it may be said that the market price of the products of the permanent plants has increased more of late years than have the prices of the crops produced by annual sowing and harvesting. This is especially true in the farming localities near the great centers of population.

This is not a plea against the field crops, which must continue to be the main products of many of our farms. But it is a plea in favor of more attention to perennial plants on the farm, which will prove often to be a reserve when the annual crops fail, as they sometimes do, for lack of suitable weather at planting time or lack of help at harvest time.

The Spring Wheat States.

Out of a total of 233,475,000 bushels of spring wheat, four states raised 192,458,000 bushels. Washington averaged 14.5 bushels per acre, producing 12,006,000 bushels, falling down from 20.6 bushels per acre the previous year. North Dakota produced this year only 5.5 bushels per acre and a total of 39,716,000 bushels, against 13.7 bushels average and a total of 90,762,000 bushels last year. Minnesota this year averaged 16.0 bushels to the acre, with 94,080,000 bushels total; and South Dakota with an average of 12.8 bushels per acre produced 46,656,000 bushels. The decrease in the United States wheat crop this year is 45,420,000 bushels, and the decrease is more than accounted for by the decrease of 51,046,000 bushels in North Dakota.

New Zealand Clover.

Says the Farmers' Union Advocate of Wellington, New Zealand:

"A fine crop of clover has been threshed out in the Doric district, upon the farm of Mr. G. T. Smith. In 11½ hours the threshing plant shelled out one ton 11 cwt. and 12 pounds, the produce of 12½ acres, which averaged 278¾ pounds an acre, which at the present price of seed would work out at about $33.60 in United States money."

FOUR BIG PAPERS 80 CENTS.

The National Farmer and Stock Grower; Twice-A-Week Republic of St. Louis, the best semi-weekly in the Southwest; Farm Progress, the biggest semi-monthly farm paper printed; and Woman's World, a monthly woman's paper, sent to any address, a year, for only 80 cents. Regular subscription price, $1.50—bargain price, 80 cents. Send orders to the **St. Louis Republic, St. Louis.**

Its Economy and Power Startle the World!

The Engine Runs on COAL OIL at a Fraction of Cost of Gasoline.

Thousands of these marvelous engines—in actual use today—prove beyond question that kerosene is the engine fuel of the future. The success of the "Detroit" Engine is absolutely unparalleled.

Demand is overwhelming.

Kerosene (common coal oil) runs it with wonderful economy. Kerosene generally costs 6 to 15c less per gallon than gasoline—and gasoline is still going up. Runs on any engine fuel. Only three moving parts. Light and portable. Does work of engines weighing four times as much. Runs everything.

The Amazing "DETROIT"

The Kerosene Wonder—on 15 Days' Trial—Direct From Factory

Any engine you want, from 2 to 20 H. P., sent on 15 days' free trial—**tested immediately before shipping and ready to run.** If dissatisfied—**every dollar you have paid us for the engine cheerfully refunded.** Prices lowest ever known for high-grade, guaranteed engines.

The New Book is Ready—WRITE! Tells all about these new wonders that mark a new era in engines. Special introductory price on first "Detroit" engine sold in each community. Quick action gets it. Address

Detroit Engine Works, 383 Bellevue Ave., Detroit, Mich.

WITTE ENGINES

GAS — GASOLINE — DISTILLATE

Cheapest of all powers. One cent average cost per horse power per hour. Nothing can equal.

FIVE YEAR GUARANTEE

We build all sizes. Hopper jacket or water tank cooling. Inducements to introduce in new localities. Write stating size and style wanted.

WITTE IRON WORKS CO.
1653 Oakland Ave., Kansas City, Mo.

Would ½ More Water With the same power from deep wells Interest You?

It is accomplished with the Double-Acting

"American" Deep Well Pump

It delivers full cylinder capacity both on the **Down**-stroke and the **Up**-stroke. It requires at no time more power than the up-stroke of a single-acting cylinder of the same displacement.

Send for the most complete deep well catalogue ever issued, No. 110 just off the press, mailed free.

SAVE YOUR BACK

Save time, horses, work and money by using an

Electric Handy Wagon

Low wheels, broad tires. No living man can build a better. Book on "Wheel Sense" free.

ELECTRIC WHEEL CO. Box 40, Quincy, Ill.

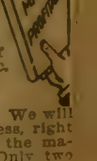
Saves Feed-Makes Fat

10 to 80 bu. per hr.

Your cattle get more good out of *half as much corn* when sliced by the **Dean Ear Corn Cutter.** Ear corn is best for beasts. Cobs help digestion. Cattle like and grow fat on them when prepared by this machine. No waste. All eaten. 1, 2 and 3 hole sizes. Slices corn 1 2 to 2 inches. Money back quick if not satisfactory; returned at our expense. Write for full particulars *tonight*, address Dept. 4

Enterprise Windmill Co., Sandwich, Ill.

EVERY HAY GROWER Should Get This Great Free Book!



This valuable book—written by a man of 25 years' experience in hay—is full of live pointers: How to cure hay, when to cut, how to take advantage of the market to get top notch prices, etc.

Save 20 % of Baling Cost

by using an Auto-Fedan Hay Press. We will prove this saving over any other press, right on your own ground, or take back the machine, paying freight both ways. Only two men required to run it. Three-stroke, self-feed, easy draft. Send **today** for free book No. 6. (5)

THE AUTO-FEDAN HAY PRESS CO.,
1506 W. Twelfth St., Kansas City, Mo

The New York Farm Colony.

The Poor Farm of New York, in the Borough of Richmond, Staten Island, won twenty-seven first prizes and twenty-three second prizes in vegetables at the Richmond County Fair, in competition with the farmers of Staten Island. The Poor Farm is now called the New York City Farm Colony.

The farm consists of 160 acres, most of it being cultivated in vegetables. Of the 500 inmates of the Farm Colony, most of whom are men, seventy-five are able to work. The only outsiders who are employed in the farm operations are a farmer and two hired men. The work of cultivation is performed, and that efficiently, by the "old guard," who delight in doing all that they are able.

The total farm expenses for the year 1909 were $6,380.32, while the value of the produce, including that which was shipped to the other institutions and that which was consumed, was $10,602.93, appraised at market rates.

The following amounts of fruits and vegetables were raised in the year:

Cabbage, pounds	125,400
Corn, dozen	2,403
Swiss chard, pecks	2,476
Potatoes, barrels	250
Peppers, quarts	1,528
Green peas, quarts	3,176
Tomatoes, quarts	18,768
Lettuce, heads	8,281
Parsley, bunches	22,465
Turnips, pounds	12,130
Cucumbers, by count	10,188
Kale, pecks	881
Egg plant, by count	1,534
Pumpkins, by count	760
Spinach, pecks	1,286
Carrots, pounds	6,720
Turnips (white) pounds	1,200
Onions, pounds	2,850
Beets, pounds	2,435
Lima beans, quarts	256
Squash, by count	258
Rhubarb, bunches	1,000
Strawberries, quarts	1,000
Parsnips, pounds	7,000
Melons, by count	708
Celery, bunches	1,140
Leeks, bunches	700
Radishes, bunches	2,796
Hay, tons	45
Straw, tons	20
Field corn, bushels	60
Corn-stalks, acres	10

Aside from the material results which come from the cultivation of the lands of the City Farm, the effect of the toil upon the dwellers there who are able to work is inspiriting. The old men who do the hoeing and the weeding take a deep interest in "our vegetables."

Agricultural Graphics.

The Bureau of Statistics of the United States Department of Agriculture has issued Bulletin 78. We have never seen anything like it before. It is prepared by Middleton Smith, who has shown every class of live stock and crops produced in every country by charts. A great black circle exhibits the total number or quantity and smaller black circles scattered over the map make up by their size the information desired, which is quickly understood. The exact figures are also given. It is a very valuable and comprehensive work.

Husking Corn Too Early.

Field husking began around October 15 in some of the early corn fields. I believe that is too early to crib corn, and grain buyers say that much of the trouble they have had with corn during the last four or five years has been due to early cribbing. Corn dries out better right on the stalk than any other place, and around November 1 is none too late to start to crib even early corn. But when early husking is done, then by all means store in narrow, well-ventilated cribs, and shift the elevator dump occasionally so that too much packing will not be done in any one place in the crib. The deep, eight-foot-wide cribs are not good keepers, and early storage in them is almost sure to turn out some poor corn. Most corn is of good quality this season. The thing now is to crib it in such condition that it will keep good.—L. C. Brown.

Harvest of Legumes in Spain.

United States Consul Charles L. Hoover at Madrid reports to the Bureau of Commerce that the Bureau of Agriculture of Spain has published an advance bulletin showing that there has been a considerable falling off in the legume crop (beans, peas, chick peas, etc.) of 1910 as compared with 1909. The total production in 1910 was 3,121 metric tons, against 3,578 metric tons for 1909.

Legumes play an important part in the dietary of the people of Spain, and the production is never equal to the demand. In 1908, the last year for which complete statistics are available, the importation of chick peas, called "garbanzos," amounted to $1,358,391, of which 10,369 tons, valued at $1,000,536, came from Mexico. At this price of a little over four cents per pound it would seem that chick peas could be grown profitably in the United States for the Spanish market.

Wanted to Know the Market.

Secretary of Agriculture Wilson, in an address at Washington, said of farming:

"The successful farmer loves his work. Every detail of it interests him. Thus Squire Plowlands proved himself a poor theologian but a good farmer when he met one Sunday morning his tenant Hodge.

"'Where have you been, Hodge?" said the Squire.

"'I've been to church, sir,' Hodge replied.

"'What was the sermon about, Hodge?'

"'It was something about Joseph going down to Egypt to buy corn, Squire.'

"The Squire brightened.

"'Did the parson say what corn is worth down there?' he asked."—Minneapolis Journal.

Swine Notes.

Hogs are heavy in market because pigs are scarce on farms. At Chicago, during the week ending October 1st, the full supply of hogs averaged 264 pounds, this being the heaviest average since November, 1893. Farmers are feeding hogs longer than they would do if pigs were plentiful.

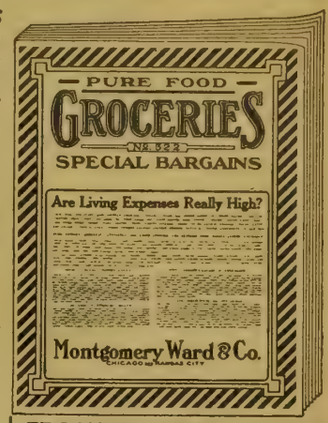
The decrease in the supply of hogs is well indicated by three figures. Three years ago up to a certain time 20,500,000 hogs were received at eleven markets; last year in the same time 17,390,000 hogs were received, and this year in the same time 14,500,000 were received.

GET BEST GROCERIES

At Less Than Usual Prices

NOVEMBER AND DECEMBER ARE TWO MONTHS WHEN CHOICEST VIANDS ARE IN DEMAND. Nothing else than the best will do for your table at Thanksgiving and from then to the Holidays. It was once necessary to pay "fancy" prices to secure the foods of the highest grades for these and other festive occasions. You can still pay high prices if you continue in the old way, but by the Montgomery Ward & Co. way, as now put into practice by some two million epicures, the same results as to *qualities* can be secured at *a saving of about one-third the cost.*

We Buy Direct from the Producers, *in large quantities,* and sell direct to the consumer in any quantities desired. We employ experts in *qualities* as well as in *prices.* Few wholesalers and certainly no other retailer buy and sell the quantities of groceries that we do.



THIS CATALOGUE WILL BE MAILED TO ANY ADDRESS. WRITE FOR IT TODAY.

These Facts Account for Our Low Prices

About the Quality of Our Groceries: **Do not hesitate to put us to the test.** Secure a copy of our November and December Grocery List, order from it what you like, and if not found to be the best groceries to be had, return to us and get your money back.

WE WELCOME TRIAL ORDERS FROM NEW CUSTOMERS

IT IS THE WAY WE BUILD UP OUR GROCERY BUSINESS. The saving is so obvious and so large, and the qualities prove so much better than usual, that one who tries us once is anxious to remain a permanent customer.

Note the Sample Prices Here. **THEY ARE NOT CUT PRICES, but are our regular quotations.** We sell many lines of groceries not obtainable in usual stores, and the staples as well. To save enough in eight months' purchases of groceries to be able to supply your table for the remaining four months of the year without cost, is what our "one-third saving on groceries" means to you.

Thus to buy groceries of us is to unite economy and high quality, and we think this should appeal to every one in these days of the "high cost of living." **SEND TO THE NEAREST ADDRESS,** as below, and say "Please send me free and postpaid your November and December Grocery List." This implies no obligation on your part. **We will send the Grocery List as soon as issued.**

Montgomery Ward & Co. 126

19th and Campbell Sts., KANSAS CITY **Chicago Avenue Bridge, CHICAGO**

[Please mention National Farmer and Stock Grower.]

THE 500 QUESTIONS ANSWERED.

This is all about swine, and is a book by L. H. Cooch. There are 526 questions and 526 answers. They are natural questions and practical answers. The questions relate to breeding, mating, feeding, preparing, farrowing, management, diseases, etc., of swine. It is a complete veterinary authority on all swine questions. The answers to questions on feeding alone, if properly attended to, will put enough pounds on one pig to pay for many books. We are sending The National Farmer and Stock Grower for one year and the 500 hog question book for 50 cents. Address, Hide Publishing Co., 3550 Vista Ave., St. Louis, Mo.

The National Farmer and Stock Grower.

(Title Registered in U. S. Patent Office.)

Published Monthly
By THE HALE PUBLISHING CO.
Philip H. Hale, Managing Editor.
Claude A. Cour, Advertising Manager.

Charles H. Hopkins, 150 Nassau street, New York City, Eastern Representative.

Entered at Postoffice at St. Louis, Mo., as second-class matter in January, 1901.

Subscription Price in the United States, 50 cents a year, or three years for one dollar.

Office of Publication, 3550 Vista avenue, St. Louis, Mo. Bell Phone: Grand 400.

With December wheat quoted at 90½ cents, corn at 46¾ cents, and oats at 30⅝ cents a bushel, it is time to stop talking about the high cost of living. These were the closing quotations, October 31st, for December delivery.

It is always refreshing to read the editorials in daily papers congratulating the city people that crops are large and prices are sure to be lower

The award for the best display of oats at the Dry-farming Congress, the competition being open to the world, was won by John Forster, of Greycliff, Sweet Grass county, Mont.

On October 31st, 1910, the Chicago Board of Trade quotation for December wheat was about 15 cents a bushel lower than a year ago.

One of the recent contributions to live stock literature is the White Breeders' Companion, a monthly journal published in the interest of the Chester White hog. It is issued by the Moore Bros. Company, of Rochester, Ind., at 50 cents a year.

On October 31st, 1910, the Chicago Board of Trade quotation for December corn closed 12½ cents a bushel lower than last year.

The Fifth Dry Farming Congress was held at Spokane, Wash., October 3d to 6th, and 1,200 delegates attended. A very fine and large exhibit of dry-farming products was shown, and liberal prizes were awarded. The next annual meeting will be held at Colorado Springs, Colo.

On October 31st, 1910, the Chicago Board of Trade quotation for December oats was 9⅛ cents a bushel lower than a year ago.

Know Not What They Do.

The great market for farmers' products is to be found in the prosperous manufacturing cities of the United States, and the way to kill that market is to destroy or disable or reduce the usefulness of these manufacturing centers. The way to do it is to buy manufactured goods abroad, admit them duty free, thereby crippling our own factories. There are many people advocating this very thing in so-called tariff reform; but they know not what they do.

Short Winter Course.

The Short Winter Course in Agriculture at the Missouri Agricultural College, Columbia, Mo., includes four terms, extending over a term of two years. The first began November 1 and will continue until December 23, and the second begins January 3 and continues to February 23. Students who failed to enter November 1 may enter January 3. Tuition is free; board, books and a college fee will make the total cost of each term about $50. This Short Course is intended for boys sixteen years old and upwards. It is also open to farmers of mature years. Further particulars published in the Short Course Bulletin can be had by addressing Prof. F. B. Mumford, Dean of the College of Agriculture, Columbia, Mo. The usefulness of the Short Course in Agriculture is attested by the increased attendance year by year.

The National Corn Show.

We hope our readers will remember that the National Corn Show will be held at Columbus, Ohio, January 30 to February 11, 1911. This is the National Corn Show for the crop of 1910. In the spring of the year The National Farmer and Stock Grower sent out many pounds of seed corn grown by breeders of prize-winning corn, and we offered certain prizes if corn raised from our seed won any prizes at State or Interstate Fairs, State Corn Shows or at the National Corn Show. Several prizes so far have been won by corn growers from our seed and some are eligible for exhibit at the National Corn Show. We hope to be called upon to pay several prizes upon prize-winning exhibits at the National Corn Show. Anyone desiring to obtain a premium list of the National Corn Show should address the Secretary at Columbus, Ohio.

The Lesson of David Rankin.

It is proper for every farm paper to mention with approval the career of Mr. David Rankin, of Tarkio, Mo., who has just passed away full of years and honors. He was born in the year 1825 in Sullivan county, Indiana, and died at Tarkio, Mo., at the age of 85 years.

Mr. Rankin was born a farmer and endured every hardship of pioneer life, having to work in the field at the age of 11 years. At his death he was the owner of the largest piece of rich cultivated farm land on the continent.

We have read his life as written by himself, and the entire success of his career was due to the fact that he was only a farmer in order to be a stockman. He marketed his crops on foot. He used the stock yards to buy and sell on. He believed in the hog; he believed in keeping up the fertility of his farm, and he enjoyed his vocation. He built up his own community, and was generous in establishing beneficial institutions. A farmer who raised one million bushels of corn in one year will always be remembered as a winner of peaceful victories.

Notable Sale of Range Cows.

On October 19th the Catlin Land and Cattle Company of White Sulphur Springs, Mont., had twenty cars of cows on the market, and the principal bunch consisted of 320 head, averaging 1,110 pounds, which sold at $5.75 per 100 pounds, which is a record price, considering the number. These cattle were sold by Clay, Robinson & Co.. Mr. Edwin H. Catlin, who arrived with the cattle, said: "The owners are pleased, the salesmen are pleased and the buyer is pleased. It was a most satisfactory deal throughout, and much credit is due Clay, Robinson & Co. for the high price the cows brought."

The Oats Situation.

As previously stated in this paper, there is, comparatively speaking, very little speculation in oats. With oats selling at 31 cents a bushel in market, the farmer's net result does not pay the cost of production. The crop is the largest and best ever grown in this country, and, being cheap, one would suppose that it would move rapidly; but it does not.

If oats are to sell at a decent price, farmers themselves will have to bring it about. With oats on hand farmers are independent; they can feed it in the sheaf or in the grain. It should be used in place of corn. Oatmeal ought to come into more general use as food for man. Oatmeal is healthier and better food than either corn or wheat flour. People who get into the habit of eating a dish of oatmeal and milk in the morning never give it up. It is the healthiest food the world has knowledge of. In any event, it is to-day the cheapest food for stock, and every bushel that is profitably consumed on the farm brings about the condition which advances the price of oats in market.

There are so many influences affecting prices of food stuffs that no hard-and-fast rules can be set down to control prices; but if farmers agreed that no oats should leave their farms at less than 45 cents a bushel, they could get it. Accumulating a crop in farmers' hands is not usually the way to sell it; but with oats it would not be an accumulation, because a certain amount of consumption would be going on which in time would have its effect.

At the present outlook (November 1st) No. 2 oats delivered in December at Chicago are worth 30⅝ cents; 34¾ cents in May, and 34⅛ cents in July. We would see them all in Jerusalem before they would get any oats at any such prices.

South Africa does not permit the exportation of ostriches or eggs, on the ground that African supremacy in the feather market would be endangered thereby.

This is the publisher's harvest time for subscriptions, and renewals will be appreciated.

MILK PRODUCERS' ASSOCIATION.

The Annual Meeting to be Held at St. Louis on Monday, November 28.

The November meeting of the Milk Producers' Protective Association of Missouri and Illinois will be held at St. Louis on Monday, November 28th, at one o'clock, p. m. The members will assemble at the office of the Secretary, 409 Franklin avenue, and proceed to the place of meeting, which will depend upon the size of the attendance. This is the regular annual meeting, and the principal object is to elect officers for the ensuing year. This election is especially important for the reason that several officials have retired from the milk-producing industry, and vacancies will have to be filled.

All milk producers are invited to attend, especially if they are in good standing, or if they have belonged to the association heretofore.

During the month of November, members on each railroad centering on St. Louis should hold meetings and appoint a Delegate to represent them during the year. If they have good men reperesenting them there will be an active association worth considerable in wealth and standing to the members.

This association has a splendid record for services rendered and has been the means of preventing many injurious measures taking effect. All that is necessary is to keep up-to-date, united for the interest of the milk producers.

D. I. FURBECK, President.
W. A. FISCHER, Secretary,
409 Franklin Ave., St. Louis, Mo.

The Indian School at Carlisle.

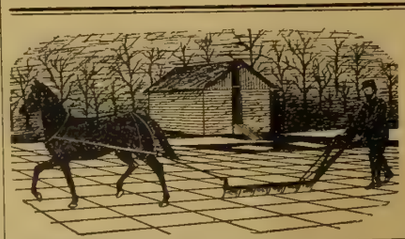
Supt. M. Friedman, of the United States Indian School at Carlisle Pa., shows that for every dollar of government appropriation the students produced nearly a dollar in return. Out of 514 graduates who are living, 300 are successfully engaged in business activities outside of the reservation. The total enrollment is 1,083 at the present time. The annual report is very interesting and gratifying. The writer of this item had a part in encouraging Indians of the Sioux Reservation to agree to sending their young people to Carlisle. This was thirty-three years ago.

A Beneficial Institution.

The L. C. McLain Sanitarium of 916 Aubert avenue, St. Louis, is devoted to the correction of deformities, as will be seen by reference to page 28. This is probably the best of its kind in the United States, and has performed wonderful cures. A letter to the Sanitarium will bring a booklet on the subject that is worth reading.

Barbed Wire and Fencing.

For bargain prices on barbed wire and fencing save 30 to 50 per cent. by writing to Chicago House Wrecking Company, West Thirty-fifth street, Chicago, Ill., and asking for Catalogue No. 990. This firm is strictly reliable.



HAVE ICE AND KEEP COOL.

IT COSTS BUT LITTLE AND IS A GREAT LUXURY. WRITE FOR PAMPHLET A M, "HOW TO CUT ICE."

Gifford-Wood Co.

HUDSON, N. Y. ARLINGTON, MASS.
123 No. Jefferson St., CHICAGO, ILL.

Avoid Harmful Drugs and Dope

It is a well-known fact that many horses recovering from Distemper or other complications of Influenza are left with a weak heart or thickened glands, and, consequently, impaired wind as an after effect of the treatment given them. Such results are impossible when FRAZIER'S DISTEMPER CURE is used. All druggists sell this remedy on a strict guarantee or refund the money. $1.00 bottle holds three 50-cent size bottles. Send for free horse booklet.

BINKLEY MEDICAL CO., Dept. H, Nappanee, Ind.

VIRGINIA FARMS

You can buy fertile farms with timber, fruit and water for $10.00 per acre and up. Annual Rainfall 45 inches. Splendid country for fruit growing, dairying, stock raising and general farming. Fine climate, abundant water, convenient Eastern markets, excellent schools, good neighbors. Write for our illustrated Quarterly, maps, Homeseeker's Excursion rates and other information. They tell WHY Virginia land is so low in price.

F. H. LaBaume, Agr. & Ind. Agt., Norfolk & Western Ry. Box 2044, Roanoke, Va

$10 AND UP PER ACRE NOW BUT PRICE RAPIDLY ADVANCING

Agricultural Blue Book.

This is our own publication, and is a copyright work of great merit and convenience. It is called **"The Agricultural Blue Book and Live Stock Breeders' Directory."** It is designed to be useful to farmers and to business men in all sections of the country.

The Farming Section.

The Agricultural Blue Book contains 128 pages devoted to names and addresses of live stock breeders, experimental and general farmers, dairymen, horticulturists, etc. This farm list numbers 150 to 180 to the page—about 22,000 in all. All the names and addresses have been carefully verified. In each instance the principal occupation and class of stock raised are stated. It is fully up-to-date and represents the owners of about twelve millions of acres of land, who conduct their own farming operations. In various lines of business the value of this **Agricultural Blue Book** cannot be overestimated.

The Business Section.

At the request of many of our patrons we have also included a Business Section, consisting of thirty-two pages. This contains a list of firms who do business with agricultural people. This list is arranged alphabetically by states. It gives the name, address, occupation and class of manufacture, etc. A general farmer, stock raiser, dairyman, poultry keeper, ranchman, fruit grower, will find this book to be valuable and interesting.

Ready For Delivery.

The Agricultural Blue Book is just out and ready for delivery. The size is 6x9½ inches, elegantly bound in blue cloth with gilt title. The price is $2.50 per copy. If the buyer is not satisfied, he can return the book and the money will be refunded. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Fairs and Expositions.

The attendance at the New York State Fair was 200,000 people, and the price of admission was 50 cents. It was held at Syracuse, a town with about 125,000 population.

The annual Exposition held by the Royal Agricultural Society of Victoria, Australia, resulted in an attendance of 150,000 people, and the profits amounted to $25,000. They now contemplate holding an International Exhibition three months in the year.

At the South Australian Agricultural Show the cow that carried off the gold medal for best cow, any breed, returned 2.6 pounds of butter as the result of two milkings. What breed she was the report sayeth not.

A Hundred Years Ago.

About a hundred years ago this country was busily engaged in importing Merino sheep from Spain and Portugal.

In the year 1810 the making of cheese as a business began in Herkimer county, New York.

About a hundred years ago the first American cigars were made in the United States by Mrs. Prout, wife of a farmer of South Windsor, in the Connecticut Valley.

In the year 1810 the invention of Nicholas Appert was used in England for canning fruits and vegetables. In this year also an English patent was granted to one Peter Durand for a can made of tin to be used in hermetically sealing food, the patent also covering the use of glass, pottery and other fit material.

In the year 1810 Mr. Seth Adams, of Zanesville, O., sold a pair of Merino sheep to Judge Todd, of Kentucky, for $1,500.

Just about a hundred years ago Hon. Henry Clay, of Kentucky, introduced fine jacks into that state from Spain.

In the year 1810 a sale of Shorthorn cattle was held by Charles Colling at Ketton, England. The average for forty-seven head was $757; top price for the bull Comet, $5,000. This was the dispersion of one of the greatest and earliest herds of cattle in Shorthorn history. The brothers Charles and Robert Colling had separate herds, and this was the first to be dispersed. The Collings were the first great improvers of modern Shorthorn cattle and famous as first-class advertisers.

One of the earlist, if not the earliest, representative of the Shorthorn breed received in the state of Kentucky was the importation of one bull by Captain William Smith, of Fayette county, in the year 1810.

The present year can be considered the centennial of the cranberry, which was first cultivated from wild bog fruit in the vicinity of Cape Cod, Massachusetts.

In the year 1810 Albert Gallatin said of American household manufactures: "By far the greater part of the cotton, flax and woolen goods are manufactured in private families, mostly for their own use and partly for sale."

Butcher Cattle Quotations.

On November 1st, at the St. Louis National Stock Yards, the following were quotations for stock cattle: Choice to fancy corn heifers, $6.25 to $7.00; good to choice heifers, $5.25 to $6.25; good to choice grass heifers, $4.50 to $5.25; common to medium heifers, $3.50 to $4.40; fancy cows, $5.00 to $5.50; medium to good cows, $3.75 to $4.10; canners, $2.75 to $3.15; medium to good cows, $3.65 to $4.10; cutters, $3.25 to $3.60; fancy bulls, $4.75 to $5.00; good bulls, $4.25 to $4.75; half-fat bulls, $3.85 to $4.00; sausage bulls, $3.25 to $3.75—all quotations being at the price stated per 100 pounds.

"It is not poverty that helps a man; it is the effort by which he throws off the yoke of poverty that enlarges the powers."—David Starr Jordan.

Root Quotations at St. Louis.

Quoted by the pound: Golden Seal, $1.95; Ginseng—Wild, $5.75 to $6.00, and cultivated $5.50 to $5.75—damp less; Lady Slipper, 15c.; Seneca, 32c.; Pink, 18c.; Black (dry), 6c.; May Apple, 3¾c.; Snake and Kansas Black Snake, 24c.—choice late dug worth more; inferior less; Angelica, 5c.; Wahoo—Bark of root, 14 to 16c.; bark of tree, 4c.; Blood, 4¼ to 5c.; Blueflag, 5c.; Sassafras—Bark of root, 5c.; bark of tree valueless; Wild Ginger, 10c.; Spikenard, 3c.; Skullcap, 7c.

L. E. Keyser, in the Petaluma Poultry Journal, says: "It seems to be the rule that the size of the egg increases and the number decreases with the age of the hen. This is due to the fact that the egg organs become expanded, and as it takes longer to grow a large than a small egg, they are deposited with less frequency. Another reason for the decreased production of old hens is that they take longer to molt and rest longer after the molt. They do not recuperate and get to laying as quickly as young hens. This makes their period of production shorter each year."

FARM AND RANCH LANDS.

ALABAMA.—GET A HOME IN ALABAMA. A limited amount of very fine land in South Alabama is offered for sale by the owner to desirable settlers. The land produced crops this year worth over $600.00 an acre. Write for full information now, as there is not much of this land offered. **H. K. Milner,** Hawthorn, Ala.

ALABAMA.—12,000 acres of cut-over pine lands in Baldwin county, Alabama, nearly thirty-five miles southeast of Mobile. Soil a sandy loam with clay subsoil. A colony now being developed on land adjoining, and the lands being sold at $20 per acre. Four or five miles distant, on apparently the same kind of land, a superior quality of tobacco is being grown, and the lands are selling at prices ranging from $20 to $30 per acre. Good water; delightful climate. Price, seven dollars and fifty cents ($7.50) per acre. **T. H. Jones,** 513 Roe Bldg., St. Louis, Mo.

FLORIDA.—50,000 acres of moderately level land in Northwest Florida. Railroad passes through the tract, with location for a town on the property. It is within sixty miles of the city of Appalachicola and its fine harbor. Soil a sandy loam with a clay subsoil, adapted to the growing of truck garden, fruits, pecans, grapes, etc. Near to this property is one of the regions where is grown the famous Sumatra leaf wrapper tobacco, so there seems to be no reason why this same tobacco could not be grown on this land.

There is estimated to be now on the land about 3,500 feet per acre of yellow pine timber, or a total of about 175,000,000 feet. It is claimed that there are no swamps or wet land, except a small acreage along the creek.

This property is well located as to climate, soil and purposes for which it can be used for a subdivision and colonization proposition.

Price, six dollars ($6.00) per acre. **T. H. Jones,** 513 Roe Bldg., St. Louis, Mo.

MISSISSIPPI.—27,000 acres on two railroads, in Jackson county, Mississippi. A sandy loam soil with red clay subsoil; moderately level, yet sufficiently rolling to drain and cultivate well. Good water; delightful climate. Here can be grown cotton, corn, oats, potatoes, both Irish and sweet, and nearly all kinds of garden truck, besides figs, Satsuma oranges, grapes, berries of many kinds and the excellent and profitable paper shell peas. Some believe that this coast region of Mississippi, Alabama and Florida will rival California when it is developed. Price, six dollars ($6.00) per acre. **T. H. Jones,** 513 Roe Bldg., St. Louis, Mo.

MISSISSIPPI.—For Rent: Plantation in Wilkinson county, Mississippi, eight miles from Woodville, thirty miles from Natchez; 800 acres open; 1,700 acres pasture lands and canebrake. Considered finest place for stock raising in South. Ready market for all live stock at Natchez at full market prices. Rental, $1,500.00 per annum. Apply **I. Lowenburg & Co.,** Natchez, Miss.

680 Acres
3,280 Acres
6,500 Acres

BARGAINS worth looking up. Use your sense and money. Will sell much below productive value. Market value over present price will quadruple on all these in less than ten years. Much more than interest on investment while waiting.

The 680 acres is a high-class farm near Ft. Scott, Kansas. Close to railroad station. 500 acres rich creek bottom land, balance rough pasture land. The bottom land was originally part prairie and heavy walnut, oak and hickory timber land along the creek. No overflow. Rich limestone soil with porous clay subsoil. Corn, wheat, oats, timothy, clover and alfalfa land; well improved and fenced. Finely watered by well, spring branch and creek with gravel and rock bottom. A clear little running stream. Worlds of timothy, clover and corn. The best alfalfa field of 20 acres in Kansas. Seventy tons of alfalfa on the farm now, cut from this 20 acres in three cuttings. A heavy fourth crop ready to cut. Ten acres more sown this spring on oats ground, and the stand of alfalfa now is perfect. This year's growth is now 18 inches high. The oats made 50 bushels to the acre.

Price $60 an acre, or leave out the rough 160 acres pasture land and take balance at $65 an acre. EASY TERMS.

7,350 acres on main line of Rock Island, between Kansas City and St. Louis. Fine, improved, Station in the center of farm, at $100,000. Is worth now $50 an acre. Will sell for $100 shortly.

The 6,500 acres just west of Topeka at $27.50 per acre. Every 160 acres will make a good farm home. As pasture it paid $8,000 this past summer. It is worth $50 an acre now. Be wise. Secure the certain great profit on any of these.

J. H. LIPSCOMB,
306 Fidelity Trust Bldg., Kansas City, Mo.

MISSOURI.—1,700 acres of "cut-over" hardwood timber lands, located in Reynolds county, Missouri, nearly 125 miles south of St. Louis. Not a solid body, but in tracts of 40, 80, 100, 200, 320 and 960 acres. About 25 to 40 per cent. can be used as farming land, remainder as orchard and pasture land. Some of it hill land, some rolling, some smooth. Excellent water; very healthful climate. Good land for growing poultry, stock and fruit, especially apples, peaches, grapes, strawberries, blackberries, etc. The timber is chiefly oak and hickory, and it is estimated that there can now be cut nearly 3,500 feet per acre. Price, $5.00 per acre. **T. H. Jones,** 513 Roe Bldg., St. Louis, Mo.

MISSOURI.—4,120 acres of rich, cut-over, well-drained bottom land, within one mile of railroad station. Located in the rich, productive region of Stoddard county, Southeast Missouri. This is the locality where such great crops of cotton, wheat, oats, corn, timothy, red clover, alfalfa, potatoes, and, in fact, nearly all kinds of grains, grasses and fruits and vegetables grown in the United States are produced so well. The land is very rich and the region is developing rapidly. It will cost about $10 per acre to get the land ready for plowing. Good markets and shipping facilities. Will be sold in farm tracts at $25 to $30 per acre. Many consider this better than the rich lands of Illinois selling at $200 per acre. **T. H. Jones,** 513 Roe Bldg., St. Louis, Mo.

NEW MEXICO.—136,000 acres of slightly-rolling, well-drained land, in one body, now used as a good stock ranch. This is located about twenty miles from Roswell, New Mexico, and nearly ten miles east of the Pecos river. It is estimated that four-fifths of the land would be well adapted to agricultural purposes, it being about the same quality and characteristics of thousands of acres now in farms in the Pan-Handle of Texas, and which is being sold at $10 to $20 per acre. Much of this land situated in the valley is a black, alluvial soil, well adapted to agricultural purposes.

This property is, however, now used and well adapted as a stock ranch. Since stock growing is so profitable, it certainly is a good proposition to so continue to use it. Nevertheless, it might be subdivided, sold into small farms and cultivated, especially following out the methods of dry farming.

The ranch is well supplied with water holes and a number of wells and windmills. It is also fenced with a substantial fence of five wires.

There are prospects of a railroad being built through the land.

Price, six dollars ($6.00) per acre. Reasonable terms. **T. H. Jones,** 513 Roe Bldg., St. Louis, Mo.

Southeastern Apple Districts

Have the advantage of location near to consuming centers. None give better returns or surer crops. Apple orchards have paid $200 to $1,000 an acre. Best growers and shippers command selected markets. One Virginia tree last year yielded $124 worth of apples, a Georgia tree $57. Lands in best districts as low as $10 an acre. Best peach and berry districts. Locations for pecans where they produce large and finest crops. Fruit and general farming go together in the Southeast. Low rate railroad fare. Write

M. V. RICHARDS
Land and Industrial Agent, **Southern Railway**
1344 Pennsylvania Ave., Washington, D. C.

TEXAS RANCH FOR SALE: 68,000 acres, 25 per cent. of which is first-class agricultural, the remainder is rolling and good grazing land, divided into fourteen pastures, watered by thirty-two wells, equipped with windmills, three large tanks and permanent running water. Situated within five miles of the town of Del Rio, in the counties of Valverde and Kinney, bordered on the south for five miles by the Southern Pacific Railroad, with a large warehouse and loading pens in the ranch on the railroad. The Orient Railroad is building from San Angelo to Del Rio, and will run almost through the center of this ranch. There are adequate improvements for a first-class ranch. Price, $5.00 per care; $100,000.00 cash, and good time on the deferred payments at 6 per cent., interest payable annually. Address, **T. B. Jones** Box 27, Del Rio, Texas.

TEXAS. For Sale: 1,200 acres; fenced dog and wolf proof. Splendid goat and sheep ranch. **J. E. McCarty,** Dublin, Texas.

Protect Plants by Vigor.

Giving plants the right conditions in which to live and thrive is one way of protecting them against disease. It is not always effective in the case of vigorous plant diseases, but it is nearly always effective in the case of some of the minor diseases.

The vigor theory is not a new one, but it has been chiefly held by farmers, who had no good scientific reason to give for believing in it. But now and then some Experiment Station comes out with a report that tends to corroborate it.

One of these reports is from Germany, which investigated a disease which was destroying different kinds of fruit trees. The disease caused the dying of the heart and the tap root, and the infected and diseased condition passed to the branches. The trees died by piecemeal, in spite of the fact that the roots, except the tap roots, were sound.

The best men at the call of the Experiment Station made a study of the conditions and discovered that the bacteria doing the destructive work were of a rather weak character and could not possibly injure a tree that was growing under conditions productive of thrift. They declared that the way to prevent the trees dying was to drain the soil and then feed the trees by putting plant food into the soil. It is probable that there are many kinds of bacteria that are able to develop in plants whose life power is small. In fact, we know it is so, from long experience. Mold grows on dead wood, and old and decrepit trees are frequently moss-grown. While they are vigorous there is something in them that prevents the moss from using them as a foundation.

Life, whether in animals or plants, has a certain power to prevent the growth of parasites, and all disease germs are parasites. To keep them away, the first protective measure is vigor.

But the giving of vigor cannot be done by the administration of a nostrum. The writer has known of men that coined money by going through the country and selling at so much a tree a treatment that consisted of boring a hole in the tree and putting a combination of chemicals into it. This was supposed to give such a remarkable vigor that neither fungus nor insects could assail the tree. Such things are but methods of producing a vigorous bank account in the name of the exploiter.

Vigor cannot thus be purchased at so much per tree. It must come in the form of attention to the requisites of the plants that need invigorating. Manuring the ground and cultivating it will prove the most common means of giving vigor. Here and there water must be supplied, while in some cases the plant is being injured by too much water.

The study of what is required to make vigor in plants is the science of agriculture. It is a study that has many sides and cannot be successfully displaced by something purchased of a traveling agricultural quack.

HOG CHOLERA SERUM.

Government Demonstrates Its Value in Test at South Omaha.

A successful demonstration of the value of the new government serum for preventing hog cholera has just been concluded at South Omaha, Neb., by the Bureau of Animal Industry of the United States Department of Agriculture. The efficiency of the serum has been proved many times in the past, but in order that its value might be brought more strikingly before the people of Nebraska a demonstration was arranged for at the Union Stock Yards at South Omaha in co-operation with the Union Stock Yards Company of Omaha.

The Stock Yards Company purchased thirty pigs, weighing from forty to sixty pounds each, from a farm which had been free from cholera for several years. These pigs were brought to the stock yards, and on July 23, 1910, four of them were injected with blood from hogs sick of hog cholera. These inoculated pigs were placed in a pen by themselves, and within five days they had become sick, at which time eighteen of the remaining pigs were each given one dose of the serum, while the other eight pigs were not treated in any way. The eighteen serum-treated pigs were then placed in the same pen with the four pigs which had been made sick by inoculation.

The four pigs which were first given hog cholera all died, and the eight untreated pigs all contracted disease from them. The eighteen pigs which were given serum and which were confined in the same pen with the four original sick pigs and with the sick untreated pigs, remained perfectly well, and were finally turned over to the officials of the Stock Yards Company upon the completion of the experiment, September 17, 1910.

The experiment was witnessed by representatives of the Nebraska Agricultural Experiment Station and of the Nebraska Swine Breeders' Association, as well as by representatives of agricultural papers published in Nebraska.

The Department of Agriculture does not distribute this serum to farmers, but is endeavoring to bring the value of this method to the attention of the stock-raising interests in order that they may arrange to secure state funds for the manufacture and distribution of the serum. The government authorities consider that this new serum treatment, if properly applied, will result in the saving of millions of dollars.

"Semi-invalidism is the curse of women of the present day. Many a one is not satisfied unless she is continually consulting a specialist about something or other. Much of this impaired health is due, in the absence of organic disease, to want of proper rest from excitement, proper holiday from work, and often also to insufficient food."—Phoebe Wardell.

"Courage is an essential of high character."—Froude.

-All Steel —Triple Power

Pull Your Stumps Free for 30 Days at Our Risk

—Guaranteed for 3 Years

TRY a Hercules right on your own land at our risk. If it isn't just the stump puller you want, or if it fails to do all that we claim, send it back. We pay the return freight. If you keep it we guarantee every casting on it for three full years against breakage, from any cause whatever. It is impossible to put a Hercules to too great a strain. We prove this by agreeing to replace free any broken castings at any time within three years from the date of your purchase. That is our flat guarantee to you. No strings. We know what the only genuine steel pullers will do and we are not afraid to back them up. Of course this does not limit the life of the Hercules to three years. It proves our confidence in the only genuine all-steel puller made, and in the superior workmanship that goes into every Hercules Genuine Steel Puller that leaves our factory. There is no reason why these pullers won't last a lifetime.

HERCULES Stump Puller

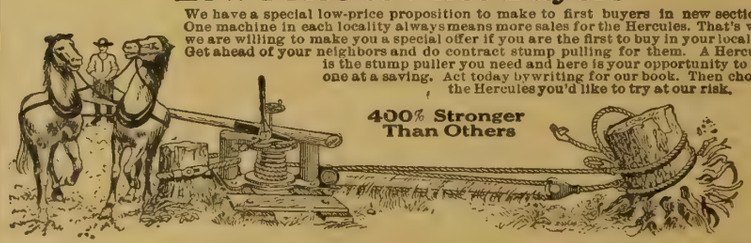
There is no more excuse for stumpy fields. We want you to try a Hercules All-Steel Triple-Power Stump Puller for 30 days Free, so that you can prove to yourself how easy and how sure and economical it pulls the largest stumps as well as the small ones, green trees and hedge rows.

DON'T risk dynamite. Dynamite is costly and inefficient. Dynamite shatters the roots. Hercules pulls them out. Dynamite leaves the roots in the ground to grow again, so you are worse off than you were before. Pull the stumps out and get rid of them once for all. Besides dynamite is dangerous. Why take chances?

You may have had trouble with the old style cast iron grubbers breaking, but the New Hercules Genuine Steel Triple Power pullers are in a class by themselves, entirely different from anything you ever saw before. They are 60% lighter in weight which makes them handy, quick, easy to handle, nothing like the heavy, cumbersome, unwieldy, cast iron grubbers you have been used to. They are 400% stronger than the old fashioned iron machines, which make them absolutely safe under all conditions. That's why we can let you try them on your land for 30 days at our risk.

Low Price to First Buyers

We have a special low-price proposition to make to first buyers in new sections. One machine in each locality always means more sales for the Hercules. That's why we are willing to make you a special offer if you are the first to buy in your locality. Get ahead of your neighbors and do contract stump pulling for them. A Hercules is the stump puller you need and here is your opportunity to get one at a saving. Act today by writing for our book. Then choose the Hercules you'd like to try at our risk.



Look at These Convincing Figures

They show the relative strength per square inch of different metals that can be used in building stump pullers. They prove that iron is the poorest and steel the best metal from which a Stump Puller can be made, that Iron Stump Pullers must be large and heavy to get the strength. They show why the Hercules genuine all-steel pullers can weigh half as much as the iron pullers and at the same time be 400 per cent stronger.

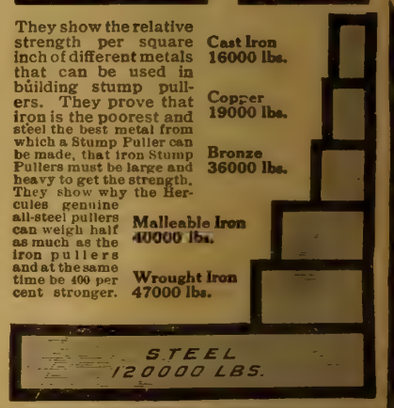
Cast Iron 16000 lbs.

Copper 19000 lbs.

Bronze 36000 lbs.

Malleable Iron 40000 lbs.

Wrought Iron 47000 lbs.



Get Our Valuable Books FREE

Let us prove to you that you can't afford to get along without a Hercules Stump Puller, that it's different from all others and in a class by itself. Let us tell you why it is different than every other stump machine and why we are safe in guaranteeing it for three years. That it is the only Stump Puller with double safety ratchets, which make it doubly safe, the only puller having all working parts turned, finished and machined, reducing friction, increasing power, making it extremely light running. The United States Government has condemned iron stump pullers as being heavy, unwieldy and unreliable. Find out all about root formations and get other valuable information from our books. Also proof of what the Hercules has done for others. Send the coupon or a postal now to

St. Louis Milk Prices.

Milk dealers are charging families in St. Louis 32 cents a gallon for milk. They sell milk at 8 cents a quart. By the pint they sell milk at twenty-five pint tickets for a dollar. This, of course, does not represent the price charged to restaurants, hotels and other large consumers, which costs less to sell and distribute.

In St. Louis retail prices vary but little; it is either twenty-five or twenty-eight pint tickets for a dollar, and just now it is twenty-five. There has also been an advance in the price of cream. The dairy managers claim that farmers are not producing as much milk as formerly, because it pays a farmer better to feed hogs than it does to feed and milk dairy cows. Farmers themselves know the reason why they quit milking cows, and that reason is, because it costs more than a pint of milk to sell another pint. Distribution and freight absorb about 60 per cent. of the actual money finally received for the product. Farmers should feed their skim milk to hogs and ship their cream to creameries after separating it by hand cream separators. By so doing they will gradually get a better share of their own money.

WINTER DAIRYING.

The Advantages Thereof—An Article by a Tennessee Authority, Reproduced From the De Laval Monthly.

The general custom among the dairy farmers of to-day is to breed their own cows, so that they will freshen in the spring of the year, thus having them fresh during the grass season. They figure that this is the most profitable time to produce milk, since the pastures are good and the cost of feed low, but they figure without reckoning the various disadvantages of summer dairying.

In the first place, the cost of ice and the trouble of cooling and caring for the milk is something to be considered. Secondly, the selling price of milk and butter is much lower in the summer than in the winter. Neither do they think about labor being more plentiful during the winter than the summer months, nor about the decreased production of milk due to the worry of flies and heat during that time, and the loss of butter-fat due to churning the cream too warm, etc.

When we figure the decreased selling price for butter, the loss of butter-fat in churning and the cost of cooling with ice, etc., the difference in the cost of producing butter from a herd of about thirty cows would be from $35 to $50 per month more in summer than in winter. To this can be added the decrease in milk flow due to the worry of heat and flies during the summer months, as well as the trouble in keeping labor during that time, and also the fact that the lactation period is generally shorter when a cow calves in the spring than in the fall, besides numerous other small details that count up in the aggregate.

Moreover, when cows are bred to freshen in the fall the total milk flow will be greater, because of the fact that they go through winter on their fresh period and when grass comes in the spring they increase in milk almost like freshening again, besides it also lengthens the lactation period. This alone should convert the farmer to winter dairying without counting the many other advantages.

Calves dropped in the fall go through the winter on skim milk and other feed and are generally large enough to subsist on pasture by spring, while calves dropped in the spring are hardly large enough to go on pasture before the grass season is gone and have to be fed on through to the next spring before they can be turned on pasture. This makes the summer calf cost more than the winter calf.

Furthermore, there is more manure saved during the winter months than through the summer, and the value of this manure depends very largely upon what the cow eats. When the cow is in full milk flow and being fed amply, as is always the case in winter, the manure is very valuable. The summer manure generally goes where it is not wanted and does but little good, being scattered over the hills and through the woods. Consequently there is a decided advantage in the saving of the manure and along the line of soil building.

There is no time during the year when it is as profitable to make butter as during the winter months, not only from the fact that butter brings more during that season, but winter dairying affords employment for the farm hands and enables the farmer to make yearly contracts with them, thus being able to keep a better class of labor all the year, and, considering the present trouble in getting good farm labor, this consideration should be quite an item with the farmer.

Again, there is no trouble or expense in keeping the milk cool in winter, and by the use of a good cream separator the ripening can be easily controlled and a better class of butter made. Besides, there is a great economy in marketing the product, as it does not have to be delivered so often.

The cream separator affords many advantages in dairying, as the milk can be separated and the skim milk fed to calves and pigs while warm and sweet, which is quite an item, as there is no time when such food is needed more than in the winter. A great deal of trouble is always obviated by the use of a good separator. It saves all the fat as well as much trouble in handling the milk, besides increasing the feeding value of the skim milk. The cream separator and the thermometer are very essential items in winter dairying.

Dairy and Creamery Notes.

The present wholesale price of milk in England is on a basis of 3¾ cents per quart, and the milk producers are contending for another ½ cent a gallon.

The De Laval Cream Separator won the grand prize at the Brussels, Belgium, Universal Exposition, which is now drawing to a close. This is the most important World's Exposition that has been held since that at St. Louis in 1904, where the grand prize was likewise awarded to the De Laval machines.

At the Iowa State Fair last month L. P. Anderson, of Algona, scored 96 points on butter made from cream delivered by users of farm cream separators, as against the highest score of 95½ in the whole-milk butter class. This is quite a jolt for those who say that hand cream separator butter is not as good as it ought to be.

It is reported that another milk-condensing plant is to be erected in St. Louis milk-shipping territory, this time at Edwardsville. An active line of condensary competition is a good thing; in fact, the only influence that will give a milk producer an assurance of a good market.

At the Brockton, Mass., Fair, in the dairy contest, the winning Holstein-Friesian made 2.61 pounds of butter in one day; the best Jersey 1.93 pounds; the best Guernsey 1.90 pounds; the best Ayrshire 2.47 pounds.

At a consignment sale of Holstein cattle, all ages, held at Syracuse, N. Y., October 11th, the result was an average of $200 per head for 177 head, the total proceeds being $35,440. A cow with a record of twenty-seven pounds of butter in a week was sold for $1,225. A bull calf sold for $500.

The St. Lawrence Farms, at Gouverneur, N. Y., the local branch of the International Milk Products Company, gave out their schedule of prices per hundred for six months, commencing October 1, which are as follows: October, $1.90; November, $2.10; December, $2.15; January, $2.00; February, $1.90; and March, $1.50. These prices are the highest ever paid in this section for the same period.—New York Produce Review.

Chicago Milk Prices.

The Chicago Milk News reports that by an agreement between the Milk Shippers' Union and the Milk Dealers' Union the price of milk received at Chicago from November to April is as follows: November, $1.60; December, $1.60; January, $1.55; February, $1.50; March, $1.45; and April, $1.40. The average is $1.51⅔ for the six-months' period. This we understand to be per eight-gallon can, F. O. B. Chicago, which means that the shipper pays the freight.

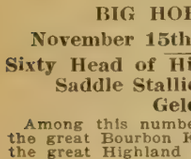
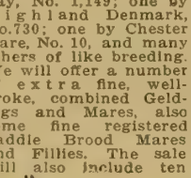
BIG HORSE SALE.
November 15th and 16th, 1910.
Sixty Head of High-class Registered Saddle Stallions, Mares and Geldings.

Among this number will be two sons of the great Bourbon King, No. 1,788; two by the great Highland Gay, No. 1,149; one by Highland Denmark, No.730; one by Chester Dare, No. 10, and many others of like breeding. We will offer a number of extra fine, well-broke, combined Geldings and Mares, also some fine registered Saddle Brood Mares and Fillies. The sale will also include ten fine large Mule Jacks, well broke, and guaranteed workers. This is an extra fine lot of Jacks.





Write for catalogue. It will be ready October 25th.

This is a rare opportunity to buy what you want at your own price. Defects and blemishes will be pointed out.

BARHAM & BUTLER, Milan, Tenn.

TAMWORTHS FOR SALE. The Bacon Hog, the largest and most prolific breed. Early to mature, economical feeders and unsurpassed as range hogs. Boars, Sows and Pigs not akin from best strains. My herd won over 100 ribbons at four State Fairs in 1909. Only made two exhibits in 1910, winning thirty-eight ribbons. Imported stock owned by me were winners at Royal Show, London, England, 1907. Mature Sows will fatten from 600 to over 700 pounds; Boars 1,000 to 1,200 pounds.
CHAS. FORD,
Mortonsville, Woodford County, Kentucky.

Blooded Stock Notes.

At the American Royal Show the auction sale of Shorthorns realized an average of $181.18 for thirty-eight head; the forty-eight Herefords averaged $169.48; the Aberdeen-Angus, fifty-two head, averaged $111.83; and the fifty-nine Galloways averaged $88.30.

D. F. Beauchamp, breeder of Poland-China swine at Meredosia, Ill., has very superior breeding stock, and by selling them young keeps down the price, so that the buyer can raise stock at a profit. We believe Mr. Beauchamp does most of his advertising in The National Farmer and Stock Grower.

Prof. Roland J. Kinzie, of the Kansas Agricultural College, was elected Secretary of the American Hereford Record Association, to succeed Mr. C. R. Thomas, who declined re-election after twenty-seven-years' service. The President of this association is Mr. C. N. Comstock, of Albany, Mo.; R. E. Edmondson, Vice-President; and W. B. Waddell, Treasurer.

Nine herds of Galloways made a fine exhibit at the American Royal Show. The senior champion bull was Captain, 4th, of Tarbeoch, exhibited by Straub Bros., of Avoca, Neb. The junior champion bull was the junior bull calf, Fearnot of Maples, exhibited by C. S. Hechtner, of Chariton, Ia. The senior champion cow was Hechtner's Floss, 2d., and the junior champion female was Straub Bros.' junior yearling Ladylike.

Chas. Ford, of Mortonsville, Woodford county, Ky., has a fine lot of Tamworth swine. His winnings at Fairs testify that as a herd it is hard to beat.

Six exhibits of Chester White swine were at the American Royal Show. Three championships and two grand championships were won by D. H. Lewis, of Geneseo, Ill.; and H. L. Bode, of Friend, Neb., won the other championships. The grand championship boar was St. Elmo, exhibited by Lewis; and the female grand championship went to Lewis on Marion.

At the American Royal Show held at Kansas City, the grand champion bull was the two-year-old Ringmaster, owned by White & Smith, of St. Cloud, Minn.; and the grand champion female was the junior yearling, New Year's Delight, exhibited by Tomson & Sons, of Dover, Kas. These are young champions, and it was generally conceded that a finer lot of young Shorthorns never was shown.

Take a run to the farm of J. P. Vissering at Godfrey, Ill. It is but an hour's ride from St. Louis. He has a fine collection of Aberdeen-Angus cattle of his own breeding. He will give you the glad hand and you will not have to be a millionaire to buy stock of him you will be proud to take home.

At the American Royal Show the Hereford senior yearling, Gay Lad, 6th, exhibited by O. Harris & Sons, of Harris, Mo., won the grand championship for males; and Scotch Lassie, a senior yearling heifer exhibited by Dr. J. E. Logan, of Kansas City, won the female grand championship. There were twenty-six exhibitors, and it was a most satisfactory show.

The grand champion Aberdeen-Angus bull at the American Royal Show was the full-aged Oakville Quiet Lad, exhibited by O. V. Battles, of Maquoketa, Ia.; and the grand champion female was the famous Barbara McHenry, 24th, exhibited by W. A. McHenry, of Denison, Ia. There were twenty-four exhibitors.

The two grand championships for Berkshires at the American Royal Show went to C. A. Steward, of Fox, Kendall county, Ill. The boar was Handsome Lee's Model; the sow was Lady Mina, 41st. The exhibit was small, but all were superior animals.

Of Duroc-Jersey swine exhibited at the American Royal Show McFarland Bros., of Sedalia, Mo., won three championships; and W. T. Hutchinson, of Cleveland, Mo., won the fourth. The Duroc-Jersey breeders had the most creditable exhibit at the show.

The Kirby Stock Farm of Marmaduke, Ark., invite visitors to examine sows with litters and purchase on the ground. Mr. J. W. Kirby has a fine string of great Poland-China pigs for the fall and winter trade. He has shipped pigs the past season to New Mexico, also to North Carolina, and from Texas north to Illinois and Indiana, with much success. His pigs are good enough for any country.

Mr. E. L. John, of Broadway Stock Farm, Broadway, Maries county, Mo., is again before us as an advertiser. He is a breeder of English Berkshire swine of the robust kind. He has the finest lot of young pigs for sale that he ever owned. They are in the best of health, in good growing condition. Mr. John is very reasonable in the matter of prices and will give good value to a buyer of Berkshires.

Remember that J. F. Cook & Co., of Lexington, Ky., breed jacks and jennets, saddle horses, Hampshire and Tamworth swine. In the prize ring this breeding company has won many ribbons. It will pay any stockman to keep in communication with this firm and write for catalogue. A visit to the farm to look over the stock will be appreciated by the firm.

Sheep and Lamb Notes.

Messrs. Clay, Robinson & Co. bought 5,800 feeding sheep on the Omaha market in the interest of W. F. Gieseke, of the Marshall Milling Company, of Marshall, Minn. They were all bought in two days—September 28th and 29th. Mr. Gieseke is a lamb feeder on a large scale, and this is far from being his first purchase.

On Monday, October 3d, the Chicago market received a total of 66,160 sheep. This number was a record breaker. The previous Monday 60,323 head had been received. These are extraordinary figures, but they were not all fat sheep, there being a majority only fit for feeders.

On Monday, October 3d, with 61,000 sheep and lambs on sale, Chicago sold top lambs, 97 pounds average, at $7.15 per 100 pounds; the best range lambs, 1,800 head of them, 68 pounds average, sold at $6.95 per 100 pounds; Western wethers sold up to $4.40, and fancy Idaho yearlings sold at $5.50 per 100 pounds.

Weil Bros. & Co., the old established fur house of Fort Wayne, Ind., begin their season's advertising with us with this issue. It would pay readers of this paper to look up this advertisement and write them and get their new price list and their free Trappers' Guide, which they send without charge to all who enquire. This house has been in business since 1871. They employ a large capital, and they are offering some special prizes to hunters and trappers, which are fully explained in their circular which they will send if you write them. We hope our readers who are interested will do so. Ask for Price List A K, and write to Weil Bros. & Co., Box 62, Fort Wayne, Ind.

BLUE GRASS FLOCK OF SHROPSHIRES.

Registered Rams and Ewes of best breeding and quality. Dense fleeces of good length. Animals that will improve any flock. Best imported Rams at head of flock. Prices reasonable.

International Live Stock Exposition and Horse Show at Chicago Union Stock Yards.

These combined exhibitions, which take place at the Union Stock Yards, Chicago, on the dates of November 22d to December 3d, inclusive, bring together the greatest aggregation of live stock that can be produced in any country in the world. The Horse Show this year occupies the dates of November 22d, 23d, 24th, 25th and 26th, and the Live Stock Exposition, commencing on the same day that the Horse Show is brought to an end and extending to December 3d, gives exhibitors at both, as well as the general public, an opportunity of witnessing these two extraordinary exhibitions without extra expense or loss of time.

Chicago, as the greatest live stock market of the world, during the dates, is the most interesting place on this continent to visit, while the International Live Stock Exposition is in progress, for not only does it bring together by far the greatest number of cattle, sheep, swine and horses that could possibly be accumulated anywhere else, but it reveals the finest specimens of every breed represented, as well as all the champions of the respective domesticated animals. By attending this exhibition the breeder, feeder, stockman and farmer, as well as others who are interested in the live stock industry, can obtain more information and practical knowledge of live stock during the thirteen days of its continuance than is possible for them to obtain in any other way.

The most renowned judges from the old country, and the most expert in this, come together for the purpose of displaying the combined talents of both, and pronouncing judgment upon the various classes, that is supreme and beyond appeal. The ordinary breeder has his ideas in regard to live stock, but when he stands near and sees the various classes pronounced upon by the best judges and greatest experts the world can produce, and is able to ascertain upon the spot why such judgments have been returned, he will be the first to acknowledge wherein he has failed on so many occasions, and how easy it is for him to make amends, and turn failure into success of the most pronounced form, redeem the ground he has lost, and make amends in the future that will not only make his name as a breeder famous but lengthen his bank account to a degree that hitherto seemed impossible.

A pound of practice is worth a ton of theory, and in no industry can this be turned into more gratifying results than it can in the live stock world. The breeder living at some distance from Chicago may say, I do not see how I can afford the expense, much as I should like to make the trip and greatly as I feel its need. Let this good fellow cut down expenses in some other direction and attend the show at all hazards, for it will pay him, and pay him doubly and trebly, for he will go back, not only full of enthusiasm, but with a practical working knowledge in his head wherewith he can right the wrongs of former methods and start on the straight road to success.

In this connection we desire to invite special attention to the sales of pure-bred stock which will be sold during the Exposition, as advertised on the first page of this paper. There is ample time for our readers to write for the catalogues and to study the merits of each animal. The sales include Aberdeen-Angus, Shorthorn and Hereford cattle, Shetland ponies and Rambouillet sheep. All stock sells at auction and the buyer makes the market.

Practical Farming and Gardening.

This is a book of 500 pages, 6x7¼ inches to the page. It is a complete farmer's instruction book. The feeding chart is worth a ten-dollar bill to any stock farmer. Soil fertility, drainage, grain crops, gardening, truck growing, fruits, forestry, pruning, grafting, budding, injurious insects, plant diseases, spraying, cattle, sheep, horse raising and feeding, treatment for diseases, silos and silage, poultry, handy rules and farm cookery, are a few of the subjects. There are eighteen three-column pages of index. If you look for something you find it. We have adopted this book as a subscription premium. Send One Dollar and we will send you **Practical Farming and Gardening,** postage paid, and The National Farmer and Stock Grower for two years. This is a grand offer. Address, **Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

Necessity For Farm Experimentation.

Experiment Stations are good, and they are doing a great work; but their work can never take the place of experimentation on the farm. In our alphabet there are but twenty-six letters, but from those twenty-six letters we have in the language over one hundred thousand words, and yet the combinations that can be made with the letters are not exhausted. We have for our symbols in numbers only nine characters that mean anything when taken alone, but with those characters and a zero sign we can make 999,999,999 different combinations, or about a billion. And every combination is different from every other combination.

So it is with the agricultural conditions on our farms. The possibility of variation is so great that it is safe to say that no combination of conditions is exactly the same on one farm that it is on another.

A farmer said to the writer the other day: "They have had a frost down my way. It didn't hurt my corn, because all my land is quite high; but some of my neighbor's corn is in low places and that got hit." There happened to be a few low places on his neighbor's farm, but not on his, and the difference in yield of corn will be considerable. That is but one kind of factor that enters into the possibility of variety making on the farm.

Where we have nine positive characters in number making we have more than that in agricultural conditions. For instance, take the soil. It may be composed of 99 per cent. sand and one per cent. clay, and there may be innumerable gradations between that and the soil that is 99 per cent. clay and one per cent. sand. But sand and clay are but two constituents of the many that a soil may contain, and that means variation that is infinite, in the soil alone.

Then there is the question of the fertility that is in a farm naturally. One farm will never contain the exact quantity of virgin fertility that another farm does. The amount of fertilizing that has been done by one farmer is never the same as that done by another farmer. On one farm a dozen cows have been kept and their manure applied to the ground. On another only six have been kept. One farmer has bought high-priced food, like oil cake, to feed to his stock, and this has made a richer manure. The next farmer has not. One farmer has fed most of his crops on the farm, selling things that carried off little fertility. His neighbor has been selling off all his crops, and they were crops taking with them large amounts of fertility. There is more chance of two human beings being alike exactly than there is of two farms being exactly alike in the amount of fertility contained in their soil.

There is, too, the very important matter of drainage. No two farms are alike in their drainage, unless they are in an arid country. The drainage differences between any two farms is very great. We can see what lies at the surface of the ground, but it is a wise farmer that knows much about the drainage processes under the surface. The water table stands at all kinds of distances below the surface, and a man can only guess what those distances are. Yet the height of the water table at different times of the year has a very important bearing on the production of crops. Moreover, the height in one soil does not prove what it should be in another soil, because capillarity is greater in one soil than in another and water will rise higher in one soil than in another.

These are but a few of the resaons why every farmer should carry on experiments on his own farm.

FRUIT GROWERS' CREED

Proposed by the Fruit School of the Extension Department of the West Virginia University.

He who plants a fruit tree professes his faith. It is as if he should say: I believe.

I believe!

I believe in God and in the orderliness of His Universe.

I believe in the regular procession of the seasons—spring and summer and autumn and winter.

I believe in the sure succession of youth and maturity.

I believe in the unfailing order of blossom-time and fruit-time.

I believe in the permanence of human needs.

I believe in the perpetuity of human institutions.

I believe in the steadfastness of Mother Earth, whose promise of food for her faithful children is a pledge that will not fail.

I believe in work as a divine gift.

I believe in myself.

I believe!

And in this abiding faith I work.

In this faith I plant this tree.

In this faith I will dig about its roots and nourish it.

In this faith I will protect it from vermin and disease.

In this faith I will wait for the early and the latter rain.

In this faith I will guard the blossom and the green fruit.

In this faith I will watch for the first blush of the ripening peach and the early tints of the maturing apple.

In this faith I will gather the first fruits with a thankful heart.

Potash For Small Fruits.

In a recent issue of the Puyallup Valley Tribune, W. H. Paulhamus, in an open letter to berry growers, said: "The past raspberry season has taught me more forcibly than ever that sulphate of potash is the cheapest fertilizer that we can get, and I, therefore, expect to continue its use for all time to come. As most of our growers know, and our last season's potash was very late in arriving, on account of which fact quite a few of our growers decided not to use it." He then went on to state that the association had purchased ten tons that would be available for berry growers.

Spraying is Profitable.

"Spraying a Profitable Investment" is an attractive 120-page booklet recently published by the Sherwin-Williams Co., of Cleveland, Ohio, makers of high-grade insecticides and fungicides. It is full of information which will not only be of value to the large grower, but which is especially valuable to the small grower who has a few fruit trees or a little garden and vegetable plot.

This is a free book, issued by a firm interested in selling spray mixtures; but of all books on the subject it is far the best. There are 120 pages, illustrated and indexed throughout, covering the entire field of spraying for all plants and trees and for all purposes, and supported by government authorities.

Every grower, big or small, should have one of these books, "Spraying a Profitable Investment." It is put up in handy form and can be slipped in the outside pocket of your coat ready for reference. Write to Sherwin-Williams Co., 689 Canal Road, Cleveland, Ohio, and ask for a copy.

Horticultural Notes.

The most popular tomato in England is the small, round kind, preferably not more than two to three inches in diameter. Tomatoes of the suitable kind cost 12 cents a pound in England, and are seldom used, except in salads and garnishing dishes. They are all hot-house grown.

The United States Department of Agriculture has conducted a series of experiments to find out the amount of cold fruit blossoms will withstand. Some of the results were: Apples, pink, 20 above zero; apples in full bloom, 26 above zero; pears, showing pink, 20 above zero; pears in full bloom, 27 above zero; peaches, showing pink, 23 above zero; peaches in full bloom, 28 above zero.

Frances E. Parker, a lady artist from Iowa, owned a four-acre potato patch in Eastern Washington, raising over 1,000 bushels on the four acres. In addition to being a potato artist she is a portrait painter.

Speaking of the Colorado peach orchards, the editor of the National Nurseryman says: "Of peaches, Elberta is the standard, the most popular and the most profitable. The season is opened with Champion, Carmen and Belle, or other kinds of their period, and practically closed with Elberta."

A telegram to the New York Herald from Tacoma, Wash., announced that "an apple tree planted twenty years ago by an Indian, near the shore of Lake Chelan, is now worth $30,000, that offer being made by an Eastern orchard syndicate that desires to propagate the variety. It was refused by the nursery company, which will itself develop the fruit. The tree produces a golden yellow apple called the 'Chelan.' It is different from any other Washington apple, possessing exceptional keeping qualities." This is considered as being a sample of good advertising.

The Northwest Pacific Farmer says that Howard Walton, of Newberg, Ore., raised in 1910 a tomato that weighed thirty-three ounces.

In the wholesale peanut market the price for farmers' consignments remains at 3½ cents a pound.

"KNODIG" PITLESS SCALES AT LOWEST PRICE EVER NAMED

DICK'S FAMOUS **Feed Cutters** Excel All and Are LOW IN PRICE. All sizes, for hand or power. Illustrated book free Weber Implement Co., 415 N. Main street, St. Louis, M

In the East, prize-winning Shetland ponies are being conveyed from their homes to the shows in their automobiles. Brownie, Jim and Morgiana, three pet ponies owned by the children in the family of John S. Phipps, of Westburg, Long Island, N. Y., set the fashion. At one of the shows so many ponies were entered the judges had to divide them into two divisions and award two sets of ribbons.

"Therefore, all things whatsoever ye would that men should do to you, do ye even so to them, for this is the law and the prophets."—Matthew vii, 12.

MINOR HEIR, 1:59, IN A RACE.

Editorial From Horse Review, Chicago, September 10, 1910.

"At Indianapolis, day before yesterday, Monday, September 12, on the opening day of the Indiana State Fair for 1910, was witnessed the most extraordinary exhibition of extreme pacing speed ever known. The quartette of champions which M. W. Savage, of Minneapolis, Minn., had collected and been touring the country with this season in races against time, gave the performance—and it was worth crossing the continent to see. The contestants were Minor Heir, 1:59¼; Hedgewood Boy, 2:01; Lady Maud C, 2:02½; and George Gano, 2:03¾, who raced a mile dash for blood and a new world's record, if possible. At Galesburg, Ill., three weeks before, Minor Heir had beaten Hedgewood Boy and lowered the world's light-harness race record to 2:00 flat, under not the most favorable circumstances. The following two weeks were trying ones on the combination. Going first to Des Moines, Ia., rain there made the track so slow that after the first day they were unable to display anything like their true form. From Des Moines they were shipped to Kalamazoo, Mich., where rain prevented them from appearing at all. They were then sent to Bethlehem, Pa., where they raced over the half-mile track on Thursday. Retracing their steps back westward, to Indianapolis, under the conditions it would not have been strange had their exhibition there on Monday not been marked by anything especially remarkable—instead of which they gave the most wonderful one on record.

Press dispatches state that Hedgewood Boy drew the pole, but that Minor Heir paced around him and took the lead before reaching the quarter, which point was passed in 29¾ seconds. The son of Heir-at-Law, 2:05¾, and Kitty Clover, by Redwald, 2:23½, was never afterward headed. Keeping on at record-breaking speed, he passed the half in 59 seconds, was at the three-quarters in 1:29¼, and, coming on through the home stretch steady and true, flashed under the wire, going strongly and without a touch of the whip, in the unprecedented time of 1:59, not only lowering his world's race record of 2:00 a full second, but establishing a new world's record for pacers "in the open," the previous one having been 1:59¼, made against time, and held jointly by Star Pointer, Audubon Boy and himself.

This was sufficiently marvelous, but it was only part of what was done. The other three starters finished so closely behind Minor Heir that all of them paced in two minutes or better! The dispatches state that Lady Maud C., who was second, paced the mile in 1:59½. That George Gano, third, was timed 1:59¾; and that Hedgewood Boy, who was fourth, despite the fact that one of his sulky tires received a puncture in the last quarter, finished in flat two minutes.

The possibility of such a performance as this, if hinted at in advance, would have been considered not only extravagant, but ridiculously so by 999 out of every 1,000 critics, we venture to say—or, rather, by 1,000 out of every 1,000. It so completely eclipses every past standard of light-harness racing speed as to render it beyond all precedent. We regret that we could not have been present to witness the performance, and we congratulate the thousands who were present upon their having seen what will remain one of the epochal performances of turf history. Incidentally, we would also state that the entire speed-loving public is under heavy obligation to Mr. Savage for his enterprise and courage in purchasing and otherwise bringing together these champions and making possible such a spectacle.

Minor Heir was driven by Harry C. Hersey; Lady Maud C. by Hal. Erwin; George Gano by Levi Turner; and Hedgewood Boy by Dick McMahan—to each of which reinsmen we also tender our congratulations."

Horse and Mule Notes.

Lou Billings, the three-year-old daughter of Lou Dillon, 1:58½, and John A. McKerron, 2:05¾, gained a trotting record of 2:08¾ in an exhibition against time at the Grand Circuit meeting in Columbus.

Under the auspices of the Morgan Horse Club, one hundred and forty-six horses of Morgan descent were exhibited in the various classes for the breed at the recent Vermont State Fair at White River Junction.

The New York Herald mentions a closing-out sale of livery horses in that city, saying: "Horses that cost Mr. Carr $150 apiece seven or eight years ago and that he had worked steadily were sold, in many instances, for $200 and $250, so aggressive was the bidding for everything in the sale. Prices for horses ranged from $40 up to $305. Eleven of the best ones brought $2,685, an average of $244, while the average for all, including good, bad and indifferent, was $140."

It was reported early in October that Fletcher Afflick, of Shelby county, Missouri, had sold to Mr. Crump, of Clarence, Mo., a span of mules at 20 cents a pound. It was a contract for future delivery, and the seller was still feeding the mules when last heard from.

The United States Consul-General at Tientsin, China, reports to the Department of Commerce that in the provinces of Chihli and Shantung there are three grades of mules as classified for export. The first embraces animals 13½ to 14 hands high, weighing about 800 pounds, four to seven years old. These can be delivered free on board for $65 to $75 American gold; second grade, 11 to 12 hands high, some 13 hands, about 700 pounds, same ages, $50 to $60; third grade, smaller than above, about $42.

Colorado E., 2:04¾, the three-year-old champion trotter, is said by The Horseman to represent the highest and latest finished product of the American turf. Colorada E. descends from Hambletonian, 10, by George Wilkes, Baron Wilkes and The Bondsman. His dam was Flossie McGregor, sired by Jay McGregor, 2:07¼, a grandson of Jay Bird.

From a practical standpoint, the record made by The Harvester of 4:15¼ for two miles, beating Cresceus' record of 4:17, is most gratifying. His first mile was in 2:08½ without a pace-maker, and the second mile was in 2:06¾. The Harvester now holds all the stallion trotting records.

The champion mule, any age, at the American Royal Show was exhibited by J. D. Jones, of Faucett, Buchanan county, Mo.; and the champion mule under two years was exhibited by E. S. O'Connor, of Lexington, Lafayette county. There were over twenty exhibitors.

The champion Percheron stallion at the American Royal Show was the two-year-old Ibsen, exhibited by Taylor & Jones, of Williamsville, Ill. The champion mare was Huchepie, a three-year-old, exhibited by Geo. B. Ross, of Alden, Kas. There were eight good breeding and importing establishments exhibiting.

Remington PUMP GUN

Over 50% of the Interstate Handicap winnings for 3 years have been made with Remington Guns.

They have thereby proven their title as "best at the traps"—you can demonstrate for yourself that they are also best in the field.

Remington Pump Gun—best in three important features—hammerless, solid breech, and *bottom ejection of shells;* the only pump gun on the market having these indispensable features. The solid breech protects the shooter's face in case of defective shells, and at the same time keeps dirt and foreign substances from the working parts located within the solid breech.

Look it over at any dealers.

"Never give ducks buttermilk, or, in fact, any other kind of milk, to drink. It may be used to moisten their food, however. Buttermilk, skim milk and 'clabber' are all valuable in duck feeding, but they should be used only for moistening the feed, and not as as a drink."—Anna Gallagher, in Farm World.

THE BOOK OF LIVE STOCK CHAMPIONS.

This is a valuable book and is of great interest to all stockmen.

Send us One Dollar and we will send you The National Farmer and Stock Grower for two years, and we will send you, post free by mail, one copy of **The Book of Live Stock Champions**, issued in the year 1905. It contains pictures of 500 individual animals, the greatest champions in live stock history. This book is nicely bound in cloth and is our own publication. Every stockman should take pride in owning a copy. It begins with the World's Fair in Chicago in 1903; contains the grand champions at the Louisiana Purchase Exposition, 1904, and at International, State and American Royal Shows. It is a book of 240 pages, with pictures of one, two or three champions on a page. The pages are 6x9 inches. We have sold ten thousand of these books to stock farmers, breeders and Agricultural Colleges. To have a copy of this book on your table is a constant pleasure. Only a few hundred of these books remain on hand and it will not be printed again. Obtain a copy while you have an opportunity. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Buying Feeding Cattle.

Every year it becomes more difficult to buy feeding cattle in the country; that is to say, the class of cattle a good farmer ought to feed. This turns us from the country to the stock yard markets, and even here it is becoming more difficult to buy feeding cattle to the best advantage unless one can turn to all the markets at one time; this, however, he can do by communicating with a well-equipped live stock commission house. A well-equipped firm in the year 1910 has to be established at more than one market. The fat cattle may be finally sold in the East, and it is usually necessary to buy them in the West. About the first live stock commission firm to enter heart and soul into the business of buying stock cattle and feeders for their customers is Clay, Robinson & Co. This firm is established at Denver, Sioux City, St. Paul, Omaha, St. Joseph, Kansas City, Fort Worth, Chicago, East Buffalo and East St. Louis. This firm has just issued a pamphlet entitled "About Buying Feeding Cattle." It is good reading for cattle shippers and cattle buyers. Write for a copy to Clay, Robinson & Co., National Stock Yards, Ill., or to either of their establishments.

Market For Potatoes.

On November 1st, at St. Louis, potato consignments were selling in car-loads on track, per bushel: Sacked Wisconsin White at 46 to 48c. for ordinary to fair; fancy, well-matured more; Michigan sacked Rural at 50 to 53c.; bulk Iowa at 38 to 40c., delivered, and do. Michigan sacked Rural at 90c., delivered; nearby Illinois and Missouri (mainly Early Ohio) were selling in sacks and barrels at 40 to 50c. per bushel.

The Wheat Situation.

The statistical situation in regard to wheat is strong, but the market movement does not correspond. The cloud on the future is the Argentine surplus. At this writing (November 1st) it is an unknown quantity. Millers are not selling flour very fast or very high. This applies to all markets, and the legitimate wheat market depends absolutely upon that one outlet—the flour barrel. If one man owned the wheat crop of the world, it could be sold at $1.20 a bushel, Chicago basis; but with the thousands of owners and current demands from average sources the future says 96¾ cents for May wheat. Hand to mouth is the market of to-day. Many experts are watching close with a view to sustaining an advance in prices; but the day and the hour have not yet come. If millers were making large profits, they could be made to divide with the holder of wheat, but the large margins are not for the miller; they are between the baker and the ultimate consumer. The only friend of the farmer is the cold weather to come that encourages the appetite and increases consumption. Only one crop of wheat can be raised in a year, and it is a long time between crop and crop. The December quotation at 90½ cents may be slightly advanced before it is closed out, but between now and May 31st, 1911, almost anything is possible with the May option, and July prices will take example by May.

On October 31st, at St. Louis, cash wheat, soft red, No. 2, was selling at 95 to 97 cents, the highest cash market in the country. The December option at Chicago closed on same day at 90½ cents; May, 1911, at 96¾ cents; and July, 1911, at 94¾ cents.

It is often said that the farmer does not know what he is going to get for his crop. We regret to say that except for changes that may or may not take place the figures represent what the farmers' wheat crop is worth, and the information is rather too plain.

Several Great Farms.

Mr. J. H. Lipscomb, of Kansas City, has a card in our Land Department on page 9. He handles but few properties which he thoroughly investigates, and they have to be good and well located. Mr. Lipscomb is offering three farms, respectively 680 acres near Fort Scott, Kas.; 3,280 acres on the Rock Island Road in Missouri; and 6,500 acres near Topeka, Kas. These are princely properties for first-class farmers to operate, and they are capable of profitable subdivision. Address, Mr. J. H. Lipscomb, 306 Fidelity Trust Bldg. Kansas City, Mo., if you are interested.

Feather Quotations at St. Louis.

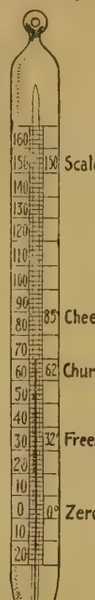
Quoted at wholesale in terms used by the trade: Prime white live goose in small sacks at 56c., and in large sacks at 54c.; prime gray do., 41c. in small and 39c. in large sacks; old white, 36 to 38c.; x, 27 to 31c.; xx, 15 to 18c.; xxx, 7 to 10c.; xxxx, 3c.; tare, 10 per cent. on small sacks and 3 per cent. on large. Duck—White, 41c.; dark, 30c. Chicken—Prime dry-picked body, 4c.—wet, damp and quill-mixed, 2c.

The Hog Market and Prices.

At the St. Louis National Stock Yards, good butcher and shipping hogs of light and medium weight brought $8.75 to $8.90; light-weight mixed hogs at $8.60 to $8.75; good, heavy hogs, $8.35 to $8.65; while plain grade heavy hogs sold largely at $8.00 to $8.30. Real heavy hogs with quality were scarce. Rough sows and stags sold from $7.00 to $8.00, most of them at $7.50—all quotations being at the price stated per 100 pounds.

"Dazey" Dairy Thermometer.

This thermometer is offered as a subscription premium in connection with the National Farmer and Stock Grower. It is one of the discoveries of Uncle Piper, the subscription editor of this publication.



Every farmer ought to have a dairy thermometer for home use. We have found one—the best of all. It is 8½ inches long. It is high grade, and with care will last for many years. The temperature of cream regulates to a great degree not only the time required in churning, but the quality of the butter. If the cream is churned when at the proper temperature, the result is generally nicely-granulated butter. When the temperature is wrong, the work is uncertain, troublesome, and the butter is inferior. Uncle Piper used to be on a dairy farm in Texas. He did not manage it, however. He would buy a dairy thermometer and demanded that it be used; but **She Who Run the Ranch said No!** Now Uncle Piper is trying to force the dairy thermometer on other people because he could not properly introduce it into his own family. Send us 60 cents and we will send you The National Farmer and Stock Grower for one year. We will also send you, securely packed, post-paid, safe delivery and quality guaranteed, one "Dazey" Dairy Thermometer. Address, **The Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

Southern Cattle Quotations.

At the St. Louis National Stock Yards, October 31st, the following were Southern cattle quotations: Choice to prime corn-fed steers, $6.25 to $7.00; good to choice fed steers, $5.50 to $6.25; fair to good caked steers, $5.00 to $5.75; medium to choice grass steers, $4.60 to $5.35; common to medium steers, $3.75 to $4.60; fair to good heifers, $3.50 to $4.60; fair to choice cows, $3.65 to $4.25; cutters, $3.25 to $3.65; canners, $2.85 to $3.15; bulls, $3.25 to $3.90; fair to choice heavy calves, $4.25 to $6.00; heretics, $3.50 to $4.25; yearlings, $3.00 to $3.25; fair to choice veal calves, $6.00 to $8.00—all quotations being at the price stated per 100 pounds.

Two Prizes to Canada.

At the Dry-farming Congress held recently at Spokane, Wash., the wheat prizes were open to the world. The three prizes were awarded as follows: First, to Wilson Creek Commercial Club, Wilson Creek, Wash.; second to Macleod District, Macleod, Alberta, Canada; third to Lethbridge Board of Trade, Lethbridge, Alberta, Canada.

Evans-Montague Commission Company

Box 68,
NATIONAL STOCK YARDS, ILL.

A Letter From Trumans.

To the Editor National Farmer and Stock Grower: Dear Sir—Owing to a train being one and one-half hours late at Peoria and missing the connection for Bushnell, some fifteen of our old customers and friends who were on their way to attend our sale were disappointed in not reaching here. The outcome was that we suffered a loss of fully $200 per head on the average of our thirty-nine fillies that were sold yesterday at an average of $585 a head, but the financial loss to us is nothing as compared to the gain that our customers will receive, and it is a well-known fact that we never advertise to sell Shire mares at auction but what we always sell them. One of the principal buyers at our sale was Mr. Cocroft, representing Mr. John J. Mitchell, President of the Illinois Trust and Savings Bank, Chicago, who made several purchases for his Lake Geneva farm. Another old customer, George M. McCray, at Fithian, Ill., bought no less than ten, and the outcome has been, we have accomplished what we started to do, and that was to distribute the best Shire mares possible to obtain in England.

We have at the present time forty-eight of England's best Shire mares on the ocean. They are due to arrive at New York on the 31st, and include twenty aged Shire mares that we expect to show at the International, and the whole consignment will be sold at public auction by us on December 14th. These mares have been selected from all our purchases the past year and will be the greatest offering of draft mares ever attempted in the history of this country, or in any other country, for that matter.

We shall be very pleased to mail our catalogues to any of your readers interested, and hope to have all our old subscribers with us again on December 14th. Very Truly Yours, Trumans' Pioneer Stud Farm, Bushnell, Ill., October 28th, 1910.

A First-class Commission House.

In consigning live stock for sale at the St. Louis National Stock Yards, remember the Evans-Montague Live Stock Commission Company. It is a successful firm, highly competent and persevering in the interest of their customers. The Evans-Montague Commission Company solicit consignments of cattle, hogs and sheep for sale on the market, and desire stockmen to take notice that the company has special buyers who select and buy stock and feeding cattle for their patrons. Address, Evans-Montague Commission Company, Box 68, National Stock Yards, Illinois.

Auction Sale of Mules.

Messrs. Campbell & Reid and Western Sale Stables Company announce that on Thursday, December 8th, they will hold a special auction sale of about four hundred and fifty head of three and four-year-old Texas mules. They are in breeeding, growth, conformation, size and quality the equal of Missouri and Kentucky mules. They were raised on limestone soil and on good mesquite grass. They are in excellent shape to be bought and handled by mule feeders in car lots. These mules will be sold at public auction without reserve. Study your interest and remember the date, Thursday, December 8th, at the Horse and Mule Market at the St. Louis National Stock Yards. It will do you good to come and bid on these mules. If you wish to know anything further about this sale, write J. J. Searcy, Sale Manager, National Stock Yards, Ill.

International Horse Show.

Remember that the International Horse Show opens at the International Amphitheatre at Union Stock Yards, Chicago, Ill., Tuesday, November 22d, and continues until Saturday, the 26th, when the International Live Stock Exposition opens and continues until December 3d. Mr. O. T. Hinkle is Secretary of the Horse Show. This show is held in the greatest arena in the country, and there will be a magnificent display. The prize list includes 116 classes. The front entrance of the Amphitheatre is on Forty-third and Halstead streets, as seen on the first page.

St. Louis Sheep and Lambs.

On October 31st, at the St. Louis National Stock Yards, mature mutton sheep, 90 to 108 pounds average, sold at $4.00 to $4.15 per 100 pounds; inferior sheep, hardly fit to kill, sold at $3.75 to $3.90. The best lambs on the market averaged 70 pounds and sold at $6.75 per 100 pounds, and others at $6.35 to $6.65 per 100 pounds; and Southwest lambs at $5.75 to $6.25, with culls at $3.25 to $5.00. Best stock sheep sold at $3.00 to $3.75; fair at $2.00 to $2.75, and culls at $1.00 to $1.75. Bucks, 130 to 150 pounds, sold at $3.00 per 100 pounds. Included in sheep sales were 226 head, 107-pound Utah wethers, sold at $3.80 to go out to the country to be fed.

Fifty-five head of thoroughbred mares, colts and fillies were shipped by Mr. James R. Keene, of Castleton Stud Farm, Kentucky, to South America and sold at auction at an average of $950 per head, and seventy-four colts and fillies consigned by Mr. James B. Haggin, of Elmendorf Farm, averaged about $500. These prices are not considered satisfactory.

PANHANDLE TEXAS MULES.

We will hold a Special Auction Sale of Three and Four-year-Old Texas Mules consigned to us as a sample of what Texas can do in raising f-i-rst-class Mules. There will be about four hundred and fifty head in all and will be sold in bunches to suit buyers. The sale will take place on

THURSDAY, DEC. 8th,

at the St. Louis National Stock Yards, the greatest Horse and Mule Market in the world.

Remember the sale of PANHANDLE TEXAS MULES, THURSDAY, DECEMBER 8th, 1910.

Stock Cattle Prices.

The following represent the St. Louis trade on November 1st for cattle that are sold to go out to the country to be fed: Selected heavy, fleshy feeders, $5.00 to $5.25; good to choice feeders, $4.75 to $5.10; fair to good feeders, $4.40 to $4.75; good to choice stockers, $4.25 to $4.50; fair to good stockers, $4.75 to $4.25; Arkansas and Western steers, $3.25 to $3.75; good stock heifers, $3.40 to $3.75; fair to medium heifers, $3.25 to $3.40—all quotations being at the price stated per 100 pounds.

Beef Cattle Quotations.

At the St. Louis National Stock Yards, November 1st: Choice to prime steers, $7.25 to $7.75; good to prime steers, $6.25 to $7.25; medium to good steers, $5.40 to $6.25; choice to prime yearlings, $7.00 to $8.00; good to choice yearlings, $6.00 to $6.75; common to good yearlings, $5.00 to $6.00—all prices at the quotation per 100 pounds.

AUCTION OF HORSES AT THE ST. LOUIS NATIONAL STOCK YARDS.

Mr. T. H. Holland, Auctioneer for HOLLAND, NUGENT & MAXWELL BROS., selling a pair of dapple grey geldings shipped by Crandall & Son, of Rushville, Ill., at $710 for the pair to Wheeler & McIlvain, of Boston. These were a magnificent pair of grade Percherons, weighing about 3,300 pounds to the pair.

NERVOUS DYSPEPSIA

A CURE FOR ALL.

Not a Patent Cure-All, Nor a Modern Miracle, But Simply a Rational Cure For Dyspepsia.

In these days of humbuggery and deception, the manufacturers of patent medicines, as a rule, seem to think their medicines will not sell unless they claim that it will cure every disease under the sun. And they never think of leaving out dyspepsia and stomach troubles. They are sure to claim that their nostrum is absolutely certain to cure every dyspeptic and he need look no further.

In the face of these absurd claims it is refreshing to note that the proprietors of Stuart's Dyspepsia Tablets have carefully refrained from making any undue claims or false representations regarding the merits of this most excellent remedy for dyspepsia and stomach troubles. They make but one claim for it, and that is, that for indigestion and various stomach troubles Stuart's Dyspepsia Tablets is a radical cure. They go no farther than this, and any man or woman suffering from indigestion, chronic or nervous dyspepsia, who will give the remedy a trial will find that nothing is claimed for it that the facts will not fully sustain.

It is a modern discovery, composed of harmless vegetable ingredients acceptable to the weakest or most delicate stomach. Its great success in curing stomach troubles is due to the fact that the medicinal properties are such that it will digest whatever wholesome food is taken into the stomach, no matter whether the stomach is in good working order or not. It rests the overworked organ and replenishes the body, the blood, the nerves, creating a healthy appetite, giving refreshing sleep and the blessings which always accompany a good digestion and proper assimilation of food.

In using Stuart's Dyspepsia Tablets no dieting is required. Simply eat plenty of wholesome food and take these Tablets at each meal, thus assisting and resting the stomach, which rapidly regains its proper digestive power, when the Tablets will be no longer required.

Nervous Dyspepsia is simply a condition in which some portion or portions of the nervous system are not properly nourished. Good digestion invigorates the nervous system and every organ in the body.

Stuart's Dyspepsia Tablets are sold by all druggists at 50 cts. per package.

Poultry Notes and Items.

During a week in which the Hebrew New Year figures as an important event the city of New York received 125 cars of live poultry by freight and 15 cars by express. This was a record in chicken receipts. The commission firms advanced the price on heavy fowls and held steady on medium weights.

"You cannot profitably raise chickens and fleas in the same house. If the fowls have body fleas, dust them with some good insecticide, renovate and fumigate the house thoroughly, paint the roosts, nest-boxes and furnishings with a good flea paint, sprinkle a generous amount of air-slaked lime on the dropping-boards. Provide new litter and nesting material, and your efforts will be rewarded in increased egg production and general thrift of your fowls."—Farmers' Advocate, New Zealand.

A Belgian company has an ostrich farm near Cairo, Egypt, where they have about 160 birds of all ages, valued at $35,000. This is nearly $220 a bird.

Commercial Poultry says: "One man should be able to take care of a thousand hens. The argument against poultry farms carrying five to ten thousand hens has been that so many could not be properly taken care of. If one man can take care of a thousand hens, why not divide a ten-thousand hen plant into ten units, or separate farms, each under the supervision of a successful poultryman?"

In the American Poultry Advocate Dr. N. W. Sanborn, authority on poultry raising, says: "The egg farm with scattered houses and free range has little use for fences. All that will be required is a few small pens for breeding stock. The egg flocks will need no cockerels, as it never pays to ship fertile eggs for table use. Infertile eggs will keep for months under any fair method of keeping and housing."

At the New York State Fair, with 6,000 birds on exhibit, there was a revival of the American Dominiques, White Langshans, White-faced Black Spanish and Black Leghorns. The birds of these breeds were a surprise to all who attended. It is said that the American Dominiques are in a fair way to have a boom.

The keeping of eggs is always a new subject. A writer in the American Poultry Advocate says that fresh eggs packed in oats will keep longer than in anything else, providing they are kept dry and in a cool place.

"Satisfactory results can never be secured by handling turkeys like cage birds or hot-house plants. Avoid overdoing the care and attention. Treat them like turkeys, and use common sense in looking after them. Their native home is in the woods and fields; in their present semi-domestic condition they need more shelter and care, but they should never be shut in so close as to deprive them of plenty of light, room and air."—Farmers' Advocate, New Zealand.

"Oats make an excellent grain for laying hens. They furnish the essential food elements without increasing the fat on the hen."—Connecticut Farmer.

Substitute For Animal Food.

Although skim milk in itself is very bulky, being 90 per cent. water, to concentrate it make into "cottage cheese," thus all the food value is without the bulk. In this form fowls will consume sufficient to render the feeding of animal food unnecessary. The Dairy Department of the Oregon Agricultural College recommends the following:

Set a can of skim milk in a place having a temperature of 75 to 80 degrees. In eighteen to twenty-four hours the milk will coagulate (thicken). Then break it up into small pieces the size of large peas or smaller; set the can in a pail of hot water, stirring the curd until a temperature of 90 to 95 degrees is reached. Hold at this temperature for fifteen or twenty minutes without stirring. Then pour the contents of the can into a cotton sack and hang up where the whey can drain off.

The protein content of cottage cheese is very high. In fact, it is nearly as high as fresh meat, therefore it makes an excellent substitute for grasshoppers and worms. You will observe that by Prof. Dryden's method the clabber milk is not allowed to come even as high as "blood" heat, it is not cooked hard like a bit of rubber, not even as hard as in making cheese at the cheese factory.

THE SEWING AWL.

A Most Useful Premium For Subscribers to The National Farmer and Stock Grower.

A farm on which there is not a sewing awl is in difficulties when work is most pressing. It is surprising how useful this little implement is. It is the Myers Famous Lock Stitch Sewing Awl. It is the only sewing awl made with a groove running the full length of the needle and has what is known as a diamond point. In order to sew leather or any heavy, thick material without breaking or cutting the thread it requires a needle with the groove running the full length of the needle. You might just as well have no groove in the needle as to have it only part of the way. With the Myers Awl you can sew old or new harness, saddles, carpets, canvas, tents, rugs, quilts, shoes, grain bags, and many other things. You can use any kind of thread in the Myers Awl, and it makes a lock stitch same as a sewing machine. It is very simple; a woman can use it as well as a man. It is one of the most practical devices ever invented. They are put up with two needles; one is straight and one curved, with a small screw-driver and wrench combined. Also a reel of waxed thread with each awl ready for use. Every teamster and farmer should own a Myers Lock Stitch Sewing Awl, as there is use for one in almost every household. The Myers Awl is nicely finished, the metal parts are nickel-plated, the needles and wrench are kept in the hollow handle, which has a screw top.

Anyone who will send One Dollar cash to pay in advance for two-years' subscription to The National Farmer and Stock Grower can select one of Myers' Lock Stitch Sewing Awls, which we will send by mail, postage paid, as a free premium. Address, **Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

The Storage-egg Trade.

A fair idea of the storage-egg trade is given in the New York correspondence of the Egg Reporter of October 6th, which we quote:

"Weather has been against the sale of storage eggs, and, while the movement from the coolers up to the present time has been satisfactory, exceeding that of a year ago, the trade is longing for a little steady cool weather. New York went into the season with nearly 100,000 cases more eggs than last year, and the movement has been so free that this excess has been considerably reduced. One feature of the held eggs this year is their general good quality for the early production. Never in the history of the trade has there been such a concerted action on the part of the receivers to clean up their summer or short holdings without touching the Aprils. When eggs got down to 15 and 16½ cents during the summer receipts were so heavy that it was impossible to consume them. The receivers were forced to put this stock away, uncandled or ungraded, and in every instance such stock has made money. Eggs which went in at 16½ cents have been taken out as high as 19½ cents and occasionally 20 cents. The great bulk of these short-held eggs has been used up. There are two reasons for this: One because they were cheap eggs and could be sold at a profit, and another that the early stock cost so much it could not be taken out at quotations and make the owner even. Just now there is a firm feeling on early-stored eggs, but at present quotations there is barely ½ cent margin above original cost and carrying charges."

How to Do It.

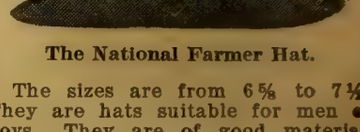
A young gentleman with a very plain face was rather annoyed because his view of the stage was obstructed by the hat of a pretty girl who was sitting in front of him in the gallery.

Wishing to get a glimpse of the performance, he picked up courage and in a nervous voice exclaimed:

"See here, miss, I want to look as well as you?"

"Oh, do yer?" she replied, in a rich Cockney accent, as she turned round and looked at him squarely in the eye. "Then you'd better run home and change your face."—Tit-Bits.

MAGNIFICENT SUBSCRIPTION PREMIUM.



The National Farmer Hat.

The sizes are from 6⅝ to 7½. They are hats suitable for men or boys. They are of good material, well made and stylish. These hats are sent direct from the manufacturer to the subscriber in a tube and sent by mail prepaid. These hats are black and steel gray. We send black unless gray is called for. These hats wear as well and last as long as any $2.00 to $3.00 hats on this market. They will give entire satisfaction. The subscription price of The National Farmer and Stock Grower is One Dollar for three years. We cut out one year, and in place of the third year we include the hat. Therefore, send us One Dollar to pay for two-years' subscription to The National Farmer and Stock Grower, and we will send you by mail one of these fine National Farmer hats as a premium. Be sure to mention the size and color.

INTERNATIONAL JUDGES.

Full List of Those Selected to Award the Ribbons at the Great Stock Show.

A complete list of the Judges and Superintendents selected for the 1910 International Live Stock Exposition is given herewith. Our readers will bear in mind that this is the greatest live stock exhibition of all—the great clearing house of all the prize-winning exhibits at earlier shows.

Cattle Judges.

Shorthorns — Breeding Classes — C. E. Marvin, Payne's Depot, Ky.; T. N. Robson, London, Ont., Canada, and E. M. Hall, Carthage, Mo. Fat Classes—J. E. Robbins, Horace, Ind., and John R. Tomson, Dover, Kas.

Aberdeen-Angus—Breeding Classes—Stanley R. Pierce, Creston, Ill.

Hereford — Breeding Classes — S. W. Anderson, Blaker Mills, W. Va.; J. A. Shade, Kingsley, Ia., and Robert H. Hazlett, El Dorado, Kas. Fat Classes—One of the above.

Galloways — Breeding and Fat Classes—Prof. R. J. Kinzer, Manhattan, Kas.

Red Polled—Breeding and Fat Classes—Prof. C. F. Curtiss, Ames, Iowa.

Polled Durham—T. J. Wornall, Liberty, Mo.

Grade and Cross Breds and Champion Steers—Richard G. Carden, Fishmoyne, Templemore county, Tipperary, Ireland.

Fat Car-load Classes—Tim Ingwersen, Union Stock Yards, Chicago.

Short Fed Specials—Jas. Brown, Union Stock Yards, Chicago.

Car-load Feeder Cattle — Chas. Brown, Flora, Ill.

Steers Entered For Slaughter—J. G. Imboden, Decatur, Ill.

Carcass Cattle — Samuel White, Chicago, Ill.

Carcass Swine — David Pfaelzer, Chicago, Ill.

Carcass Sheep — John Childs, Chicago, Ill.

Sheep Judges.

Shropshire — Breeding and Fat Classes—J. C. Duncan, Lewiston, N. Y., and L. Kammerer (Alternate), Brodhead, Wis.

Hampshire—P. W. Artz, Osborne, Ohio.

Southdown—H. Noel Gibson, Millbrook, N. Y., and J. C. Duncan (Alternate), Lewiston, N. Y.

Oxford Downs—Prof. E. L. Shaw, Department of Agriculture, Washington, D. C.

Cotswold—J. Hal Woodford, Paris, Kentucky.

Lincolns—Prof. E. L. Shaw, Department of Agriculture, Washington, D. C.

Continental Dorset—Robert Miller, Stouffville, Ontario.

Cheviot—Breeding Classes—F. R. Dawley, Fayetteville, N. Y.

Leicester — Fat Classes — J. M. Gardhouse, Weston, Ontario.

Rambouillet — Nace Burnham, Woodstock, O.; John E. Webb, Southport, Ind., and C. H. Lockwood, Washington, Mich.

Grade and Cross Bred and Champions—David McKay, Fort Wayne, Indiana.

Car-load Sheep — Geo. Meyers, Union Stock Yards, Chicago, Ill.

Swine Judges.

Berkshires—Breeding Classes—S. C. Hollingsworth, Shreveport, La. Fat Classes—Prof. R. S. Shaw, University of Michigan, Lansing, Mich.

Poland-Chinas—Breeding and Fat Classes—John Harcourt, New Augusta, Ind.

Duroc-Jersey—S. E. Morton, Camden, Ohio.

Hampshires—Breeding and Fat Classes—Harry O. Booth, Union Stock Yards, Chicago, Ill.

Chester White—H. E. Newburn, Hennepin, Ill.

Tamworth—Frank Thornber, Carthage, Ill.

Yorkshire—Prof. R. S. Shaw, Lansing, Mich.

Grade and Cross Bred—Prof. D. A. Gaumnitz, Minnesota Agricultural College, St. Anthony Park, Minn.

Champion Swine—Prof. W. L. Carlyle, Moscow, Idaho.

Car-load Hogs—Felix Gehrman, Union Stock Yards, Chicago, Ill.

Horse Judges.

Percheron—John De Lancy, Northfield, Minn.; Wm. Bell, Wooster, O., and Jos. Watson, Lincoln Hotel Building, Lincoln, Neb.

Clydesdale—Prof. W. L. Carlyle, Moscow, Idaho; Andrew McFarlane, Polo, Ill., and Prof. M. A. Trowbridge, University of Missouri, Columbia, Mo.

Shires—A. Latimer Wilson, Creston, Ia.; Jos. Watson, Lincoln, Neb., and O. B. Sizer, Fisher, Ill.

Belgian—Ely Sprunger, Decatur, Ind.; Robert Graham, Claremont, Ontario, and Prof. W. L. Carlyle, Moscow, Idaho.

Draft Horses in Harness—Prof. C. F. Curtiss, Ames, Ia.

Judges For Students' Judging Contest.

Horse Division—Charles Coleman, Wayne, Ill.; Jas. Z. McLay, Janesville, Wis., and Prof. W. B. Richards, Agricultural College, North Dakota.

Cattle Division—O. E. Bradfute, Xenia, O.; Prof. W. A. Cochel, University of Pennsylvania, State College, Pa., and Leslie Smith, St. Cloud, Minn.

Sheep Division — David McKay, Fort Wayne, Ind.; H. Noel Gibson, Millbrook, N. Y., and Prof. W. D. Faville, Wyoming Agricultural College.

Swine Division—Prof. H. G. Fuller, Madison, Wis.; Ed. Klever, Bloomington, O., and C. R. Doty, Charleston, Ill.

Block Demonstration—Prof. D. A. Gaumnitz, Minnesota Agricultural College, St. Anthony Park, Minn.

Feed and Forage Classes—Dr. G. Howard Davidson, Millbrook, N. Y.

Clay-Robinson Classes—Cattle—Richard G. Carden, Fishmoyne, Templemore county, Tipperary, Ireland. Sheep—David McKay, Fort Wayne, Ind. Swine—Prof. W. L. Carlyle, Moscow, Idaho.

Best General Exhibit—Richard G. Carden, Fishmoyne, Templemore county, Tipperary, Ireland; David McKay, Fort Wayne, Ind., and Prof. W. L. Carlyle, Moscow, Idaho.

Committee on Judges—W. E. Skinner, Denver, Colo.; Dr. G. Howard Davidson, Millbrook, N. Y., and A. J. Lovejoy, Roscoe, Ill.

Superintendents.

Cattle—Thos. Clark, Beecher, Ill., and I. M. Forbes, Henry, Ill.

Sheep—Richard Gibson, Delaware, Ontario, and Prof. W. C. Coffey, Assistant, Urbana, Ill.

Swine—A. J. Lovejoy, Roscoe, Ill., and Chas. Kurtz, Assistant, Indianapolis, Ind.

Horses—R. B. Ogilvie, Chicago, Ill., and Col. John S. Cooper, Chicago, Ill.

Carcasses—Prof. C. F. Curtiss, Ames, Ia.

Car-loads—J. W. Martin, Gotham, Wis., and Emil Ingwersen, Chicago, Illinois.

College Division—Prof. H. Shepard, Agricultural College, North Dakota. (See first page.)

Silver Cup to Alberta.

At the Dry-farming Congress held recently at Spokane, Wash., the $250 silver cup awarded for the best collective exhibit by state or province (the state of Washington being barred from competition), was won by Alberta, British Columbia; and the second award went to the state of Colorado.

Fashions Change in Watch Cases

You usually know an old or out-of-date watch by its case—not always because the case shows wear but because it is out of style. As a rule, the better the case the better the design and the longer it stays in style. It is the worst possible economy to buy a cheap or a trashy watch case. It is not fair to a good movement to put it in a poorly made case. Then, too, the case represents a substantial part of your watch investment—and if you want your money's worth you must know who made the *case* as well as the movement.

The trade marks illustrated on this page are your safeguard. They are standard with the fine jewelry trade, and have been for 50 years. They mean absolute integrity in bullion value, in assay, in construction of a watch case. Be sure to find them. Every good jeweler in this country knows the marks and carries the cases. They are made for ladies' and men's watches—plain, engine-turned, engraved or enameled. All sizes, all patterns.

The Reliability of Paints.

Many a man has industriously painted his house and barn to find after the work is done that the first storm makes his house look almost the same as it did before. We paint for appearances and to preserve the wood or metal, and inferior paints do not preserve and rely altogether on appearances. These appearances last but a short time, and the supposed preservation is a delusion and a snare. The only right way in selecting paints is to buy a standard brand. Communicate with the manufacturers and have them direct you to a dealer selling reliable paints. If our readers will write to Sherwin-Williams Co., 689 Canal Road, Cleveland, Ohio, and ask for a copy of their Farm Paint Book they will receive a surprising amount of information concerning paints and be on the right road to get attractive and lasting paints, besides obtaining expert assistance in the artistic blending of colors. Well-painted buildings add value to a farm and pleasure to the home.

Didn't Come Back.

"So she doesn't return your affection, eh? Well, I shouldn't get mad about that. What's the use of bothering about a girl?" said Watkins.

"I don't mind her not returning my affection," said Dobbleigh, "but, confound it, she won't return my diamond ring, either!"—Harper's Weekly.

The Australian high-jump record for a hunter appears to be six feet ten inches. Two horses, Sunshine and Lubra, have cleared this height.

We Treat You 30 Days FREE

Blood Poison can never be cured with mercury or potash. You might as well know this first as last. Medical authorities say so. The most these drugs can do is to drive the blood poison back into the system and smother it for several years. Then when you think you are cured, pitiful mercury symptoms will break out, and you find that your bones have been rotting all the while. Your teeth will begin to loosen and your tissues, glands, brain and vital organs will show the terrible destructive power of the mercury and potash. Locomotor Ataxia, Paralysis, Imbecility and Premature Death are then almost inevitable. Any medical authority will corroborate these statements. The remarkable vegetable Obbac Treatment does not drive in the

Blood Poison

but drives it **out.** It positively contains no mineral poisons whatever, so that once cured by the Obbac Treatment you never run the terrible risk of having your bones soften, your nerves collapse, your teeth fall out, your kidneys degenerate or your brain weaken. The Obbac Treatment is a marvel, producing remarkable changes in only 30 days. This is why we offer to any blood poison victim living, no matter how bad a case, a

30-Day Treatment FREE

You want to be cured and cured quick—not poisoned with mercury and potash for years. A 30-Day Treatment is yours for the asking. You will open your eyes at what it will do for you in a month. We treat you free for a month. Just write to us and get the treatment free. Then if you are satisfied it is the most remarkable treatment you ever took, you can continue if you wish. Never in your life will you ever again have such an opportunity for a complete cure, as is given you by this

Great Obbac Treatment

This is a square deal. You sign nothing, no notes, make us no promises, except to take the treatment.

The wonderful Wasserman Test, the only blood poison test known to scientists, proves that the body is completely purified by the Obbac Treatment, and that mercury and potash do not cure blood poison. Sit down and write to us, giving a full history of your case in detail. We will treat your letter as a sacred confidence. Consultation and advice free. We will send you also the remarkable book, "Driving Out Blood Poison" free.

THE OBBAC CO.

1194 Obbac Bldg., Chicago, Illinois.

A Fruit and Garden Paper.

Inquiries for a first-class publication devoted to fruit growing and gardening are answered by our adopting **The Fruitman and Gardener** as a companion paper to The National Farmer and Stock Grower. The combination is a good one. This is offering one as a subscription premium to the other. This is a splendid clubbing arrangement. The National Farmer and Stock Grower one year and **The Fruitman and Gardener** one year, both papers for 50 cents. Send orders to **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

The Newest Sleeves.

With the exception of the sleeve of the plain shirtwaist or the tailored coat form, there is no such thing as a plain sleeve in the fashionable dress of to-day. Nor is there any one style of sleeve trimming which predominates over all others. Every effort is for individuality. Try for this and you will succeed in having a stylish sleeve, provided, be it understood, you follow the general lines now in vogue. These require, first of all, that the sleeve be much trimmed, but that it give not the least suggestion of bulkiness. Like the skirt of the year, the sleeve effect must be narrow, yet easy and well-trimmed.

Three-fourths of the indoor dresses have sleeves in which two, three, or four materials are used. Beginning at the wrist, a transparent material, either plain or tucked, or possibly open-worked (fine laces are much used also), is likely to be employed, but even this may be banded with silk, velvet, or figured material.

Somewhere between the wrist and the elbow, or at the latter exactly, the material in the forearm ends and another is introduced. This may or may not be carried up to the armhole, but it may be combined here of a slashed or laddered oversleeve or drapery, or a shadow "classic" sleeve of silk, cut in one with the waist. This is, of course, the prevailing upper form. The innovations are the Raglan form, or those seamed ones which continue the seamless effects.—Harper's Bazar.

Have a Plan.

The man who is satisfied with what comes to him unsolicited answers few knocks at the door.

The stay-at-home misses daily opportunities that pass at the next corner.

Get away from the desk—get out of the chair-tilting class. Opportunities are in perpetual motion. Get after them.

Don't let custom dictate the boundaries of your business—don't let convention hold you down.

Lay out a plan, a campaign for new business—then go after it. Exhaust every resource, swing every prospect into line.

Don't be satisfied with the business that you have—get more.—System.

The Incubator Season.

In a little while the incubators and brooders will be advertised in farm papers. Many farmers and their families have not yet decided whether the incubators are successful or not; but the advanced poultry raiser has forgotten the time when that question was decided in favor of the incubator.

For over ten years incubators have ceased to be playthings. They have become larger and larger. We have before us a picture of an incubator that turns out 14,000 chicks at one hatching. Another page shows a 6,000-egg incubator, which is only one of many of the same size.

In the Petaluma district of California last year eighty million eggs were produced. On a hundred-acre farm in that district from chickens and eggs the income, over all farm and family expense, was $5,000. Whichever way we turn we see people going into the business of raising poultry on a commercial basis. A few days ago a young lady came into the office of The National Farmer and Stock Grower who was soliciting family custom of city people for eggs produced on an Ozark poultry farm that delivers fresh eggs direct to the consumer. In every direction we see that the incubator and the brooder are increasing in reliability, and the evidence of it is the increase in the sale of one-day-old chicks.

The city poultry raiser is nearest to market, but the farmer poultry raiser has cheaper feed and more land. There are some poultry systems advocated for city use, but none compare with the colony houses on good-sized farms, where an acre can be given over to 500 hens. Every hen will pay for feed at a fair price to the farmer and pay a dollar or more profit per hen per year. This requires good-size incubators and someone looking after them. The step from the usual fifty to a hundred hens, to five hundred or a thousand hens, requires the implements of the poultry farm, of which the incubator is the great machine. Study the incubator subject; there is money in it on the farm.

An Entertainment Help.

To help furnish entertainment where there is a gathering of young people, distribute copies of the following rigmarole. The numbers indicte the number of letters in each word, and where hyphenated it signifies that two words or a compound are used. The fillers are all names of some kind of flower or blossoming plant. Limit the guests to twenty or thirty minutes and reward the one who has filled most blanks with some little souvenir. And if you are not going to have a "party," just try it among yourselves around the evening lamp.

The Lover's Delay.

As the girl finished mending a pair of 9--8, she 4 and going to the window she saw that the 6-4 had faded from the west and 5 of birds were homeward flying; a pale 8-4 leaving its trail behind it across the sky told her that soon complete darkness would fall.

"Gone is the 3-7, have closed their petals, not to open till the 7-5 is upon us. Since 4-6 I have waited for 5-7. Last night when he picked up my little sandal and said: 'This tiny 5-7 belongs to my own true love!' I knew he was the 3-2-3-5 for me. But why does he tarry? My 8-5 will break and he will 3 it to his dying day."

At last a man came in sight, crying, as he aproached the girl in 4-4, "dearest—"

"5-2-3," cried Bell, "until you have explained your long delay. I'm 6 than a hornet."

"'Tis quickly done," the youth replied as he tossed his 9 from his head. "First, I got a 8 in the neck; then I passed some 5 on the way to water, and I saw a 7 on a bit of ice, so I stopped to get her up. Your cheeks are so 4, dear Bell! So that you may 6-2-3, I have brought you a hand 7-3 to add to your set and a box of chocolate 11. Will you kiss and forgive?"

Then Bell held up her pretty face and puckered out her 6 for the kiss.

Dutchman's Breeches, Golden Glow, Phlox (Flocks), Shooting Star, Sun Flowers, Morning Glory, Four O'clock, Sweet William, Lady's Slipper, Man-of-the-Earth, Bleeding Heart, Rue, Blue Bell, Touch-Me-Not, Madder, Monkshood, Snowball, Stock, Cowslip, Pink, Forget-Me-Not, Painted-cup, Peppermints, Tulips.—Janet Thomas Van Osdel.

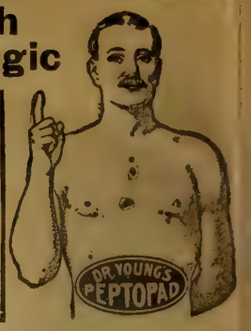
A Nice Apology.

Deacon Washington, colored, says the Detroit Free Press, was holding a meeting in the Nolachucky Chapel, and, being wrought up to a high pitch of excitement, he cried out: "I see befo' me ten chicken-thieves, includin' Calhoun Clay!"

Instantly Calhoun Clay rose and left the church. He was very angry. He brought several powerful influences to bear, and the deacon promised to apologize. So at the next meeting the old man said:

"I desire to retract mah last night's remark when I stated that I see befo' me ten chicken-thieves, includin' Calhoun Clay. What I should have said, dear brethren and sistern, was —I see befo' me nine chicken-thieves, not includin' Calhoun Clay."

Stomach Troubles Vanish Like Magic



Would you like to eat all you want to, and what you want to without having distress in your stomach?

Would you like to say **farewell to Dyspepsia, Indigestion, Sour Stomach, Distress after Eating, Nervousness, Catarrh of the Stomach, Heart Flattering Sick Headache and Constipation?**

Then send me 10 cents to cover cost of packing and I will mail you absolutely free one of these wonderful Stomach Drafts. They relieve the bowels, remove soreness, strengthen the nerves and muscles of the stomach, and soon make you feel like a new man or woman. Suffer no longer but write today enclosing 10 cents for postage, etc., and get one of these wonderful Stomach Drafts that are celebrated because they have cured where medicines alone failed. Write Dr. G. C. Young, 419 National Bank Building, Jackson, Mich.

Complete School Outfit.

Every boy and girl should read the card on page 27 in regard to the complete school outfit which can be earned in a few minutes of spare time. The advertisement clearly states what it is and all about it. The time to attend to this important matter is right now.

What It Caught.

Hiram paused at the door, and, holding up a steel trap, said:

"Mariar, when you see this trap agin it'll have a skunk in it."

Fifteen minutes later he reappeared.

"Mariar," he yelled. "You come here and loosen me outen this all-fired trap!"

Mariar's strongest efforts couldn't keep back an expansive smile.—The Early Bird.

"We twain have met like ships upon the sea,
Which hold an hour's converse so short, so sweet,
And then pass on, to meet no more."
—Alexander Smith.

I Cured My Rupture

I Will Show You How To Cure Yours FREE!

I was helpless and bed-ridden for years from a double rupture. No truss could hold. Doctors said I would die if not operated on. I fooled them all and cured myself by a simple discovery. I will send the cure free by mail if you write for it. It cured me and has since cured thousands. It will cure you.

Fill out the coupon below and mail it to me today

Free Rupture-Cure Coupon

Horticultural Notes.

The report comes from Elma, Wash., by way of the Northwest Pacific Farmer, that Mr. Joseph Kane, one of the leading horticulturists of that vicinity, who, some years ago, planted a large orchard of chestnuts and walnuts, will have a crop this year whose value is $100 per tree.

Niagara county, New York, is where a large number of apples are grown. The county has produced 1,421,796 bushels in one year. The proportion of apple orchards is forty-six acres to each square mile. The income is said to be $100 per acre per year. Bulletin No. 262 by the New York College of Agriculture contains a full statement in regard to this famous orchard district, and it can be obtained by addressing Mailing Clerk, College of Agriculture, Ithaca, N. Y.

OUR ROSE PREMIUMS.

This is only a reminder of our rose premiums. We have contracted for a half million one-year plants true to name and to be delivered at the proper time. We therefore keep our patrons in mind of them.

Our Special Offer.

This special offer is a sixty-cent proposition. Each subscriber sends us 60 cents and each subscriber will receive: 1st, The National Farmer and Stock Grower for one year; 2d, The set of Eight Hardy, Ever-blooming Roses. They are one-year plants, each plant with the name attached. 3d, A lovely picture by Paul De Long Pre entitled 'American Beauties." This picture is 10½x14 inches and is a panel picture, reproduced from the original painting for which the artist received $2,500. This picture of American Beauties is truly unsurpassed in artistic excellence. The subscription to the paper will be credited as usual, the plants will be sent out at the proper time, and the picture will be sent on receipt of the subscription. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

In Regard to Classified Advertising.

The advertising rate of The National Farmer and Stock Grower, issued monthly at St. Louis, Mo., is 50 cents per Agate line per month. This applies to classified advertising. The only classified advertising in the paper is land advertising, arranged by states. We expect advertising to be paid for in advance unless the order comes through an advertising agent in good standing. For the purpose of facilitating country orders we will accept payment in advance at the rate of **five cents a word.** This is allowing considerable discount for cash.

$30 corn from $10 land

Mr. Hurd, who went to Arkansas from Logansport, Ind., says "After 3 years I am willing to try it *another* three. I am in love with this fine climate. I have a field of Fall sown oats and one of rye ready to cut (April 30th) and can then raise a crop of corn and *sow again* in the fall. This land will make $100 per acre in potatoes, $200 in strawberries, $100 in watermelons and $30 in corn. And then think that it can be bought for $10 to $25.00 per acre or *even less*." If you would read the many interesting examples told in our booklet it would open *your* eyes to the big opportunities in

ARKANSAS

COTTON BELT ROUTE

It tells of a splendid land that has been almost overlooked in the rush Southwest—a normal section, like yours, with a normal climate and normal conditions—where everything is normal except the *high* yield of crops and the *low* cost of land. Right now, cleared and cultivated land, whose richness has hardly been *scratched* can be had at $10 to $25 per acre, within a few miles from good towns and close to markets that pay *city* prices for country produce. Sounds good? *It is* good—so good that you'll not be satisfied until you've *seen* the country it tells about.

Arkansas is no longer *undiscovered*. Its big advantages have been *found out*. *Get there* before places and prices are *boomed*. Hundreds of farmers are taking advantage of the low round trip fares twice each month via Cotton Belt Route to look around. Why not you?

Your free copy of "Arkansas"—our splendid book on this splendid land—is ready to send the moment we hear from you. Write *to-day* for the book and full facts about the low fares.

E. W. La Beaume, G. P. & T. A., St. L. S. W. Ry., 1202 Pierce Bldg., St. Louis

The National Farmer and Stock Grower is a first-class advertising medium for substantial properties and is in the habit of obtaining for the advertiser the largest amount of substantial inquiry and the least possible amount of trash. The National Farmer and Stock Grower is widely advertised as a land-selling medium and is furnishing its own advertisers excellent results. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Time to Buy Ice Tools.

The time to look up ice tools has come. Ice is a farmer's necessity and a means of profit. The dairy farmer especially is able to use ice to the greatest advantage. Write to Gifford-Wood Co., at Hudson, N. Y., for pamphlet A M, "How to Cut Ice." It will assist you.

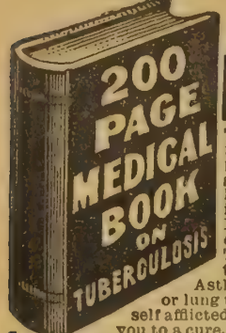
"Choose the way which seems the best, however rough it may be."—Pythagoras.

UNIVERSAL MAGAZINE BABY SPOON.

This is the attraction of the present day. An elegant baby spoon. This spoon is finished with velvet handle in a beautiful carnation pattern and is guaranteed to be heavily plated with silver on a German silver base, something real good that will be kept a lifetime. We have adopted the Baby Spoon as a **Universal Magazine** subscription premium. The **Universal Magazine** is a nice, bright, cheerful, illustrated monthly magazine of thirty-two pages, three column to the page, containing home reading, stories, fashions, patterns and poetry—a splendid publication for the money. To anyone who will send us a money order for 50 cents we will send the **Universal Magazine** for two years, and we will send one elegant Baby Spoon in a beautiful box, postage free, as a subscription premium. Money returned if not satisfied. Address,

HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

Tuberculosis Book FREE



This valuable medical book tells in plain, simple language how Tuberculosis can be cured in your own home. If you know of any one suffering from Tuberculosis, Catarrh, Bronchitis, Asthma or any throat or lung trouble, or are yourself afflicted, this book will help you to a cure. Even if you are in the advanced stage of the disease and feel there is no hope, this book will show you how others have cured themselves after all remedies they had tried failed, and they believed their case hopeless.

Write at once to the Yonkerman Company, 4409 Water Street, Kalamazoo, Mich., and they will gladly send you the book by return mail free, and also a generous supply of the New Treatment, absolutely free, for they want every sufferer to have this wonderful remedy before it is too late. Don't wait—write today. It may mean the saving of your life.

Practical Gifts.

When doing up preserves, relishes, jams and jellies, prepare a few extra glasses and set them aside to be used as Christmas gifts for invalids, persons living alone, who have no chance to do up fruit, or people who have not the fruit to do up. The woman who has an abundance of fruit to work with cannot understand how a gift of a couple of glasses of jelly or a jar of fruit will be appreciated by those who have not the skill, the strength or the money to do such things. Besides, fruit freshly picked, even when cooked, tastes better than anything a city woman can buy.

Another happy thought is, when making the Christmas fruit cake and plum pudding, to bake several tiny fruit cakes and boil several tiny plum puddings to be sent to girls or boys who are rooming in cities, or to old people who have no opportunity to taste such goodies unless they come as gifts.

Town friends will also appreciate a small basket filled with bright red Christmas apples or a basket of ear popcorn or nuts far more than many a gift that a country woman will spend time and money in preparing. I have heard country women complain that they could not give Christmas gifts because they could not get to the stores to buy them, when all the while "the fruits of the earth" are theirs to bestow. And how much more appreciated is a gift when it seems in some way to be peculiarly connected with the life of the giver. When one little woman was reminded of that she said: "How stupid of me! I'll take Mary Chase a dozen eggs and slip a pine branch into the carton. I'll do the same for Mrs. Reeves. To Mrs. Piper I'll send a gill of cream. They always send me books or something that I couldn't get for myself. I always thought I couldn't remember them, but I see I have the same chance to give them something they canot get for themselves."—Janet Thomas Van Osdel.

Fashion Chat.

There is no reduction in the size of hats, and the plumes used to decorate them are simply immense. There is one thing in favor of these great plumes: They always remain in style for more than one season. They may be dyed, if desired, and a first-class one will really do much service. They are almost universally becoming.

The latest breezes from Paris indicate that the skirts are growing wider. This will be regarded as good news by many, for the fashionable hobble skirt is certainly not popular with either sex. Wherever it goes, the wearer is subjected to keen criticism as well as personal inconvenience. A few days ago one was seen on a Pittsburg street car and a seemingly well-bred man remarked: "Any one who would wear such a thing as that ought to be tarred and feathered and ducked in the Allegheny river," to which his comrades emphatically assented.

And now comes the thought that there are more people every year who dress according to what is becoming rather than what is modish. The style of wearing the hair is largely determined by the contour of the face and head. The collarless neck is among the new things, but it is not in favor unless becoming to the wearer.

While the hobble skirt may have admirers, it really has few wearers, the inconvenience attached being sufficient to hold the fair sex aloof; the new scant skirt with the flare of two or three inches at the floor line may be popular in society circles, but the short walking skirt cannot be crowded out from the circle of general utility.

Velvets are favorites, and the rich trimmings of fur are artistic, if expensive. But for the modest purse there are the velveteens, quite reasonable in price.

Sleeves are short or long, according to fancy or the size of the cloth, but they are uniformly small.

Contrasts in color are now favored. The skirt, waist, hat and gloves are no longer of the same shade, but there must be no clash in the harmony of the color scheme.

Large Dutch collars are still worn, though there are numberless other neck garnitures, so many that one can scarcely go astray in style, and many a worn handkerchief has in it one or two good corners of lace or embroidery which may serve in part or as a whole for the stylish jabot.

Piping is still a favorite dress trimming for children. If the dress is of a solid color, the trimming may be of plaid silk cut bias, the prevailing color matching that of the dress.

The school dress for the young girl still shows the pleated skirt, while the waist may be embroidered or show almost any kind of trimming. If open in the back, the trimming on the front may simulate the side opening.

Those fortunate enough to have an old-fashioned crepe shawl are using it to drape the front of a dress, the point being used in the front and the shawl uncut. Steel trimming for this sort of drapery is also seen on some of the fancy dresses.

Embroidery and other needlework show no signs of waning in popularity, and the owner of a slender purse may add much to her attraction by making use of some of the many variations which they offer.

Study your own tastes, your purse and your figure, as well as the fashion sheets and do not be tempted to wear something which you do not like and which you know is not becoming just because it is the style. The most elegantly-dressed women now regard fashions as flexible enough to be bent to suit the figure. —Bessie L. Putnam.

Hunter and Hunted.

A near-sighted sportsman strolled into a little hotel on the shores of Loch Carron, and, complaining, said: "Just seen a seal, shot at it three times, and missed it each time."

At dinner, an hour later, he sat next to a tourist who had a bandage round his head.

"Had an accident?" asked the sportsman.

"Accident!" growled the other. "Attempted murder, you mean. I was having a bath about an hour ago, when some lunatic with a gun fired at at me three times from the shore and shot part of my ear off. I don't know why such animals are allowed out without a license."

Then silence reigned supreme.—London Telegraph.

Shirts and Shirts.

She was a dear old lady, but she lived at Hardscrabble, and was a bit behind the times. She had been reading the advertisements in a city newspaper chance had brought her way.

"Father," she asked her husband, "what is these here negligee shirts they talk about?"

Father, being a man, was equal to the occasion.

"Don't know what they be?" he grinned. "Well, you are a back number. Negligee shirts ain't quite so stiff and choky as a b'iled shirt—I mean a regular hard-b'iled shirt. A negligee shirt is something you might call a soft-b'iled shirt."—Many Clever Chestnuts.

Cement Workers' Handbook.

This book is designed to teach anybody how to work with cement; how to mix mortars of all kinds for all concrete purposes; how to make building blocks; how to build walls, floors, ceilings, walks, posts, cisterns, troughs, tanks, etc. It gives estimates of the cost of all kinds of mortars and concretes and all methods of house construction. It is a cloth-bound book of 100 pages and covers more than fifty most important subjects on cement and its uses and construction. This is a diamond of a book for wide-awake farmers. The price of the book alone is 50 cents.

For 60 cents we will credit one-year's subscription to The National Farmer and Stock Grower and send a copy of the **Cement Workers Handbook. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

Debts Are Debts.

The Supreme Court of Michigan, in an opinion delivered September 28th, held that the International Harvester Company of America is not debarred from collecting its outstanding debts by any plea that it is a "trust." The Circuit Judge decided the other way, but this decision was reversed, and the defendants will be compelled to settle their accounts with the company.

This decision is not only of the utmost importance to all large trading companies, but to the general public. Incidentally, it once more brings to view the streak in human nature which deems it defensible to steal rides on railway trains, to smuggle personal purchases through the Customs House, and to break contracts with large corporations.

The facts in the case are that the International Harvester Company of America, several months ago, began action against some dealers to collect a balance long overdue. There was no equitable defense against the debt, but the defendants hit upon the novel plan of setting up the claim that the company was a "trust," and that this was a bar to the collection of the amount due. Strange to say, a lower court sustained this claim, but on appeal the Supreme Court reversed the decision and ruled that the plea is not a good defense.

A company selling an article or commodity bears precisely the same relation to the purchaser at the time the obligation falls due that it did at the time the purchase was made. If the decision of the lower court had been sustained it would be impossible for any large company to continue in business except upon a strictly cash-in-advance basis. It may as well be understood, first as well as last, that all honest debts must be paid. Farmers are especially interested in upholding their credit and their honor.

Subdividing Big Farms.

We hear a great deal about bonanza farms, and the inference is that the owner of a bonanza farm has something that is as profitable as the old Bonanza gold mine of past fame. The fact is that bonanza farms are mostly so in name only

Probably there are few excessively large farms that are profitable in civilized lands, where laborers are free and fairly intelligent. In uncivilized lands big farms are often very profitable, chiefly because laborers can be hired at wages that indicate scarcely more than slavery on the part of the workers. The products are sold in civilized countries, where general prices are higher on account of the higher level of workers' wages. But such successful big farms are not worthy of being held up as a criterion of farm management. Their success is not due to good farming, but to oppressive methods of dealing with ignorant toilers.

In the United States, and in England and her colonies, where the English population is predominant, the handling of big agricultural establishments is not often profitable. The problems connected with farming are so great that we find few capitalists that will put money behind big corporations created with the idea of getting rich out of farming operations.

In New Zealand the government has from time to time purchased large farms and cut them up into small farms, which were resold to men who could till them with little labor outside of their own families. In Australia big farms have been cut up to make many small ones and prosperity has resulted. The same process has been going on in England, the home of big farms.

The report of the breaking up of one big English farm is interesting. At Newdigate, in Surrey, England, a society was formed called the Small Holdings Association. This was organized for the purpose of buying up large farms and breaking them up into small ones. Most of the big farms purchased were either being run at a loss or were paying such a small profit that their owners were glad to get their money out of them. One such farm consisted of over 360 acres. It was divided up into many farms, ranging in size from one to thirty acres.

The total number of farms thus created was over thirty, and these are being handled at a profit, while the big farm was unprofitable, even though it was run by one man, who, theoretically, could buy and sell to greater advantage than the many small owners now in possession of the land.

It is fortunate that big farms can not, as a rule, be profitably run. Otherwise all the land would soon be run and subsequently owned by a few big commercial companies, without heart and entirely mercenary. The small farm is the mainstay of the American farm home. The home on the excessively big farm is often more like an office than anything else.

But by the term big farm, we, in the United States, mean a farm of ten thousand acres or more. A farm of 360 acres may be termed a big farm in England, but in this country such a farm ranges as ordinary in size. But the relative problem involved is the same in both countries.

One Eye Better Than T'other.

Hank Dobbs was noted as an "honest" horse trader. He would not lie about a horse. He would merely suppress the truth. Incidentally, he always beat the customer who dealt with him. The way he could slur over the defects and buzz about the virtues of an animal amounted to genius.

Once Hank was trying to sell a neighbor a horse that had an eye which was nearly sightless. The neighbor knew Hank would not lie outright to him, so he questioned the horse trader as to the various points of the brute.

"How about his eyesight? Can he see out of both eyes?"

I Guarantee to Cure ECZEMA TO STAY CURED!

It is also called SALT RHEUM, SCALD HEAD, TETTER, ITCH, WEEPING SKIN, MILK CRUST, PRURITUS—these are different names, but all mean one thing—ECZEMA.

DR. J. E. CANNADAY, THE DOCTOR WHO TREATS NOTHING BUT ECZEMA.

I prove every word that I have said—I give to every sufferer

A FREE TRIAL

Just to show you that you need my treatment. It is yours for the asking. If you have been to other Doctors, if you have taken patent medicine, and used lotions and salves till you are disgusted, write to me—I will send you ABSOLUTELY FREE OF CHARGE, A TRIAL TREATMENT. There are no strings to this statement. There is not one cent to pay—not a penny accepted. I know what my trial treatment will do; I know that it will convince you more than anything else on earth that you need my treatment.

Don't Miss This Chance for a Cure

If you are SUFFERING FROM ECZEMA you can only be cured one way—REMOVE THE CAUSE. What is the cause? ACID IN THE BLOOD. How do you remove it? By cleansing the blood of the ACID.

My treatment is soothing—relieves the dreadful itching at once and cures the disease quickly. You don't have to take treatment for months and months. ONLY ONE CASE IN TEN needs the second treatment—ONE IN FIFTY needs the third—think of that!

What Eczema Is

Eczema is a disease of the blood and affects all parts of the body—the face, lips, ears, hands, feet, genital organ, etc.

SYMPTOMS.—Yellowish red eruption; the pimples or patches may swell and the itching is so great the person will scratch the top off, then they bleed and dark scales form; there is an oozing of matter. In some the skin cracks and bleeds. Itching is terrible; a person suffering will scratch till they bleed. Scales form on parts of the body, where the clothing comes in contact.

Ten Years Guarantee

I positively Guarantee that every case cured by me will stay cured 10 YEARS! It must be good or it could not be sold this way.

Strong as Rock of Gibraltar

I am a graduate from two leading medical schools. I am the holder of a GOLD MEDAL taken in Competitive Examination. Does this not show that I am fully qualified? I will send you my book, showing endorsements of business men of all classes. Also testimonials and pictures from cured patients everywhere. Some of them may be YOUR NEIGHBORS.

MY BOOK

Is the most complete book ever sent out. I explain every form of the disease plainly and fully. I show pictures of many severe cases, which are extremely interesting. I send you names of thousands who have been cured and are grateful.

DR. J. E. CANNADAY
969 Park Square
Sedalia, Mo.

Reliable Beyond Question

This is a statement from the bank of my home town, where I have done business for years.

THIRD NATIONAL BANK,

SEDALIA MO Jan.-1-1910.

TO WHOM IT MAY CONCERN:—

Dr. Cannaday, of our city is a physician, making a specialty of ECZEMA. We have handled his business exclusively for one year and eighty four days. His patients deposit their money with us, in their OWN NAME, to be paid to the doctor, if his treatment is satisfactory. If we remember correctly, we have been called upon by only FOUR of his patients for their money, and it seemed then, that the fault was more with the Express Companies than with the treatment failing.

Considering the number of cases he treats, we regard his success as remarkable. We consider him perfectly reliable, and assure those placing their money with us a fair, square, business deal.

Yours truly,

Treatment and literature sent in plain wrapper.

"Sure," said Hank; "he's got good eyes." Here he leaned forward, his eyes fairly scintillating with suppressed honesty. "One eye is particularly good!"

Hank's enthusiasm for the truth had carried him too far. The deal was off.—Tulsa (Ok.) Post.

The Quaker's Evasion.

A Sheriff's officer was sent to execute a writ against a Quaker. On arriving at the house he saw the Quaker's wife, who, in reply to the inquiry whether her husband was at home, answered in the affirmative, at the same time requesting him to be seated and her husband would speedily see him. The officer waited some time, but the fair Quakeress coming into the room, he reminded her of her promise that he should see her husband.

"Nay, friend, I promised he should see thee. He did not like thy looks, therefore avoided thee, and has left the house by another path."—Ex.

As Sometimes Happens.

Lawyer—"Am I to understand that your wife left your bed and board?"

Uncle Ephriam—"Not 'zactly, boss. She dun tuk mah bed an' bo'd along wif her."—Puck.

They All Wish That.

"They say that when an ostrich is surprised he hides his head in the sand."

"I wish to thunder he'd everlastingly hide his tail there," observed the man who had just settled a heavy millinery bill. — Memphis News-Scimiter.

There are several grades of cranberries which sell by the barrel. The late October quotations ranged from $5.00 to $6.00.

THE MEXICAN RESURRECTION PLANT.

This is a great and pleasing novelty. Without water it dries up and is apparently dead. Place it in a shallow tank of water and it revives to a beautiful, living, fern-like plant. Let it dry out again and it curls up like a ball and can be kept for years. It will revive again directly it is placed in water. It requires no soil, no nourishment, no attention.

We have adopted the Resurrection Plant as a subscription premium to the **Universal Magazine.** The magazine is most interesting and is published monthly. It is an illustrated publication, with genuine stories, splendid poetry and home reading. Send 25 cents for one year's subscription to the **Universal Magazine** and we will mail you one of these genuine Resurrection Plants as a free premium.

Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

The Wise Mother.

The wise mother never waits until one of her children is ill or severely hurt before she makes any provision for these emergencies, and every piece of old soft cotton and flannel is carefully washed and pressed and laid away where she can find them at once when the need arises. She makes several small bags of the flannel pieces and fills them with salt; then when they are needed they are placed in the oven and heated and applied as hot as can be borne. These are used for earache, toothache, or wherever heat is needed, and are much cheaper and better to use than a hot-water bag.

If one of the children has a cold, she makes a flannel jacket like an infant's shirt, and this is made to fit close and extend well over the stomach; then she takes a heaping tablespoonful of lard, one teaspoonful of turpentine and enough quinine to make a thin paste; then this is spread on the back and front of the jacket, warmed good, and put on the child.

She is never without a boric solution to use for sore eyes, ears, mouth, and for little cuts and bruises, and she makes this solution by adding a heaping teaspoonful of the boric powder to one pint of boiled water, and it is always ready for use. Every small cut or scratch is bathed cleanly with the boric solution and wrapped with a soft cloth before a particle of dirt can enter it.

She makes a cheap and pure tooth powder for her children to use with two parts of precipitated chalk and one part each of powdered boric and pulverized Castile soap, and she sees to it that the brush and powder are used at least once a day.

She has learned that there is nothing better than good mutton tallow for rough or chapped skin, and a nice cake is always kept on hand; and when a good healing salve is needed it is made with about three parts of the mutton tallow to one of coal oil.

She washes the inside of her children's ears with the loop at the end of a hair-pin covered with a soft cloth, and there is no chance of hurting the ear or the hearing.—M. A. T.

MAY MANTON EMBROIDERY.

These paper patterns require only a hot iron to insure a perfect transfer on cloth. The way to do it is to lay the material to be stamped on a padded ironing board or table, place the pattern over it with the printed side down and press over the entire surface of the paper with a hot iron, when a perfect outline will result. Please order by embroidery number.

Elegant Photo Frame.

No. 454.—Design for embroidering a photograph frame. The work consists of solid embroidery for the wheat, each kernel being worked separately, for the ribbon effect and also for the dotted figures; the lines and stems are to be outlined. The price of this pattern is 10 cents.

Absolutely New Design.

No. 540.—A design for a braided panel for a Princesse gown. The price of this splendid pattern is 10 cents.

Table Center Piece.

No. 538.—Design for an embroidered center piece eighteen inches in diameter. This is very attractive when finished. The price of the pattern is 10 cents.

Pin Cushion For Christmas.

No. 541.—Design for embroidering a removable pin-cushion cover. The price of the pattern is 10 cents.

Please send all orders for these embroidery patterns to the **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

No Need of Consolation.

He was bashful, and she tried to make it easy for him. They were driving along the seashore and she became silent for a time.

"What's the matter?" he asked.

"Oh, I feel blue," she replied. "Nobody loves me, and my hands are cold."

"You should not say that," was his word of consolation, "for God loves you, and your mother loves you, and you can sit on your hands."—Puck.

Many Hams For Sale.

"The most successful swindles," said James R. Keene at a dinner, "are those that have a basis of honesty. It's like the story of King Edward's pigs.

"At Sandringham, you know, King Edward raised prize swine, prize bullocks and all manner of fancy live stock. Well, there was a fashionable West End butcher who bought all the king's fat swine every year at a simply enormous price, and a reporter said to this butcher one day:

" 'How can you afford to pay such prices for the royal swine?'

" 'Well, you see,' said the butcher, with a wink of the eye, 'the king's pigs have such a lot of legs!' "—Detroit Free Press.

According to the State Department of Agriculture, there are in New York state 32,080 pure-bred Holstein cattle, 6,448 Jerseys, 2,907 Guernseys, 2,065 Ayrshires, and 729 Shorthorns. This is a count of pure-bred dairy cattle, these being the principal breeds in the state.

"Finish every day and be done with it. Some blunders and absurdities, no doubt, crept in. Forget them as soon as you can. To-morrow is a new day, too good to be cumbered with old nonsense."—Emerson.

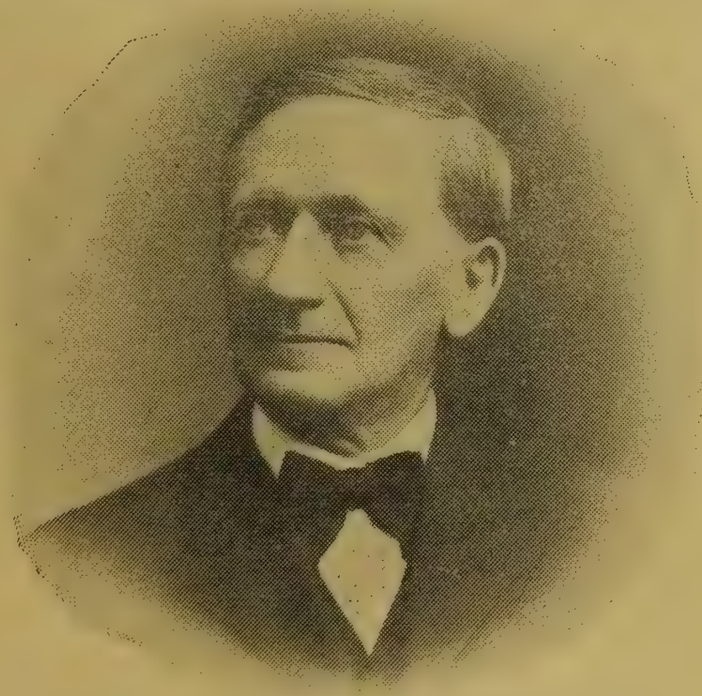
A Genuine Rupture Cure Sent On Trial To Prove It

Don't Wear a Truss Any Longer.

After Thirty Years' Experience I Have Produced An Appliance for Men, Women and Children That Actually Cures Rupture.

If you have tried most everything else, come to me. Where others fail is where I have my greatest success. Send attached coupon today and I will send you free my illustrated book on Rupture and its cure, showing my Appliance and giving you prices and names of many people who have tried it and were cured. It is instant relief when all others fail. Remember, I use no salves, no harness, no lies.

I send on trial to prove what I say is true. You are the judge and once having seen my illustrated book and read it you will be as enthusiastic as my hundreds of patients whose letters you can also read. Fill out free coupon below and mail today. It's well worth your time whether you try my Appliance or not.



The above is C. E. Brooks, the inventor, of Marshall, Mich., who has been curing rupture for over 30 years. If ruptured write him today.

Ten Reasons Why

You Should Send For Brooks Rupture Appliance.

1. It is absolutely the only Appliance of the kind on the market today, and in it are embodied the principles that inventors have sought after for years.
2. The Appliance for retaining the rupture cannot be thrown out of position.
3. Being an air cushion of soft rubber it clings closely to the body, yet never blisters or causes irritation.
4. Unlike the ordinary so-called pads, used in other trusses, it is not cumbersome or ungainly.
5. It is small, soft and pliable, and positively cannot be detected through the clothing.
6. The soft, pliable bands holding the Appliance do not give one the unpleasant sensation of wearing a harness.
7. There is nothing about it to get foul, and when it becomes soiled it can be washed without injuring it in the least.
8. There are no metal springs in the Appliance to torture one by cutting and bruising the flesh.
9. All of the material of which the Appliances are made is of the very best that money can buy, making it a durable and safe Appliance to wear.
10. My reputation for honesty and fair dealing is so thoroughly established by an experience of over thirty years of dealing with the public, and my prices are so reasonable, my terms so fair, that there certainly should be no hesitancy in sending free coupon today.

Remember

I send my Appliance on trial to prove what I say is true. You are to be the judge. Fill our free coupon below and mail today.

Pennsylvania Man Thankful

Mr. C. E. Brooks,
Marshall, Mich.

Dear Sir:—

Perhaps it will interest you to know that I have been ruptured six years and have always had trouble with it till I got your Appliance. It is very easy to wear, fits neat and snug, and is not in the way at any time, day or night. In fact, at times I did not know I had it on; it just adapted itself to the shape of the body and seemed to be a part of the body, as it clung to the body, no matter what position I was in.

It would be a veritable God-send to the unfortunate who suffer from rupture if all could procure the Brooks Rupture Appliance and wear it. They would certainly never regret it.

My rupture is now all healed up and nothing ever did it but your Appliance. Whenever the opportunity presents itself I will say a good word for your Appliance, and also the honorable way in which you deal with ruptured people. It is a pleasure to recommend a good thing among your friends or strangers. I am,

Yours very sincerely,
JAMES A. BRITTON.
Spring St., Bethlehem, Pa.

Recommend From Texas Farmer

Brooks Rupture Appliance Co.,
Marshall, Mich.

Gentlemen:—

I feel it my duty to let you, and also people afflicted as I was, know what your Appliance has done for me. I have been ruptured for many years and have worn many different trusses, but never got any relief until I got your Appliance. I put it on last November, but had very little faith in it, but must say I am now cured. I have laid it away—have had it off for two weeks and doing all kinds of farm work with ease. While I was wearing it, I had lagrippe and coughed a great deal but it held all right. Words cannot express my gratitude towards you and your Appliance. Will recommend it to all ruptured people.

Yours sincerely,
Bald Prairie, Texas. J. E. LONG.

Others Failed But the Appliance Cured

C. E. Brooks,
Marshall, Mich.

Dear Sir:—

Your Appliance did all you claim for the little boy and more, for it cured him sound and well. We let him wear it for about a year in all, although it cured him 3 months after he had begun to wear it. We had tried several other remedies and got no relief, and I shall certainly recommend it to friends, for we surely owe it to you. Yours respectfully,

WM. PATTERSON
No. 717 S. Main St., Akron, O

Cured At the Age of 76.

Mr. C. E. Brooks, Marshall, Mich.

Dear Sir:—

I began using your Appliance for the cure of rupture (I had a pretty bad case) I think in May, 1905. On November 20, 1905, I quit using it. Since that time I have not needed or used it. I am well of rupture and rank myself among those cured by the Brooks Discovery, which, considering my age, 76 years, I regard as remarkable.

Very sincerely yours,
Jamestown, N. C. SAM A. HOOVER

Child Cured In Four Months.

21 Jansen St., Dubuque, Iowa.

Brooks Rupture Appliance Co.

Gentlemen:— The baby's rupture is altogether cured, thanks to your appliance, and we are so thankful to you. If we could only have known of it sooner our little boy would not have had to suffer near as much as he did. He wore your brace a little over four months and has not worn it now for six weeks.

Yours very truly,
Andrew Eggenberger.

Words From "Doc" Cogan.

Rather more than 300 years ago there lived in Engand a ruddy-faced, jolly old doctor. His name was Thomas Cogan. The name Cogan makes one suspect that there was a bit of the brogue to the old doctor's tongue, and that before he started in a long life a-doctoring English people he had himself stored up health and strength on the lean diet of an Irish cottager.

Anyhow, Dr. Cogan, in a quaint old book of general advice, put down these words—words so true that they are as good now as they were more than 300 years ago. Let's let good old Docther Cogan write us an editorial about our eating:

"The quantitie of meates to be eaten ought of all men greatly to be regarded, for therein lyeth no small occasion of health or sickness, of life or death. For as want of food consumeth the very substance of our flesh, so doth excess and surfeit extinguish and suffocate natural heat, wherein life consisteth. * * *

"Use a measure in eating, that thou maist live long.

"The greatest occasion why men passe the measure in eating is varietie of meates at one meale. When we are well satisfied with one dish or two, then come other more delicate and procureth us by that meanes to eat more than nature doth require. Thus varietie bringeth us to excess, and sometimes to surfeit also. Common is that saying and most true—that more die by surfeit than by the sword. * * * And even if nature be not actually sicke upon a full gorge, yet they are drowsie and heavie and more desirous to loyter than to labor. * * * Yes, the minde and wit is so oppressed and overwhelmed with excesse that it lyeth, as it were, drowned for a time, and unable to use his force."—Syracuse (N. Y.) Journal.

Hammond's Handy Atlas of the World.

This great Atlas contains 107 pages, 6x8 inches, is printed in colors and is bound in a durable red-cloth cover. Address, **Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

Woman's Chief Beauty.

A good complexion is a woman's chief beauty, yet few women seem willing to give proper personal care to retaining the freshness of their complexion, but without this care the most beautiful complexion will grow unlovely as the years go by, while a bad skin will be greatly improved with a little daily attention.

If possible, time should be given every night before retiring to the following treatment: Soften, cleanse and relax the muscles by washing the face with warm suds made with good toilet soap, then rinse this off with warm water to get rid of all suds, and keep the pores of the skin open, and when washing and drying the face, rub up and back, never down; and after drying the skin, anoint the fingers with a good skin food and rub well into the pores of the skin. The fat surrounding a sheep's kidneys makes one of the very best skin foods, and is prepared by cutting the fat in small pieces and cooking slowly in half a cup of water. Strain, pour out all water and let harden; then melt again and add a few drops of camphor and a few drops of some good perfume, and pour in boxes ready for use.

Before going out in the cold or wind, rub a little of this skin food into the skin, then wipe off with a soft cloth and powder with Mennen's Borated Talcum Powder and wear a thin veil, and you will come back with an unharmed complexion.

Some high-priced face powders are very injurious to the skin, but this talcum powder not only whitens beautifully, but refines and softens the skin, and the two great essentials for a good complexion are a good skin food and a good face powder.

A few drops of tincture of benzoin in a bowlful of water is an admirable tonic for the face. The benzoin whitens the skin and prevents it from wrinkling, and any tonic that will build up a loose skin will kill wrinkles, for, as a general thing, they are only the result of flabbiness, and wrinkles often appear because the skin is not properly cared for, and not from age, and it is worth while to keep them away as long as possible.—A. M. H.

THE GLOOMY GREEN FROG.

A Very Little Story With a Very Big Moral.

"What a dreary day! What a dreary day!" croaked a gloomy, green frog as he sat hunched up, staring down at the ground. "A pity the sun wouldn't shine! A pity the sun wouldn't shine!"

"You foolish, gloomy, green frog!" said a voice that came from above and behind. It so startled the gloomy, green frog, who sat gazing down at the ground, that he jumped exactly four feet and landed face about. Then he saw that the big voice must have come from merry Mister Sun, who was broadly smiling at him.

"Well," choked out the gloomy, green frog, frowning fiercely. "It is high time you began to shine. It is high time you began to shine. Thought you'd gone out of business—out of business."

"Ha, ha, ha! That is a joke, you gloomy, green frog! I've been hard at work shining my brightest for four hours and never a second have I rested behind a cloud. But you've been hunched up with your back turned toward me, looking at your shadow. You've been croaking all the morning about the gloominess, when, if you'd taken your eyes off that speck of earth in front of you you might have seen sunshine all about you. Or, if you had turned and looked at me, you wouldn't have seen your shadow."

"That's so, gloomy, green frog," trilled a meadow lark. "Mister Sun has been giving us such a day!"

"Just remember, gloomy, green frog," said Mister Sun, "that though I am very big and you are very little, yet you are quite big enough to shut me out if you will turn your back upon me and sit staring at your shadow. Whether you look at the shadow or the sun, depends entirely upon the position you take."

"Ker plunk!" splashed the water as it received the gloomy, green frog, who was so ashamed that he wished to hide from Mister Sun.—Janet Thomas Van Osdel.

Try It At My Expense

Take Immediate Advantage of This Free Offer and

Rid Yourself Of

CATARRH

Thousands suffering from Catarrh have been successfully treated by the use of my wonderful device. The

CO-RO-NA MEDICATOR

C. G. PHILLIPS, PROP.
CORONA MFG. COMPANY, 16 Corona Block, Ashland, Ohio.

Impossible Remedy.

John S. Inglis, contracting freight agent of the Union Pacific, has been suffering for several days with a severe toothache, the first of his lifetime, says the San Francisco Call. He has consulted every railroad man on the "row" in an effort to find a remedy to stop the pain. Yesterday he was given a tip on a sure cure, but refused it, claiming that the remedy was worse than the ache.

He paid a visit to the seventh floor of the Flood Building, and there met a freight man who suggested the remedy.

"It's sure to relieve you," said the friend.

"Can you take the same treatment?" asked Inglis.

"Sure, I can stand it," replied the friend.

"If you can stand it I am sure I can. What is it?" asked Inglis anxiously.

"Place a small glassful of whisky in your mouth. Let it run around on the aching tooth and then spit it out. It's a sure cure if you can do it."

Inglis still has the toothache.

At St. Louis, home-grown horseradish is selling as delivered from farmers' wagons at $3.75 to $4.00 per barrel. St. Louis is the great horseradish market.

FARM BLACKSMITHING.

Here is a book for the farmer. The book was written by A. J. Drew. It is a complete treatise on blacksmithing from the farm standpoint. This book teaches how to profitably spend stormy days. Many thousands of farmers will find it to their interest to own a copy. There are 100 pages. It is nicely and clearly illustrated and bound in cloth. We credit one-year's subscription to The National Farmer and Stock Grower and send one copy of this book by mail for 65 cents. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

MAY MANTON PATTERNS.

Very Elegant Pattern Service, With Full Instructions For Ordering and Making.

This is the very best pattern service, and we are very much pleased to obtain it for our friends and patrons. Each pattern is new and original.

Child's Single-breasted Coat.

No. 6759.—The coat that is made with a panel effect is a novelty of the season. This one shows that feature, and is altogether smart, while quite simple and childish in effect. It will be found appropriate for all seasonable materials. Venetian blue broadcloth makes this one, and is finished with stitching, but rough-finished mixtures are in vogue, and velvet and velveteen will be worn throughout the cold weather. The plain back is altogether becoming to childish figures, and the panel effect is as pretty as it is new.

The coat is made with fronts, side-fronts, back and side-backs. The fronts and the back are extended to be overlapped at the under-arms, while the side portions are cut off to produce the panel effect. The collar and fronts are faced and rolled over to form the lapels. The sleeves are made in regulation style with upper and under portions and are finished with cuffs.

The quantity of material required for the six-year size is 2¾ yards 24 or 27, 1¾ yards 44, or 1½ yards 52 inches wide.

The Pattern 6759 is cut in sizes for children of four, six and eight years of age, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Child's Night Drawers.

No. 5840.—Almost all children are apt to be restless in their sleep and to toss the covers aside in a way that means discomfort if not a menace to health. Here are sleeping garments of such a comfortable, cozy sort that even the most restless youngster would find it impossible to really expose himself to draught. They can be made from Canton flannel, from flannelette, or from any material of the sort, or they can be made from the thinner muslin, as liked. In any case, they are really protective yet absolutely simple. The front leg portions are cut in one with the body, but at the back they are made separately to allow of a comfortable closing and of buttoning the drawers into place. In the illustration white domet flannel is finished with a little frill of embroidery at the neck.

The fronts of the body and leg portions are cut in one with the back of the legs, but the back of the waist is entirely separate, and the drawers are buttoned to it.

The quantity of material required for the medium size (six years) is 3¼ yards 27, or 2¾ yards 36 inches wide.

The Pattern 5840 is cut in sizes for children of two, four, six and eight years of age, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Morning Jacket With Peplum.

No. 6474.—Such a simple morning jacket as this one always is in demand. It is pretty and becoming as well as comfortable. It can be worn with a skirt to match or an odd one, as may be liked. The sleeves can be made as illustrated or extended to the wrists. In this instance dotted challis is trimmed with bands of ribbon, but any trimming that may be liked can be substituted, and there are a great many attractive ones as well as materials. Cashmere with bands of Persian or flowered ribbon would make an extremely attractive jacket. Madras with embroidery would be pretty, and many women prefer washable materials to any others, whatever the season. The separate peplum does away with the fullness over the hips, and the round collar is always satisfactory for morning wear.

The jacket is made with fronts and back. The back is plain, but the fronts are tucked to yoke depth. The peplum is circular, and is joined to the jacket beneath the belt. The rolled-over collar is seamed to the neck. The sleeves are cut in one piece each, and are finished with cuffs.

The quantity of material required for the medium size is 3⅜ yards 24, 2⅛ yards 32, 2¼ yards 44 inches wide, with 9½ yards banding.

The Pattern 6474 is cut in sizes for a 34, 36, 38, 40, 42 and 44-inch bust measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Fancy Gathered Blouse.

No. 6750.—The soft, full blouse that is cut in one with the sleeves is a new and attractive one, that will be much worn throughout the season. This model is made with pastron and yoke in one, and consequently it is especially well adapted to the combination of materials that are so much in use. Crepe de Chine is the material illustrated, and it is combined with lace and trimmed with Persian banding, edged with velvet ribbon, but every material that is thin and soft enough to be made full will be found appropriate, and the blouse suits the entire gown and the separate waist equally well.

Persian silks are extremely fashionable in combination with plain material, and this blouse made of chiffon cloth to match the color of the suit, with yoke and plastron of Persian silk, will be exceedingly smart to wear with the tailored costume.

The blouse is made with a fitted lining It consists of the blouse portions that are cut in one with the sleeves, and of the yoke with the plastron. When long sleeves are used, the linings are faced to form deep cuffs. The closing is made invisibly at the back.

For the medium sizes will be required 2½ yards material 24 or 27, or 1¼ yards 44 inches wide, with 1⅜ yards of all-over lace and 2⅜ yards of banding.

The Pattern 6750 is cut in sizes for a 34, 36, 38 and 40-inch bust measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Plain Blouse or Guimpe For Misses and Small Women.

No. 6769.—The plain blouse or guimpe is one always needed. This model can be treated in so many ways that it really becomes several. Made as illustrated, it is a pretty blouse, adapted to general wear. As shown in the small view, it is suitable for evening occasions, and when made plain it can be used as a guimpe beneath an overblouse, if liked. The peplum that is joined to the lower edge does away with bulk at the waist line. In the illustration, embroidered muslin is trimmed with Valenciennes lace.

The blouse is made with front and backs. It can be gathered and joined to a peplum or cut below the waist line, as liked. The sleeves are moderately full and gathered at their lower edges, where they are joined to the cuffs or the bands.

For the sixteen-year size will be required 2⅝ yards of material 24 or 27, 1⅞ yards 36, or 1½ yards 44 inches wide, with 2 yards of banding.

The Pattern 6769 is cut in sizes for misses of fourteen, sixteen and eighteen years of age, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Child's Dress.

No. 6762.—The simple little dress that is closed for its entire length at the back is a practical one that every mother likes. This model allows a choice of plaited or gathered skirt, high or square neck, long or short sleeves. It can be made of sturdy material and become an every-day morning frock, or it can be made from dainty material, as suggested in the small view, and become entirely different in effect. Cotton poplins and piques will be much worn throughout the season, and are very pretty for the plain dress, while for the dress with the gathered skirt, challis, cashmere, albatross and all similar materials are appropriate, as well as the washable ones that a great many mothers use throughout the entire year.

The dress is made with the long waisted body portion and the skirt. The skirt is straight, and the body portion consists of front and backs. The long sleeves are gathered into bands. The short sleeves are designed to be finished with trimming that matches the yoke portion applied over the square neck.

For the four-year size will be required 3¾ yards of material 24 or 27, 2¾ yards 36, or 1⅞ yards 44 inches wide, with ⅝ of a yard 27 inches wide, to trim as shown in the small view.

The Pattern 6762 is cut in sizes for children of two, four and six years of age, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Please be sure to give the size of pattern ordered and write your own name and address plainly that no mistake can be made to cause delay.

Kindly address all pattern orders to **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

FREE TO YOU—MY SISTER

Free to You and Every Sister Suffering from Woman's Ailments.

I am a woman.
I know woman's sufferings.
I have found the cure.

I will mail, free of any charge, my **home treatment** with full instructions to any sufferer from woman's ailments. I want to tell all women about this cure—you, my reader, for yourself, your daughter, your mother, or your sister. I want to tell you how to cure yourselves at home without the help of a doctor. Men cannot understand women's sufferings. What we women know from experience, we know better than any doctor. I know that my home treatment is safe and sure cure for Leucorrhoea or Whitish discharges, Ulceration, Displacement or Falling of the Womb, Profuse, Scanty or Painful Periods, Uterine or Ovarian Tumors, or Growths; also pains in head, back and bowels, bearing down feelings, nervousness, creeping feeling up the spine, melancholy, desire to cry, hot flashes, weariness, kidney, and bladder troubles where caused by weaknesses peculiar to our sex.

I want to send you a complete ten day's treatment entirely free to prove to you that you can cure yourself at home, easily, quickly and surely. Remember, that, it will cost you nothing to give the treatment a complete trial: and if you wish to continue, it will cost you only about 12 cents a week or less than two cents a day. It will not interfere with your work or occupation. Just send me your name and address, tell me how you suffer if you wish, and I will send you the treatment for your case, entirely free, in plain wrapper, by return mail. I will also send you free of cost, my book—"WOMAN'S OWN MEDICAL ADVISER" with explanatory illustrations showing why women suffer, and how they can easily cure themselves at home. Every woman should have it, and learn to think for herself. Then when the doctor says—"You must have an operation," you can decide for yourself. Thousands of women have cured themselves with my home remedy. It cures all old or young, To Mothers of Daughters, I will explain a simple home treatment which speedily and effectually cures Leucorrhoea, Green Sickness and Painful or Irregular Menstruation in young Ladies, Plumpness and health always results from its use.

Wherever you live, I can refer you to ladies of your own locality who know and will gladly tell any sufferer that this Home Treatment really cures all women's diseases, and makes women well, strong, plump and robust. Just send me your address, and the free ten day's treatment is yours, also the book. Write to-day, as you may not see this offer again. Address

MRS. M. SUMMERS, Box H - - Notre Dame, Ind., U. S. A.

One on the Judge.

The lawyer for the prosecution had finished his closing argument, and the Judge, a pompous and long-winded individual, was charging the jury.

He was in the midst of an unusually long and tedious address when he suddenly noticed that one of the jurymen had fallen fast asleep. The indignation of His Honor was boundless. Rapping sharply on his desk, he awakened the slumberer, who seemed not at all abashed at being thus caught napping. After glaring at him angrily for a few moments, the magistrate in his most sarcastic tone said:

"So that's the way you attend to your duty, is it? You're a fine specimen to have on a jury. Do you think your opinion will be of any value when I send you out to determine the fate of this prisoner?"

"Yes, sir," said the juryman quietly, "I think so."

"Oh, you do, do you?" shouted the exasperated Judge. "Pray, tell me, sir, how long you have been sleeping?"

"I don't know, Your Honor," was the reply. "How long have you been talking?"—New York Herald.

Question of Time.

It is related of the President of a famous college that at one time he allowed his wife to persuade him of the uselessness of fire insurance on household goods, and he allowed his policy to lapse. But better judgment asserting itself, he finally renewed his insurance. The same day a fire in his wife's rooms destroyed some of her dresses, which the professor enjoyed as a good joke.

In due time the President of the insurance company wrote President Blank this letter:

"Dear Mr. Blank—We inclose check for $500, paying your fire claim under our policy B 6007.

"I note in passing upon these papers that the policy went into effect at noon, December 10, and the fire did not occur until 3 p. m Why the delay?"—Circle Magazine.

BOYS AND GIRLS

I'll Give You This Complete SCHOOL OUTFIT

Every Boy and Girl should earn one of my fine **Complete "Storm King" School Outfits** in just a few moments of spare time. Contains all articles shown in these illustrations, and **does not cost you a cent.** You'll need this strong water-proof Storm Bag to carry your books and lunch in (no danger losing them on the road) and every one of the supplies in the neat and useful box.

The Bag is strong and tough, made of water-proof black oil-cloth with all edges neatly bound and sewed, has a generous sized round cornered flap. Wraps into small roll when empty and extends 2 inches all around to receive books, etc. Size 11x19 inches when flat. Large enough for your books and lunch. Extension shoulder strap with buckle is riveted to back of Bag and passes through rings at end of front straps, automatically closing Bag so books cannot get out.

The Box is well made, nicely finished and varnished, with hinged cover and lock. The interior is conveniently partitioned to keep articles separate. Box contains pen holder, and pen, pencil sharpener, eraser, chalk, package of 9 pens, 6 assorted colors, and 6 inch ruler.

JUST SEND YOUR NAME

I give you this **Complete School Outfit** for just a few moments of your spare time. Many boys and girls have earned it in a half hour or less and you can, too. I will give it all to you for selling only 4 packages of my fine floral and art post cards, high class cards which your friends will be glad to secure on our liberal terms. **Just send me your name and address** and 4c postage and say you want to earn the School Outfit, and I will send you **for yourself** a sample package of cards to show and take orders with. When you send me four orders I mail cards to your customers and send you this Complete School Outfit, postpaid. It does not cost you a cent. Send your name and address today to

F. H. PHELPS, Manager, 26 C WATER ST., SPRINGFIELD, MASS.

Ropp's Commercial Calculator.

This is a standard book and a revised, enlarged and improved edition. There are millions in use. **Ropp's Commercial Calculator** is especially valuable to farmers. By its regular use many hard problems become easy. It will prevent mistakes, relieve the mind, save labor, time and money, and do your figuring in the twinkling of an eye. As handy as a watch, always ready and reliable. Anyone who will send 50 cents for one-year's subscription to this paper, The National Farmer and Stock Grower, can select one copy of **Ropp's Commercial Calculator** as a free premium. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Stock Buyer—I'll lose money on the hogs at $4.52½ unless the market improves by tomorrow. The weight is 3895 lbs. Here is your check for $166.25.

Farmer—There surely is a mistake somewhere. Ropp's **New** Calculator makes it $176.25. (p. 58.)

S. B. (after figuring it over carefully)—Correct. Here is a $10 bill with your check. Pardon my mistake.

The Mother.

They were sitting on the hotel piazza, comparing notes.

"Well, my son-in-law hasn't spoken an unkind word to me for ten years," said one old lady.

"How perfectly lovely!" said the other. "Is he dumb?"

"No," replied the first, smiling at her friend's pleasantry—"no, we haven't been on speaking terms since 1899."—Harper's Weekly.

A Diplomatic Incident.

A show of force is often the best kind of diplomacy. A writer in a Paris newspaper tells a story of the French Admiral, Dupetit-Thouars, who had been entrusted with the mission of exacting reparation from an African Bey who had insulted a French Consul. As Dupetit-Thouars' demands were supported by the forcible argument of loaded cannon, the Bey acknowledged that he had been too hasty, and proffered profuse apologies. He even invited the Admiral to his table, and had a sumptuous repast prepared for his guest. The Consul warned the Admiral to be on his guard.

"The Bey is inclined to be malicious," said he, "and when he strokes his beard and smiles you may be sure that he is concocting some mischief."

"We shall see," was Dupetit-Thouars' reply.

He reached the Bey's palace in good time. Profuse compliments and salutations were exchanged. All at once the Admiral's foot met some soft, hairy substance lying on the carpet under the table. He bent down and saw a huge lion showing his formidable teeth. The Bey smiled and stroked his beard.

Dupetit-Thouars did not wince, but called to his Dragoman.

"My pistols," was all he said.

"The servant saluted, retired and brought back a pair of pistols on a silver tray. The Admiral took them and placed them on the table before him. But the Bey, still smiling, continued to stroke his patriarchal beard.

"Tell the Commander," he said to the Dragoman, "that if those pistols are for the purpose of blowing out my lion's brains, they are quite insufficient and perfectly useless."

Then, like a skilled fencer countering his opponent's thrust, after the Bey's ironical advice had been translated, Dupetit-Thouars replied:

"Tell His Highness that my pistols are not here to kill his lion, but to blow his own brains out at the first movement of this objectionable carpet."

Gravely, but a little pale, the man interpreted. The smile died away on the Bey's lips, and he no longer stroked his beard.

"My lion," said he, "is too well trained even to scratch one of my guests, but since he is not wanted, he shall be sent away."

At a word from the Bey the lion slowly and heavily left the room, like an obedient dog.

Raising Cattle in the South.

The fine opportunity which is presented in the mountain regions of Virginia, North and South Carolina, Northern Georgia and East Tennessee for raising and feeding cattle is to be taken advantage of by a new company, the Smoky Mountain Cattle Company, just organized with a capital of $200,000. The manager of the enterprise is Ray R. Flint, of Reno, Nev., an old stockman in the Western country, who has made a thorough examination of the South Appalachian mountain region and pronounces it the best range section of the country. The company has purchased 6,000 acres of land, leased 22,000, and has an option on 78,000 additional. It will start in this winter with 400 or 500 head of cattle, but expects in the spring to greatly enlarge the number, putting on the range as soon as possible about 10,000 cows. It will plant the range to blue grass, Bermuda grass, orchard gras,s crow-foot grass dog grass and other good range grasses which, Mr. Flint believes, will give a range that will support three cows to every five acres.

The location is in Swain county, North Carolina, on the Murphy branch of the Southern Railway, the headquarters being at Bryson City, sixty-five miles below Asheville. That section is already a large producer of cattle, shipping many thousand head every fall to the feeding farms of North and South Carolina and Virginia for final shipment to market. Other opportunities of this kind can be heard of by addressing M. V. Richards, Land and Industrial Agent, Southern Railway, 1344 Pennsylvania Ave., Washington, D.C.

The Standard Watch Case.

In buying a watch, be sure to obtain the Keystone manufacture. In order to understand this subject, see page 19. It is easy to obtain the benefit of the guarantee, for the reason that it is engraved inside every case. You know exactly what you are buying just the same as you know a gold coin issued by the United States Mint. The subject is worth investigating.

The Care of Little Pigs.

"Little pigs may be kept from danger of crushing by the mother by having a fender made of a scantling, rail or pole securely fastened, say eight inches from the wall and the same distance from the floor. The pigs will quickly learn the protection afforded by this device when the sow lies down. Some breeders advocate a farrowing pen not large enough for the sow to turn around in, and wit walls open eight inches from th floor, so the pigs may run in and ou A pen of this sort may be made b confining the sow at one end of h regular pen with boards so naile that she will be unable to tur around."—From Coburn's "Swine i America."

This Imported Self-Filling "Wonder" Fountain Pen Free

For several weeks I have searched diligently for a fountain pen which would give uniform satisfaction and I am pleased to announce that in my imported patented self-filling "Wonder" pen I have an article which will be immensely appreciated by all of my friends who avail themselves of my special FREE offer.

Unique and Most Practical

In this "Wonder" pen I am offering something entirely different from the ordinary fountain pen. It requires no filler whatever. All you need to do to fill the fountain is to dip the point in ink, turn the little screw on the bottom to your right until it stops and your pen is ready for use. No waste of ink. No soiled fingers.

Any Ordinary Pen Point Can Be Used

One of the many features of this "Wonder" pen is that you are not confined to the use of any particular pen point. When the original pen shows signs of giving out replace it with any ordinary pen point without affecting the writing value of the "Wonder" Fountain Pen.

Can Be Carried In Pocket With Absolute Safety

You need have no fear of soiling your clothing through carrying this pen in your pocket. It is non-leakable and the ink has no chance to get out except when writing. The pen comes to you packed in a neat box with full directions how to use it.

Absolutely Free to Readers of this Advertisement

This pen is free to every reader of this advertisement who will send me 25 cents for a full year's subscription to my handsome monthly magazine, Farm Life—12 dandy numbers running from 36 to 84 pages each issue, printed in colors with beautiful cover printed on heavy stock. Editorial contents unsurpassed. If after you have received the first three numbers you are not convinced that Farm Life fills the bill, tell me and back goes your subscription money. Remember you get a full year's subscription for 25 cents and one of my "Wonder" fountain pens as a token of remembrance. Avail yourself of this offer now. Address,

J. R. WOLTZ, Publisher,
1322 Wabash Ave., Chicago, Ill.

Poultry and Farm Paper Club.

The Future of Farm Forestry.

There is no doubt that in the future farm forestry is to be productive of revenue far in excess of anything that has been true of it in this country in the past. It was not a generation ago that the returns from forestry operations did not represent more than three per cent. on the investment.

Some years ago the writer visited a famous estate in the eastern part of the United States. It was owned by a millionaire, who could afford to have the services of a German forester, who had had large experience in forestry work in Germany. He told the writer that he was working to produce beauty for the estate rather than revenue. He asserted that forestry in the United States would never be profitable, as not more than three per cent. returns could be expected from such an investment.

But the last few years have proved that he was wrong. The value of forest products has risen so greatly that six and seven per cent. returns are realized, and in some cases the annual return is as high as ten per cent. on the investment, without any extra care on the part of the men owning the investments.

A tremendous demand is developing for some of the forestry product of cheap land. Take, for instance, the demand for hard pine and tamarack. Hard pine grows on land so sandy, some of it, that the wind blows the sand, while tamarack grows in swamps. This wood has many uses, but one great and growing use is street paving.

Creosoted blocks are now in great demand for street paving, and the specifications generally require that these blocks be of hard pine or tamarack, both woods that have a grain that wears down but slowly when the block is so placed that the grain ends are up. But brick and asphalt are more commonly used because of the fact that square creosoted blocks cost much more than either of the paving materials named. The demand, therefore, is for more wood of these two varieties. The matter of paving materials is ever growing in importance as our cities grow in size. City streets have to be paved, and the highest-priced material is used in front of valuable property in the cities. The demand is one that farmers can afford to keep watch of. The old, round paving block is gone forever. The spaces between the blocks were so large that binders of tar or asphalt could not be effectively used. But the square block has now come to the front, as this kind of a block can be laid close and the binding material flows into the interstices and makes a perfect unification. This is a fact that will mean much to the future owners of farms on which can be grown wood suitable for the above-named purpose.

The demand of commerce for wood does not seem to be abating, if we can judge anything by the way prices go. Cement has come in as a building material, but more wood houses than ever are being constructed. Many arts are now using large quantities of wood that previously used little. The commercial forests are being exhausted, and if the farms were producing enough merchantable wood to amount to anything there would be a steady demand for the products of the farm forests.

A Matter of Opinion.

"Mary!"

Father's voice rolled down the stairs and into the dim and silent parlor.

"Yes, papa, dear!"

"Ask that young man if he has the time."

A moment of silence.

"Yes, George has his watch with him."

"Then ask him what is the time."

"He says it is 11:48, papa."

"Then ask him if he doesn't think it about bedtime."

Another moment of silence.

"He says, papa," the silvery voice announced, impersonally—"he says that he rarely goes to bed before one, but it seems to him that it is a matter of personal preference merely, and that if he were in your place he would go now if he felt sleepy!"—Harper's Bazar.

Instruction in Trapping.

The fur trade has been built up by fur dealers instructing hunters and trappers how to treat and handle their skins. The Trappers' Guide sent free by F. C. Taylor & Co. has done wonders in this direction. Every trade has its secrets, and how to obtain the most for furs is no longer a secret when you have their Trappers' Guide in your possession. Write for it, addressing F. C. Taylor & Co., 315 Fur Exchange Building, St. Louis, Mo.

Valuable Lands Cheap.

Attention is invited to the card headed "$30 Cows From $10 Land," which appears on page 21. Our readers can also read the article on the Iowa census, showing that Iowa land advanced in actual value, buildings not considered, from $36 to $82 per acre in ten years. The increase in actual value was nothing and the increase in market value was 122 per cent. The same process is going on in Arkansas, only the starting cost is lower and the increase is quicker. To go into Iowa and buy a farm worth the money is difficult. To go into the state of Arkansas and buy a farm that will double in selling value twice in ten years is easy. This subject is worth investigating. Write to E. W. LaBeaume, 1203 Pierce Bldg., St. Louis, Mo., and ask for the booklet entitled "Opportunities in Arkansas."

Spoiling For a Row.

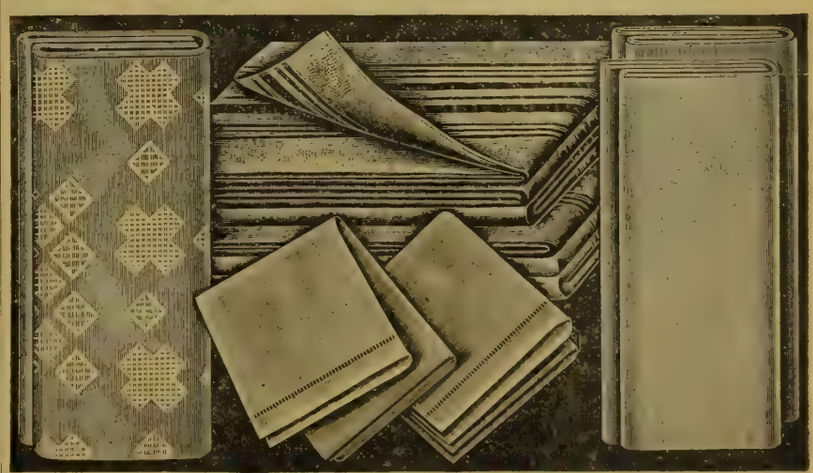
Two Irishmen went into a place of refreshment in Chicago, and one of them stayed behind, after the other had left, and got into a row. He was badly mauled. Later, he found his friend and told him of his treatment, and the friend, an aggressive little chap, rushed back, dashed in, threw his coat on the floor, danced a jig on it, brandished his fists in the air and shouted: "Where is th' mon who licked my friend? Show him t' me."

A longshoreman, as big as the side of a house, loomed up. "I did," he growled. "Watchugot to say about it?"

The little Irishman looked up at the huge bulk of the longshoreman.

"So you're the mon, are you? Well, well, be gobs, you nearly kilt him, didn't you?"

Free! To Every Lady Reader This Beautiful and Durable 7-PIECE BED SET



Consists of 2 Blankets, 2 Bleached Sheets, 2 Bleached Pillow Cases and 1 Bed Spread—All Full Size Pieces

Hints on Stenciling.

The most inexpensive material may be rendered beautiful if one has but the time and patience to make the stenciling which is now so popular. The materials cost almost nothing, and the work is speedy after one becomes acustomed to it.

Simple patterns are most pleasing, and beginners should especially give them preference. If there are broken lines, see that the figure is filled in afterwards in a way to make it complete. Thus we saw recently a design in clusters of grapes, the fruit not being attached to the stems. Even a child should be able to see that such a piece is not finished, and to make the single stroke necessary to remedy the defect.

Avoid an elaborate color combination. One or at most two kinds of paint will be sufficient. The work is not a painting, and any attempted mixture of colors mars the pleasing simplicity of the plan. Cream or ecrue curtains may have brown stenciling. A rich, red tablespread is rendered more elaborate by the addition of a few gold butterflies or a border of green leaves.

Any plain material will serve nicely, crash, linen, even cheese cloth or unbleached muslin being well adapted to the work. For the heavier materials, bolder designs may be used, while the lighter patterns and tints are best suited to the more delicate fabrics.

While the work requires neither an artist's skill or taste, yet neat work necessitates patience and a little brain work. The figure chosen may be repeated as many or as few times as desired, but they must be at regular intervals. If there are corners, it is well to complete them as well as the center at first, and then fill in as many repetitions as the space will allow.

Oil colors are more permanent than any others, and hence more satisfactory. They may be thinned with turpentine or gasolene, and one authority says that if a little powdered alum is mixed with the liquid used in diluting it will tend to make the colors more permanent and fadeless. The paint should be thinned enough to sink into the cloth with a little rubbing and yet not run outside the pattern.

Spread a piece of old cloth over the kitchen table. Upon this place blotting paper, and then the fabric to be stenciled, fastening it firmly with thumb tacks. Patterns may be purchased ready for work, or they may be made by drawing the outline on manila paper which has first been treated to a coat of linseed oil and then thoroughly dried.

Fasten the stencil upon the fabric with thumb tacks, having first marked out just where the middle of the stencil is to come at every place in the cloth. It is decidedly unpleasant to work away from one and to the other and find in the middle or at the corners a spot in which the rules of symmetry must be violated or the spacing changed. Uniformity in arrangement is an essential to a finished appearance.

Have as many brushes as you have colors, and mix each color separately. Take only a little color on the brush at a time, and use only a little turpentine. Rub the color well into the cloth, so that the threads are entirely filled with paint and yet are themselves plainly visible. The work must not look like a painted fabric, but simply a colored one. Experiment first on waste pieces of the cloth.

A single stencil if carefully selected will furnish quite a variety in form and color. Thus, roses may be in white, red or yellow, and either a part or the whole of the design used. This suggests endless variations in other patterns, and a little practice will suggest numerous modifications. Adapt your pattern to the size and shape of the cloth. Retain the same colors in a room, though the pattern may be used as a whole or in part, with wide spacing or close together.—Bessie L. Putnam.

How a Camera May Help a Child.

There comes to nearly every child a period of restlessness at a time when he is beginning to realize a development of his powers, both mental and physical. Though he cannot so define it, yet it is nothing but the desire to express himself in some constructive work—something worth while—something that is not looked upon by the parents with a barely tolerating smile and then relegated to the rubbish heap at the first opportunity.

As a useful toy that will satisfy both the play and work instincts of a child I know of nothing better than a camera. Inexpensive it may be, and at what a low cost the interesting little machine may be bought! With each camera should come a book or circular giving explicit directions for its operation, and by carefully following these the child will be able to take pictures. If he is provided with a developing tank and allowed to develop his own films or plates, so much the better for him and for his father's pocketbook.

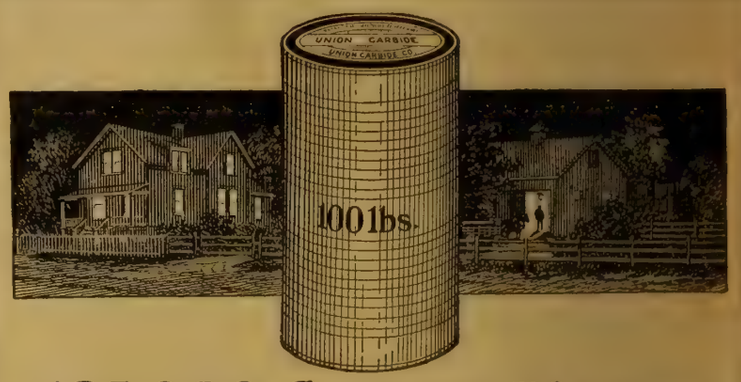
The pictures he takes and the manner in which he develops them should be occasionally observed by some adult, and any tendency to haphazard or slipshod work be promptly checked. There is nothing that tends to develop the power for careful constructive work better than the intelligent use of a camera. I know of one young girl who always did everything in a hurry. There are some things cannot be done successfully if done in a hurry. When she got a camera she took pictures at random, deevloped them in a hurry and mounted them in a hurry, and her work plainly told the tale. Her work was spoiled throughout by the marks of carelessness. If the child can be encouraged to work with patience he will soon have results of which he will be proud. A splendid plan is to keep a camera note book and in this jot down the number of the film, its subject and what has contributed to make it a success or failure.

A fact not to be overlooked is that a camera is a surprisingly good aid in developing the power of observation in a child. He is continually looking for subjects. Things that previously wholly escaped his notice are now full of interest as possible subjects for his camera. He will be asking all sorts of questions and giving all sorts of information about birds and flowers and trees and clouds.

While the mental and physical training which the use of a camera brings about seems reward sufficient, there is also a chance for a wide-awake boy or girl to make pin money after he has become something more than a novice in the art of photography. Views of neighboring scenes, houses, farm animals, pets and snap shots of children mounted on the post cards prepared for that purpose can be sold to people in the vicinity at a fair profit. I know of one boy living in a village who paid for a nineteen-dollar camera in just that way, and the last I heard of him he was still making money at it.—Janet Thomas Van Osdel.

"Complain as little as possible of wrongs done to you, for, commonly speaking, he who complains much lies, because self-love always makes us believe the injuries done to us are greater than they are."—St. Francis of Sales.

"Culture comes through drudgery."—W. C. Gannett.



185,000 Country Places Use Light Made From Crushed Stone and Water

These 185,000 homes are independent of Gas or Electric Companies.

They make their own light—as much or little as they require.

Make it right on the premises with the aid of a tank-like machine.

They feed one of these little machines plain water and a few pounds of the Crushed Stone, known commercially as "Union Carbide," once a month.

Without further attention, the machine supplies genuine Acetylene Gas to lights located throughout the house and in every barn and building on the place.

The machine makes gas only while the burners are lighted and is absolutely idle when the lights are out.

* * *

In every one of these 185,000 cases, this new rural illuminant has done away entirely with out-of-date, greasy, smelly kerosene lamps, that are so often tipped over with fearful results.

In most instances, the lights throughout the house and in the barns and outbuildings are fixed to light up with the pull of a chain—no matches required.

This means that one hundred and eighty-five thousand farmers now do chores after dark in comfort and safety.

When there's a team to put away, cows to milk or a sick animal to be doctored, they merely reach up and pull the chain, which turns on a flood of white light whenever or wherever it is wanted.

* * *

The Crushed Stone is sold in every district in sheet steel drums. This Stone won't burn and can't explode.

The gas is so harmless to breathe you could sleep all night in a room with an open burner without even a headache.

One hundred cubic feet of this rural gas gives each of these 185,000 country people more light than one thousand feet of City Gas gives the millions of people who are using the latter.

* * *

If you want to be up-to-date, enjoy modern conveniences, and keep the young folks at home, write us how many rooms and buildings you have. We will send you free an intensely interesting lot of facts, figures and booklets.

Just address Union Carbide Sales Company, 157 Michigan Ave., Dept. X—56, Chicago, Ill.

SELECTED POETRY.

CITY LIFE AS VIEWED BY UNCLE HIRAM.

Yes, it's lively in the city, where they've got their 'lectric lights,
And the people soon have wrinkles from their staying out o' nights;
They've got shows and things to keep 'em from a-gittin' lonesome there,
And they look all-fired stylish in the costly clo's they wear.
But I guess they have their troubles jest the same as me and you,
And I reckon that they're often ru-their worse-n ours, too.

We've got wood piled in the woodshed that'll last a year or so,
And there's more out where that come from and more saplins still to grow;
We ain't worried over coal strikes, let the cold winds blow away;
We can carry in the billets and not have a cent to pay;
While they're shiverin' up yonder where they've got so much to see,
We can heat fer the babies that the Lord sent you and me.

There is always somethin' doin' to make city people sad;
If it ain't a sausage famine, why you'll hear the water's bad;
When the strikers stop the street cars then the dickens is to pay
And the people have to foot it, gittin' clubbed along the way,
And the fever epidemics and the smallpox every year
Keep the city people stewin', and I'm glad to live out here.

Oh, it's quiet in the country and there's few uncommon sights,
And God's moon and stars up yonder have to do fer 'lectric lights.
But with 'taters in the cellar and with wood piled in the shed,
When there's hay stacked in the hay-mows fer the stock that must be fed,
They can have their noisy city, with the sights up there to see,
And the kind, old, quiet country will be good enough fer me.

—S. E. Kiser.

SUNDAY AT THE FARM.

On Sunday mornin's years ago, when but a little lad,
I used to come to salt the sheep in this same field with dad.
The little clouds that floated 'round I thought were bits of wool;
The sky was blue as 'tis to-day, and calm and beautiful.

Now dad is gone, and mother, too; they lie up on the hill.
Just by that clump of popple trees beyond the old red mill;
For Time has kept a-creepin' on, and you and I are men,
And little Robbie thinks the thoughts that I was thinkin' then.

There's a brown thrasher in the tree that stands there on the knoll;
Just hear the little tyke a-spillin' his immortal soul!
Our preacher says that man alone has got a soul, but yet
What pretty critters God has made, and loves 'em, too, I'll bet!

I know the city pretty well; I lived there once a while,
But I was the homesickest boy you'd meet in many a mile.
The very horses on the street looked sad, it seemed to me,
There wa'nt no colts a-friskin' 'round, nor lambs, as I could see.

So when in June the breezes blew across the prairie west
I packed my grip an' told 'em I had got enough, I guessed!
Of course, there's city folks who keep their faith in God and man,
Though if they stayed there all the while I don't see how they can!

We've had our troubles, wife and I, we buried little Dot;
Upon that slope we made her grave—a green and sunny spot;
And Death will nevermore to me seem terrible and grim,
Since I have seen my little girl a-smiling up at Him.

And often now I come out here and set me down a spell,
There rustlin' leaves and wavin' grain seem whis'rin': "All is well."
I wish that all who'd like to feel their dead are safe from harm
Could come out here and spend with me a Sunday on the farm.

—Farmers' Sentinel.

CORN.

I stand upon the slopes of hill,
I saunter 'long the lane,
I've felt the early morning's thrill
And summer's later rain.

I plume and strut the high divide,
I haunt the cove and glen,
I sweep o'er valleys far and wide,
And near the homes of men.

I've seen the gibbous moon ride down
The arches of the sky,
And watched the sombre midnight frown,
Its stars all fade and die.

The autumn's golden pumpkin vine
Walls round about my feet,
And lovers' arms I've seen entwine—
I know their words were sweet.

The sunflower comes with smiling cheer,
Tells me the gossip o'er,
And tiptoed whispers in my ear
Tales never heard before.

The morning glory flaunts its flower,
Into my very face,
And dies, if I, within the hour,
Return not its embrace.

I've heard the babbling ripples flow,
I've rested weary wings,
I've seen the twinkling night worms glow
And heard each bird that sings.

The bells on Sunday time I've heard
Across the clover float,
And solemn song the hot air stirred
From some angelic throat.

Alone I start when half asleep,
When all the night is still,
To hear from tangle dark and deep,
Some lonesome whippoorwill.

I've bathed in beaded morning dew,
I've drank of nectared rain,
I've breathed each breeze that ever blew,
And felt the balm of plain.

And I've been hushed to sleep at night,
As swift the summer sped,
Aldebaran far flamed his light
To counterpane my bed.

I've heard way down the dark of night,
From barn-yard far and near,
The answer echoed with delight
To some brave chanticleer.

I've heard no hungry wolf afar,
Nor victim's cry of pain;
I've traced the track of shooting star
Till all grew dark again.

The varied voices, manifold,
Of nature, I have heard,
But angry speech, defiant, bold,
There never was a word.

And so I groaned and so I grew,
In stalk and ear and blade,
The livelong summer season through,
In sunshine and in shade.

I've borne the fervid sun by day,
And in its presence stood;
At night the shadows long at bay
Trooped downward from the wood.

Of me there's naught but autumn song
And music's rift and rhyme;
I've hived the honey all day long
The pleasant summer time.

I've in my blood the crimson dawn,
The flush of sunset hills,
Ere night has all its curtains drawn
And wearied nature stills.

For peace and plenty here I stand,
Nor grief nor sorrow made;
No stain upon my guiltless hand,
No blood is on my blade.

No human woe is charged to me,
No guilt, nor crime, nor shame;
My lordly crests wave high and free
To champion my name.

—Joseph G. Waters, Topeka, Kas.

THE HIRED MAN ON CONTENTMENT.

Tired of trudgin' the furrer,
Tired o' pitchin' hay,
Tired o' rootin' at four o'clock,
F'r a fourteen-hour day;
Tired o' chores an' the groc'ry stores an' a round in a ten-quart pan,
Tired o' livin' a whole life through as a Kansas hired man.
So I kind o' thought I'd shift my style
O' life to the boundless sea awhile—
F'r I'd read 'twas grand, an' so one day,
I shipped on the liner "Tishy May."

Learnt to pull the halliards,
Learnt to h'ist the sail;
Liked the life o' the sailor-man
Ontil there came a gale.
Bread to eat like baked concrete, lolloped in Porty Reek—
I felt like a stun-bo't lo'ded with rocks—an' the gale it blowed a week!
An' then the sloshin's wet the lime,
An' we was in f'r a hot-foot time,
F'r, when we crossed the deck, 'twas—whoo!—
Hippity-hop, like a kangaroo.

All o' the lime a-slackin',
Innards a steamin' wreck;
Baked our dough-boys every day
By settin' 'em on the deck;
Took the bo't an' went afloat, an' a liner f'r Liverpool
Picked me up an' set us to work down in her stockers' school.
Oh! the stowhole's hot when you're pitchin' hay,
An' the fields are hot on a July day;
But to bake your heart and frizzle your soul
You've got to git down in the stokin' hole!

Feedin' her chunks an' dustin's,
Feedin' her coal all day;
Hardly time f'r a breath o' air,
Never a time f'r play!
Stiddy chaw in her guffin maw, growl for more in her stack,
An' that was the kind o' life I led to Liverpool dock an' back.
Tie up o' cattle is fur from fun
Till fodder's down an' the chores is done;
But a real stout job we'll never know
Till ye feed in the stokehole down below.

Back to the farms o' Kansas,
Back to the soil f'r me!
Gimme some land on every hand,
An' never a sniff o' sea!
The most o' men, now an' again, will hanker f'r suthin' new,
Wishing the work o' some other chap, tired o' what they do;
But I tell ye, friends, the trouble to-day,
Is 'cause so many is took that way;
If ye're built f'r land, then hark to me—
Don't git foolish an' go to sea.

—Hodman F. Day, in Success.

From Oven Door to Farm House Door

That sums up the whole story when you buy soda crackers by name—

Uneeda Biscuit

As soon as they are baked they are placed in moisture-proof packages. In this way they are kept free from dust, damp and other harmful conditions.

This means that you are *always* assured of fresh, clean, crisp, unbroken soda crackers no matter *where* you buy them or *when* you eat them.

They come in five cent packages.

(Never sold in bulk)

NATIONAL BISCUIT COMPANY

MARY'S SUNDAY GOWN.

It is not made of costly silk
Nor ivory satin rare;
It is not trimmed with old point lace
That ladies like to wear.
I'm sure that you would call it plain,
And yet no belle in town
Looks half so sweet as Mary when
She wears her Sunday gown.

Perhaps you've met with Mary—
She works upon the farm—
A winsome little fairy
Of artless grace and charm.
Her little hands with toil are hard,
Her cheeks are ruddy brown;
But she's "princess of the boulevard"
Dressed in her Sunday gown.

'Tis somewhat scant in longitude,
And thus her ankles neat
Attract the eyes of "mashers" rude
Who throng the city street.

But, like some sweet wild violet,
Demurely looking down,
She's peerless in her toilet
When she wears her Sunday gown.

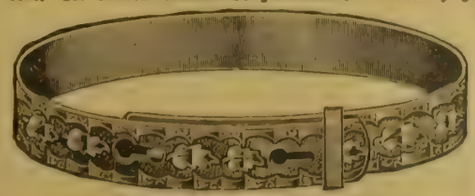
She goes to church, the little elf,
A worshiper sincere;
She does not go to show herself
Nor mark what others wear.
But Tommy Green he calls her "queen,"
She calls him "lout" and "clown,"
Declares there is "too much a screen"
'Bout Mary's Sunday gown.

Among the list of "fashion's set"
Her name you will not find;
In what is known as "etiquette"
She is perhaps behind.
She's just a simple country lass,
Unversed in ways "high-flown,"
But the flowers look up to see her pass
Dressed in her Sunday gown.

—Wm. McCormick, in Denver Times Magazine.

The Universal Magazine Bracelet.

This is all the rage. And Adjustable Bracelet. The most elegant design and perfectly finished. It is not solid gold, but it is washed and plated and will stand the acid test. Its match cannot be purchased in country jewelry stores for any price. It is a duplicate of the latest Parisian creation made expressly for the purpose of using it as a subscription premium to the **Universal Magazine**. The **Universal Magazine** is a nice, bright, cheerful, illustrated monthly magazine of thirty-two pages, three columns to the page, containing home reading, stories, fashions, patterns and poetry—a splendid publication for the money. To anyone who will send us a money order for 50 cents we will send the **Universal Magazine** for two years, and we will send one elegant **Universal Magazine Bracelet**, postage free, as a subscription premium. Money returned if not satisfied. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**



Universal Magazine Bracelet.

LOOK at these poor sufferers all bent with nerve-racking pain—they are victims of kidney trouble; they think it is a rheumatic twitch. Friends say they grumble, but considering their awful pain, they bear up most bravely.

Oh, it is terrible that there should be such suffering, when you can be relieved so quickly, so surely, so simply, and right now, free of charge.

(From the Chicago Inter-Ocean.)

All readers of The National Farmer and Stock Grower who have sick friends suffering from rheumatism or kidney trouble, will be interested.

FINDS NEW KIDNEY CURE

Dr. T. Frank Lynott, New York Specialist, Discovers Remarkable Remedy.

At last a perfectly harmless and positive cure appears to have been found. Dr. T. Frank Lynott, formerly of the New York University, New York, later of the famous Bellevue hospital, and now a celebrated specialist in Chicago, has a very quick acting formula which has been approved by the best doctors.

The editor of The National Farmer and Stock Grower saw the above clipping from the Inter-Ocean and wanted to know of this new formula for curing kidney trouble.

Arrangements were then made by which Dr. Lynott offers The National Farmer and Stock Grower readers a **free treatment.** Dr. Lynott, however, says that he proposes to give the free trial treatment only for a limited time to convince the public in every part of the United States of the positively wonderful efficacy of his treatment.

Furthermore, Dr. Lynott wants to make it clear that he has no "cure-all." He is a specialist in kidney and bladder diseases and rheumatism, so please do not write to him unless you have one of these diseases. If you write at once, both the medical advice and the medicine are entirely free.

The editor of this paper, The National Farmer and Stock Grower, feels that with such a free offer anybody who stays sick with kidney trouble or rheumatism deserves to be sick.

I know that a good many free offers have been advertised where the public had to send money, **but this free offer really IS A FREE OFFER.** And remember that instead of getting an ordinary physician, you get the medical advice free direct from America's greatest of all specialists on these diseases. See Free Treatment Certificate at bottom of this page and get relief **right now.**

STOP!

Stop that back-breaking, twisting, terrible, terrible, unbearable agony! Oh, that awful, awful digging soreness—the back all bent, the joints stiff, the heart-wringing pain—stop that pain RIGHT NOW!

Yes, Write For the Free Treatment—

a REAL Free Proof Treatment, that will give you relief—relief at once—not next week—not tomorrow, but relief AT ONCE—**immediately** after starting the treatment. It is so **simple,** so mild, yet so scientific and so **sure**—this treatment for rheumatism, kindney and bladder trouble. Write now, today.

See the Certificate Below—Sign it and send it today. **No money—no obligation. At last** you can get relief, and if you write at once, you get the treatment absolutely free. Just think—a genuine **free** treatment by America's and Europe's **leading** specialist—absolutely free—really and genuinely free **to convince the public.**

If you have Kidney or Bladder Trouble or Rheumatism (the cause of those pains), then it's your loss if you suffer any longer. When Dr. Lynott says free, he means free—not one cent to pay; and it's "up to you" whether you want the best medical advice and medicine all without a cent of cost. Don't miss this wonderfully liberal offer. See the Free Trial Certificate at the bottom of this page.

Dr. T. Frank Lynott

whose photo is printed here, is, as you perhaps know, a great authority on kidney and bladder trouble and rheumatism. Rarely before has a physician of such high standing offered to treat patients by mail. But Dr. Lynott wants the people to get the benefit of this free treatment.

His cures have extended over America and Europe. In fact, Dr. Lynott received a special diploma on urinary diseases from the great New York University—of which the famous Bellevue Hospital, New York, is now an honored part.

Writing of Dr. T. Frank Lynott, who gives the medical advice free, a brother specialist writes as follows:

"I have for years been considered an authority on urinary diseases; but I must confess my respect, my profound sense of esteem, for Dr. Lynott, whose wonderful success in treating urinary diseases has surprised us all. Dr. Lynott, by the way, is making a most remarkable free offer—the most genuine and generous offer ever made by a high-grade physician. It seems to me the medical world ought not to be jealous of his success, but should praise him for what he has done and is doing for humanity."

WATCH These Symptoms

Trouble in the kidneys begins slowly, slowly. It creeps upon th unsuspecting patient like a thief in the night. Slowly, slowly thos stinging, racking pains foist themselves upon the sufferer; gradually gradually the pains increase into a daily, nightly, constant, endles torture. Watch the symptoms, and cure yourself. Here are the prin cipal symptoms of uric acid disease:

The Symptoms

1—Pain in the back.
2—Too frequent desire to urinate.
3—Burning or obstruction of urine.
4—Pain or soreness in the bladder.
5—Prostatic trouble.
6—Gas or pain in the stomach.
7—General debility, weakness, dizziness.
8—Constpiation or liver trouble.
9—Pain or soreness under right ribs.
10—Swelling in any part of the body
11—Palpitation or pain around th heart.
12—Pain in the hip joint.
13—Pain in the neck or head.
14—Pain or soreness in the kidneys
15—Pain or soreness in the joints.
16—Pain or swelling of the muscles
17—Pain and soreness in nerves.
18—Acute or chronic rheumatism.

NOW THEN This Certificate is FREE

You get the treatment, the medicine and Dr. Lynott's personal attention absolutely free, if you write at once. Instant relief for those terrorizing pains.

Send no money—read the certificate—note that it puts you under no obligation. Dr. Lynott is glad to see a sufferer cured—write at once and get free treatment.

Just Your Name

And ADDRESS and the SYMPTOMS

of your disease given by number. That is all Dr. Lynott wants. Read the free treatment certificate; read how it puts you under no obligation whatever; how it says specifically and distinctly that you are not under any obligations whatever

SEND NO MONEY--Just Write for the Free Treatment

REMEMBER—This free treatment offer is limited. Only a certain number can be taken under Dr. Lynott's care. If you answer this offer the first time you see it you are guaranteed the free proof treatment. So better send the free treatment certificate today, at once, and remember, you need instant, immediate relief from those awful pains.

DR. T. FRANK LYNOTT, 3986 Occidental Bldg., CHICAGO

☞ If you have a friend suffering with kidney or bladder trouble or other uric acid disease, such as rheumatism, don't you feel you owe it to your friend to tell him or her of this free offer?

Free Certificate

What is Your Name?.....
State plainly, Mr., Mrs. or Miss.

Your Address?.....

What Symptoms Have You?.....
Give numbers from table above—that is all

What is Your Age?..... *Married?*.....

Just fill out the above—nothing to sign, you see. Just answer the questions and be sure to give your name and address. You are under no obligations whatever. The **FREE** proof treatment will then be sent **at once, prepaid.** Cut out this certificate (or write a letter describing your symptoms) and **get INSTANT relief from those racking, rocking pains.** Address personally

BREEDERS' SALE

450--HORSES--450

IN COLISEUM, BLOOMINGTON, ILLINOIS,

January 10, 11, 12 and 13, 1911.

ON TUESDAY, WEDNESDAY, THURSDAY AND FRIDAY

We Will Sell

400 IMPORTED AND NATIVE BRED REGISTERED PERCHERONS, BELGIUMS, FRENCH DRAFT, SHIRE AND CLYDESDALE STALLIONS AND MARES.

200 HEAD of Imported Stallions and Mares that will land by sale day.
150 HEAD of Imported Stallions and Mares that have been here a year.
150 HEAD of the BEST Registered Mares that ever went in an auction ring.
100 HEAD of Imported Fillies, one and two years old.
100 REGISTERED STALLIONS of the very choicest of breeding and individuality.

ON FRIDAY, JANUARY 13, 1911,

We will sell 100 head of REGISTERED TROTTERS, GRADE DRAFT, SADDLE and ALL-PURPOSE FARM HORSES, STALLIONS, MARES and GELDINGS.

CONSIGNORS—D. Augstin, John C. Baker, Down Bros., Miller Bros., M. G. Murry, Moots Bros., D. D. Brotherton, W. A. Turnipseed, L. B. Wilson, J. W. Cavanaugh, Ed Hodgson, Sass Bros., Ralph Moore, L. C. and Stock GROWER

Our Seed Corn Premiums.

Every farm should be an experimental farm to the extent of conducting experiments with a view of ascertaining which are the best seeds for local conditions. The National Farmer and Stock Grower has

endeavored to furnish grain growers something of value to experiment with. At the First National Corn Show held at Chicago the editor had the pleasure and honor of meeting two great corn growers. One was Mr. D. L. Pascal, who was exhibiting a few ears of corn, including the famous ear of Reid's Yellow Dent Corn, with which he had won a trophy for the best ear of corn produced in Iowa. The editor thought it would be a good idea to buy some seed corn from Mr. Pascal and distribute it in small parcels to farmers. He requested Mr. Pascal to sell him a few sacks of corn for the purpose of distribution.

The editor also met Mr. L. B. Clore, of Indiana, who with his Johnson County White Corn had won the championship at the show. Mr. Clore also promised to sell the editor a reasonable quantity of corn of his own raising and produced in the same breeding blocks with the champion ears.

Having secured pure-bred seed corn from the leading prize winners, the next thing to do was to distribute it to subscribers as they paid up their subscriptions, offering liberal prizes if the growers thereof could win a prize at their own State Fairs or at the National Corn Show. The result has been quite satisfactory. It was demonstrated that even with the crop grown from a single pound of seed corn state prizes could be won, as will be seen on page 30 of this issue. Up to this time the editor did not offer any cash premiums at County Fairs, but this time prizes are offered at County Fairs in every state and territory, providing the premiums are won with corn grown from the seed furnished from this office.

It costs practically nothing but the cost of mailing the seed over and above the subscription price of the paper, and the prizes as honestly won are paid promptly. Furthermore, many farmers have raised much of their own seed corn with the few pounds furnished from the office of The National Farmer and Stock Grower, thereby deriving great benefit from their subscriptions to this paper.

Melilotus Alba.

There is a wonderful plant known as sweet clover. It is a wonderful plant, because of its great power of growth, and because of its great power of renewing waste and barren land, especially if such land is so hard that almost no other plant can grow on it.

Notice it growing on the hard roadside, where the thousands of feet have packed the ground hard. It gets a foothold and shoots its root down and its stem up. Then it sends out many strong, thrifty branches and loads them with strong leaves. All over some states it is found growing continuously by the roadside in all land rich in lime.

But here is one of its virtues: It never invades the cultivated field. If you want it to grow in the cultivated field you must plant it there or its seed. This is a rare virtue, possessed by few plants. Even the plantain, which grows on the footpath, will also invade the lawn and become the despair of the lawn owner. But what lawn was ever invaded by the Melilotus Alba?

It loves lime. The writer saw a place on the edge of a garden where the masons had thrown some lime left from the building of a chimney. The caustic properties of the lime burned out the grass and a bare spot a yard wide resulted. Immediately sweet clover sprang up and grew luxuriantly. It made a clump five feet high, and some of the plants had stems as large as one's little finger. Under its shade the grass came in, and the next year the sweet clover was gone and grass remained. That is the way it works. It is a sort of breaking-up plow. It plows deeply into the soil and makes way for other plants and then it moves onto a harder homestead.

It cares nothing for the winter or the drouth. Its roots have gone down deep enough to be below the frost line and the line of drouth. It asks not for fertilization, for it can get all of its nitrogen from the air, and does not use large quantities of the other elements, with the exception of lime. It does not ask that the ground be prepared for it; it prefers to do its own plowing and cultivating.

It is one of the greatest renovators we have and is now being grown for that purpose. The writer was in an experimental field in which the growth of sweet clover was like a small forest, rising to a height of seven feet.

It has at present one drawback, which is the bitterness of its foliage, if it is used for feed. Few animals will eat it, and the ones that do stop short after having eaten a little of it. But surely someone will develop from it a new variety that will not have the bitter quality. When this is done, sweet clover will become one of the very important feeding crops of the world.

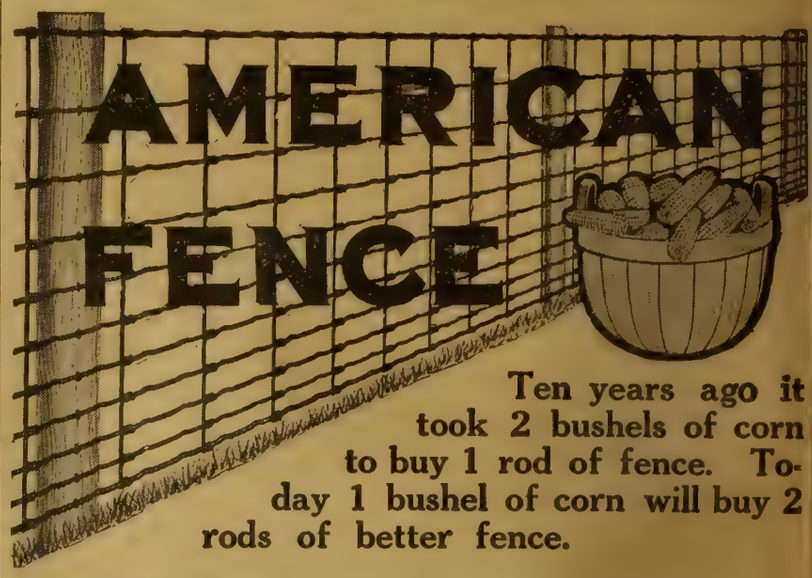
But even now it should be used more extensively than it is as a soil renovator. If we can make it edible, what a hog feed it will become!

Wild Oats in Illinois.

Illinois farmers have never regarded wild oats much of a menace to other crops, but now official graders have taken cognizance of the matter, and cars which carry any mixture at all of wild oats are graded down one or two cents a bushel. I believe oat growers in the central oat belt have been altogether too negligent in the introduction of fresh seed supplies, especially in the matter of seed oats. A big grower in Livingston county recently stated to me that wild oats did not bother him, for, under the common practice of crop rotation, they were subdued or killed out readily. The facts are they are not killed out easily, and they are frequently found where they are not expected. The wheat grown this season on this same Livingston county farm had a bad mixture of wild oats, and the grower does not know where they came from. No doubt they were brought in with seed oats two or three years ago. Don't fool with wild oats; and with such abundant clean supplies to draw from there is really no reason for anyone sowing next spring any mixed or impure seed grain of any kind.—L. C. Brown.

Four makes of incubators are advertised on page 18, and each of them worth investigating.

Higher Cost of Living Does not Include Fence



Ten years ago it took 2 bushels of corn to buy 1 rod of fence. Today 1 bushel of corn will buy 2 rods of better fence.

Price Low—Quality Better Than Ever

Within ten years farm products have greatly advanced in market value while the price of woven wire fence has been reduced. These are the reasons: Newer and improved methods of digging the ore, shipping to the furnaces, melting into steel and making into finished products are in force. Ten years ago operations were on a small scale. Today the plan of operation is vast. The manufacturer is able to deliver the finished goods quickly, of better quality and at a lower price.

American fence is made better than ever. It is a thoroughly galvanized square mesh fence of weight, strength and durability. Large wires are used and the whole fabric is woven together with the American hinged joint (patented)—the most substantial and flexible union possible. Both wires are positively locked and firmly held against side slip and yet are free to act like a hinge in yielding to pressure, returning quickly to place without bending or injuring the metal.

Dealers Everywhere Stocks of American Fence are carried in every place where farm supplies are sold. The Fence is shipped to these points in carload lots, thereby securing the cheapest transportation, and the saving in freight thus made enables it to be sold at the lowest prices. Look for the American Fence dealer and get the substantial advantages he is enabled to offer. He is there to serve the purchaser in person, offer the variety of selection and save the buyer money in many ways.

FRANK BAACKES, Vice-President and General Sales Agent

American Steel & Wire Company

More Live Stock on Feed.

Feed yards show more life this fall than at any time during the last five years. Thirty-five-cent corn looks like the feeders' opportunity, and wherever decent feeding stuff can be had corn is going into feed bunks. The move is a good one. We have been running to grain too long and have been fast approaching the point where soil conditions would demand a halt. Stock feeding will restore normal conditions. The corn crop will be fed, and roughness, which is usually wasted, can be put to good use. Straw-stacks can be worked up and manure-piles can be made bigger. There is an enormous rush of immature stock to market, with the object, of course, of getting in while high prices are going. Well-posted men look for heavy feeding this winter and lower prices in the spring for both hogs and cattle. Still, I question the wisdom of marketing rough, immature stock with such an enormous amount of cheap feed in the country. If feeding stock can be bought right I believe there is bound to be good money in feeding operations, unless, of course, the bottom drops out of the market, which is unlikely under present general prosperous conditions.—L. C. Brown.

Top Price For Yearling Cattle.

On Wednesday, November 16th, the top price for beef cattle on the Chicago market was $7.75 per 100 pounds, realized by Clay, Robinson & Co. for thirty-two head of Aberdeen-Angus yearlings, consisting of steers and heifers, the lot averaging 916 pounds. They were raised and marketed by C. C. Jackson, of Earlham, Ia., and fed by his son, G. D. Jackson. Not only did these little cattle top the market, they actually topped it by 50 cents per 100 pounds. There were choice 1,600-pound steers sold the same day at $7.10, and prime heavy steers stopped at $7.25 per 100 pounds on the same day.

A View of the Hog Market.

Hogs have declined in value from the high range of prices, and the reduction as viewed from a hog raiser's standpoint is considerable. Furthermore, after a great racket and many complaints on the part of the people of the cities, the retail price of pork has come down. There is also considerable discussion as to the future market for hogs, and the general consensus of opinion in the cities is based upon the hope that on account of the large corn crop the prices of all live stock will continue to decline. The farmer still hopes that he will obtain remunerative prices for his products, and the people in the cities are very anxious to obtain food cheap. In fact, the interest of the producer and the interest of the consumer cannot be reconciled; neither is it easy to foretell what the future will bring forth.

The only aid in keeping prices where they belong and in advancing them whenever it is possible to do so, is the well-organized commission interest, which stands between the farmer and the hog buyer. In every central market the buyers are trying to force prices down and the commission interest is trying to force prices up. The battle is fought out every day. Commission firms and buyers endeavor to look into the future and study conditions. Every point in the favor of either side is calculated upon, especially the visible supply of the day, the expected supply of to-morrow, of next week, and the supply back in the country, and all the elements which influence the demand.

We have looked over considerable literature from the stock yards and find an article in the Live Stock Report, issued by Clay, Robinson & Co., which begins by saying that there are no cheap hogs in sight. Clay, Robinson & Co. are organized on every market from Buffalo to Denver, and from Chicago to Fort Worth, including St. Louis, and make it a business to investigate all market subjects thoroughly with a view to forcing the market upward, if they can possibly do so in the interest of their customers. They are of the opinion that there are no existing conditions to discourage farmers raising hogs. There is a large crop of corn, also 10 to 15 per cent. more hogs in the country than there was a year ago, but much of the decline has taken place, and they believe there is yet reason to contest all further reductions with a fair chance of pushing up the prices whenever the run is light enough to see an opening. We regard their opinion as worthy of consideration by all swine raisers. Clay, Robinson & Co. advise farmers as follows in their edition of November 18th:

"Advices from everywhere are of the same tenor: 'No big supplies of young or matured hogs on hand and no burdensome receipts in sight at either the Western or Eastern markets for months to come. The supply for the year to date at the eleven leading markets shows a decrease of upwards 3,300,000 head from the same period of last year. This is sufficient evidence of a depleted hog supply and at the same time is a source of encouragement to producers."

"Prospects are so favorable that the hog will continue a valuable asset on the farm that extreme measures to insure its health, comfort and rapid growth are certainly warranted, and also to make it a very foolish policy to market thrifty swine below the 200-pound mark. Packers' representatives on the Chicago market, who are naturally bearish at all times, have expressed the opinion that droves of hogs will not be put much under the seven-cent mark this winter. As to whether they are right or wrong, time alone will tell."

"It is not probable that the market will drop so low as to render marketing corn by the pork route unprofitable. Another strong factor in the favor of hog producers is a record crop of corn and current prices the lowest since 1906 for this time of the year, with prospects of still lower prices."

"Marketing healthy pigs or shotes, or swine tipping the beam under 200 pounds, will prove a very unwise policy for months to come. However, in our opinion, hogs weighing upwards of 200 pounds and in good marketable condition should be sent forward right along, and especially those around 225 pounds and heavier."

Protecting the Roots of Plants and Trees.

Annually many trees and other plants are lost by reason of the ravages of frost. It takes time and effort sometimes to give adequate protection, but it pays to do so when the danger from frost is considerable. Often, however, it is only necessary to refrain from uncovering the roots of the plants that may be endangered by so doing.

The locality in which one lives must determine the amount of care that needs to be given. If one lives on the border of the Southern States, far less care is necessary than if one lives in the northern tier of states of our country. Also the supply of soil moisture counts for much in the case of hard winters.

One very common mistake in the handling of orchard trees and even of other trees is the cultivation of the soil around them late in the fall. This is especially bad if the ground has been previously covered with sod. Where there has been no sod the cultivation of the ground loosens the soil and permits the frost to go deeper, which endangers the existence of the plants or trees.

Trees in growing year after year accommodate themselves to a certain depth of frost penetration. As long as this depth is kept up the trees will not be injured by the frost, but when conditions are so changed that the frost goes much deeper the result is a freezing of the ground to a depth that kills the trees.

But some may ask how it is that the tree is killed by having all of its roots frozen, while other roots of the same tree may be frozen without injury to it or to themselves? It is probable that the answer is found in the thawing-out period in the spring. Doubtless the freezing of all the roots of our common Northern plants and trees does no harm if the thawing in the spring is rapid and complete. But that is the trouble with deep freezing.

It is a fact not known to very many that a tree may have its roots in frozen soil, but may bud and leave and bloom under the warm rays of the sun. But if it does that it is necessary for the soil to be immediately warmed to save the life of the tree, for when the tree begins to expend its stored-up material in the making of leaves, the work of the roots must also begin to make good the deficiency caused by the production of leaves. Roots in frozen soil cannot do this. Therefore it is necessary to prevent soil around the trunks of trees from freezing deeper than ordinary.

Dry ground freezes deeper than moist ground, and this is why dry falls followed by hard winters result in the destruction of many trees. Wet falls and mild winters are best for our plants. Wet falls and hard winters will give fairly good results if the roots of the trees have not been partially unprotected by cultivation. In the hard winter of 1898 and 1899 vineyards that had been cultivated in the fall perished, while neglected vineyards in which the grass had matted into a sod came through all right.

What Farmers Are Saying.

A number of farmers who have visited our office the present fall have declared themselves emphatically in favor of a law prohibiting hunting. They are greatly annoyed by sportsmen running over thefr premises regardless of any authority to do so. Hunters even tear down fences, leave open gates, pull down bars and engage at slaughtering birds that are very valuable to men engaged in agriculture. They say that hunters will come out of the cities and towns and trespass upon fields and farm property generally with perfect impunity as though they were owners thereof. If a farmer, they say, would go to the city and trespass upon property there as the city fellows do in rural districts, a policeman would be speedily called and the farmer placed under arrest. It does seem that if a man enters upon another's property for hunting of any other purpose whatever, he should have the decency and respect to ask the owner thereof for permission to do so.—Honesdale (Pa.) Independent.

At St. Lous, just now, popcorn is quoted on the cob at $1.25 to $1.75 per 100 pounds.

True Conservation

Conservation has become a watchword and is on every tongue. When its novelty has passed and we come to consider its true meaning, we shall find that conservation of the resources of the soil of our farm lands is the most important element in the whole subject.

The American farmers have been a race of unconscious soil skinners.

Now, we want not only to conserve productivity, but to restore some of that removed. We must get down to facts.

One fact often lost sight of is that we can double the value of clover and farm manure by supplementing them with

Potash and Phosphates

thus making a complete and balanced fertilizer. This is true soil building as well as plant feeding.

It Will Pay, for Potash Pays

We will sell you Potash through your dealer or direct, in lots from one bag (200 lbs.) up. Write for prices.

Our Factory Price and Book Prove This the Biggest 1911 Value in a Harrow

HERE'S the one harrow bargain of the year—the *first* and *only genuine tongueless* Disc—at a price that you can't resist. You can't get higher quality or bigger value no matter what you pay. We'll let you have this Detroit-American on the only *Real* 30 day free trial offer—no money in advance, no deposit and we pay the freight. Then if you decide to keep the harrow, send money or pay on time—and our unlimited time guarantee protects you *forever*. Don't use an old fashioned tongue disc with its whipping and pounding of horses and neck-weight which injures the team just when you need it most. A tongueless disc solves the problem, saves the horses, saves time and work, lets you work closer to fences because no pole to catch.

Get our book and freight paid price *first*. Note that the

Detroit-American **The Only Genuine Tongueless Disc**

is all steel, which means no breakage, no repairs or costly delays in busy season. Light in *draft*—strong as a harrow can be made. Entire frame and front trucks are steel. Wide tired steel wheels do not cut into soil. Arched axle gives good clearance. Trucks are attached to frame by flexible pivot so wheels pass over uneven places without disturbing the perfect balance of frame. Steel discs cut to uniform depth. Disc sections do not strike together in center. All end thrust taken up by *Hard Maple Ring* Bearings. Pipe oilers. Steel Separators between blades. Long blade scrapers. These and many other Detroit-American advantages are shown in our big book. Choice of 16 sizes, cutting from 4 feet to 10 feet in width. Regular round disc blades 18, 18 and 20 inches. Cutaway discs furnished if desired. Get *your* harrow at a price that makes it the biggest bargain ever offered. Send coupon now. Get the guide to the right harrow at the right price. Also see new Detroit-American Manure Spreaders and Cultivators. All in the Big Book. Write *now*. Address

Favorite Corn Husker.

Clark's Corn King with its new self-shedding hook. The spear point enters the husks easily. The slant bend turns the husks for shredding, and the rounded, curved and beveled edges throw out the husk and prevent clogging. As this is the most approved husker hook on the market, we have selected it as a seasonable subscription premium. The hook sets at any angle; two positions for a thumb hook and five positions as a palm hook. Opening and closing the small end of the plate makes the adjustment perfect for any width of hand and prevents chafing. The strap passes through the leather tongue and the first ring and over the hand to the opposite ring and back

through the first ring. Be sure and have the strap enter the ring from the outer side. It brings the pulling strap underneath, forms the sinch draw and gives you the full benefit of the sinch lock, which is the same as a half-hitch. The strap then passes to the last ring and then to the buckle; the half-hitch forms one fastening and the buckle holds the end of the strap. We will send The National Farmer and Stock Grower for one year and Clark's Corn King Husker for 50 cents. The Husker is a free premium. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

The Oats Situation.

The commercial market for oats on November 30th is much the same as it was on October 31st. On November 30th, last year, December oats were selling at the Chicago market for 39¼ cents a bushel, and this year at 31¼ cents. The decline is 8 cents on a bushel of 32 pounds, and is a clean cut reduction of 25 cents. People in the cities, who eat a good bowl of oatmeal and cream, are paying just as much for it as formerly, but the farmer is receiving 8 cents a bushel less. The increase in the crop is only 10 per cent.; and there you are.

We continue to be of the opinion that a farmer who sells threshed oats on the present basis is cheapening his own product. The Board of Trade opinion, as expressed by the next May option at 34¼ cents, is, that the future market may be stronger. Many farmers are selling sheaf oats satisfactorily in their local markets, but the grain in bulk should not be sold—not a pound of it—for shipment to the great markets until there is a considerable advance. As previously stated in this paper, there is not much speculation and not much export business in oats. Yet the available supply is being cleared away and there is an opening for an advancing market.

A Car-load of Steers.

The grand champion car-load of beef steers at the Chicago International Live Stock Exposition of 1910 were exhibited by Ed. P. Hall, of Mechanicsburg, Ill., who won $1,125 in prizes,and whose load of fifteen yearlings, 1,156 pounds average, sold at 13½ cents a pound, and realized $2,340, or $156.06 per head.

They were yearlings and classed as baby beef, and were sold by Shinn, Fry & Co. to the Pittsburg Packing and Provision Company. Their competitors were champion two-year-old steers, averaging 1449 pounds, and three-year-old steers, averaging 1,586 pounds; but the 1,156-pound baby steers, all Polled Angus grades, were awarded the grand championship over all steers and all breeds. The grand champion steers classed as fully equal to any load ever shown; were fed in the open lot, were bought as calves, and were selected out of forty-six head. The steers which he did not exhibit dressed 73.70 per cent. beef.

The Market For Corn.

Once a month we become interested in the corn market. On November 30th of last year the December corn price was 58¼ cents a bushel. On November 30th of this year the December corn option closed at 44¼ cents a bushel. Thus it appears that corn is now selling 14 cents lower than a year ago. A year ago one hundred pounds of corn cost the buyer $1.04, and right now one hundred pounds of corn cost the buyer 79 cents. This article is dated November 30th, 1910.

It appears, however, that the price of corn has touched bottom. We reach this as the Board of Trade opinion— not our own. It costs money to carry a bushel of corn and three cents advance from December to May about covers the expense. Therefore as the traders on the Board of Trade at Chicago are paying 47¼ cents for corn delivered next May, it looks like what we call a steady market.

If we had corn, that is exactly how we would value it—forty-five cents a bushel, less cost of transportation to market. If we were feeding it to cattle, hogs or sheep, a fair price to charge them up with would be about 40 cents a bushel in the feed lot. With corn at this valuation it can be fed profitably at present prices of corn or hogs and cattle, and the farmer is well situated if he can market his corn crop that way. The amazing corn crop of the present year amounts to 3,121,681,000 bushels, or 349,305,000 bushels more than it was last year. The corn crop increased 15 per cent. and the market has declined 25 per cent. Business is good at the decline, but the decline is there plain enough for anybody to figure for themselves. There is no help for it. The amount of corn that is sold off the farms and entering into the food supply of the people can easily be purchased at current quotations, and no man or set of men can change the existing conditions. Corn may decline a little more or recover a little, yet we have an abiding faith that changes will not amount to much.

Grand Champion Lambs.

At the Chicago International Show Ben Conley, of Marshall, Mich., exhibited a load of shorn native lambs which won the first prize in class and the grand championship of the show. It is the first time that shorn lambs have been exhibited at this show, and they surprised the judges and exhibitors, but they won the highest prize. These lambs with the wool off averaged 111 pounds and sold at $8.25 per 100 pounds to Morris & Company.

The Percheron Champions.

At the Chicago International Live Stock Exposition the champion Percheron stallion, any age, was Helix, owned by Taylor & Jones of Williamsville, Ill., and afterwards sold to Mr. W. C. Brown, President of the New York Central Railroad. The champion mare was Iolanthe, owned by H. G. McMillan & Sons, Rock Rapids, Ia., an American-bred mare, sired by Calypso; dam, Norma. She was foaled May 23, 1903. Helix is an imported horse, foaled in 1907, and classed as under four years. There were 526 Percheron entries.

The Champion Herefords.

At the Chicago International Show the grand champion bull, any age, was Repeater, calved September 23, 1907; sire, Distributor; dam, Mina, exhibited by O. Harris, of Harris, Mo. Grand champion female, Scottish Lassie, a senior yearling; sire, Young Beau Brummel; dam, The Last Rose, exhibited by Dr. James E. Logan, of Kansas City.

The Shorthorn Champions.

Best bull, any age, Ringmaster, two years old, roan; sire, Snowflake; dam, Dorothea, 3d. Exhibited by White & Smith, St. Cloud, Minn.

Best cow, any age, Susan Cumberland, two years old, roan; sire, Cumberland's Last; dam, Susan, 2d. Exhibited by Geo. J. Sayer, McHenry, Ill. These were the International champions of 1910.

Australian Milking Machines.

It is reported that Australia is in the lead when it comes to the use of milking machines. The Bureau of Manufactures of the Department of Commerce and Labor at Washington has pictures of all the different makes, which are at the service of American manufacturers.

The Champion Shires.

In the Shire exhibit at the Chicago International Show, Trumans' Pioneer Stud Farm, of Bushnell, Ill., received the two championships. The stallion award went to Dan Patch; and the champion mare was Shelford Pride, a magnificent dapple grey, imported, foaled in 1903; sire, Chedwick Majestic; dam, Shelford Pax.

Practical Barn Plans.

This is the name of the best book out. Every farmer needs it. It contains drawings, pictures, plans, specifications and everything necessary and up-to-date for a barn, stock shed, wagon shed, corn barn, smoke house, ice house, silo, dairy barn, or any other conceivable outbuilding on the farm. Not only one plan of each, but many of each are shown with all the latest inventions and contrivances for saving time, money and labor.

Each and every plan in the book is accompanied by a lengthy written description, explaining and giving the details of the drawings, and so worded and arranged, numbered and indexed, that it must be readily understood by anyne who reads it.

The price of this book is One Dollar, and we include one-year's subscription to the National Farmer and Stock Grower. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

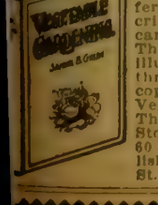
FOR THE VEGETABLE GARDEN.

There is a very good book on the subject of Vegetable Gardening, written by Samuel B. Green. It is a manual that can be relied on. It is easy to grow vegetables and save them against the different diseases when at critical periods such a book can be readily referred to. There are 252 pages, nicely illustrated and practical throughout. We will send a copy of the book entitled Vegetable Gardening and The National Farmer and Stock Grower one year for 60 cents. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.



Furs From Farms.

Mr. S. S. Pingree, President of the F. C. Taylor & Co., St. Louis, Mo., said recently: "I don't know that there are any figures showing the catch that comes in from farms, but I know from our own experience that it amounts to thousands of skins. Some of the most valuable skins we receive have been caught by amateur trappers. We frequently send to men and boy trappers on the farm $150.00 and upwards for their season's catch, which is quite a nice sum added to their savings."

This company issues a reliable Trapper's Guide, which it will send to our readers free. A special feature of the book refers to animal bait, and the facts there given are as important to trappers as traps. This Trapper's Guide will be sent free upon request by F. C. Taylor & Co., 315 Fur Exchange Building, St. Louis, Mo.

The Wheat Market.

Wheat production in the United States is about 6 per cent. less than last year and the market is 15 per cent. lower. On November 30th of last year, December wheat was quotable at $1.06⅛ a bushel, and on November 30th of this year the closing quotations is 90¼ cents, and the opinion of the Board of Trade at present is that by May, 1911, wheat will sell at 96¼ cents a bushel, the advance being more than carrying charges. There is one thing to be said about wheat, and it is that wheat is the product upon which centers the mind of the average dealer, and their calculations include every reported market and every crop in the known world. It is useless to figure on wheat from any local standpoint. It is a world-wide crop, sold on a world-wide market. Wheat can be transported from one country and values are well sifted, so that important centers like Liverpool and Chicago are in as close communication as the telegraph lines can bring them. The trading for delivery on certain months, which brings about a settling day four times a year, does localize the market to some extent, but it is an artificial condition, and the world's supply and the world's demand, or, more properly speaking, the world's consumption, does not control the range of prices.

From the United States standpoint wheat ought to be higher instead of lower; but when news comes over the wire that the Russian crop is larger than was estimated, or that growing conditions favor a large crop in Argentine, then the United States market declines in proportion to the reliance placed upon the report. If all business interests were actively engaged in making money and labor was fully employed, there would be an opening for speculative activity in wheat; but there is no telling. Wheat is in a statistically strong position, but the demand is not considered to be very strong. We are facing the unknown, but we do not expect to see a lower market this side of the next crop.

A Business Success.

Attention is invited to the advertisement of the Temple Pump Company. The successful career of this organization is remarkable. They are now entering their fifty-ninth year of continuous manufacturing. They manufacture gasoline engines, windmills, pumps, taks, etc. Fifty-nine years of continuance can be no other than the outcome of reliability in their output and conscience in their dealing with their customers. See their three-column card on page 16.

St. Louis Apple Market.

Basis of sales early in December, quotations by the barrel: Mixed varieties at $2.25 to $2.75 for No. 2, to $3.25 to $3.50 for fancy; Ben Davis at $2.25 to $2.50 for No. 2 to $3.00 for choice, and $3.50 to $3.60 for fancy; Winesap at $2.50 to $3.00 for No. 2, to $3.75 to $4.00 for fancy; fancy Gano and Missouri Pippin at $3.25 to $3.50; fancy Roman Beauty at $3.50 to $4.00; York Imperials at $2.50 to $3.25 for No. 2, to $3.50 to $3.75 for No. 1, and $4.00 to $4.25 for extra fancy; Baldwin at $2.50 to $2.75 for No. 2, to $3.25 for choice, and $3.50 to $3.85 for fancy; and fancy Greenings at $4.00 to $4.25; bulk Ben Davis and York at $2.50; fancy Baldwin and Greening at $3.25; choice do. at $2.85, and No. 2 do. at $2.50 per barrel measure.

Argentine Beef Business.

Summarized, it may be said that the most important aspect of the meat situation in the Argentine Republic is the growing influence of United States capital in its direction. The American companies, which control materially the meat supply of the United States, entered the Argentine field barely half a dozen years ago, but have already attained a commanding position by reason of their capital and progressive methods.

United States interests do not yet control—as far as currently known—a majority either of the companies or the cold-storage output of the country, but their production is increasing more rapidly than that of the Argentine or French plants, and they have purchased land on the Parana river, presumably with a view to erecting new freezing works. The two avowedly North American companies are already shipping about a third of the total export of frozen beef and mutton, and more than half of the chilled beef. The latter aspect is most important, because chilled beef represents the latest and highest development of the meat industry. It has practically been built up in Argentina by the American companies and in the space of five years. Beginning at almost nothing in 1905, export of chilled beef has grown until for the first six months of this year it outstripped the frozen product.—From Consular and Trade Reports, Department of Commerce and Labor.

MILK PRODUCERS' ASSOCIATION.

The Annual Meeting Adjourned to December 27 on Account of Small Attendance.

The November meeting of the Milk Producers' Protective Association of Missouri and Illinois was held at St. Louis on Monday, November 28th, at one o'clock, p. m., and on account of the small attendance was adjourned until Tuesday, December 27th. The election of officers will then take place.

All milk producers are invited to attend, especially if they are in good standing, or if they have belonged to to the association heretofore.

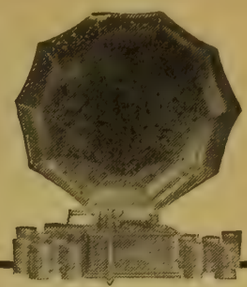
De Laval Gets Highest Award.

At the recent California State Fair, held at Sacramento, September 3-10, unusual attention was given to cream separator exhibits, and competing against a half-dozen of the best known makes of cream separators, the highest award was given to the De Laval machine. The De Laval Dairy Supply Company of San Francisco, under whose auspices the exhibition was made, also received the highest award for the best exhibit of dairy machinery and supplies.



FREE LOAN

Yes, An Absolutely Free Loan, the World's Greatest Phonograph, Our New No. 10 Model, 1910 Outfit, Now Offered on a FREE LOAN.

WHEN WE SAY FREE LOAN, WE MEAN FREE LOAN. We will ship you a machine without a cent down, and without any C. O. D. payment to us, so you can take it right to your home and play the music there. All this on a free loan. Then when you are through with the free loan, simply return the phonograph to us at our expense.

Mr. Edison Says: I want to see a Phonograph in EVERY AMERICAN HOME

The phonograph is his pet and hobby, and it is true that there should be no home in the country without this grand and magnificent entertainer.

Hog Feeds and Profits.

The high-priced hog day is over, but at the values now prevailing or likely to prevail it is certainly desirable to produce as many marketable hogs as possible. The great problem is that connected with the feeding, for the price of corn is such that no profit will result if one feeds a hog entirely corn throughout his entire life. This condition formerly did not exist. Many hog raisers have not profited much by the high prices, for they have continued to build up their hogs on corn. What shall it profit a man if he sells at eight cents a pound a hog that has cost eight cents a pound in corn?

A man cannot afford to build up the frame of his hogs on the commercial stuffs he must buy on the market. Those can only be used in putting on some extra finish. But the great bulk of the hog frame must be built up on what the farm has produced. This is the problem that must be worked out.

Fortunately the hog is in part a grazing animal, and thus some of the very nutritious forages like clover and alfalfa can be used to build the frame. These two crops will come to be the great foundation crops for the production of hogs, if corn continues to keep its present price.

The by-products of the dairy are cheap feeds and rich in protein, but they will never again be in large enough supply to count for much in the general expansion of the hog-raising industry. Moreover, sour milk is more and more being made into articles of food to supply the tables of the people, and this is cutting off one of the sources of supply of hog feed.

To as large an extent as possible the hogs should be induced to consume the clover hay and alfalfa, in the fall and winter, and to these can be added cowpea hay and soybean hay, for the most difficult part of the problem is the feeding during the time of year when grazing is not possible. In the warm season, pasturage should be made the most of, because this is largely the one kind of feeding that promises most in the way of profits.

It is evident that with the changing of levels of prices for the commercial feeds it will be necessary for the American farmer to turn more and more to the methods of the European farmers in their production of swine, which includes the feeding in the winter time of considerable quantities of sugar beets, turnips, pumpkins and such other materials as can be still raised cheaply.

As a result of the difficulty of getting hog feed in winter at a price that will yield a profit, we see the fall litter production largely abandoned. Under present conditions the farmer must have the pigs come at the time the spring milk supply is increasing. He must also have the weaning time of the pigs come at the time pasture grass is growing and succulent. It is desirable to work out the problem to the point where the fall litters will be profitable, and this is now being done by some of the most progressive of our experimenters.

Safest Varieties of Corn.

Some car-loads of new corn which have reached Illinois and Indiana central markets during the last week have shown as high as 24 per cent. moisture. Under the splendid drying conditions we have had this fall it is rather disappointing to have to stand No. 4 on "sample" grading because of such high moisture content.

I have critically inspected over two hundred different corn fields during the last three months, observing growth, yield and maturity. In the central and southern corn belt there is a constant tendency towards large-ear varieties, consequently the biggest ears are selected for seed, and if they happen to be soggy they are dried out by artificial heat. Persistent selection of this character of seed must result in overgrown, later corn, whose ripening habits are unreliable. It is the gravest mistake that growers in the central and southern regions have made. Another feature which works against the good of the crop is the preponderance of stalk. The stalks and ears are out of all proportion, and too much of the substance of the ground goes into the stalk. In these zones any of the big varieties, such as Boone Cunty White, Johnson County White, Leaming, or Reid's Yellow Dent, should be adapted, and here really is the home of these sorts. The trouble here from late maturing comes from faulty seed selection and faulty soil conditions, which produce too large stalks.

North of latitude of Champaign, Ill., and Indianapolis, Ind., early types of Reid's Yellow Dent, Griffith's Early Dent, Indiana Early Yellow Dent and Silver Mine are the safest and most dependable, one season with another. Also, in every region of the corn belt ther are unnamed local sorts of corn which mature and yield well, but the ears are poor lookers, and growers accustomed to symmetrical ears of Reid's Yellow Dent do not take to them.

I have followed this matter closely now for several years, and I am satisfied that it is impractical to attempt to adapt the big, 140-day varieties to 100-day conditions. It requires so many heat units and so many moisture units to produce a big, ten to twelve-inch ear of corn, and these units we do not have in the northern section of the corn belt. In this northern section we must look for other means of increasing yield.—L. C. Brown.

Grain Supplied to England.

With regard to cereals, tthere was a general increase in the year 1909 as compared with 1908 in all varieties. The quantity of wheat received in 1909 was slightly below the average of the preceding five years. Of the total, 109,596,480 hundredweight were imported as grain, and some notable changes in the sources of supply occurred. Consignments from Russia rose from 5,764,640 to 19,986,400 hundredweight; those from India from 3,302,880 to 16,388,960 hundredweight; those from Australia from 6,180,160 to 10,864,000 hundredweight. Canadian supplies are not subject to such violent fluctuation, but have maintained steady upward progress, reaching, in 1909, 18,609,920 hundredweight, an addition of 917,280 to the total received in 1908. Against these increases must be set off some large decreases, the United States supply falling from 24,864,280 to 17,364,480 hundredweight, and that from Argentina falling from 35,493,920 to 22,442,560 hundredweight.

Value of Barn-yard Manure.

Manure from the barn-yard adds humus to the soil, and humus acts like a sponge, retaining moisture in the soil, making it more capable of absorbing a heavy rainfall and of holding it there longer. The moral, therefore, is to save and carefully spread all barn-yard manure over the fields. Manure is worth dollars, and will put dollars into the farmers' pockets. — University Farm Press, News, Minn.

The Mighty Pig Pen.

"A woman in Michigan made $10,000 this year with her pen."

"Quit your kidding."

"Honest, she did; she raised hogs."

Its Economy and Power Startle the World!

The Engine Runs on COAL OIL at a Fraction of Cost of Gasoline.

Thousands of these marvelous engines—in actual use today—prove beyond question that kerosene is the engine fuel of the future. The success of the "Detroit" Engine is absolutely unparalleled.

Demand is overwhelming.

Kerosene (common coal oil) runs it with wonderful economy. Kerosene generally costs 6 to 10c less per gallon than gasoline —and gasoline is still going up. Runs on any engine fuel. Only three moving parts. Light and portable. Does work of engines weighing four times as much. Runs everything.

The Amazing "DETROIT"

The Kerosene Wonder—on 15 Days' Trial—Direct From Factory

Any engine you want, from 2 to 20 H. P., sent on 15 days' free trial—tested immediately before shipping and ready to run. If dissatisfied—every dollar you have paid us for the engine cheerfully refunded. Prices lowest ever known for high-grade, guaranteed engines.

The New Book is Ready—WRITE! Tells all about these new wonders that mark a newera in engines. Special introductory price on first "Detroit" engine sold in each community. Quick action gets it. Address

Also Power Grinders, Gasoline Engines, Scales, Farm Implements.

Improvement of Wheat.

A correspondent asks by what process wheat may be improved.

The usual method of improvement of small grains is by head selection; that is, when the crop has ripened the best heads are selected, and these are sown or planted the following year in rows or plats. This process is kept up until sufficient grain is secured for seeding one or more acres. Each head is allotted an individual row or plat and performance record is kept of each head. Heads which show freakish or any undesirable tendencies are discarded, and only those heads which show persistent qualities are retained in the rows or plats.

The most important step in this work is starting with heads posessing as many good qualities as possible. The improvement of wheat by this process is sure, and wonderful results may be had in four years; that is, there should be sufficient seed, the fourth year from the first head selection, to sow the main crop. Particular attention should be given to the character of both head and straw. Large, well-filled, early-maturing heads should be sought for, and preferably those which are borne on stiff, upright straw. Heads which are not completely filled and those which produce berries of light weight should be discarded, and it is essential that all heads conform in size and color of berries as well as in color of glumes, to the variety. For instance, Turkey Red wheat is a rather small, red, heavy berry, but frequently lighter-colored berries are found. Heads which bear even one kernel that is off color should not be used in this improvement work. One should first learn minutely the characteristics of the variety under test and should always keep these characteristics in mind. Persistent and consistent selection must be done each successive year of those heads which show the dominant features. Any departure from the original ideals will confuse the work and really accomplish nothing.

Grain improvement by head selection is nice work, but it is painstaking, skillful work, and only those who devote time, patience and skill to it ever accomplish very much.

The cleaning and grading of seed grain will help the resultant crop, because heavy seed produces stronger plants than light seed, and strong, quick-growing plants will be more likely to produce heavy grain. But improvement for the purpose of fixing good qualities, such as high yield, heavy, uniform weight of berry and firm straw, must come through several generations of breeding of plants which possess these characteristics.—L. C. Brown.

Keeping Apples in Winter.

Millions of dollars represent the losses every year experienced by farmers through the rotting of apples in their cellars. Cold-storage facilities are not generally available, and will not be in this generation. The farmer's cellar will continue to be the place in which most apples will be stored and in which most of the loss from rotting will occur.

Fortunately for the storage of apples, many of the cellars of farm houses have not yet been made the location of the furnace. If a cellar is warmed by the presence of a furnace, it is of no use to consider it as a place in which apples can be stored. So we refer to the unheated cellar.

One general principle should be kept in mind in the storing of apples, and that is to prevent a circulation of air around them. The circulation of air will dry out the apples and cause them to shrivel. This used to be the result when apples were placed on shelves to keep them dry. They rapidly lost weight and became soft and wrinkled. This made them unsalable. About the same thing was done when the apples were placed in bins in dry cellars—they lost weight and salability.

Well-ventilated boxes and barrels used to be advocated for the keeping of apples. Now tight barrels and boxes are recognized as necessary. Some people even go so far as to pack the apples in sawdust in the tight barrels and tight boxes. This results further in preventing an interchange of air, which change would carry off some moisture from the apples.

Warm apples should not be packed in such receptacles, or they will sweat on the fall of temperature, because the air in a warm apple has in it more moisture than can be retained in a cold apple, and this extra moisture will gather on the outside. If the apple is exposed to the air the moisture will evaporate. But if it is packed in a box the moisture will favor the growth of mold and the beginning of the rotting process. Therefore warm apples should be cooled off for some hours till they have reached a low temperature and appear perfectly dry. In the open air the sweat of apples falling in temperature does not show, as it evaporates as fast as it works out of the apple.

The next important matter is that of temperature, which can generally be kept quite low in the cellar or the farm house, except in very warm days in winter. In the side of the cellar, or through the windows, there should be small vents for ventilation or for cooling of the cellar at night. Most farm cellars are without such arrangements. The cellars are shut up tight in the beginning of winter and cold air is let in. But vents to be opened for the letting in of cold air will prove a great help in keeping down the temperature.

A twenty-five-cent thermometer will prove of inestimable value, if kept always where it can show the general temperature of the cellar.

Late Maturity in Crops.

With no killing frosts prior to October 16, still some of the corn in Central and Northern Illinois is not sound and good. The condition is nothing new; but why do farmers still stick to these big-ear varieties? Nine farmers out of ten have selected the big, fine-looking ears for seed again, and the smaller-ear, earlier varieties are not wanted. The trouble is right here: Growers in the southern, central and northern divisions of Indiana and Illinois are attempting to grow the same varieties, when in fact there is from forty to fifty-days' difference in the normal season between the southern and northern divisions. All growers look upon such standard sorts as Boone County White and Reid's Yellow Dent as ideal varieties, and they attempt to grow them in regions clear out of their zone. Most growers like to produce a big, thrifty stalk, even if they do it at the expense of immense stores of fertility. This feature of the crop naturally tends toward later maturity. We have too much unsound corn, and when so much corn goes into cribs in November in poor condition, it shows we are on the wrong track. Boone County White and Reid's Yellow Dent cannot be planted with safety farther north than, say, the latitude of Champaign, Ill., although there are strains of Reid's Yellow Dent which may mature up to 42 degrees. The earliest types or strains are not the usual ones planted, for most growers want the ten to eleven-inch ear, rough-dent, deep grain, and that is just the type which will not mature under 120 to 140 days.—L. C. Brown.

Sorghum is quotable at St. Louis at 15 to 20 cents per gallon, wholesale.

We Reduce the Cost of Living

Our Pure Food Grocery List Will Enable You to Reduce Your Grocery Bills About One-Third

There is not a day in the year when you and your family and guests do not partake of breakfast, dinner and supper. And you have discovered lately that in buying groceries for your table in the old way, paying the local grocer whatever he has chosen to ask you, **it has become much more expensive to keep the table supplied than it used to be.** If we can convince you of a fact that others have proven; if we can make it plain and sure that there is a way to live better than you ever lived before and to do so for the least money you ever paid; if we can establish the fact in your mind that groceries at our place on the average are not higher now than they were five years ago—we assume that you will be glad to save one-third of what you are now paying for groceries, and that you will wish to take advantage of the opportunity at once.

We Sell Groceries of Very Best Qualities at Lower Than Usual Prices

We are able to do this by reason of the fact that we buy in carloads direct from growers, canners and producers, from both hemispheres, and sell in any quantity desired direct to the consumer. Thus we eliminate the several middlemen that under the old method take their profits on the way to your table, profits that you have to pay if you buy the old way.

Why Not Save These Profits For Your Own Pocket?

WE ARE AMONG THE LARGEST PURVEYORS OF FOODS IN THE WORLD. No other retail store and but a few wholesale grocery houses sell the quantities that we do. We have our own pure food laboratory under the direction of a celebrated chemist, graduate of Johns Hopkins University. **We sell only groceries that conform to all pure food laws. WE GUARANTEE SATISFACTION AND SAFE DELIVERY.**

YOU TAKE NO RISK WHEN YOU BUY GROCERIES OF US
FOR IF THEY ARE NOT SATISFACTORY FOR ANY REASON THEY MAY BE RETURNED AND YOU CAN HAVE YOUR MONEY BACK

We Issue a Large Grocery List

EVERY 60 DAYS

Write for a Copy Today

This great price list of groceries is like a large city grocery store right in your home. It posts you on prices and qualities and points the way to a decided saving of money in your expenditure for groceries, and groceries is something that every householder must buy somewhere. Why not read over this new Grocery List and find out what we are talking about? Then send us an order, and prove the facts for yourself. No need to take our word for qualities and prices. Get the goods you want. Try them. You'll wonder, then, how you never before came to adopt this economical and satisfactory way.

THE PRICES quoted on the few items in this advertisement are our regular quotations. You may order any of them, or the new Grocery List, or both. In writing address the house nearest you; 19th and Campbell Streets, Kansas City; or, Chicago Avenue Bridge, Chicago.

The National Farmer and Stock Grower.

(Title Registered in U. S. Patent Office.)

Published Monthly
By THE HALE PUBLISHING CO.
Philip H. Hale, Managing Editor.
Claude A. Cour, Advertising Manager.

Charles H. Hopkins, 150 Nassau street, New York City, Eastern Representative.

Entered at Postoffice at St. Louis, Mo., as second-class matter in January, 1901.

Subscription Price in the United States, 50 cents a year, or three years for one dollar.
Office of Publication, 3550 Vista avenue, St. Louis, Mo. Bell Phone: Grand 400.

We wish our patrons, one and all, "A Merry Christmas" and "A Happy New Year," with the blessings of satisfactory market conditions and abundant harvest in 1911.

"Hammond's Handy Atlas" is a very valuable premium to receive with The National Farmer and Stock Grower one year for 50 cents. Don't fail to look up this offer.

Read about the Cement Workers' Handbook. Cement is cheap and concrete is lasting. A copy of a very handy little book and a splendid farm paper for a year is to be had for 60 cents.

Our rose premium offer is in this paper. Look for it. This rose premium is the best we ever offered.

The Mother and Child picture offered as a premium with a six-months' subscription is an elegant adornment to any home.

Our Seed Corn Premiums.

The seed corn premiums offered by The National Farmer and Stock Grower, crop of 1911, are advertised on page 30. We are furnishing subscribers small quantities of seed corn grown by famous corn breeders who have won many prizes. Any farmer may derive pleasure and profit by planting this seed, harvesting the crop and exhibiting selected ears of corn at the shows. There is little to pay, nothing to lose, and much to gain. We have just sent a check for $75.00 to a young man who won first prize in class and sweepstakes prize at the Louisiana State Fair of 1910 because he exhibited ten selected ears that won these prizes with corn he produced from two pounds of seed corn furnished from this office. He paid us one dollar for two-years' subscription and he received two pounds of seed corn. He has his crop of seed corn to the good and in addition he received $15.00 for each ear of corn exhibited. Others have won lesser prizes, and some did not exhibit at all, in every instance they improved their knowledge of corn growing and obtained better crops than heretofore. Our supply of champion-grown seed corn is limited, and we certainly advise our patrons to secure their supply early. We do not furnish anyone over two pounds of seed corn, and later in the season may have to place the limit at one pound. See page 30.

The Scarcity of Potash.

A farmer in a Southern State had a sample of his soil analyzed by the chemist at the Agricultural College and it was found to contain a very small amount of potash. It was not oversupplied with nitrogen, but it was abundantly supplied with phosphoric acid. This same farmer had bought considerable fertilizer from time to time and was very much disappointed because he had only found on the market fertilizers which contained two per cent. of potash. Being a small farmer and not in a position to investigate further, at the same time he used a fertilizer that was obtainable and not worth one-fourth of what it cost; but he did as hundreds of farmers are doing—buying stuff that they don't need and that is absolutely no good, sold by dealers who are taught to say: "That fertilizer contains all the potash the law allows," and put up by manufacturers who trade upon the fact that the farmer is not a chemist, and that any kind of a compound will pass to get the money.

We rejoice in the fact that a farmer can now buy nitrogen direct, or produce it by raising leguminous crops. We rejoice that potash is at last available at a reasonable price direct from the only available source of supply. We rejoice that the Agricultural Colleges will analyze the soil for a farmer, that he may know exactly what is deficient. We rejoice that farmers are able to co-operate and buy together and improve the soil effectively and economically. There is now no reason why a farmer should not feed his soil intelligently and get the worth of his money. The first move is to get the soil analyzed, then to buy and apply the chemical that may be notably deficient.

We have no doubt that in certain sections, where special crops are raised, that in a general way fertilizers are sold that suit the conditions; but it has been stated to us by people who are better conversant with the subject than we are "that in not one formula is there a sufficiency of potash in proportion to the other chemicals." In Vivian's book, "First Principles of Soil Fertility," speaking of potash, he says: "And the belief has been substantiated in large parts by experiments already conducted, that the average commercial fertilizer does not contain a sufficient amount of this element."

Feeding For Milk Production.

The Missouri College of Agriculture has a cow which has given 11 gallons of milk a day for 182 days; also a cow that has produced 18,405 pounds of milk in a year, from which was made 721 pounds of butter; has also six cows that each produced 709 pounds of butter in one year. It is therefore reasonable to suppose that at said Agricultural College the dairy department is conducted by a professor who knows something about the rations that dairy cows should be fed for the purpose of obtaining the best results.

One of the most interesting and valuable Agricultural College editorial productions has just arrived at this office in the shape of a circular entitled "Feeding For Milk Production," edited by Prof. C. H. Eckles, Professor of Dairy Husbandry, giving the results of his experience with the Missouri Agricultural College dairy herd. He has gone into the subject in a clear, concise, definite manner, so that any dairy farmer will be able to understand it. There is no Greek and Latin and very little chemistry to cause the farmer to give it up in despair, and when the Professor explains the principles governing the composition of balanced dairy rations he also gives the weight of pounds of the actual feeds, so that a dairy farmer is able to use up his own farm feed productions to the best advantage and buy no more concentrated feeds than are actually necessary.

We intend to refer to this circular again in future issues and would like everyone of our readers to carry this circular around in his pocket for a month of two for the purpose of making a study of it. We therefore advise our readers in every state to write to Prof. C. H. Eckles, College of Agriculture, Columbia, Mo., and ask for a copy of Circular No. 44, as mentioned in this paper. They will be glad to see in this circular a life-like picture of Missouri's Chief Josephine, the greatest milk-producing cow on earth, the picture of the six cows heretofore mentioned as great average butter producers, also the picture of Princess Salatine Carlotta, the cow that gave the 18,405 pounds of milk in one year.

"Ropp's Commercial Calculator" was published for the benefit of farmers. It fills the bill. After a farmer becomes acquainted with the tables he carries it with him whenever he has any trading to do. See page 25.

Crimson Winter Rhubarb.

We are offering as a subscription premium a few plants of Crimson Winter Rhubarb, originated by the famous plant improver, Luther Burbank of California. We receive the plants that we are sending out from Mr. J. B. Wagner, a California plant breeder, who paid Mr. Burbank $35 for his first plants, seven years ago. Since then he has made a reputation for improving on Burbank's foundation stock. It is now a bonanza plant that can be tried anywhere. Rhubarb yields as much as $1,000 per acre the first year after planting and is at its best during the season when very little other garden truck is obtainable. It is easier to grow than corn or other field crops, and this particular rhubarb yields best from October through winter until late in the spring. For a small investment it is better than a gold mine. We also furnish a copy of Wagner's booklet entitled "Rhubarb For Profit," the best authority on the subject. See page 29.

A Reliable Guide to California.

The wonderful productiveness of California is attested on every fruit and vegetable stand in the United States. California associations of farmers hold auctions of fruits in every city worthy of being called a market. Their fruits are transported across the continent by the Union Pacific and Southern Pacific Railways. If you contemplate going to California to locate, get posted beforehand. Write to Gerrit Fort, of the U. P. R. R., 897 Farnam street, Omaha, Neb., and ask for information about farms in California. He will answer promptly.

We have heard very much about abandoned farms of New England, but it appears that any farm an experienced farmer would buy will cost more in New England than the best land in Iowa.

The Bureau of Animal Industry of the Department of Agriculture is issuing new and revised regulations for the admission of pure-bred stock free of duty from foreign countries for breeding purposes.

In the state of Indiana, during the past ten years, the value of farm lands advanced from $39 to $75 per acre. The improved farm acreage in Indiana is now about one per cent. more than it was ten years ago.

In Indiana there are 214,000 farms. Of these 91,213 are owned free and clear; 56,788 are mortgaged; 64,451 are conducted by tenants and 2,289 by farm managers. This is according to the census of 1910.

HAVE ICE AND KEEP COOL.

IT COSTS BUT LITTLE AND IS A GREAT LUXURY. WRITE FOR PAMPHLET A M, "HOW TO CUT ICE."

FRAZIER'S DISTEMPER CURE

Chronic Cough Among Horses

May run into Heaves. Avoid this trouble by using FRAZIER'S DISTEMPER CURE. Every bottle guaranteed to cure one case of any form of Distemper, Influenza, Epizootic, Pinkeye, Catarrhal Fever and all Nose and Throat Diseases. Best Kidney Remedy, safe for brood mares and all others. The $1.00 bottle contains three times as much as the 50c. bottle; sold by all druggists, or direct prepaid. 32-page horse booklet sent free.
BINKLEY MEDICAL CO., Dept. H, Nappanee, Ind.

VIRGINIA FARMS

You can buy fertile farms with timber, fruit and water for $10.00 per acre and up. Annual Rainfall 45 inches. Splendid country for fruit growing, dairying, stock raising and general farming. Fine climate, abundant water, convenient Eastern markets, excellent schools, good neighbors. Write for our illustrated Quarterly, maps, Homeseeker's Excursion rates and other information. They tell WHY Virginia land is so low in price.

F. H. LaBaume, Agr. & Ind. Agt., Norfolk & Western Ry. Box 2044, Roanoke, Va

$10 AND UP PER ACRE NOW BUT PRICE RAPIDLY ADVANCING

BUY THE LOWEST COST ENGINE

MADE. Lowest fuel cost; lowest up-keep cost; easiest on the machine it operates, delivering steadier power than any other gasoline engine, adapting it especially for operating farm machinery, with better results and least waste of grain. Lowest fuel cost for it runs on Gasoline, Kerosene, Distillate, Gas or Alcohol and has perfect lubrication. Lowest cost because it delivers greatest available power per horse. A slow speed, high duty engine. Starts easier and quicker than any other engine, occupies less space is less cumbersome, with less vibration, therefore adapting it for either stationary, portable or traction use. IT IS THE POWER CONTRACTOR'S FAVORITE ENGINE. No engine made has so wide a range of use. YOU WILL MAKE A MISTAKE IF YOU DO NOT WRITE US FOR INFORMATION 1½ H. P. to 5½ H. P. single cylinder. 6 to 20 H. P. two cylinder. 30 to 50 H. P. four cylinder. State your requirements and get our advise
THE TEMPLE PUMP CO., Manufacturers, 420 West 15th St., Chicago, U. S. A. This is our 58th year.

Agricultural Blue Book.

This is our own publication, and is a copyright work of great merit and convenience. It is called **"The Agricultural Blue Book and Live Stock Breeders' Directory."** It is designed to be useful to farmers and to business men in all sections of the country.

The Farming Section.

The Agricultural Blue Book contains 128 pages devoted to names and addresses of live stock breeders, experimental and general farmers, dairymen, horticulturists, etc. This farm list numbers 150 to 180 to the page—about 22,000 in all. All the names and addresses have been carefully verified. In each instance the principal occupation and class of stock raised are stated. It is fully up-to-date and represents the owners of about twelve millions of acres of land, who conduct their own farming operations. In various lines of business the value of this **Agricultural Blue Book** cannot be overestimated.

The Business Section.

At the request of many of our patrons we have included a Business Section, consisting of thirty-two pages. This contains a list of firms who do business with agricultural people. This list is arranged alphabetically by states. It gives the name, address, occupation and class of manufacture, etc. A general farmer, stock raiser, dairyman, poultry keeper, ranchman, fruit grower, will find this book to be valuable and interesting.

Ready For Delivery.

The Agricultural Blue Book is just out and ready for delivery. The size is 6x9½ inches, elegantly bound in blue cloth with gilt title. The price is $2.50 per copy. If the buyer is not satisfied, he can return the book and the money will be refunded. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

The Packers and Argentine Beef.

We are informed by the reports of the United States Department of Agriculture that the United States packers have secured a stronghold in Argentine for the purpose of controlling the dressed-beef trade of that country. This trade so far is between South America and Great Britain, and thus far it is no disadvantage in having it in their hands. They are acting within their rights. The meat trade between the United States and Great Britain is no longer the controlling factor in the price of American cattle. Liverpool quotations do not concern us as they did thirty years ago, because we have a great population to feed in the United States and the future of the cattle, hog and sheep raiser here will depend upon the meat-buying ability of the city people of our own country. What we have to do is to look after our own market and see that we are not unjustly deprived of its benefits.

South America is an immense territory, and Argentine is the choice stock-raising part of it. The cattle ranches are held by large ownerships and the packing plants are also in strong hands. The South American interests are increasing the output far beyond home consumption, and eventually and inevitably will look for a market in the United States. Last year, under the then existing law and customs duties, all meats coming into this country from foreign ports had to pay two cents a pound for the support of the United States government; but in the tariff revision this was reduced by the protective party in power to 1½ cents, and we feel assured that at the next revision, when nobody is looking, there will be another reduction, and about the time the tariff will be any positive benefit to our great army of stock raisers it will be taken away altogether and the South American dressed meats will be landed at Galveston, New Orleans and New York free and untaxed, just the same as hides are coming in free and untaxed now.

When this beef and mutton begins to arrive there will be great excitement with the stock raisers. They will begin to cry aloud against the injustice of having to support all our county, state and federal governments out of the stock they produce and sell, while foreign productions will come in free and untaxed; but then it will be too late. The cry even now is: "Take the taxes off foodstuffs!" which really means: "Stick all the taxes you can on home-grown foodstuffs," and "let foreign foodstuffs come in free and untaxed." In other words, if you wish to raise cattle for the American market without paying taxes here, why go to Argentina?

We will not go further into this subject; it is a very serious one. Yet nobody seems to know, and nobody appears to care. We are not in favor of shutting out South American beef by a prohibitory tariff, but we are in favor of restoring the duty to two cents a pound—as it was a year ago—and we are in favor of the restoration of the duty on hides.

In the year 1910, the combined corn production of Alabama, Louisiana and Mississippi was 188,523,000 bushels, a gain of 53,000,000 bushels over the previous year.

In the present year, the corn production of Illinois exceeded any other state by 70,000,000 bushels. Iowa averages highest in quality.

The Department of Agriculture finally places the corn crop at 3,121,381,000 bushels, against 2,772,376,000 bushels in 1909. The quality 87.2, against 84.4 last year. Average yield per acre, 27.4 bushels, against 25.5 last year, and the ten-year average of 25.8.

Maine averages 210 bushels of potatoes to the acre; New York, 102; Michigan, 104; Colorado, 100; Wisconsin, 95; and Pennsylvania, 88.

The average weight per measured bushel of this year's crop of wheat is 58.5 pounds, against 57.9 in 1909, and the ten-year average of 57.6

The average weight of oats this year is 32.7 pounds to the bushel, the same as last year—two phenomenal crops in quantity and quality.

Kentucky is still raising more tobacco than any other three states in the Union. In 1910, 381,024,000 pounds; Virgina, 123,318,000; North Carolina, 129,600,000 pounds; and Ohio, 75,087,000 pounds.

Ice-cutting Implements.

On page 8 will be found an advertisement concerning ice cutting and storing. It is a subject worth investigating. Ice-cutting tools made by the specialist are better than the appliances picked up at the last moment. The pamphlet advertised is actually a magnificent catalogue, enumerating every conceivable ice-cutting, hauling, lifting and handling machinery for small and large operations. It is illustrated from beginning to end, and is a work of art. Write to Gifford-Wood Co., 123 North Jefferson street Chicago, Ill., for Pamphlet A M, "How to Cut Ice;" or, if nearer to Hudson, N. Y., or Arlington, Mass., write to either establishment.

The results obtained from the fruit and vegetable lands of California are not overdrawn. See page 23.

"Good deeds ring clear through heaven like a bell."—Richter.

FARM AND RANCH LANDS.

FLORIDA.—50,000 acres of moderately level land in Northwest Florida. Railroad passes through the tract with location for a town on the property. Within sixty miles of the city of Appalachicola and its fine harbor. Soil a sandy loam with clay subsoil, adapted to the growing of truck garden, fruits, pecans, grapes, etc. Near to this property is where is grown the famous Sumatra leaf wrapper tobacco.

There is estimated to be now on the land about 3,500 feet per acre of yellow pine timber, or a total of about 175,000,000 feet. It is claimed that there are no swamps or wet land, except a small acreage along the creek.

This property is well located as to climate and soil for a subdivision and colonization proposition.

Price, six dollars ($6.00) per acre. **T. H. Jones,** 513 Roe Bldg., St. Louis, Mo.

FLORIDA for 25c. Big Monthly Magazine. Questions answered about land of Flowers. **Fruit & Produce News, Box E, Tampa, Fla.**

MISSISSIPPI.—25,000 acres on two railroads, in Jackson county, Mississippi. A sandy loam soil with red clay subsoil; moderately level, yet sufficiently rolling to drain and cultivate well. Good water; delightful climate. Here can be grown cotton, corn, oats, potatoes, both Irish and sweet, and nearly all kinds of garden truck, besides figs, Satsuma oranges, grapes and berries of many kinds. Price, six dollars $6.00) per acre. **T. H. Jones,** 513 Roe Bldg., St. Louis, Mo.

MISSOURI.—4,120 acres of rich, cut-over, well-drained bottom land, within one mile of railroad station. Located in the rich, productive region of Stoddard county, Southeast Missouri, where such great crops of cotton, wheat, oats, corn, timothy, red clover, alfalfa, potatoes, and in fact, nearly all kinds of grains, grasses and fruits and vegetables grown in the United States are produced as well. The land is very rich and the region is developing rapidly. It will cost about $10 per acre to get the land ready for plowing. Good markets and shipping facilities. Will be sold in farm tracts at $25 to $30 per acre. Many consider this better than the rich lands of Illinois selling at $200 per acre. **T. H. Jones,** 513 Roe Bldg., St. Louis, Mo.

680 Acres 3,280 Acres

BARGAINS worth looking up. Use your sense and money. Will sell much below productive value. Market value over present price will quadruple on all these in less than ten years. Much more than interest on investment while waiting.

The 680 acres is a high-class farm near Ft. Scott, Kansas. Close to railroad station. 500 acres rich creek bottom land, balance rough pasture land. The bottom land was originally part prairie and heavy walnut, oak and hickory timber land along the creek. No overflow. Rich limestone soil with porous clay subsoil. Corn, wheat, oats, timothy, clover and alfalfa land; well improved and fenced. Finely watered by well. Spring branch and creek with gravel and rock bottom. A clear little running stream. Worlds of timothy, clover and corn. The best alfalfa field of 20 acres in Kansas. Seventy tons of alfalfa on the farm now, cut from this 20 acres in three cuttings. A heavy fourth crop ready to cut. Ten acres more sown this spring on oats ground, and the stand of alfalfa now is perfect. This year's growth is now 18 inches high. The oats made 50 bushels to the acre.

Price, $60 an acre, or leave out the rough 160 acres pasture land and take balance at $65 an acre. EASY TERMS.

3,280 acres on main line of Rock Island, between Kansas City and St. Louis. Finely improved. Station in the center of farm, at $100,000. Is worth now $50 an acre. Will sell for $100 shortly.

J. H. LIPSCOMB,
306 Fidelity Trust Bldg., Kansas City, Mo.

MISSOURI. 1,700 acres of "cut-over" timber lands, located in Reynolds county, Missouri, nearly 175 miles south of St. Louis. Not a solid body, but in tracts of 40, 80, 100, 200 and 320 acres. About 25 to 40 per cent. can be used as farming land, remainder for orchards and pasture. Some of it hill land, some rolling, some smooth. Excellent water; very healthful climate. Good land for growing poultry, stock and fruit, especially apples, peaches, grapes, strawberries, blackberries, etc. The timber is chiefly oak and hickory, and it is estimated that there can now be cut nearly 3,500 feet per acre. Price, $5.00 per acre. **T. H. Jones,** 513 Roe Bldg., St. Louis, Mo.

MISSOURI.—385 acres of rich, well-drained bottom land, excellent for corn, wheat, timothy, clover, alfalfa, cotton, fruits and vegetables. Nearly three-fourths in cultivation, remainder in timber. Four tenant houses, four barns, good fencing and land easily cultivated. A rapidly-growing region, with schools, churches, good markets, a mild climate and very rich soil. Price, $70 per acre. **T. H. Jones,** 513 Roe Bldg., St. Louis, Mo.

NEW MEXICO.—136,000 acres of slightly-rolling, well-drained land, in one body, now used as a good stock ranch, located about twenty miles from Roswell, New Mexico. It is estimated that four-fifths of the land would be well adapted to agricultural purposes, it being about the same quality and characteristics of thousands of acres now in farms in the Pan-Handle of Texas, and which is being sold at $10 to $20 per acre. Much of this land, situated in the valley, is a black, alluvial soil, well adapted to agricultural purposes.

This property might be subdivided, then sold into small farms, especially following out the methods of dry farming.

The ranch is well equipped with water holes and a number of wells and windmills. It has a substantial fence of five wires.

There are prospects of a railroad being built through the land.

Price, six dollars ($6.00) per acre. Reasonable terms. **T. H. Jones,** 513 Roe Bldg., St. Louis, Mo.

Live Stock in the Southeast

There is money in raising live stock and in dairying in the Southeast, where good lands are only $10 to $40 an acre. The climate is the best in America. The largest varieties of grasses and forage plants give stock raisers advantage over other sections. Alfalfa yields four to six crops a year. Corn yields by good farmers highest in the country. Beef and pork are made at 3 to 4 cents a pound. Dairy products command highest prices. Government experts recommend Southeast for horses, cattle, sheep and hogs. We will give information about best locations. Write for Homeseekers' Rates.

M. V. RICHARDS
Land and Industrial Agent, Southern Railway
2044 Pennsylvania Avenue, Washington, D. C.

TEXAS.—2,600 acres, 11 miles from Sabinal, Uvalde county; about half agricultural, balance excellent grazing. Price, $7.00 per acre; half cash; deferred payments to suit the purchaser. Address, **Albert D. Evans,** North Fort Worth, Texas.

VIRGINIA.—Farms for sale from the mountains to the sea. Stock, Grain, Fruit, Poultry, Fish and Oysters. New Illustrated Catalogue free. Address at once **Geo. E. Crawford & Co.,** Richmond, Va.

CASH FOR YOUR FARM OR BUSINESS,

Our Premium Offers.

Many of our subscribers have noticed the liberality of Uncle Piper, subscription editor of The National Farmer and Stock Grower, in offering subscription premiums. Uncle Piper made a boast that he could take a few copies of The National Farmer and Stock Grower and a pocketful of dairy thermometers as premiums and take enough subscriptions in the Ozarks to buy an automobile. He started out and you see the result. Uncle Piper has had a notion that all he had to do was to offer a dairy thermometer as a premium and that would bring in subscriptions so fast we would have to hire an extra wagon to carry the money to the bank.

Is this Uncle Piper?

Uncle Piper started out all right for the Ozarks and lost himself. We had to send a tracer after him, and the tracer sent in a sketch of a poor fellow camping by the roadside, saying: "Is this Uncle Piper?" and sure enough "it is." Uncle Piper is thinking of his boasting; is thinking of the set of furs that he promised Mrs. Piper; and he is thinking that her chances for the furs are not very good. Since the picture was taken we have received a letter as follows:

"This country is looking fine. We are doing well on the road. If you fellows in the office will only invite attention to the subscription premiums in the paper, all will be well. Give prominence to the lock-stitch awls, and stick the article about seed-corn premiums on the best page; fill up another page with the cement workers' handbook; display the corn huskers; and so on, and so on. Get a move on you." Signed Uncle Piper. And then we look at the picture once more and ask the question: "Is that Uncle Piper, the famous subscription editor of The National Farmer and Stock Grower?" and the answer is that "it is."

THE CROP OF OATS.

The Low Market, the Distribution and Feeding Value.

On the day this article is written the Chicago Board of Trade is quoting oats for delivery before the last day of December at the price of 31 cents a bushel. Any farmer who knows what the freight rate on grain is to his nearest market can tell very closely what money value his oats have if shipped to market. If he has a crop of oats unsold, they are worth more at home than on the cash market.

We have written about oats in several previous editions of this paper, saying that oats were being sold too low, and that conditions favored feeding the crop on farms rather than sending the crop forward to be sacrificed. We also stated that the market for oats could be readily controlled by farmers if they would just quietly keep oats off the market and feed as many oats as possible to stock at home. We also stated that there being a very small quantity of oats exported, there was very little so-called speculative movement; in other words, the trade is on the hand-to-mouth basis, which results in daily orders rather than contracts for future delivereies. When the market grade of oats is quoted at 31 cents it is time to look around for a means to dispose of the crop in order to cash it to a better advantage, and the only course we can see to follow is to feed all that can be fed profitably and hold the balance.

Some light has been turned on the oats crop recently by the Department of Agriculture. Farmers' Bulletin No. 420, by Prof. C. W. Warburton, is entitled: "Oats; Distribution and Uses," and it is timely and interesting. In twenty-four pages there is not a waste line. It is full of facts carefully arranged for the purpose of posting farmers, so that they can understand the entire oats situation. It ought to be on the desk of every farmer who expects ever to have oats to sell. To obtain a copy, all that is necessary is to write to the Secretary of Agriculture, Washington, D. C., and ask for a copy of Farmers' Bulletin No. 420. We cannot in this article do more than to refer to the main points covered so completely by the bulletin.

Probably the reason we are so complimentary in referring to this bulletin is because it sustains all our own conclusions. Oats is the world's largest crop in bushels, but not in pounds. Although raised in most countries, the principal crops are grown in Europe and North America. European Russia raises splendid oats, the crop being very little less than in the United States. Canada is producing a third as many oats as the United States on the average of ten years. The states which usually market the largest surplus of oats are Illinois, Iowa, Wisconsin, Indiana, Minnesota and Nebraska. These are all important oats-shipping states, and if these states would hold oats off the market for thirty days there would be very little oatmeal on breakfast tables of the city people.

The bulletin supports our previous conclusion that the greater portion of the oat crop of the United States is fed on farms where it is grown; only about 29 per cent. of the crop is usually shipped out of the county where it is raised. On this basis the 1,096,396,000-bushel crop of 1910 would produce a marketable quantity of 365,465,000 bushels; but the crop being the greatest ever known, the surplus for market is more likely to be 500,000,000 bushels, and that is what is breaking the market. Last year the shipments amounted to 330,000,000 bushels out of a crop of 1,007,353,000 bushels.

As previously stated by us, the export of oats is insufficient to cut any special figure in the matter of price, amounting to but 2 per cent. of the crop. This year prices being lower, the exports may be larger than usual.

Last year we imported 6,691,000 bushels of oats, mostly for seed, but some few oats arrived from South America and were sold on the grain market.

The greater quantity of oats is fed to horses. The Scotchman consumes oats as his main ration, but in the United States oats are not freely used in general consumption. A whole lot of manipulated wheat and corn breakfast foods are on the market, but none of them compare in food value with oatmeal properly milled and cooked.

It may be that the low price of oats will cause increased consumption at the table, thereby enlarging the demand for the benefit of future years; but right now, in the present emergency, the only way oats can be advanced in price is for farmers to feed what they can and hold the balance.

TO BE SURE OF A GOOD MANURE SPREADER LOOK FOR THE I H C MARK

THERE is one way to be sure of satisfaction in buying a manure spreader—one way to be sure of highest quality and greatest value. See that the I H C trade mark is on the spreader you buy. The proof is the experience of thousands of careful farmers—and the records of I H C spreaders on their farms.

There are many reasons for the efficiency, strength, simplicity, and durability of I H C spreaders. First, they are made on the right principle—second, of the highest quality materials—third, by master workmen,—and fourth, in the best equipped factory for the manufacture of manure spreaders.

I H C Manure Spreaders

are built up to a standard—not down to a price. They are made as all manure spreaders ought to be made. There is no experimental or "freaky" construction in them. They stand up and work perfectly month after month and year after year.

Call on the local I H C dealer and let him show you the many I H C advantages. Note the easy adjustment of the feed, enabling you to spread just the right amount of manure in just the right places. Note that the beater bars are designed to thoroughly pulverize every particle of manure. Note the wide tires, the roller-bearings, and light-draft features. Note all the other I H C features. Then remember that you are assured of satisfaction by the I H C reputation.

You can have a choice of three spreaders. **Corn King** and **Kemp 20th Century** are of the return apron type, and **Cloverleaf** spreaders are of the endless apron style. All are made in several sizes ranging from 30 to 70 bushels capacity.

If not convenient to see the I H C local ealer at once, write direct for catalogues and all other information you desire.

I H C Service Bureau

The purpose of this Bureau is to furnish farmers with information on better farming. If you have any worthy question concerning soils, crops, pests, fertilizer, stock, etc., write to the I H C Service Bureau, and learn what our experts and others have found out concerning those subjects.

"Feeds and Feeding."

A new edition of this famous work by Prof. W. A. Henry is just issued. It is a great authority on all methods of stock feeding. The publisher's price is $2.25 per copy. This office will sell copies at the publisher's price, send the book prepaid and include a year's subscription to The National Farmer and Stock Grower. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Open Up the Cribs.

A letter received a day or two ago from an extensive corn grower in Sangamon county, Illinois, describes a situation which may be found in many regions of the corn belt this season. He says his Boone County White and Leaming have not dried out satisfactorily, and he fears he will have trouble with it should we have a spell of warm weather. The truth is, corn has not dried out this fall like we would naturally expect, with the weather conditions we have had. The kernels on the ears were seemingly mature and dry early in October, but the cob has not dried out. I noticed this especially in a lot of corn which we selected early for seed. The ears were apparently sound and mature, but after storage of six weeks the cobs are full of moisture, and artificial heat was necessary to put the corn in safe condition for storage for winter. Don't be fooled on appearances. Open up the cribs, so that every ear of cribbed corn will have the benefit of as free circulation of air as possible.—L. C. Brown.

A Prize Cow's Ration.

From the Press Bulletin issued by the Wisconsin College of Agriculture a monthly prize of $25 offered in the Wisconsin Dairy Cow Competition was won by Yu-No Aaggie Johanna, 86,683, owned by G. J. Schuster, of Milwaukee. The production of this cow for the month was 1,952.3 pounds of milk, containing 238.57 pounds of solids and 63.45 pounds of butter-fat (12.22 per cent. solids and 3.25 per cent. fat). Her age, four years, ten months, entitles her to a handicap of 5 per cent., making a total credit of 66.623 pounds of butter-fat. Yu-No Aaggie Johanna was only five days in milk at the beginning of the month. Her daily ration was 16 pounds ground oats and bran, 20 pounds silage and 12 pounds alfalfa hay.

For the month of September, the eleventh month of the competition, forty-four cows that had been in milk an average of 138 days were credited with a production of over fifty pounds of butter-fat each. Complete reports for the month were furnished by 243 cows, their average actual production being 853.8 pounds milk and 32.207 pounds butter-fat, average test 4.12 per cent.

At the Texas State Fair, the three highest scoring tubs of butter were exhibited by Donnell Creamery Company, of Belton; score, 89½; Lyon Farm Creamery, of Sherman; score, 89; and the Alta Vista Creamery Company, of Fort Worth; score, 88¼. Exhibit of ten pounds of butter in one-pound prints—Yorktown Creamery Company, of Yorktown; score, 91½; Lyon Farm Creamery, of Sherman; score, 91; and Alta Vista Creamery, of Fort Worth; score, 90.

CREDIT SUBSCRIPTIONS.

We desire to invite attention to our blank form at the end of this item, which can be filled out for subscriptions on credit. This is an invention of Uncle Piper, our subscription editor, who has guaranteed that every one of them will be paid when they are due. The subscription price of this paper is $1.00 for three years, and the bill for the subscription is sent to the subscriber at the end of the first year. When the bill goes out Uncle Piper generally slips in a list of handy premiums for the subscriber to select one, providing he pays the bill promptly, and the general result is that the bill is soon paid. When it comes to getting subscriptions from intelligent, high-class farmers, Uncle Piper is at the head of the class.

Uncle Piper.

SUBSCRIPTION BLANK.

To the Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Gentlemen: — You are hereby authorized to enter my name as a subscriber to The National Farmer and Stock Grower for three years. At the end of the first year I will pay One Dollar for the three-year period. This order is given with the understanding that I am at liberty to stop the paper at any time by paying the subscription to that date.

Name.. .....

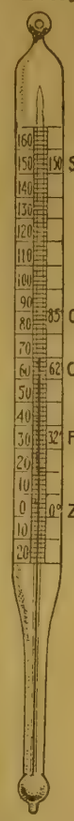
"Dazey" Dairy Thermometer.

This thermometer is offered as a subscription premium in connection with The National Farmer and Stock Grower. It is one of the discoveries of Uncle Piper, the subscription editor of this publication.



Every farmer ought to have a dairy thermometer for home use. We have found one—the best of all. It is 8½ inches long. It is high grade, and with care will last for many years. The temperature of cream regulates to a great degree not only the time required in churning, but the quality of the butter. If the cream is churned when at the proper temperature, the result is generally nicely-granulated butter. When the temperature is wrong, the work is uncertain, troublesome, and the butter is inferior. Uncle Piper used to be on a dairy farm in Texas. He did not manage it, however. He would buy a dairy thermometer and demanded that it be used; but **She Who Run the Ranch** said **No!** Now Uncle Piper is trying to force the dairy thermometer on other people because he could not properly introduce it into his own family. Send us 60 cents and we will send you The National Farmer and Stock Grower for one year. We will also send you, securely packed, postpaid, safe delivery and quality guaranteed, one "Dazey" Dairy Thermometer. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Another Milk Powder.

A process of reducing milk to a powder has now been introduced into Norway. One of the new companies formed has contracted to deliver three hundred tons of dry milk each year for three years to an English firm. The dry milk is used largely for invalids and convalescents, and on ships on long voyages, because of its keeping qualities under all climatic conditions and its convenience for transportation.

English Dairy Delivery.

A new milkman had been told that the lady at No. 75 was inclined to find fault. But she was a good customer, and he was on no account to be rude to her. "Those eggs you left yesterday here were stale!" complained the lady on the milkman's second visit. "Them heggs," responded the milkman blandly, "was laid 'arf an hour before you 'ad 'em by special, quick-laying birds imported from the Scilly Isles, marm, an' they came down ter this very house by Marconigram, so as yer should get 'em fresh. A bit of a twangy flavor they may 'ave; but you can lay odds, marm, they weren't stale!" The lady gasped.

"Well, the milk didn't seem as good as usual yesterday, either," she pursued.

"Well, the guv'nor will be cut up when 'e 'ears that!" continued the milkman. "'E sent down to Halderney a-purpose for a cow wot'll eat nothing but peaches an' pineapples. 'Never mind the expense,' sezee. 'This 'ere cow we keeps a-purpose for the lady at No. 75; an' mind it sleeps on a feather bed at nights,' 'e sez, 'an' don't forgit the heiderdown quilt an' the bed-socks.' Was there anything wrong wi' the butter, marm?" But the lady shook her head, speechless.

DE LAVAL BUTTER
Triumphs As Usual
At National Dairy Show

At the fifth great NATIONAL DAIRY SHOW held at the Coliseum in Chicago October 20th–29th, butter produced through the use of DE LAVAL Cream Separators made the usual clean sweep of all the higher awards; just as at all previous National Dairy Shows as well as all the contests of the National Buttermakers Association since its organization in 1892.

The highest award at the great Dairy Show this year went to Albert Camp, of Owatonna, Minn., with a score of 97, and the second highest award to B. A. Hass, of McFarland, Wisc., with a score of 96.66, both DE LAVAL users.

In the seven great State Contests for Silver Cups, five of the Cup winners were DE LAVAL users and one was an exhibit made from cream gathered from farm separators largely DE LAVAL.

Year after year, dating back to the invention of the "ALPHA-DISC" system of DE LAVAL bowl construction, butter made by users of DE LAVAL machines has scored highest and won all highest awards at every large and thoroughly representative butter contest throughout the world.

The explanation is to be found in the ideal design and construction of the DE LAVAL separating bowls and their comparatively low necessary speed, which enables the production of cream of even texture in perfect condition for superior buttermaking, an advantage which is never possible in the use of any gravity creaming system and seldom in that of any other centrifugal separator.

Hence the indisputable fact; established by twenty years of world's records, that DE LAVAL Cream Separators produce not only the MOST but the BEST cream and butter.

Dairy and Creamery Notes.

During the fiscal year ending June 30th, 1910, the one-fourth-cent tax on uncolored oleomargarine was collected upon 136,236,448 pounds, and the ten-cent-a-pound tax was collected upon 3,491,978 pounds colored. The increase of the oleo product in one year was in round numbers 50,000,000 pounds.

The November Milk Reporter of Sussex, N. J., speaking of New York prices, said: "Bear in mind that milk is now sold for nearly 4½ cents per quart net to the farmer, and that certain brands of feed are $3.00 per ton less than it was five years ago, when milk brought much less."

Wanted More Bacon.

Senator "Bob" Taylor, of Tennessee, tells a story of how, when he was "Fiddling Bob," Governor of that state, an old negress came to him and said:

"Massa Gov'na, we's mighty po' this winter, and Ah wish you would pardon mah old man. He is a fiddler same as you is, and he's in the pen'tentry."

"What was he put in for?" asked the Governor.

"Stead of workin' fo' it, that good-fo'-nothin' nigger done stole some bacon."

"If he is good for nothing, what do you want him back for?'

"Well, yo' see, we's all out of bacon ag'in," said the old negress innocently. Cosmopolitan.

POLAND-CHINAS.

Come and see our great herd for yourself. We can show you Sows with litters that will wake you up to your interest. Come and see us or write.
KIRBY STOCK FARM, Marmaduke, Ark.

SPLENDID POLAND-CHINA SWINE.

A few high-breed Fall Pigs for sale; one for $15.00, or $25.00 for the pair; also booking orders for Spring Pigs. No better Poland-Chinas in the land. **WILDER CARPENTER, Grandview Farm, Marmaduke, Arkansas.**

Buy right-type, low-down, deep-bodied, compact Angus of leading families. **J. P. VISSERING, Box 1, Godfrey, Ill.**

BEST STRAINS OF POLAND-CHINAS.

Everything sold. Will have a fine bunch of Spring Pigs. Will book orders now for them at $10.00 each. All buyers are well satisfied.
D. F. BEAUCHAMP, Meredosia, Ill.

SPLENDID LOT OF POLAND-CHINAS.

We have a fine lot of Poland-China Pigs for sale that will give satisfaction, strengthen and invigorate any herd. Our stock originated on the famous Goodrich Farm and has been constantly improved. Write for prices.

POLAND CHINAS

Of national reputation for size and bone. They are sired by 1,000-lb. Boars and are out of stretchy, prolific Sows.
J. P. VISSERING, Box 1, Godfrey, Ill.

REGISTERED SHROPSHIRE SHEEP.

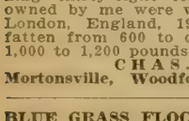
For Sale: Some good registered Shropshire Ewes; bred to an imported English Ram. These are superior Ewes and a fine chance to get some pure-bred Sheep at a reasonable price.
C. J. SMITH & SONS, R.M.D. 4, Greenville, Ill.

O.I.C. and CHESTER WHITE HOGS

all ages, from First Premium Boars at Illinois and Iowa State Fairs. September Gilts all sold. Some choice Boars and bred Gilts yet for sale. Send for free catalogue.
W. A. Hinkle, R. R. 7, Decatur, Ill.

TAMWORTHS FOR SALE. The Bacon Hog, the largest and most prolific breed. Early to mature, economical feeders and unsurpassed as range hogs. Boars, Sows and Pigs not akin from best strains. My herd won over 100 ribbons at four State Fairs in 1909. Only made two exhibits in 1910, winning thirty-eight ribbons. Imported stock owned by me were winners at Royal Show, London, England, 1907. Mature Sows will fatten from 600 to over 700 pounds; Boars 1,000 to 1,200 pounds.
CHAS. FORD, Mortonsville, Woodford County, Kentucky.

BLUE GRASS FLOCK OF SHROPSHIRES.



Registered Rams and Ewes of best breeding and quality. Dense fleeces of good length. Animals that will improve any flock. Best imported Rams at head of flock. Prices reasonable.
WILARD MILLER, R. F. D. 2, Anita, Iowa

You can buy fence at wholesale prices—13¼ cents a rod up if you write Kitselman Bros., of Muncie, Ind., for their free Catalogue. See their ad. in this issue.

SHAMROCK, 2d—Grand champion steer at the Chicago International Live Stock Exposition. Fed and exhibited by the Iowa Agricultural College. Sold by CLAY, ROBINSON & CO., live stock commission agents, at the magnificent price of sixty cents a pound to C. H. Morgan & Co., enterprising Chicago butchers.

Feeding the Farm Horse.

Probably the most important part in the care of the horse is the feeding. A large majority of the diseases among farm horses result from faulty feeding. So many make the mistake of not securing the best feed. Their trouble begins when partially-matured, musty and dusty feed is used.

Several points should be taken into consideration when we decide upon the amount of feed; whether the animal is accustomed to dry feed, and if in good flesh, or in a thin, emaciated condition.

A horse should not be fed a large quantity of hay and grain without exercise. Many think that because a horse is thin in flesh no work should be required of him. It is always best to work the flesh into the animal rather than to fatten him as you would a steer.

A good plan is to have a stated programme as to time and amount of feed to be given. Horses, by all means, should be fed regularly. Hay requires time for mastication and digestion. For this reason, the large percentage of the hay should be fed at night. Horses soon learn the manner of giving food and water, so it is best to have one feeder and have his plan followed out for all the horses. The horse should receive some water the first thing in the morning. After watering the horse is fed a small amount of hay and then given grain after all the hay has been eaten. By this plan the feed which is the most difficult to digest is left in the stomach, and therefore receives proper digestion. The noon feed should be given after the horse is cooled and has been allowed to rest for fifteen minutes or half an hour. A small quantity of water may be given soon after the horse is brought to the barn. Feed hay, and when the animal is thoroughly cooled, give all the water he desires, after which feed the grain. At night feed the same as at noon, only give more hay; in fact, feed as much hay at night as is given at both morning and noon meals. When a horse is working hard and is fed large quantities of grain, it is found advisable, once a week, to give a bran mash for the evening meal. The bran acts as a laxative and prevents indigestion and possibly a case of colic.—C. L. Barnes, Colorado Agricultural College, Fort Collins.

Blocded Stock.

Mr. Wilder Carpenter, owner of Grandview Farm, Marmaduke, Ark., who breeds Poland-Chinas, is offering a few fall pigs for sale. His foundation stock is registered and pedigrees are furnished with all he sells.

J. P. Vissering writes: "Some Poland-China breeders stick to the ball-shaped kind that do fairly well if they farrow twins; but the up-to-date farmer is looking for the big-boned, long-bodied kind. To these I offer serviceable boars, fall pigs and bred gilts that are sired by 1,100 and 1,200-pound boars, and are out of stretchy sows that have a large house for a large family." Address, J. P. Vissering, Box 1, Godfrey, Ill.

Mr. Gaius Paddock, owner of one of the oldest and best stock farms in Illinois, is advertising pure-bred Poland-Chinas of superior quality and breeding. This came to us too late to go into particulars, but our readers will be safe to write to Mr. Gaius Paddock for prices. Address R. F. D., Moro, Ill.

At El Paso, Tex., on November 3d, the National Mohair Growers' Association was organized with the following officers: President, U. S. Grant, The Dalles, Ore.; Vice-President, J. E. McCarthy, Dublin, Tex.; Secretary, S. G. Baker, Silver City, N. M. Delegates representing 441 Angora goat breeders in thirty-two states were present.

The time to start a flock of pure-bred sheep is now. We are advertising Messrs. C. J. Smith & Sons, R. F. D. 4, Greenville, Ill., who raise a satisfactory type of Shropshires, the breed which is most largely represented in the United States. No mistake is made in buying a few Shropshires and then sticking to the breed forever.

A load of Western ewes at the International Show averaged 180 pounds, but they were not sold at a high price.

Champion International Hogs.

The grand champion load of hogs at the Chicago International Show were Poland-Chinas, fifty-one head, 247 pounds average, sold at $7.75. Exhibited by J. D. Waters, of Dawson, Ill.

BRED ON THE COOK FARMS.

Registered Kentucky Mammoth Jacks, Jennets, Saddle and Harness Stallions. We have more good big Jacks and Stallions than ever before. A guarantee back of every one that is as solid as the hills. Write for prices or come to see us before you buy.

Breeders of Tamworth and Hampshire Swine. Stock, all ages, for sale.
J. F. COOK & CO., Lexington, Ky.

5,000 FERRETS FOR SALE. Write for price list; it's free. **De Kleine Bros., Box 13, Jamestown, Michigan.**

PURE-BRED REGISTERED ANGORA GOATS

Bred from the choicest strains of imported Angora Goats. Sweepstake and First-prize Winners at the American Royal Show. Satisfaction guaranteed.
R. C. JOHNSTON, Lawrence, Kansas.

ELMER GIMLIN, Taylorville, Ill., White Wyandotte Specialist. Exclusive business. Duston strain. Stock, $2 each; 15 eggs, $1; $3 per 50; $5 per 100. Catalogue free.

SUNSET JERSEY CATTLE HERD.

Three registered full-blood Bull Calves for sale at veal prices. These are fine animals and splendidly bred, but are not registered, and I would rather sell to farmers who can use them than to a butcher.
ALBERT S. ENNIS, 712-21 Missouri Trust Bldg., - St. Louis, Mo.

CHOICE BERKSHIRE PIGS FOR SALE.

Fine lot of Pigs, September farrow; also one choice Brood Sow to spare. These Pigs are of the Masterpiece breeding, and are the best I have ever raised. Will be sold worth the price if taken before the 1st of January, 1911.

Mill Creek Stock Farm,

The home of the noted Starlight family of Jacks and Jennets for the past thirty years, is located seven miles southeast of Nashville, Tenn., on the N. C. & St. L. R. R., at Asylum Sation, and has on hand at all times a nice lot of Jacks, Jennets and Stallions, all of the best blood, from six months to six years old, for sale at reasonable prices. Write for catalogue. Also Jersey Cattle.

THOS. H. EZELL, Prop.,
(son and successor to the late H. C. Ezell),
Nashville, Tenn., Sta. B, R. F. D. No. 7.

THE 500 QUESTIONS ANSWERED.

This is all about swine, and is a book by L. H. Cooch. There are 526 questions and 526 answers. They are natural questions and practical answers. The questions relate to breeding, mating, feeding, pasturing, fattening, management, diseases, etc., of swine. It is a complete veterinary authority on all swine diseases. The answers to questions on feeding alone, if properly attended to, will put enough pounds on one pig to pay for many books. We are sending The National Farmer and Stock Grower for one year and the 500 hog question book for 60 cents. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Turnip Crop in Canada.

In the year 1909 the Dominion of Canada produced 107,724,600 bushels of turnips and other roots on 248,047 acres, equal to an average yield of 434.29 bushels to the acre. At a general price of $0.169 per bushel the crop was worth $18,197,500. To this total the Province of Prince Edward Island contributed 4,980,000 bushels.

The crop of the present year in this island is somewhat below that of 1909, being estimated at 4,000,000 bushels. The home consumption is ordinarily one-half of this year's growth. The surplus is shipped to the other maritime provinces,to Newfoundland, and if the market is high there in the spring, to Boston. Prices at the end of October are 18 cents per bushel, water freight rate to Boston 12 cents per bushel. This season the crop suffered little from aphis, but considerable from the myxomycetous fungus Plasmodiophora Brassicae, also known as club root.

The principal root crop of this province is the turnip. Some mangels, sugar beets, carrots and parsnips are grown. The latter are raised more each year. They keep well, even through the month of May, and are excellent feed, particularly for milch cows. Carrots are somewhat hard to grow. They require very rich, well-worked soil, and are tedious to thin and weed. They afford a desirable variety in stock food and help to tide over the month of May, which, owing to the late springs in this latitude, is quite hard on stock, no ensilage being used here.

The root crop on which the stockmen depend in this island is the turnip. It is very seldom a partial and never a complete failure. The varieties that grow best are the Swedes and Rudebakers. The average yield per acre of these is 800 bushels. It has been found that seed selection is of the highest value with the turnip, and that large, fully-developed seed will produce 50 per cent. more than the smaller seed. In the dairying industry of this province it has been found that the daily feeding of hay, roots and of some oats to milch cows produce the best results. This information was furnished by the United States Consul to the Department of Commerce and Labor.

The $10,000 Shire Stallion.

In the catalogue of the International Live Stock Exposition there were 84 fine stallions enumerated in the Shire horse classes, and the exhibit being presented for awards of the judges by the leading breeders of the United States. The grand champion of this exhibit was Dan Patch—not the king of harness horses—but the champion of draft horses of the Shire breed. The draft horse Dan Patch is a five-year-old, foaled in England, sire Wellingborough, dam Primrose. He is a well-formed, massive horse, and has twice won the grand championship at Chicago, and won it easily, and is classed as the foremost male representative of his breed in the United States. The picture we publish was taken at the Iowa State Fair last year.

After winning the 1910 championship, this grand draft horse was sold for ten thousand dollars by his importers, Trumans' Pioneer Stud Farm, of Bushnell, Ill., to Mr. Jno. J. Mitchell, President of the Illinois Trust and Savings Bank of Chicago, who has a breeding establishment at Lake Geneva, Wis. The same price was paid a year ago for the Percheron stallion Carnot, also grand champion of his breed, at the International Show of 1909. See page 28.

MORE "EDUCATION" FOR THE FARMER.

A new fertilizer paper has been started in the South, which announces that one of its purposes will be to "Educate" the farmer in regard to the great advantages of mixed fertilizers, and the folly of home mixing. One of the means to this end consists of a series of cartoons representing the farmer in a most uncomplimentary way. The text accompanying these is an insult to the intelligence of the farmer. The plan is to have the local papers reproduce these, and in this the aid of the local fertilizer agent is expected. The editorial announcement concludes by stating that: "Once the good work is started, and the editors of the agricultural papers are convinced of the big savings to the farmers from using commercial fertilizers manufactured in an up-to-date factory, the battle will be won."

The battle is not likely to be won at all on this basis. Many local dealers are heartily in favor of meeting the wishes of their customers for raw material. Opposed to this is the attempt of the manufacturer to bind the local dealer not to sell raw materials, and, if this fails, the manufacturer will not give the same credit accommodations on raw material as on mixed goods. The custom of manufacturers in giving a local dealer exclusive territory on the firms' brands, and then giving his next door competitor exclusive territory on brands of exactly the same composition but sold under the name of some "Bay window" company belonging to the same manufacturer, and continuing the process as long as the supply of dealers in a given town holds out, is not one that is likely to make the local dealer favor the manufacturers and their anti-home mixing plans, as against the best interests of the dealers' customers.

The editors of the agricultural papers are too well informed to take up any such scheme, and they, as well as their readers, know that wherever home mixing has been intelligently tried, the "Big savings" are all on the side of home mixing. It has been repeatedly shown that in factories equipped with the most elaborate machinery for mixing, it is by no means an unusual thing for goods to be mixed by exactly the same process as the farmer would use at home. This is especially true for small lots of high-grade goods made from the best class of raw materials.

Many large factories are returning to the old process of wet mixing, and for this work there is a great advantage in using mixing machinery, since the process involves the use of sulfuric acid and has the manufacturing advantage of permitting the utilization of low grades of raw materials that a farmer would never think of buying, if offered to him in their unmixed condition; it also serves to disguise the filler.

The manufacturers continue to press the sale of 10-2-2 in the South, and 2-8-2 in the North, both of which permit the use of low-grade raw material and filler.

The farmer demands formulas better suited to his crops and soils, and containing less filler. Brands of higher grade are meeting with increased sale, and farmers are learning that they can make their own brands to suit themselves. The ridicule of the trade papers will not deter them in this.

Home mixing is now rendered much more practical and profitable by the fact that dealers or farmers can now buy both nitrate of soda and potash salts direct from the producers, where heretofore they were obliged to get them through fertilizer manufacturers, many of whom placed all sorts of obstacles in the way of such purchases. This dealing direct with the producers of the two substances needed to supplement basic slag, acid phosphate or bone, in producing complete and filler-free fertilizers suited to the various needs of the farmer, results in a marked saving n the cost of raw materials and so adds to the profit resulting from home mixing.

Wheat Fields Abandoned.

In Southern Indiana and Southern Illinois many early-sown wheat fields have been abandoned altogether, and many others have been so severely injured that they may be abandoned next spring. The whole damage has been done by the Hessian fly, which has been unusually troublesome this fall in early-sown wheat. The Indiana Experiment Station and likewise the Illinois Station warned wheat growers against too early seeding of wheat this fall, because conditions were favorable to the fly, and widespread damage was feared. Their warnings were unheeded in many instances and an unusually large acreage was put in during September. Growers who profited by practical experience of farmers, and delayed seeding until late in October, have promising stands, and they have passed the stage when the fly can do any damage. The point is this: Can we afford to ignore such sound and practical advice coming from Experiment Stations and other authoritative sources? Can we afford to stick to obsolete practices which have proved hazardous? Many sowed wheat during September this year, simply because they had been accustomed to sowing at that time. They failed to take pests into account and evidently have not profited by the experience of others. Farther north in the winter wheat belt many make the same mistake of sowing wheat too early; and, while the fly will not bother these fields, yet the long growing season has produced a rank growth which will weaken the crop and make it more likely to winter kill.—L. C. Brown.

Notes on Potatoes.

The average yield of potatoes in Minnesota for the ten years, 1899 to 1908, was 86 bushels per acre.

The average yield of potatoes in the state of Maine for the same ten years was 171 bushels per acre.

There are about ten thousand hills on an acre of potatoes planted in rows 3½ feet apart and 14 inches apart in the row.

One eight-ounce potato in each hill will produce a yield of about 88 bushels per acre.

Many times one hill will produce six eight-ounce potatoes; which is at the rate of 520 bushels per acre.

The low yields secured, on the average, must be due to the failure of a large number of hills to produce.

Some of the things that cause the failure of hills are poor soil, improper preparation, poor seed, irregular planting, poor cultivation, bugs, diseases and poor weather. Many of these conditions are controllable; all of them may be influenced by proper methods of culture.

A hill of potatoes stripped by bugs, or on which the leaves are injured by blight, cannot give a satisfactory yield.

Paris green or some other poison should be used to destroy the bugs before they have a chance to seriously injure the vines. A few-days' delay means the loss of a great many hills.

The most successful growers spray from two to six times each year, with Bordeaux Mixture, to prevent injury to the leaves from blight. Paris green may be mixed with the Bordeaux, thus spraying for bugs and blight at the same time.—A. D. Wilson, University Farm, St. Paul, Minn.

New Idea in Feeding.

A Missourian met a darky who was driving a horse so thin that it staggered as it walked.

"Why don't you put more flesh on that nag?" indignantly demanded the Missourian.

"'Scuse me, boss," replied the driver. "But I's doin' the best I kin Cain't yo' see, boss, dat po' hoss kin hardly carry what little flesh he's got on him now?"—St. Louis Star.

Thirty Pounds Gain in Lambs.

R. M. Reeder, of Tipton, Ia., was at Chicago, November 10th, with 341 fed Western lambs that averaged 79 pounds, and were sold by Clay, Robinson & Co. at $6.80 per 100 pounds, the highest by 15 cents per 100 pounds for Western lambs that week. They were bought at South Omaha in July by Clay, Robinson & Co. Mr. Reeder said that the lambs had the run of a blue grass pasture and a meadow until September 1, when they were run in the corn field. They made the neat gain of thirty pounds per head, involved little care, enriched the soil and showed a nice profit. While Clay, Robinson & Co. have bought many cattle at Kansas City, and both cattle and sheep at South Omaha for Mr. Reeder, this was his first shipment of fat stock to them. He remarked that hereafter they would handle all his shipments.

OUR GUARANTEE.

The Binkley Medical Company has been making Frazier's Distemper Cure for twenty-five years, and have put up hundreds of thousands of bottles. Every bottle is sold on the basis of "satisfaction or money refunded." Almost every year since starting, they have had to increase facilities and enlarge the laboratory to meet the demand for "Frazier's." This year the demand is greater than ever. All this shows that it must give thorough satisfaction to a great multitude of horse owners, and many of these are just as particular as you are. It needed actual proof to convince them that Frazier's Distemper Cure is safe, speedy and positive in treating contagious diseases among horses. A treatise on the horse is sent free on request; $1.00 size bottle contains as much as three 50-cent-size bottles. At all drug stores, or direct prepaid from Binkley Medical Company, Dept. H, Nappanee, Ind.

Potash is now sold through all fertilizer dealers, also direct from the mines. Write for prices to German Kali Works, Continental Building, Baltimore, Md., and mention this paper.

BETTER CISTERNS --- WHY?

To protect the health of every member of your family. Medical experts have pronounced the brick and wood cistern to be the cause of many cases of sickness.

A Cistern to be perfectly sanitary must be made so tight that no impurities can possibly get through. This can only be accomplished by using the Steel Cistern.

Sunlight Fertilization.

A striking instance of the way in which modern investigators often discover that a sound reason underlies many time-honored practices is furnished by a recent examination of the proceedings of the ryots of India, who for centuries have been accustomed to expose their alluvial soils to the intense heat and light of the sun during the hot weather of April and May, reaping for their reward extraordinary crops, as if the soil had received a dressing of nitrogenous manure. Doctors Russell and Hutchinson explain this as due to the bactericidal action of the sunlight, which sterilizes the soil. Scientific experiments have shown that partial sterilization of the soil by heat or poison leads to increased fertility through the increase of nitrogenous compounds.

Sale of Kansas Percherons.

J. C. Robinson, of Towanda, Kas., one of the leading horse breeders of the United States, held an auction sale on November 10th and sold twelve stallions for an average of $754.15 per head, and forty-two mares for an average of $460.95 per head. The top price for females was $800, paid by D. H. Wacholtz, of Larned, Kas., for a two-year-old filly in foal to the St. Louis World's Fair first prize winning stallion Casino. A two-year-old stallion, Richard, son of Casino, sold to J. H. Tangeman, of Newton, Kas., for $1,125; and W. H. Ritter, of Colfax,, Ill., paid $1,000 for the five-year-old stallion Camelia.

Racing in Queen Anne's Reign.

Racing in England is very different from what is was when Queen Anne, most sporting of English Queens, instituted Ascot races, one hundred and ninety-nine years ago, and ran her famous horses, Mustard, Pepper and Star. Horses intended for racing were always kept tightly girt, with the idea that it rendered them more swift; and, as for feeding, the old-time trainer believed in giving them a liberal amount of soaked bread, supplemented a day or two before the race with fresh eggs. The jockeys, instead of sporting light silk jackets, wore full suits of the stiffest taffeta, and, as if the applause of the crowd were not sufficient, drums and trumpets greeted the winner.

Breeders' Horse Sale.

Write to C. W. Hurt, Manager of the Breeders' Sale Company, for catalogue of the great sale of horses to be held at the Coliseum, Bloomington, Ill. This is always the greatest Western collection of pure-bred draft horses. There are Percherons, Belgians, French Draft, Shires and Clydesdales, mares, stallions, colts and fillies, also trotters, saddle and all-purpose farm horses. The sale continues four days—January 10, 11, 12 and 13. Write a postal card and ask for a catalogue. Address, C. W. Hurt, Manager, at Arrowsmith, Ill.

He Was Running to Win.

"X." Beidler, whose name was John Xenophon Beidler, or something very much like that, but who always was called "X," and who was one of the famous Montana pioneers as well as a vigilante, was out on the plains one day with Liver-eating Johnson, another well-known Montana character, when they were chased by a band of Indians.

Johnson had a better horse than "X" and was soon ahead. He turned several times and urged Beidler to hurry up.

"Hurry up, 'X,'" he yelled. "Get a move on!"

"Dod-gast you, Johnson!" shouted Beidler as he spurred his horse; "do you think I'm trying to throw this race?"—Saturday Evening Post.

Sale of Percheron Horses.

In the middle of November, Messrs. H. G. McMillan & Sons, well-known breeders of Percherons, sold at Omaha thirty-one pure-bred stallions at an average of $479.50 per head; forty-three mares, averaging $445.25, the general average of seventy-three head being $460. The highest price at the sale was $1,040, paid by Nelson Fish, of Washita, South Dakota, for Dogue, Jr., a black stallion, foaled in June, 1907. A. D. Fugate, of Correctionville, Ia., paid $910 for Thespian, a five-year-old black stallion. The top price for a mare was $900, paid by Barnes & Cam, of Muskogee, Okla., a firm that bought fifteen head at the sale. The sale included a considerable number of colts and yearlings.

Shire Horse Sale December 14th.

Mr. W. E. Truman, of Bushnell, Ill., arrived from New York on the inst. with an importation of forty-eight horses, which came over on the Minneapolis. Included in the lot are forty-two Shire mares that are on exhibition at the International Show and afterwards will be consigned to the sale of Shire horses on December 14th. Never before has such a grand lot of mares been together. The majority of them are matured and are certainly a sight worth going a thousand miles to see These mares have been held back and selected from about 300 that Trumans purchased in England this year on purpose for the regular December sale. Never were as good a bunch of draft mares offered at public sade in this country, and all lovers of draft horses, no matter of what breed, ought to make it convenient to attend this sale, as it will be an eye-opener, and they will be sold regardless of price. Messrs. Trumans are showing a grand lot—Shires, Percherons, Belgians and Hackneys—running in ages from rising two to seven years old and are making attractive prices in order to make room for another importation that is due to leave England shortly. Since the 25th of last January this is their tenth importation. For catalogues of the sale on December 14th address Trumans' Pioneer Stud Farm, Bushnell, Ill.

Alfalfa Pasturage For Horses.

"One of the foremost horse breeders in America, who constantly maintains upwards of one hundred head of various ages, writes this: 'In my experience of twenty-five years in pasturing horses on alfalfa, results have convinced me that it produces more bone, muscle and blood in horses in less time than any other pasturage with which I am acquainted. But I believe it profitable in raising the best horses to use also a moderate grain ration, to stimulate rapid growth and early development; my horses, however, have shown no ill-effects from pasturing on alfalfa without grain, or other feed, and I have found such pasturage conducive to health and prolificacy, maturing animals equal for service to any reared otherwise. I have raised three-year-olds grown on alfalfa and a light grain ration to exceed a ton in weight, carrying all the good qualities of the breed to which they belonged. Further, I find using alfalfa as a horse pasture a much more economical method of raising horses than any other.'"—From Coburn's "The Book of Alfalfa."

The Lost Shipping Tag.

A Missouri mule was being shipped to a farmer in Virginia. A tag with directions on it had been tied securely around his neck with a rope, but in the course of the journey the mule grew restless and chewed up both tag and rope.

This gave the negro brakeman great concern. He hurried to the conductor in the caboose.

"Marse George," he yelled, "for de Lawd, where yo' 'specs to put off dat mule? He done eat up where he's gwine!"—St. Louis Star.

At St. Louis, December 1st, horse-radish is selling at $3.75 to $4.00 per barrel from farmers' wagons.

NEW CLUB SHOT SHELLS

Their popularity began with our grandfathers and has grown like an oak for fifty years. Never equalled in demand by any shot shell—today more in demand than in any previous year.

THE BOOK OF LIVE STOCK CHAMPIONS.

This is a valuable book and is of great interest to all stockmen.

Send us One Dollar and we will send you The National Farmer and Stock Grower for two years, and we will send you, post free by mail, one copy of **The Book of Live Stock Champions,** issued in the year 1905. It contains pictures of 500 individual animals, the greatest champions in live stock history. This book is nicely bound in cloth and is our own publication. Every stockman should take pride in owning a copy. It begins with the World's Fair in Chicago in 1903; contains the grand champions at the Louisiana Purchase Exposition, 1904, and at International, State and American Royal Shows. It is a book of 240 pages, with pictures of one, two or three champions on a page. The pages are 6x9 inches. We have sold ten thousand of these books to stock farmers, breeders and Agricultural Colleges. To have a copy of this book on your table is a constant pleasure. Only a few hundred of these books remain on hand and it will not be printed again. Obtain a copy while you have an opportunity. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

HOT-HOUSE LAMBS.

The Trade in New York—Statement From a Firm That Receives and Sells Many of Them.

To the Editor of The National Farmer and Stock Grower:

In response to your request for information on the subject that although the hot-house lamb business does not start here until after January 1st, we do receive a few for Thanksgiving and Christmas. After January 1st we receive considerable numbers that weigh about 30 pounds with the skin on, heads and feet removed, which is about 25 pounds skinned, and these generally bring from $10 to $12 each, though in off years we have obtained more. As the season advances the buyers demand more weight until 35 pounds is reached, when most buyers are satisfied. Now you must not think that the buyers here, where we have most of the consumers of hot-house lambs of the country, will take any lamb that reaches 35 pounds with the pelt on for top prices; but, on the contrary, the lambs must be prime, fat, white-meated, and from two to three months old. These lambs are sold, we may say, during the first three months of the year (while the price is high) to the best hotels and wealthy private families only; therefore the trade is limited. The hot-house lamb business, like the ginseng, mushroom and squab business, attracted many who made a failure of it, they supposing there was no such word as fail connected with it, as sheep eat most anything, and the mother would take care of her baby mutton, hence many who did not care to sit up all night (lambing time) in the winter and carry neglected lambs from the barn to the warm kitchen at midnight in two or three feet of snow have dropped out, and this leaves a good field yet for a hard worker who understands more or less about sheep.

We receive lambs from Vermont, New York, New Jersey, Pennsylvania, Maryland and Ohio, but it seems the latter state produces more of good quality than any of the others, though New York state is a close second. The express from Ohio, which, by the way, is the only way to ship them, is about 50 cents each, and our commission of 5 per cent. is about 50 cents each more. We get our shippers to build crates to hold two and four each, which protects them in transit, and which we return to them free, so the only charges they would stand on this end is about $1.00 per lamb. We have had all kinds of dressing sent us, but we find a good lamb just plain hog-dressed (like a calf) will bring just as much as a fancy or so-called city-dressed one with the stick inserted in the backs and the caul fat plastered all over it. Remember one thing: The American people eat with the eye, so if the shipper of these goods will only keep them clean, both inside and outside, we can many times pass a little inferior lamb for a top one.

We enclose you a copy of dressing instructions which we send to those inquiring for them, which you may add, if you like, and hope this note may start some new people of Ohio in the business who mean to stick, and that we shall get our share of their patronage. William H. Cohen & Co., Commission Merchants, 229 and 231 Washington street, New York City, N. Y.

To Dress "Hot-house Lambs."

Tie a stout cord around the hind legs, hang up, grasp nose firmly and cut the throat close up to the jaws. If the wool is soiled, as it generally is on the belly, shear it all off, also shear it between the hind legs to the tail and tail itself, if that is dirty. Now currycomb it all over with a stiff, rice-root brush and wash the flanks and under side of the tail where the skin is bare until thoroughly clean. Cut open from the middle between the hind legs to the breast bone, and from the upper part of the breast bone down the throat about four inches. Cut off the head right behind the ears, and the feet after you are all finished dressing at the joint below the knee toward the hoof. Remove the skin over the back part of the hind quarters and down the front and back of the flanks about an inch. Remove the entrails and gall bladder, being careful not to disturb the kidneys, heart or liver. Pull out the gullet. Stick the knife in the heart, also through the diaphragm a couple of times on both sides. Remove the trachea or windpipe so as to give as free drainage and ventilation as possible and cut out the rectum large enough for the free passage of air. Remove the caul carefully, and after the lamb has been thoroughly washed out place it over the exposed parts of the flesh and press in place, where it will stay if held a couple of minutes.

Now hang the lambs in a cool place, where there is a draught, after you have brought the skin back to its place with a few stitches, using a darning needle and some thin, soft cord. The next morning, or when you are sure the animal heat is out, wrap in cheese-cloth, then in thin burlap, and place in crates you have made of good, strong slats, held together at the corners by bolts. A crate to hold your lambs in is 40 inches long, 13 inches deep, 15 inches wide, inside measurements. These crates and wraps we will return free. A prime lamb is at its best when eight or twelve weeks old, and should weigh for January marketing 40 to 45 pounds; February, 45 to 50 pounds; March and April, 50 to 60 pounds alive, as they lose one-third in dressing.—By W. H. Cohen & Co., Commission Merchants, 229 and 231 Washington street, New York City, N. Y.

St. Louis Mule Trade.

The mule trade at the St. Louis National Stock Yards is active. All good, fat, finished, nice mules on the cotton type are selling on arrival. Plain, common thin stuff is selling bad. There has been too much of that class of stuff on the market to do any good. Fourteen-hand mules are quoted at $75 to $150; 14½ hands at $92.50 to $160; 15 hands at $117.50 to $195; 15½ hands at $135 to $225; and 16 hands at $150 to $275. Matched teams are sold at special prices. Fat and quality in the mule trade never sold higher than now.

Horse Market Conditions.

Holland, Nugents & Maxwell Bros. sold 650 horses at their auctions held on the last Monday and Tuesday in November. Their auctions are held at the St. Louis National Stock Yards every Monday and Tuesday in the year, and they manage to concentrate the buyers at their auctions. They report a reviving trade in horses weighing 1,300 pounds, and they expect this demand to keep up. The Southern demand is also good for all kinds that go South. This firm stands to-day as the foremost commission firm for the sale of domestic horses consigned to market strictly on commission. Address the firm, Holland, Nugents & Maxwell Bros., National Stock Yards, Ill.

The Grand Champion Steer.

The single beef-steer contest at the Chicago International Live Stock Exposition resulted in the selection of Shamrock, 2d, a high-grade Polled Angus calf, as the grand champion. With two exceptions, Shamrock, 2d, was the youngest steer on exhibit. He was calved on January 8th and was awarded the grand championship on November 29th at the age of 325 days. His official weight was 1,120 pounds. He was as near a perfect steer as one could imagine, and was not an overfat beef. Shamrock, 2d, represents 3.446 pounds gain per day from birth to slaughter; we may say 3½ pounds per day, in round figures. Eliminating all show features and conditions, on the open market, on day of sale, he was about an eight-cent steer and worth $89.60. Shamrock, 2d, was sold by Clay, Robinson & Co. to C. H. Morgan & Co., Chicago butchers, for 60 cents a pound, the total being $672. This is the second highest price paid for a grand champion of the International Show and outsold last year's champion by 42 cents a pound.

Shamrock, 2d, was sired by a pure-bred Aberdeen-Angus bull, and his dam was a high-grade Aberdeen-Angus cow. He was fed and exhibited by the Iowa Agricultural College and it is the third time the Iowa College has won the award, and each time with Angus steers.

The lesson of the grand championship clearly indicates that perfect beef can be prepared for market at one year old. Pure-bred beef sires, bred to first-class, high-bred beef cows, fed from the start with proper rations, will make them top any market, and even at the present reduced prices are worth $80 to $100 per steer. And freight, feed and market charges, all told, will not exceed five per cent. of the total. See illustration.

Four Good Agricultural Books.

Just a postal card will do. Write at once and address Wm. Galloway, 1289 Galloway Station, Waterloo, Iowa, and ask for the four free agricultural books advertised in The National Farmer and Stock Grower.

The only nursery advertised in this edition of The National Farmer and Stock Grower is the Galbraith Nursery, Fairbury, Neb. See Page 5.

Evans-Montague Commission Company

THE MEASURE OF SUCCESS attained by a SHIPPER OF LIVE STOCK depends largely upon THE COMMISSION HOUSE to which he consigns his CATTLE, HOGS AND SHEEP.

If you wish to receive TRUSTWORTHY AND RELIABLE SERVICE, and have your consignments SOLD BY CAPABLE AND CONSCIENTIOUS SALESMEN, you cannot do better THAN PATRONIZE OUR HOUSE.

The Shippers' Interests ARE OUR INTERESTS, and our rapidly-increasing business IS THE STRONGEST TESTIMONIAL of our ability TO PLEASE OUR CUSTOMERS.

Evans-Montague Commission Company

Box 68, NATIONAL STOCK YARDS, ILL.

Stump-pulling Experience.

Ex-Sheriff Climie, of Appanoose county, Iowa, says: "I had forty acres of stump land that I cleared two years ago with a Triple Power Steel Puller. Right alongside of it I had forty acres of old land that was in cultivation for twenty years. After clearing the forty acres of stump land, I plowed it up and put it in corn the first year, also put the forty acres of old land in corn. There was just a wire fence between the two forties. I gave the same attention and cultivation to each forty. The corn on the old land made about thirty-three bushels to the acre. The corn on the newly-cleared land made about ninety bushels to the acre."

Here it is clearly seen that Mr. Climie gained sixty bushels of corn to each acre of new land cleared, which paid for the clearing. At 60 cents per bushel he was paid $36.00 per acre for clearing his new land and at the same time had the same

Three Acres Cleared From One Position, using 200 Yards of Triple Power Cable without moving the Stump Puller.

amount of crop left, thirty bushels to the acre to pay for the cultivation and for the profit, the same as on his old land, yet after being cleared the new land was worth $40.00 an acre more than before. Thousands of practical farmers have had similar experience. The Triple Power Stump Puller is manufactured by the Hercules Mfg. Co., 140 Seventeenth street, Centerville, Iowa. See the sixth page.

Sheep Market and Prices.

Sheep were selling on the St. Louis market, December 1st, at the following range of prices: Lambs, good to choice natives, $6.00 to $6.50; lambs, fair to good natives, $5.50 to $6.00; lambs, common to fair natives, $4.00 to $5.00; lambs, culls, natives, $3.50 to $4.50; lambs, good to choice Southwest, $5.50 to $6.35; lambs, fair to good Southwest, $5.00 to $5.75; lambs, culls, Southwest, $3.50 to $4.50; yearlings, fed, $5.00 to $5.50; wethers, good to choice natives, $3.00 to $4.50; ewes, good to choice breeders, $3.00 to $4.25; stock ewes, fair to good, $2.50 to $3.00; ewes, culls, $1.00 to $2.50; bucks, $2.25 to $2.75—all quotations being at the price stated per 100 pounds.

A First-class Commission House.

In consigning live stock for sale at the St. Louis National Stock Yards, remember the Evans-Montague Live Stock Commission Company. It is a successful firm, highly competent and persevering in the interest of their customers. The Evans-Montague Commission Company solicit consignments of cattle, hogs and sheep for sale on the market, and desire stockmen to take notice that the company has special buyers who select and buy stock and feeding cattle for their patrons. Address, Evans-Montague Commission Company, Box 68, National Stock Yards, Illinois.

Oats For Mares.

A number of the most successful horse raisers feed the following to mares just before they foal and for several weeks after: Make a mixture of two parts oats and one part corn and have it chopped. For every 100 pounds of this add seventy-five pounds of bran and twenty-five pounds of oil meal. Feed about a gallon to each 1,000 pounds of live weight twice each day. At the other feed give three ears of corn for each 1,000 pounds of live weight.

These amounts are, of course, for the mare that is not doing hard work. If she is used as a work horse, more of the mixture should be given and more corn should be taken into the ration. In addition to this she should have all the clean, bright hay that she desires. A mixture of clover and timothy, cut about the time the first blooms of the clover are turning brown and cured without a rain, is much better than either timothy or clover alone. If this kind of hay is given it is not necessary to mix any oil meal with the ration as above advocated.

Do not attempt to raise a colt without giving the mare care. The colt must have nerve force, and this can be best given it by the oats through the mother's milk. Then the colt must have protein to form flesh and frame. This, too, can be best given in the oats to the mother. A successful ration can hardly be built for the mare nursing a colt without oats.—Inter-Ocean Farmer.

The Native Cattle Trade.

At the St. Louis market, opening trade of December, prime heavy, native steers were quoted at $6.50 to $7.25 per 100 pounds; choice steers, $6.75 to $6.50; medium to good, $4.75 to $5.70; choice to prime yearlings were quotable at $6.00 to $7.25; good at $5.00 to $6.00; common to medium at $4.25 to $5.00; choice to fancy corn-fed heifers were selling at $5.00 to $5.50; fancy cows at $4.50 to $5.25; other cows at $2.75 to $4.00 per 100 pounds.

Sale of Show Cattle.

Seventy-three loads of show cattle at the Chicago International Exposition were sold at an average of $7.77 per 100 pounds, as compared with $11.44, the high average of last year. This is a decline of $3.67 per 100 pounds. This very probably represents more than the actual decline from the high point on what are classed as fancy cattle. It has been customary for the principal buyers on the Chicago market to deal liberally in buying the show cattle, but it is probable the seventy-three loads would have brought as much, or very nearly as much, on the open market.

Street-sore Horses.

Messrs. Keyes & Marshall Livery Co., with headquarters at 5263 Delmar avenue, St. Louis, Mo., have for sale a number of fine horses. They are described as street sore, having been used regularly in the livery business, and will be sold at reasonable prices on that account. Horsemen will understand what to expect, as Keyes & Marshall are leading liverymen of the city.

Mules by the Pair at Auction.

A novel sale of Western range mules will be held in February, 1911, by Campbell & Reid and Western Sale Stables Company at the St. Louis National Stock Yards. They are Montana mules now on feed, and just at the right time for spring service will be brought in and sold at auction by the pair. There will be several hundred of them. A further announcement will be made in this paper next month.

Will Purchase Mule Colts.

Mr. L. Newt Gaines, of Gaines, South Carolina, who is situated in the county of Greenwood, desires to purchase a car-load of mule colts, six to eight months old. His shipping and receiving point is Greenwood, and anyone who can fill the order may address him at Gaines, S. C., to their advantage.

Horse Market Quotations.

At the St. Louis National Stock Yards, in a general way, there are some few plug horses quotable at $25 to $45 per head. Southern horses of the inferior and plain kind sell at $50 to $70; a better class at $75 to $115; and what are classed as top Southerners at $125 to $165. Eastern chunks sell at $115 to $165, with extras at $175 to $200. Draft horses are quotable at $165 to $235, with high quality a little stronger.

Clay, Robinson & Co.'s Offer.

Attention is invited to page 13, where Clay, Robinson & Co., live stock commission firm, offer their Weekly Live Stock Report in connection with their magnificent Art Flower Girl Calendar for 1911. This firm make a study of all market conditions and have built up a magnificent business by honesty, skill and ability. Do not fail to read page 13.

The December Hog Market.

At St. Louis, the December hog market started out with the top of $7.40 for pigs only, such as weighed 125 to 135 pounds. The top of the good-weight hogs was $7.35 per 100 pounds, the loads at this price weighing 215 to 278 pounds. They were butcher hogs for the fresh-meat trade. Very few hogs sold below $7.20, and the bulk of all the offerings sold at $7.25 to $7.35 per 100 pounds.

HORSE AND MULE SALESMEN.

HOLLAND, NUGENT & MAXWELL BROTHERS.

NATIONAL STOCK YARDS, EAST ST. LOUIS, ILLINOIS.

HORSE AUCTIONS EVERY MONDAY AND TUESDAY.

Horse and Mule consignments are solicited for sale by the most competent firm on the Best Market in the United States. Every consignment given personal attention. Keep in touch with us. Let us sell your Horses and Mules on commission.

HORSE DEPT.—Nugent Bros., Maxwell Bros.
MULE DEPT.—Ed Conway, Lan Morris.
AUCTIONEERS—Tim Holland, Ike Howard.

Write us for market information. Address,

HOLLAND, NUGENT & MAXWELL BROTHERS.
P. O., National Stock Yards, Ill.

The Horse Breeders' Sale.

Remember the Horse Breeders' Sale advertised on the first page. It will be a "bumper." There are seventy-five consignors to this sale, and it looks like 500 registered draft horses will be sold at auction. Write to C. W. Hurt, Manager, Arrowsmith, Illinois, for catalogue.

Horses at St. Louis.

In eleven months of the year 1910 the St. Louis National Stock Yards received and sold 115,443 horses and mules, and the total is 3,162 more than were received during the corresponding period of last year.

The First Tongueless Disc Harrow Ever Used.

Read this letter from Mr. Buckingham to the American Harrow Company, of Detroit, Mich.:

"I received the Disc all right, and have used it on sod and in berry patch, etc., and like it very well. The four-horse size runs one horse lighter than the old-fashioned tongue disc. One of my neighbors said he wished he hadn't bought a tongue disc or he would have bought a Detroit-American Tongueless. Another one of my neighbors says he will buy a Detroit-American this fall. I enclose a picture of our four-year-old boy and my disc harrow I purchased from you."

The Detroit-American Disc Harrow is advertised on page 3, where all its excellent points and advantages are enumerated.

Valuable Lands Cheap.

Attention is invited to the card on page 26, which is headed: "The Easiest Country to Make a Living In." This refers to Arkansas and East Texas, and it is not a particle overdrawn. It is a mild and happy climate, and the soil is productive and easy to work. It is also very cheap, and will advance in value rapidly. It is equally good for grain and stock farms, fruits and vegetables. This subject is worth investigation. Write for Arkansas and East Texas booklets to E. W. LaBeaume, 1402 Pierce Bldg., St. Louis, Mo.

CATARRH OF THE STOMACH.

A Pleasant, Simple, But Safe and Effectual Cure For It.

Catarrh of the stomach has long been considered the next thing to incurable. The usual symptoms are a full or bloating sensation after eating, accompanied sometimes with sour or watery risings, a formation of gases, causing pressure on the heart and lungs and difficult breathing, headaches, fickle appetite, nervousness and a general played out, languid feeling.

There is often a foul taste in the mouth, coated tongue, and if the interior of the stomach could be seen it would show a slimy, inflamed condition.

The cure for this common and obstinate trouble is found in a treatment which causes the food to be readily, thoroughly digested before it has time to ferment and irritate the delicate mucous surfaces of the stomach. To secure a prompt and healthy digestion is the one necessary thing to do and when normal digestion is secured the catarrhal condition will have disappeared.

According to Dr. Harlanson, the safest and best treatment is to use after each meal a tablet, composed of Diastase, Aseptic Pepsin, a little Nux, Golden Seal and fruit acids. These tablets can now be found at all drug stores under the name of Stuart's Dyspepsia Tablets, and not being a patent medicine can be used with perfect safety and assurance that healthy appetite and thorough digestion will follow their regular use after meals.

Mr. R. S. Workman, Chicago, Ill., writes: "Catarrh is a local condition resulting from a neglected cold in the head, whereby the lining membrane of the nose becomes inflamed and the poisonous discharge therefrom passing backward into the throat reaches the stomach, thus producing catarrh of the stomach. Medical authorities prescribed for me for three years for catarrh of the stomach without cure, but today I am the happiest of men after using only one box of Stuart's Dyspepsia Tablets. I cannot find appropriate words to express my good feeling. I have found flesh, appetite and sound rest from their use."

Stuart's Dyspepsia Tablets is the safest preparation as well as the simplest and most convenient remedy for any form of indigestion, catarrh of the stomach, biliousness, sour stomach, heartburn and bloating after meals.

Shipping Dressed Poultry.

After the fowls have been dressed and are thoroughly cooled, they will be ready for packing. Poultry dressed for market should be kept off feed at least twenty-four hours previous to slaughter, and should not be drawn before it is picked for shipment. The action of the air on the inside of the fowl will cause it to spoil and make it impossible to keep in good condition. Use a flat box, in which two layers of poultry can be packed. Wrap the head of each bird in paper, so that any blood which may be left in the head will not come in contact with the body of the fowl and soil it. In some cases the whole bird is wrapped in wax paper.

Start a layer in the bottom of the box; take each bird separately and fold the head to one side and place it in the box with the head up. Continue in this way until the bottom layer is filled. Put in the upper layer the same way, except that the head is in the middle and the side of the breast is up. If this method is followed in packing, either side of the box may be opened when it reaches the market, and a nice, uniform lot of poultry will meet the eye of the purchaser.

The poultry may be packed in barrels or larger boxes; but small flat boxes are preferred, because they are easier to handle, and there is also less danger of spoiling while they are being shipped.

It is a good plan to establish a permanent trade with some commission firm, meat dealer or large hotel, to supply them with poultry. This will insure a better price than when shipped only occasionally.

Poultry should be sent by express, so as to be on the road the least possible time. The cases, when shipped, should be plainly marked for whom and from whom they are, the number of birds in the case, and the weight. —W. H. Tomhave, University Farm, St. Paul.

THE SEWING AWL.

A Most Useful Premium For Subscribers to The National Farmer and Stock Grower.

A farm on which there is not a sewing awl is in difficulties when work is most pressing. It is surprising how useful this little implement is. It is the Myers Famous Lock Stitch Sewing Awl. It is the only sewing awl made with a groove running the full length of the needle and has what is known as a diamond point. In order to sew leather or any heavy, thick material without breaking or cutting the thread it requires a needle with the groove running the full length of the needle. You might just as well have no groove in the needle as to have it only part of the way. With the Myers Awl you can sew old or new harness, saddles, carpets, canvas, tents, rugs, quilts, shoes, grain bags, and many other things. You can use any kind of thread in the Myers Awl, and it makes a lock stitch same as a sewing machine. It is very simple; a woman can use it as well as a man. It is one of the most practical devices ever invented. They are put up with two needles; one is straight and one curved, with a small screw-driver and wrench combined. Also a reel of waxed thread with each awl ready for use. Every teamster and farmer should own a Myers Lock Stitch Sewing Awl, as there is use for one in almost every household. The Myers Awl is nicely finished, the metal parts are nickel-plated, the needles and wrench are kept in the hollow handle, which has a screw top.

Anyone who will send One Dollar cash to pay in advance for two-years' subscription to The National Farmer and Stock Grower can select one of Myers' Lock Stitch Sewing Awls, which we will send by mail, postage paid, as a free premium. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Poultry and Farm Paper Club.

We are often asked which is the best poultry paper in the United States, and the answer is **The Reliable Poultry Journal.** There are other excellent poultry papers, but the one we take home to read and one the family is determined to read is **The Reliable Poultry Journal.** We have made arrangements whereby we can send The National Farmer and Stock Grower and **The Reliable Poultry Journal,** both papers, one year, for fifty cents. This is a bargain that is good now, but this advertisement may not appear again. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Some Things About the Poultry House.

Many of our methods are still barbarous in the management of poultry. Only here and there is a person who is trying to make the management of poultry a success. The poultry house in fall and winter speaks loudly of the amount of real science being used.

There is the question of light. Many poultry owners are still of an opinion that too much light can be easily obtained for the good of the fowls. They base this on the idea that if the fowls lie in the sun in the daytime they will feel the cold more at night. But this is a rather gauzy theory that does not work out well. The advocates of that theory fail to note the fact that the rays of the sun have in them something besides light and heat. They have in them chemical and electrical virtues that affect the living things on which they fall. Therefore they are health-giving far beyond mere heat. Give the fowls enough of the light of the sun, especially in fall and winter, when the sun is low in the south and its rays are lessened in intensity by the increased space of the earth atmosphere through which they have to pass.

The writer likes best those poultry houses whose windows are on the east, south and west. This permits the rays of the sun to come in from early morning till late afternoon. The heat and light thus brought in make the keeping of the poultry house clean an easy matter. Put big windows on the south side.

The old poultry house is frequently found to be dark and therefore damp. It is an easy matter to put windows in it. The sash costs little, and small panes of glass are also cheap. In buying sash, buy that with small panes rather than large ones. This will greatly reduce the first cost and will make repairs light. Small panes of glass are very cheap. By small panes the writer means those about twelve inches square.

By all means see that the poultry house does not go through another winter without sufficient light. Light has a cash value to the poultry keeper.

When the sash have been made, lay in a few panes of glass, to be used in case of breakages. A supply of putty can be placed in a tin can with a little linseed oil over the top of the putty, and time should not affect it. When using the putty again, first pour off all the oil or the putty will be too soft. Not making repairs in time has resulted in roup being started in many a flock, and there is nothing like having the materials on hand with which to make repairs.

The second most important thing is to have a scratching shed on the south side of the poultry house. This should merely be protected from above by a glass-covered roof, but should be open in front. The protection should be only enough to keep out the snow. Fowls will do better in an open scratching shed than in a closed scratching shed, and they will have less disease.

Scratching material inside and outside of the house will help induce the fowls to work, and this helps make eggs.

American Harvester Company in Russia.

United States Consul-General John H. Snodgrass reports that the International Harvester Company of America has organized a company in Russia for the manufacture of harvesting machinery, agricultural implements, engines, etc., at Moscow, with a capital of $8,240,000. In addition to the purchase of the works of the New York Air Brake Company at Lubertzy, a suburb of Moscow, the company has bought sixty-two acres of land with a view of enlarging the plant and the erection of several large buildings for factory purposes.

Practical Farming and Gardening.

This is a book of 500 pages, 6x7¼ inches to the page. It is a complete farmer's instruction book. The feeding chart is worth a ten-dollar bill to any stock farmer. Soil fertility, drainage, grain crops, gardening, truck growing, fruits, forestry, pruning, grafting, budding, injurious insects, plant diseases, spraying, cattle, sheep, horse raising and feeding, treatment for diseases, silos and silage, poultry, handy rules and farm cookery, are a few of the subjects. There are eighteen three-column pages of index. If you look for something you find it. We have adopted this book as a subscription premium. Send One Dollar and we will send you **Practical Farming and Gardening**, postage paid, and The National Farmer and Stock Grower for two years. This is a grand offer. Address, **HALE PUBLISHING CO., 3550 Vist Ave., St. Louis, Mo.**

Increasing Productiveness.

It is a well-known fact that in countries where the population is greatest per square mile of territory, and the farms are consequently small on the average, the farmers raise more per acre. They are more particular in the preparation of the seed bed, properly planting the seed, being sure that the best seeds are selected, and that the soil is enriched and provided with fertilizers that insure the largest yields. These farmers do not take chances on implements. They purchase only those of known worth—the ones that have been thoroughly tried out. When an implement has stood the tests imposed upon it by thousands upon thousands of different people in all parts of the world, it is a sure indication that the machine is all right and that it has done, and will do, all that the manufacturers claim for it. That is exactly the position the Buckeye Grain Drill is in. These grain drills have been constantly used for more than fifty years by successful grain growers in every part of the world where grain is grown. This proves that there is manufactured a Buckeye Drill that can be relied upon to meet any seeding condition anywhere in the world. The farmer who wishes a hoe drill, shoe drill, single disc drill or double disc drill—the man who wants to use his grain drill for planting beets, peas, Lima beans, red kidney beans, sorghum, bearded oats, treated wheat, flax, rape, millet, grasses, clover and alfalfa; the farmer who wishes to sow commercial fertilizers with his crop; those who want a plain grain drill or a press drill—can get in the Buckeye line the drill that will do the work in the best possible manner—in other words, do it right. It is so strongly guaranteed that the purchaser is just as safe in ordering as in buying government bonds. The Buckeye is manufactured by The American Seeding-Machine Co., Incorporated, Springfield, Ohio. Write them for a Buckeye catalogue and then go to your nearest implement dealer and ask to see the Buckeye Drill.

About Sunflower Seed.

"Millions of pounds of sunflower seed are allowed to go to waste in Missouri, annually, simply because it is not generally known that they can be used for food for men, as well as animals, and therefore have a commercial value," says the 1910 Red Book of the Bureau of Labor Statistics. Figures made public by the Labor Commissioner show that in the year 1909 about 400,000 pounds of the seeds were sent to market by Missouri's 114 counties.

"While originally a native of tropical America, the sunflower is now found growing more or less wild in all cutivatable portions of the world, and especially in South and Cenral Europe, seeds having been carried there from America and planted by several sixteenth century rovers, who took a fancy to the large flower, both for its peculiar wild beauty and that it has a food value," reads the Red Book chapter on this subject.

"In Russia the sunflower seed is prepared and eaten just like Americans do peanuts. The poorer class often eat the seeds raw, the only drawback to this style of turning them into a palatable article being the difficulty of easily separating the kernel from the hull."

"In Missouri the sunflower is found everywhere, growing in vacant city lots as well as in the rich lands of the Southeastern section of the state and in the foothills of the Ozarks. Goats thrive on the plant, eating everything, from the seeds and petals down to the coarse, rough stalks and the roots. The seed is often used, mixed with other seeds, as feed to poultry, and parrots specially enjoy this menu, forming a feed which was a mainstay for them in the tropical regions. The early Indians of the land pounded the seed into a powder and made a bread of the same."

"The counties of Missouri which marketed the most seed in 1909 are: Butler, St. Charles, St. Louis, Jackson, Ste. Genevieve, Greene, Buchanan, Jasper and Mississippi, probably because they are closer to the larger cities than the other counties"

"An oil closely resembling olive oil, but of course inferior in quality, is made by pressing sunflower seeds. It is very palatable, easily digested, and has a high food value. In this respect it is said to be superior to our cotton-seed oil, which is put to so many uses in domestic life and in art and science."

"The sunflower is full of the substances which make honey, and therefore is an article of food for bees. The stalks and leaves and flower petals make excellent fodder for cattle. As a fuel, the stalks and leaves have high value in sections where wood is scarce and not too great a degree of heat is required. An acre of sunflowers will yield several cords of good fuel without considering the value of the seed. It is estimated that fifty bushels of seed can be grown on an acre of ground. A bushel of seed yields a gallon of oil, figuring that the oil is as valuable as the cotton-seed variety, which in 1909 averaged about 40 cents, one acre of sunflower seed will produce oil worth $30, which means that the farmer's share would be about $12, and the manufacturer the remainder, out of which sums both would of course meet all their expenses."

The latest quotation for sunflower seed on the St. Louis market was $2.25 per 100 pounds, and it was also reported that so much of it becomes infested with weevils before shipment to market, the buyers do not care to bid on it.

The First Navel Orange Tree.

Prof. H. E. Deman, in the Rural New Yorker for June, 1899, has this to say regarding the introduction of the navel to the United States:

"During the Civil War a woman had been sojourning in Brazil, and sent to Mr. William Saunders, of Washington, D. C., that she knew of an orange in Bahia, Brazil, that excelled any other variety she had ever tasted or heard of. He sent there and had twelve trees propagated by budding and sent to him in 1870. They all grew and some of them are yet bearing fruit in the orange house at Washington. None of the original trees were sent out to the Pacific, but all were there used as stock from which to propagate by budding. Many young trees were budded from them and sent to Florida and California. Early in 1873 Mrs. Tibbetts was in Washington, just previous to going to her new home in Riverside, Cal. Mr. Saunders offered to give her some trees of this new untried orange, and she most gladly accepted two trees. She and her husband planted them beside their cottage, and when they bore fruit it was found to be equal to the most extravagant reports of its quality and size and the trees were very prolific in that section. The trees sent to Florida produced equally good fruit but they did not bear well. This is why many fruit growers thought there was more than one variety in the lot of trees imported from Brazil, but the difference in fruitfulness came from climatic causes, as has been thoroughly proven by many years of experience in all the orange-growing sections of the country.

At St. Louis, December 1st, homegrown sweet potatoes were selling at 50 to 65 cents a bushel; the Bermuda at 50 to 55 cents, and Nansemond at 60 to 65 cents.

Investigate the Detroit-American, the genuine tongueless disc harrow, by sending in the coupon on page 3.

Your Money's Worth in a Watch Case

The reliable watch case, with its tight-fitting caps and neat joints, is a mighty fine piece of workmanship. There are a dozen ways to cheapen it—in amount of labor put on it, in skill, in weight, in fineness.

The *genuine* watch case is made not merely to please the eye and to sell, but to protect the wonderfully fine and delicate mechanism of the watch movement or "works."

You know how it is in buying anything: if you take things for granted and don't know what to ask for you get an adulterated article—a substitute said to be "just as good" as the genuine.

The trade marks illustrated on this page are your safeguard. They are standard with the fine jewelry trade, and have been for 50 years. They mean absolute integrity in bullion value, in assay, in construction of a watch case. Be sure to find them. Every good jeweler in this country knows the marks and carries the cases. They are made for ladies' and men's watches—plain, engine-turned, engraved or enameled. All sizes, all patterns.

We Treat You 30 Days FREE

Blood Poison can never be cured with mercury or potash. You might as well know this first as last. Medical authorities say so. The most these drugs can do is to drive the blood poison back into the system and smother it for several years. Then when you think you are cured, pitiful mercury symptoms will break out, and you find that your bones have been rotting all the while. Your teeth will begin to loosen and your tissues, glands, brain and vital organs will show the terrible destructive power of the mercury and potash. Locomotor Ataxia, Paralysis, Imbecility and Premature Death are then almost inevitable. Any medical authority will corroborate these statements. The remarkable vegetable Obbac Treatment does not drive in the

Blood Poison

but drives it **out.** It positively contains no mineral poisons whatever, so that once cured by the Obbac Treatment you never run the terrible risk of having your bones soften, your nerves collapse, your teeth fall out, your kidneys degenerate or your brain weaken. The Obbac Treatment is a marvel, producing remarkable changes in only 30 days. This is why we offer to any blood poison victim living, no matter how bad a case, a

30-Day Treatment FREE

You want to be cured and cured quick—not poisoned with mercury and potash for years. A 30-Day Treatment is yours for the asking. You will open your eyes at what it will do for you in a month. We treat you free for a month. Just write to us and get the treatment free. Then if you are satisfied it is the most remarkable treatment you ever took, you can continue if you wish. Never in your life will you ever again have such an opportunity for a complete cure, as is given you by this

Great Obbac Treatment

This is a square deal. You sign nothing, no notes, make us no promises, except to take the treatment.

The wonderful Wasserman Test, the only blood poison test known to scientists, proves that the body is completely purified by the Obbac Treatment, and that mercury and potash do not cure blood poison. Sit down and write to us, giving a full history of your case in detail. We will treat your letter as a sacred confidence. Consultation and advice free. We will send you also the remarkable book, "Driving Out Blood Poison" free.

THE OBBAC CO.
1195 Obbac Bldg., Chicago, Illinois.

Fure-food Groceries.

The wholesale price list of groceries issued by Montgomery Ward & Co. is most valuable to a farmer's family. It sifts down the necessities which the farmer does not produce and is able to buy them at wholesale prices, with the pure-food guarantee behind them. There is vital difference in the nutrition to be obtained from food and by sending to this firm you are absolutely sure of superior quality. Write to Montgomery Ward & Co. at Nineteenth and Campbell streets, Kansas City, Mo., or to Chicago Avenue Bridge, Chicago, whichever house is nearest to your farm. Mention this paper and ask for the grocery price list.

Buchanan county is credited with being the first in Missouri in the matter of poultry products, the surplus being valued at $3,035,660, including 6,308,000 dozen eggs. Pettis county comes second. Poultry products of Missouri are reported at $45,902,655 for the year 1909.

The Peanut and Its Culture.

The peanut is a fruit and not a vegetable, and it is becoming a very interesting fruit. The plant is a legume, therefore beneficial to the soil and the rotted vines are fully equal as a fertilizer to barn-yard manure. The commercial value of the common peanut is about 3½ cents a pound, which is three times more than oats are selling for, and the yield is also three times larger than oats. Within reasonable limits every farm should have its acreage of peanuts, especially of the superior varieties. There is but one farm where peanuts have been systematically improved. The two great varieties of greatest value are Improved Spanish and Bunch Jumbo. There is a treatise entitled "The Peanut and Its Culture," written by practical peanut growers, which goes into every detail. The chapters are: "Magnitude of the Peanut Crop; Origin and Botany of the Peanut; Peculiarities of the Peanut Plant; Varieties of Peanuts and Their Uses; Domestic Use of the Peanut; Breeding Seed Peanuts; How to Cultivate and Harvest Peanuts; The Peanut "Popper;" Peanut Culture in Arkansas; Adaptability of the Peanut to the Arid West; How Peanuts are Prepared by the Factories. Industry at Petersburg, Norfolk and Suffolk, Virginia; Foreign Peanuts; How Peanut Oil is Made; The Peanut as a Food; Weights and Prices."

We are in position to make our patrons a very advantageous offer to enable them to get a start with the best peanuts. For $1.25 sent to us we will send The National Farmer and Stock Grower for one year; a copy of the treatise entitled "The Peanut and Its Culture," and three quuarts of selected seed peanuts, sufficient to plant an eighth of an acre, equally divided between Bunch Jumbo and Improved Spanish. The treatise and the peanuts will be sent postage paid, safe delivery guaranteed. We consider this to be a grand offer for the farmer to accept, and we believe it will be appreciated.

The Window Garden.

The health of the plants and members of the family are to a certain extent bound together. Plants take up the carbon exhaled by man; they further demand a certain amount of moisture, and the living room is apt to be too dry for our own good. Hence when the plants protest, we may well on our own account strive to correct the deficit.

But it is a mistake to suppose that all plants will thrive under the same conditions. Look to nature. Her cacti and her ferns flourish under conditions entirely different. Take a peep into a great conservatory and you will be convinced that the luxuriant growth on every side is a direct result of heeding her requirements. Open the door between the apartment for palms and other tropical plants and that of the chrysanthemum room and it will almost make your teeth chatter from contrast.

In the window garden we cannot hope to completely fill these diverse conditions, and yet we may approximate them. But it takes special care and forethought. The latter in selecting the plants; the former in the respective positions assigned and the method of treatment.

Give the calla, cactus and coleus all the sunshine possible, but slip the farfugium back into the shade. Beraniums revel in sunshine, and nothing else will give the zenales the rich markings so desired, yet the plants will thrive without complaining in a less favored place.

The kitchen window is the best of any in the house for this reason, —there is always an abundance of moisture. With steam from cooking and perhaps washing, the red spider does not even knock for admittance. The plants thrive, too, and this is another safeguard against the attacks of insects, for these pests always prey upon the weaker rather than the stronger plant. Keep the plants in health and growing and there is less call for insecticides.

The woman who has the best "luck" with plants is eternally looking at and after them. The scale insect does not have a chance to get in its work, for she is sure to spy it on the start, and then out comes some kerosene emulsion or even a sponge and warm water, and the colony is broken up while still in the nucleus. If a root becomes pot-bound, she is quick to apprehend the fact by a sudden arresting of growth and the plant is gently shifted to a pot of larger size. If it even sends out a branch in an unsymmetrical form she is ready to nip it off and compel a comely appearance. If the soil is too wet or too dry, she is ready with the remedy.

The one who can give her plants a good shower bath at least once a week can always take pride in the fact that they are clean. And it is just as essential to plant hygiene that the pores of the leaves be kept open and free from dust as that the human flesh be immaculate. Perhaps there are too many to move all at one time. Try filling the sink with pots taken alternately and spray thoroughly with a regular sprayer or a whisk broom, using tepid water. If there are rough-leaved begonias in the collection, keep them out of the sunlight until completely dry. By thus taking a few plants at a time one may keep the collection clean and at the same time not make the work too laborious.

Plant food in some form must be provided, for the soil, though rich in autumn, will need replenishing long before spring. There is nothing better than barnyard fertilizer, though there are other foods more convenient to furnish. Some have said that sheep supply all the elements necessary to plant life. The cattle yard has long been a favorite resort for the flower lover. If the fertilizer is kept in a thin cloth sack, as a sugar sack, in an old crock, it can be moistened and the liquid applied as needed. Ammonia, a teaspoonful to a quart of water, is a clean and excellent food.—Bessie L. Putnam.

Hay Prices at St. Louis.

The following sales represent the St. Louis hay market, December 1st, 1910: Timothy, choice, $18.50 to $19; No. 1, $16.50 to $19.50; low grades, $12 to $15. Prairie quiet; choice, $11 to $15; good alfalfa quiet but firm at $17 to $17.50 for choice; No. 1, $15 to $16; low grades, $7.50 to $11. Clover dull; choice, $13; off grades much lower. Clover-mixed, good, $14 to $16; No. 2, $11 to $12 per ton.

At the Chicago International Show H. B. Duryea, of Hickory Valley, Tenn., bought $4,245 worth of pure-bred Shorthorn cattle.

"Ingratitude is monstrous, and for the multitude to be ungrateful were to make a monster of the multitude." —Shakespeare.

"As I approach a second childhood, I endeavor to enter into the pleasure of it."—Lady Montagu.

I Cured My Rupture

I Will Show You How To Cure Yours FREE!

I was helpless and bed-ridden for years from a double rupture. No truss could hold. Doctors said I would die if not operated on. I fooled them all and cured myself by a simple discovery. I will send the cure free by mail if you write for it. I cured me and has since cured thousands. It will cure you.

Fill out the coupon below and mail it to me today

SOUND FORMULA CO., Seattle, Wash.

FOR THE FRUIT GROWER.

Someone in the family ought to be a fruit grower, and yet it is very hard to interest the stockman in fruits. We will do our best, however, by placing a good fruit book in the hands of our readers. The book entitled Amateur Fruit Growing was written by Samuel B. Green, a practical man and one of the best authorities on the subject. There are 134 pages, written with special reference to the growing of fruits for the home and the market. We will send the book entitled Amateur Fruit Growing and The National Farmer and Stock Grower one year for 55 cents. Send a money order to Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

GRAND SUBSCRIPTION OFFER.

A Most Delightful Picture.

This glorious and beautiful picture is 6x8 inches and is mounted on a nice green mat which is 8x11 inches. It is just the right size for a panel picture. It is rich in colors and is ready to tack or hang on the wall. It is not necessary to frame this picture, but no picture in the world is better worth framing.

Mother and Child.

The dark, warm colors of the room, enlightened by the glow of the candles; the chubby face; the restful, healthy, natural position of the child; his delicate, little hands, and the fond look of the mother, all go towards perfecting a picture that will be enjoyed and give happiness to any house it may enter.

We offer this picture as a subscription premium. Send us 25 cents and we will send The National Farmer and Stock Grower for six months. We will also send one mounted copy of the **Mother and Child Picture**, in colors, postpaid, and safe delivery guaranteed. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

The "Educated" Woman.

Not long ago a woman bewailed to me the fact that she had no education. She is skilled in every branch of housework; has brought up a family of four children to be a credit to herself and their home town, and has practical experience as a trained nurse. Were she thrown upon her own resources to-day, at the age of sixty, she could make a comfortable living. I reminded her of all this and she said: "Oh, would you really call that an education? I have always felt so ignorant. I know I read a great deal but I can never wholly forget the fact that I had only two years of actual schooling, and those were spent in a German school." I laughed as I answered: "Do you remember the class of Sunday school boys that Miss Andrews could not manage? She is a college graduate—has done nothing but study all of her life and has had a regular course in psychology and child training. She gave up the class and you took it. What was the result? Why, you couldn't have hired those boys to stay away after that, and, what was more, they brought others until the class grew so big we had to give you a room to yourselves. They gave you a surprise party about once in six months and showered you with presents on every possible occasion. Other teachers they barely tolerated." "Oh, that is just because I understand boys," answered the woman with a pleased blush.

And that is the gist of the whole matter. Human nature existed with all its peculiar phases before there was any "ology" made of psychics. And that woman has got back of all the books that were ever written on pyschology and child training. She understands the subject matter at first hand and knows enough about it to write a practical treatise, though probably the grammar and construction would need some correction. But when Mrs. M. succeeds where Miss Andrews fails, can we say: "Mrs. M. is an uneducated woman, while Miss Andrews is an educated woman?" No. Any man or woman who is skillful along any line is to that extent educated. And the men and women who are regretting that they had no chance to attend school and are belittling the results of their lives because they feel handicapped by the lack of the school education, should bear in mind that if they are good farmers or good housewives or good anything at all, they are to that extent educated and can look the whole world in the face and say: "I have learned all that it has come my way to learn and with an open mind am reaching out after more. I have used all available resurces to become skilled in my line of work and have done my best."

While the young people of to-day may indeed be truly thankful that the way to a common, high school and even college education has been paved so smoothly for them, it might be well for them to bear in mind that there is an education that comes only from experience, and in spite of diplomas and degrees there are still some things which the good parents can tell them.—Janet Thomas Van Osdel.

Getting Full Use of the School House.

According to the tales of the grandparents and great-grandparents, in their day the school house was made a center of social and intellectual activity. They tell us there is nothing in the country to-day that takes the place of their spelldowns and their singing school, and they also tell us that the spelling of the American youth is a disgrace to the country, and the singing is not what it used to be. The country people of to-day are surely missing something by not reviving the old spelldowns and the singing school or by putting something in their stead in which the whole community, old and young, can join. For an evening of pure, hearty fun there is nothing to beat the old spelldown and the "sing." But if there is no desire to revive these, think of something else of common interest to be held weekly or fortnightly. The point is this—make use of the school house for community gatherings. It is the public building of the district, the members of which are keeping it in condition. Why shouldn't there be some public gathering at it, say once a week, preferably Friday evening? It may be for a spelldown or a "sing" or a concert or a lecture—that would be for the people to decide. But there ought as a rule to be no price set upon these entertainments, except when the district is put to some expense in providing the entertainment, as in furnishing a lecturer or musicians who perform only on a salary. Each year a committee of three or four persons might be chosen to lead in making arrangements for these public gatherings. There is usually a large amount of hidden talent in a neighborhood—someone who can sing, another who reads well, perhaps another who can perform some sleight-of-hand tricks—all of which can be made use of if only it can be unearthed. Neighboring villages will usually help out in the matter of lecturers and musicians. The school teacher can help out in these matters and will seldom refuse to do so. But whether it's a meeting to discuss good roads or a frolic pure and simple, the fact remains that the people participating are finding new interest in life and will enter upon their to-morrow's work with new vigor and better results.—Janet Thomas Van Osdel.

New Selling Plan a Success.

The new selling plan recently inaugurated by the Detroit Engine Works has proved a tremendous success and one worthy of encouragement by every engine buyer. Their new fifteen-days' trial proposition makes the buyer the sole judge of the merits of the engine, and it is up to him whether he keeps it or not. There is no joker in the office of the Detroit Engine Works. They enter into an ironclad agreement to refund every dollar paid them for the engine if the engine is not satisfactory in the minutest detail.

The Detroit Engine Works gives the buyer of its new kerosene engine the ample time of fifteen days to decide if he wants the engine. The buyer is the sole judge—the company in no way attempts to influence his judgment. They have enough confidence in their product to give the buyer every opportunity in the world to work it out. Write for new engine book to Detroit Engine Works, 383 Bellevue avenue, Detroit, Michigan.

DON'T PAY TWO PRICES
FOR STOVES AND RANGES
You Save $18.00 to $22.00 on
Hoosier Heaters and Ranges

Recovered His Cow.

A judgment worthy of Solomon was pronounced not long ago by a civil magistrate in Bucharest. It seems that a peasant living in the village of Predeal, near the Hungarian frontier, lost his cow. About two months later he happened to be standing at the railway station, watching a train-load of cattle about to be sent across the frontier. Suddenly he cried: "That's my cow!"

The railway men laughed at him, but he went before the magistrate, who listened to his story patiently. Then he pronounced judgment.

"The cow shall be taken to the public square of Predeal and milked. Then if it goes of its own accord to the plaintiff's shed it shall belong to him."

The order of the court was carried out. And the cow, in spite of its two-months' absence, took without hesitation the lane which brought it, a few minutes later, into the peasant's shed.

Flower Show Awards.

At the Flower Show of the St. Louis Horticultural Society, held in November, the E. G. Hill Company, of Richmond, Ind., was awarded the first prize of $500 for the best display of carnations. The grand prize of $500 for the best display of roses was awarded to the Poehlmann Bros. Floral Company, of Chicago, Ill. The E. G. Hill Company also won the first prize for chrysanthemums. There was a long list of prizes won by St. Louis firms—E. Young & Sons, Metropolitan Floral Company, Koenig Floral Company, and others.

Shoeing the Family.

The farmer is very careful in the selection of the man who shoes his horses, well knowing that if their feet are defective they are greatly depreciated in value. But he sometimes forgets that the shoe is as much a matter of health and comfort as any other feature in family life. Wet feet are the doctor's best helpers. Uncomfortable shoes are the modern inquisition. With suitable protection for the feet, even the worst weather may be endured.

The expense is often the greatest of any single item in the family. The economical housewife can make over and patch other clothing; but her skill ends here. The home cobbler is a thing of the past. Yet there are many little kinks which do much toward lessening cost and add to the appearance and comfort.

While the day of wearing leather goods without rubbers has nearly passed, for every-day wear some of them are still most serviceable. A cheap dressing for rendering them pliable and yet to a certain extent waterproof is made by heating castor oil very hot and adding as much old rubber cut into small bits as it will absorb. This gives a dressing which is partly waterproof, and yet has a gloss that is pleasing.

Not everyone is aware of the fact that two pairs of shoes worn alternately will wear at least a half longer than the same two pairs, the one worn out before the others are used. This is a recognized fact among shoemen, not so easily explained as proved, though there are various elements entering into the economy.

When shoes are worn alternately, any perspiration present has a chance to be dissipated, and the rotting of the leather which it induces is warded against. If a shoe tree is used, any peculiar shape which the wearing gives has a chance to be eliminated in the day of rest. Shoes thus used are more apt to be kept clean. And finally the rest to the feet by the change is one which must be experienced to be appreciated.

Rubber boots so often prove unsatisfactory, despite the high prices maintained, that many have grown to regard them as merely a gamble, a few even going so far as to refuse to sell the discarded ones, lest they buy them back "made over." While there is much truth in the grounds for complaint, there is another side to the story. And no material more quickly resents improper treatment than rubber. Many of the rubber goods thus condemned would, if given proper care, prove quite satisfactory.

In buying, remember that it is quite as bad to select a size too large as a size too small. If they wrinkle at any point, they will surely soon crack there. Never use grease or oil in any form upon rubber. This is a rule which is as forceful in machinery as in shoes. The machinist who allows oil to touch his belts must soon replace them.

Rubbers should be kept in a dark, cool place when not in use. Bright sunshine rots them, while the practice of placing them near the stove to dry out is still more destructive. If there is perspiration, fill the boots with dry oats during the night. They will be perfectly dry in the morning, the grain having absorbed the moisture.

Extreme cold is very hard on rubber, and, if used in a cold climate, it is apt to crack. Milk or dirt of any sort should be removed with clear water. Avoid sharp stones or anything which will cut the rubber, and remember that the care which you give them increases their value to you.

Cheap shoes are, as a rule, all that the name implies. Those of good quality, well cared for, are in the end cheapest. A good dressing used frequently is as essential to the wearing qualities as to the looks.—Bessie L. Putnam.

SisterWoman!

READ MY FREE OFFER

My Mission is to make sick women well, and I want to send you, your daughter, your sister, your mother, or any ailing friend, a full 50-cent box of Balm of Figs Compound absolutely free. It is a remedy for the treatment of **woman's ailments**, and I want to tell you **all about it**—just **how to use it yourself**—right at **home** without any inconvenience—and the best of it is that it will not in the least interfere with your work or pleasure. Balm of Figs Compound is a remedy that has made sick women well and weak women strong, and I can prove it—**let me prove it to you**, and I will gladly do it, for I have never heard of anything that has, according to the abundance of testimonials at hand, so **quickly** and **surely** cured women's ailments. No internal dosing necessary—it is a local treatment, yet it has to its credit some of the most extraordinary cures on record. Therefore I want to place it in the hands of every woman suffering with **any form of female weakness or diseases so common to women.**

This 50c box of Balm of Figs Compound will not cost you one cent

I will send it to you absolutely free, to prove to you its splendid qualities, and then if you wish to continue further, it will cost you only a few cents a week. I do not believe there is another remedy equal to Balm of Figs Compound, and I am willing to **prove** my faith by sending out these **50-cent boxes** free. So, dear reader, irrespective of your past experience, write to me **at once — today** — and I will send you the treatment **entirely free** by return mail, and if you so desire, I can readily refer you to many, who can personally testify to the great and lasting cures that have resulted from the use of this remedy. But after all, the **very best test** of anything is a **personal trial** of it, and I know a 50-cent box of Balm of Figs Comcound will **convince you** of its merits. Nothing is **so convincing** as the **actual test** of the article itself. Will **you** give Balm of Figs Compound this test? Write to me today, and remember I will gladly send you a **50-cent box of this remedy absolutely free.** Address:

MRS. HARRIET M. RICHARDS, Box A160 JOLIET, ILLINOIS

Value of Incubators.

A correspondent of the Egg Reporter, published weekly at Waterloo, Ia., who has been investigating poultry conditions on the Pacific Coast, gives an idea of the wholesale manner in which eggs are hatched, saying: "Incubators are used entirely in the egg districts, and at this season of the year the hatcheries keep the market bare of fresh eggs. One of the several hatcheries at Petaluma began in July and has been going right along and is using about 30,000 eggs every three weeks. The day-old chicks are shipped without food or water on a three-days' journey safely, and an extensive business by all the hatcheries in exporting chicks opens up our market for outside eggs."

Who Bossed the Ranch?

Once upon a time, runs a modern fable, a youth, about to embark on the sea of matrimony, went to his father and said:

"Father, who should be boss—I or my wife?"

The old man smiled and said:

"Here are 100 hens and a team of horses. Hitch up the horses, put the hens into the wagon, and wherever you find a man and his wife dwelling, stop and make inquiry as to who is the boss. Wherever you find a woman running things, leave a hen. If you come to a place where a man is in control, give him one of the horses.

After about ninety-nine hens had been disposed of he came to a house and made the usual inquiry:

"I'm the boss of this farm," said the man.

So the wife was called and she affirmed her husband's assertion.

"Take whichever horse you want," was the boy's reply.

So the husband replied: "I'll take the bay." But the wife did not like the bay and called her husband aside and talked to him. He returned and said: "I believe I'll take the gray horse."

"Not much," said the young man; "you get a hen."

Speaks Well of Absorbine.

No use to deny it, Absorbine is the most successful remedy for removing soft bunches from horses that is on the market. No blister, no hair gone, and you use the horse during the treatment. H. H. Claus, of Pittsfield, Ill., under date of September 16th, 1910, reported: "My horse is now able to work all right. Would not take $150 for him, and four weeks ago would have given him away. I tell you I cannot speak well enough for your wonderful treatment." Use Absorbine for wind puff, soft swellings, rheumatism, stiff shoulders, capped hock, bog spavin, thoroughpin, etc. On sale at druggists', $2.00 per bottle, or sent direct, express prepaid, upon receipt of price. Write for descriptive pamphlet, sent free upon request. W. F. Young, P. D. F., 106 Temple street, Springfield, Mass.

From Taylorville, Ill., on November 26th, it was reported that James Corn, aged 34, a farm hand, had died during the night. He had picked 108 bushels of corn in seven hours the day before in an effort to establish a record, and was was found dead in bed the next morning. Heart disease, aggravated by overexertion, caused death.

NEW THIN MODEL SIZE 16 STEM WIND SET WATCH

This watch is a beauty of a timepiece with several new features in watch making. **Thin model, size 16,** (about 1-2 larger than picture) **stem wind, stem set,** bright nickel case with gold-plated winding stem. White dial has Arabic numerals printed in gold on a maroon background decorated with silver, all inside a circle of gold and silver stars and dots. Case has new **double back,** protecting works from accident and dust. Each watch thoroughly **tested at factory** and just the watch to wear every day in the year and know what time it is. Just as good a time keeper as a very expensive watch, will wear for years and it **costs you nothing.**

You Can Earn It in a Few Minutes

I will give you this fine watch and fob with your initial for just a few minutes of your time. New and easy plan, sure to win. Many friends have earned it **in a half hour.** Just send me your name and 4cts. postage for full free outfit of Post Cards, etc.

Write to **F. H. PHELPS, Manager, 37E Water St., Springfield, Mass.**

Cement Workers' Handbook.

This book is designed to teach anybody how to work with cement; how to mix mortars of all kinds for all concrete purposes; how to make building blocks; how to build walls, floors, ceilings, walks, posts, cisterns, troughs, tanks, etc. It gives estimates of the cost of all kinds of mortars and concretes and all methods of house construction. It is a cloth-bound book of 100 pages and covers more than fifty most important subjects on cement and its uses and construction. This is a diamond of a book for wide-awake farmers. The price of the book alone is 50 cents.

For 60 cents we will credit one-year's subscription to The National Farmer and Stock Grower and send a copy of the **Cement Workers' Handbook.** Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Origin of the Tomato.

There are people now living who remember when the tomato was thought to be poisonous. It was called the Jerusalem apple and was kept on the mantel as an ornament. Boys in those days were warned against eating tomatoes, but seeing the birds eat them they soon found the bird knew what was good. The tomato is a native of Peru, but grows spontaneously throughout Mexico and as far north as Texas-California in a form closely approaching the cherry tomato of our garden. It was introduced in Europe as early as 1561, and was eaten there dressed with pepper, salt and oil, much as many people eat it to-day. In 1596 it was grown in England, but used only for ornament for many years. In 1700 there is mention of six varieties—one pale red, one striped, two yellow, one white and one red—but its culture was neglected, for in 1819 only four red varieties were mentioned. It was introduced in Philadelphia in 1789, and in Salem, Mass., about 1802. Its cultivation for the market began in 1829, but it did not find a place in the premium list of horticultural societies until 1830. In the earlier catalogues mention is made of a type called the large red, which was followed in 1862 by the Fiji Island, in 1866 by the Tilden, and in 1869 by the Cook's Favorite.

Bulletin 117 of the Agricultural Experiment Sation of West Virginia gives the following information:

A. W. Livingston, of Columbus, Ohio, originated a great many good varieties, the first of which was the Paragon. In 1880 he produced the Perfection, and during the next ten years a number of other varieties We had a call from Mr. Livingston in 1880 and were very greatly interested in his methods. He appeared to rely entirely upon sports. He brought seeds from the canneries by the tens of thousands, planted them and studied them, and when he found a sport that had the shape and color that he desired it was carefully preserved and propagated.

The wisdom of his methods has been shown by the experience of the various Experiment Stations. None of them have succeeded in making any great improvement through hybridding. Both the Maine Experiment Station and Cornell University have endeavored to produce hybrids by crossing two species, but the result is that the hybrids are unstable and the fruit too small to be of any commercial value. As varieties run out, which they will do in the course of time, the quality can be kept up mainly by adopting Mr. Livingston's method of hunting sports. It is a rather humiliating fact that nature does in her off-hand way what man with all his science and skill is unable to do. A number of our best varieties of wheat are sports. The same seems to govern both in the wheat field and in the tomato patch. —M. Daly.

Corning Beef.

The pieces commonly used for corning beef are the cheaper cuts of meat, such as the plate, rump, cross-ribs and brisket. The meat should be cut into medium-sized pieces, so that it will pack well in a jar or barrel. It should be well cooled and corned before decay sets in, or it will spoil the brine. For each 100 pounds of meat weigh out eight pounds of salt and sprinkle a layer of about a quarter of an inch in depth over the bottom of the vessel, and then pack in a layer of meat five or six inches in thickness. On top of this put a layer of salt, followed by a layer of meat, until all the meat is packed in the vessel. Keep enough salt for a good layer over the top of the last layer of meat. After this has stood over night, add, for every 100 pounds of meat, four pounds of sugar, two ounces of baking soda and four ounces of saltpeter, all dissolved in a gallon of warm water. When this is cool, pour it over the meat and add enough cold water to cover the meat. Weight it down with a loose board, held in place by a clean stone, to keep the meat under the brine. It should be left in the brine for from twenty-five to forty days before it is ready for use.—W. H. Tomhave, University Farm, St. Paul, Minn.

The Standard Watch Case.

In buying a watch, be sure to obtain the Keystone manufacture. In order to understand this subject, see page 19. It is easy to obtain the benefit of the guarantee, for the reason that it is engraved inside every case. You know exactly what you are buying, just the same as you know a gold coin issued by the United States Mint. The subject is worth investigating.

The Country Orchestra.

The offer made through this paper by a Chicago music house to help in the establishment of an amateur symphony orchestra in every community, regardless of size, desiring one, is an offer that should, and probably will, bring rejoicing to all musically-inclined young people who have been longing for some such organization but have not known how to go about to perfect one themselves.

There is nothing that brings more life and light into a community than just such an orchestra. It gives the young people an outside interest that is worth their while, and it develops among them a common tie that makes neighborhood associations dear to them. Every one of these ties formed serves to strengthen the bond that will keep the young people from looking toward the city with longing eyes. Then there is the entertainment for the home and for all local public occasions which the orchestra can furnish. We do earnestly hope for their own profit and pleasure that the young people of the land will take up the matter and that there will be an orchestra established in every community where there is a music-loving soul.—Janet Thomas Van Osdel.

$1,600 a Year From One Acre

A man in ***Southern California*** owns and lives on one acre of ground. Around the acre is planted a row of fruit trees from which he realized $400. From one-quarter of an acre of strawberries he made $200. On the remaining ground he raised vegetables. California has a year 'round growing season—he sold $1,000 worth in twelve months. In addition he kept many fowls; all money makers.

An Invaluable Book For Sportsmen.

We have just received a copy of "Game Laws and Guide Directory For 1910," a book of ready reference for sportsmen, issued by the Union Metallic Cartridge Company.

We understand that this book has been produced at great expense, and there is every evidence of it, for it consists of 120 well-printed pages and contains just such information as every hunter should have at his command. It tells where the various kinds of game abound, when the seasons open and close, and what laws govern the hunting of game in each state. Also there is given a list of the names and addresses of dependable and efficient guides, who know every haunt in the big-game regions.

A copy of this invaluable book can be had upon request and mention of this paper to the M. Hartley Co., 299 Broadway, New York City, N. Y.

Only One Book on Farming.

If a man on a farm could only afford one book on farming we would advise him to obtain "Practical Farming and Gardening," which is advertised in this paper. The original price of this book was $2.00, but we have managed to get a big edition cheaper. See page 19.

Read "A View of the Hog Market" on page 3. It is encouraging to farmers who are interested in hog raising and hog feeding.

THE MEXICAN RESURRECTION PLANT.

This is a great and pleasing novelty. Without water it dries up and is apparently dead. Place it in a shallow tank of water and it revives to a beautiful, living, fern-like plant. Let it dry out again and it curls up like a ball and can be kept for years. It will revive again directly it is placed in water. It requires no soil, no nourishment, no attention.

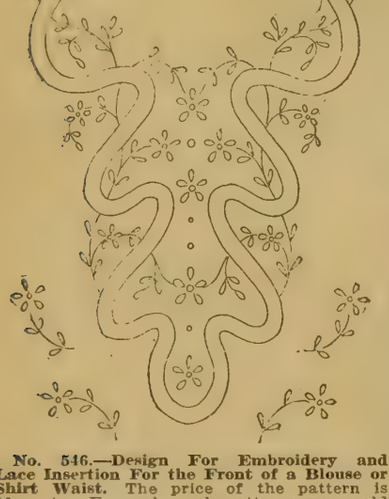
We have adopted the Resurrection Plant as a subscription premium to the **Universal Magazine.** The magazine is most interesting and is published monthly. It is an illustrated publication, with genuine stories, splendid poetry and home reading. Send 25 cents for one-year's subscription to the **Universal Magazine** and we will mail you one of these genuine Resurrection Plants as a free premium.

Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

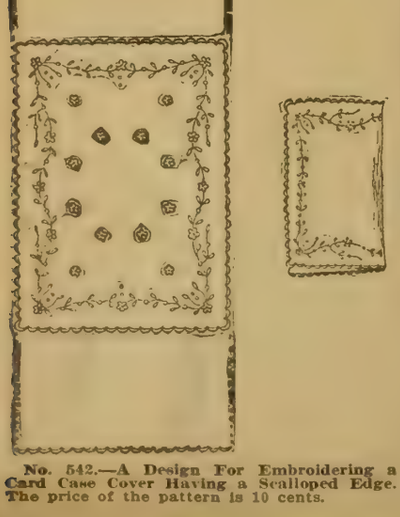
MAY MANTON EMBROIDERY.

These paper patterns require only a hot iron to insure a perfect transfer on cloth. The way to do it is to lay the material to be stamped on a padded ironing board or table, place the pattern over it with the printed side down and press over the entire surface of the paper with a hot iron, when a perfect outline will result. Please order by embroidery number.

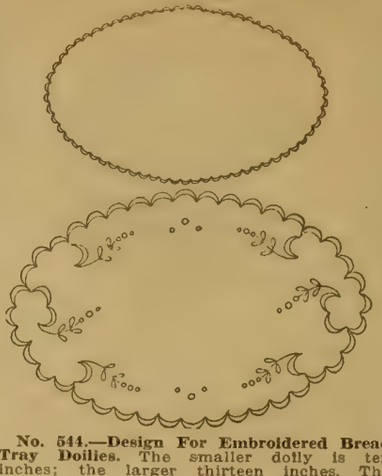
No. 543.—Design For Braiding a Blouse or Princesse Gown. The price of the pattern is 10 cents.



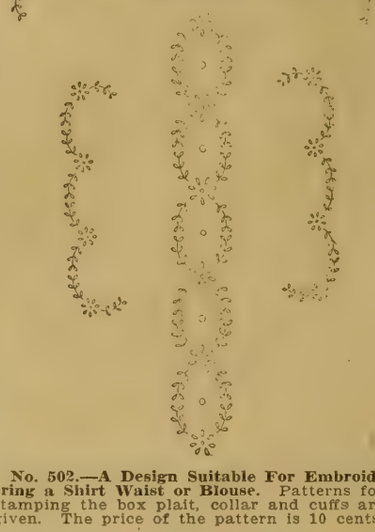
No. 546.—Design For Embroidery and Lace Insertion For the Front of a Blouse or Shirt Waist. The price of the pattern is 10 cents. Formerly such patterns were sold at 35 to 40 cents.



No. 542.—A Design For Embroidering a Card Case Cover Having a Scalloped Edge. The price of the pattern is 10 cents.



No. 544.—Design For Embroidered Bread Tray Doilies. The smaller doily is ten inches; the larger thirteen inches. The price of the pattern is 10 cents.



No. 502.—A Design Suitable For Embroidering a Shirt Waist or Blouse. Patterns for stamping the box plait, collar and cuffs are given. The price of the pattern is 10 cents.

Please send all orders for these embroidery patterns to the **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

A Few Poultry Notes.

So many writers on poultry place so much stress on the feed to be given to poultry to be successful. As I see it, while the feed is important, quantity and quality, there are many other things equally as important, and one of them is cleanliness. The poultry house should be kept clean and free from bad smells. The poultry house that you can smell before you enter it is mighty apt to be the home of sick chickens. There is nothing quite equal to air-slaked lime for keeping the poultry house clean and free from disease. That well sprinkled, often, and plenty of lime whitewash used several times a year, and daily, or at most weekly scraping and sweeping, will keep a hen house that chickens can live in and one you can go in without feeling sick. What is more nauseating than going in a dirty, filthy hen house? It is no wonder hens kept in such a place don't lay; that they sicken and die. We should be just as careful now as earlier in the year to keep their quarters clean. All the feed in the world given to hens in a filthy hen house will not make them lay at their best. And eggs are money. That is what we keep them for. We may not make a fortune selling eggs, but there is a mighty good living to be made at it. Then let's take care of our hens. Give them good, clean quarters to sleep in and good, wholesome feed, plenty of it, and of different kinds, good, comfortable nests, then gather in the eggs. And, my word for it, you will be well paid for your work. Work? Yes, lots of work; but the pay is good. Take good care of the hens.—Mrs. H. M. Prince, Oakland, Miss.

Timely Household Hints.

Bed coverings that are too small are the cause of many colds and spells of rheumatism and neuralgia, and if you use the outing cloth blankets, it is far better to buy the goods and make them at home, as the ready-made articles are entirely too small for a durable bed.

If you have a door that lets in much cold at the bottom, make a sack of some stout material and fill it with clean sand and place at the door. The sack must be a little longer than the door and not very large around, as it will roll over easily when the door is opened and it can be easily replaced by the foot; and mats made of burlap cut in strips and braided are good for using around the doors and they are quite easily made.

The best way to make a comfort is to make a comfort of cheese cloth or any old, thin, soft material and tack with fine tidy cotton to keep the cotton batting in place; then make the outside covering and tack over this with yarn or pretty wools. When this covering becomes soiled it can easily be slipped off, washed and ironed and then tacked in place again. An outing flannel blanket is as easy to wash as a cotton sheet and far more pleasant to sleep next to in the winter. When they need washing, put them in warm suds with a little borax added to soften the water and allow them to soak for half an hour, then add more hot water and wash them clean through this suds and put them through a light borax suds, rinse in one clear water and hang out. They will dry in a few hours and can be folded and carried into the house and they need no ironing.

In cold weather, when the windows become dusty and dingy with smoke, wipe them off good with a soft cloth, then wash them with borax water without soap and rinse with one clear water; rub dry with a soft cloth and polish with soft tissue paper, and they will be shiningly clean, and the borax water removes the dirt from the woodwork of the windows without affecting the woodwork or paint.

A good and safe way to use coal oil for a fire starter is to fill a can two-thirds full with fine coal or wood ashes, then stir in enough oil to saturate the ashes thoroughly and use about two spoonfuls to start one fire. —M. H.

To Buy Groceries Right.

On page 7 will be found an advertisement of Montgomery Ward & Co., relating to their pure-food grocery catalogue. This firm is well and favorably known as a strictly reliable house, and hundreds of thousands of farmers will testify to this from having bought of them for many years. To get this catalogue, all you have to do is to write a postal card, saying: "Please send us your grocery catalogue as advertised in The National Farmer and Stock Grower." Address, Montgomery Ward & Co., Chicago Avenue Bridge. Chicago, Ill., or to Montgomery Ward & Co., Nineteenth and Campbell streets, Kansas City, Mo. The service is equally as good from either establishment.

A Necessary Precaution.

A theatrical man, who is also a farmer, was afraid that the hunters from town would kill his stock. Therefore he put signs on them: "This is a cow;" "This is a horse;" "This is a pig," thereby preventing the city people from mistaking them for wild game.

"About the only advantage there was in the good old days was that you were younger then."—Exchange.

$3.50 Recipe Cures Weak Kidneys Free

Relieves Urinary and Kidney Troubles, Backache, Straining, Swelling, Etc.

Stops Pain in the Bladder, Kidneys and Back.

Wouldn't it be nice within a week or so to begin to say goodbye forever to the scalding, dribbling, straining, or too frequent passage of urine; the forehead and the back-of-the-head aches; the stitches and pains in the back; the growing muscle weakness; spots before the eyes; yellow skin; sluggish bowels; swollen eyelids or ankles; leg cramps; unnatural short breath; sleeplessness and the despondency?

I have a recipe for these troubles that you can depend on, and if you want to make a quick recovery, you ought to write and get a copy of it. Many a doctor would charge you $3.50 just for writing this prescription, but I have it and will be glad to send it to you entirely free. Just drop me a line like this: Dr. A. E Robinson, K-1174 Luck Building, Detroit, Mich., and I will send it by return mail in a plain envelope. As you will see when you get it, this recipe contains only pure, harmless remedies, but it has great healing and pain-conquering power.

It will quickly show its power once you use it, so I think you had better see what it is without delay. I will send you a copy free—you can use it and cure yourself at home.

Ropp's Commercial Calculator.

This is a standard book and a revised, enlarged and improved edition. There are millions in use. **Ropp's Commercial Calculator** is especially valuable to farmers. By its regular use many hard problems become easy. It will prevent mistakes, relieve the mind, save labor, time and money, and do your figuring in the twinkling of an eye. As

Stock Buyer—I'll lose money on the hogs at $5.52½ unless the market improves by tomorrow. The weight is 3895 lbs. Here is your check for $215.

Farmer—There surely is a mistake somewhere. Ropp's New Calculator makes it $176.25. (p. 58.)

S. B. (after figuring it over carefully)—Correct. Here is a $10 bill with your check. Pardon my mistake.

handy as a watch, always ready and reliable. Anyone who will send 50 cents for one-year's subscription to this paper, The National Farmer and Stock Grower, can select one copy of **Ropp's Commercial Calculator** as a free premium. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

SURELY CURES SPAVIN.

Winnifred, Alberta, Oct. 6, '09.

B. J. KENDALL CO.:

Dear Sirs—Please send me your book "A Treatise on the Horse." I have used your Spavin Cure for over a year and have cured the horse of a Spavin. I find it to be a great medicine. Yours truly, T. THORSON.

In Ontario the Canadians raised an average of 286 bushels of carrots; 410 bushels of mangel-wurzels; 117 bushels of turnips; and 353 bushels of beets to the acre. These are official figures and will surprise many farmers who do not raise turnips.

As many as 70,343 sheep have arrived on the Chicago market in one day and 277,748 in one week.

Geese From Canada.

The United States Consul at Charlottetown, Prince Edwards Island, reports that last year live geese to a considerable amount were shipped from Price Edward's Island to the United States, and a number of American buyers are there purchasing for the Boston and New York markets.

The fattening is done in the United States. It is claimed that the geese from this island fatten well and yield richly in rendered grease, used in many households in the place of lard. The average live weight is 8½ pounds and the freight is 10 cents each. The prices paid to farmers in 1908 were from 60 to 65 cents per goose; in 1909, 80 to 85 cents; and this season 10 per cent. more than last year. Shipments of dressed geese, which will amount this year to about 35,000, have commenced. Most of these go to the other maritime provinces and to Newfoundland, the remainder to Boston and New York. The prevailing prices of dressed geese are from 12 to 13 cents per pound.

The exports of live poultry from Canada during the fiscal year ended March 31, 1910, amounted to $120,623, of which $111,241 worth went to the United States; poultry, dressed and undressed, to the value of $32,432 and $26,730, respectively, went to Great Britain.

(Note.—Under the existing tariff live poultry imported contributes three cents a pound and dressed poultry five cents a pound for the support of the United States government.)

To Feed Young Chicks.

Farmers who intend to use incubators in their poultry raising are interested in a very valuable contribution to poultry literature just issued by the Agricultural Experiment Station at Ithaca, N. Y. It is entitled "Seven Methods of Feeding Young Chickens," and the authors are J. E. Rice and Clara Nixon. There are forty-eight pages of it, showing every detail of rations, feeding, brooding, yarding, also pictures of chicks at two, four and six weeks old. Their chicks cost them nearly four cents each at birth, and $9.89 per 100 chicks at six weeks old. Write for the incubator books advertised on page 18 and then write to Director Agricultural Experiment Station, Ithaca, N. Y., and ask for a copy of Bulletin No. 282.

He Found Another Job.

A. T. Stewart was shown one day by one of his confidential employes an amusing caricature of himself done in pencil.

"Good, good!" he laughed, "that is excellent. Who did it!"

"A young salesman at the linen counter. He scratched it off as you passed the other morning. I managed to get it from him and now he's scared stiff for fear you'll see it," was the laughing reply.

"Scared stiff is he?" said Mr. Stewart, with a twinkle in his eye. "Just send him to me, will you?"

A little later a slim youth entered Mr. Stewart's private office and said he understood he had been sent for. "Yes," said Mr. Stewart gravely, and, holding up the sketch, asked: "Did you do this?"

The lad grew pale and stammered: "I—I beg your pardon, sir—it was only a bit of fun—I meant no offense."

"That's all very well, but you'll have to give up your job here."

The youth humbly protested, when Mr. Stewart burst out laughing and said: "Don't say any more, my boy. I'm only joking. Your sketch is excellent, and as it would be a sin to keep a man of your artistic talent behind a linen counter I propose to supply you with the means to study art."

Mr. Stewart's proposition was gratefully accepted and it was thus that John R. Rogers, the sculptor, began his artistic career.—New York Press.

Stumped by Sammy.

"Do not sneer at the juvenile intellect," said John J. Chickering, District Superintendent of Schools. "Sometimes a boy can ask questions that a man can't answer." And he went on to tell of an experience he had when he was principal of one of the New York schools. He was called on by a teacher to come to her aid.

"It's all right," said she, "until natural history hour comes. Sammy Jones lives on a farm, and he thinks he knows more about natural history than the man that invented it. He keeps asking me questions, and if I answer them Sammy laughs, and if I don't the children do. Discipline is simply gone to pot. The children would give up their recess if I would lengthen the natural history hour by five minutes."

"So," said Mr. Chickering, "in the pride of my manhood I told her I would come to her rescue. 'One short, sharp answer will denote to Sammy that the matinee is over.'" The teacher welcomed my aid. That afternoon I dropped in and took charge of the exercise. I told the children I would allow just one question each. And Sammy stumped me. I had hardly made the announcement before his hand was up.

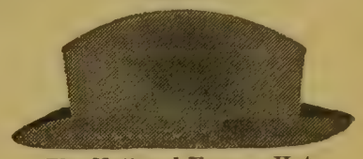
"What is it, Sammy?" I asked.

"Has a duck eyebrows?" asked Sammy."—Cincinnati Times Star.

A Fruit and Garden Paper.

Inquiries for a first-class publication devoted to fruit growing and gardening are answered by our adopting **The Fruitman and Gardener** as a companion paper to The National Farmer and Stock Grower. The combination is a good one. This is offering one as a subscription premium to the other. This is a splendid clubbing arrangement. The National Farmer and Stock Grower one year and **The Fruitman and Gardener** one year, both papers for 50 cents. Send orders to **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

MAGNIFICENT SUBSCRIPTION PREMIUM.



The National Farmer Hat.

The sizes are from 6⅝ to 7½. They are hats suitable for men or boys. They are of good material, well made and stylish. These hats are sent direct frm the manufacturer to the subscriber in a tube and sent by mail prepaid. These hats are black and steel gray. We send black unless gray is called for. These hats wear as well and last as long as any $2.00 to $3.00 hats on this market. They will give entire satisfaction. The subscription price of The National Farmer and Stock Grower is One Dollar for three years. We cut out one year, and in place of the third year we include the hat. Therefore, send us One Dollar to pay for two-years' subscription to The National Farmer and Stock Grower, and we will send you by mail one of these fine National Farmer hats as a premium. Be sure to mention the size and color.

SUBSCRIPTION BLANK — To be Filled Out if Order is Given.

Close Competition.

"Yes," said the specialist, as he stood at the bedside of the miser millionaire, "I can cure you."

"But what will it cost?" came feebly from the lips of the sick man.

The specialist made a swift mental calculation. "Ninety-five dollars," was his answer.

"Can't you shade your figure a little?" wailed the other. "The undertaker's bid is much less."—Lippincott's.

Manitoba's record crop for 1910 was grown on McMillan Bros.' farm, near Westbourne. They have a total crop of 70,000 bushels, netting $40,000 off 2,200 acres.—Toronto Sun.

Make $14.00 On Your Hide

Our Catalog tells how. Save yourself the profits ordinarily made by the other fellow. Ship your hides and skins to us. Let us make them into handsome made-to-measure **Coats, Robes, Mittens, Gloves, etc.** We return the finished article 3 weeks after receiving raw hide. **We guarantee to pay you full market value for the hide if our work does not please you.** You can't loose.

Get Our New Catalog

Fully Illustrated. Full of information. Complete as to prices. It will tell you how to keep the whole family warm AT SMALL COST with hides of your own raising.

WE PAY FREIGHT

Our catalog tells when. We make no claims we do not fulfill. If you have a hide ship it now, and write for this new Catalog.

Why Send Hides to No-Account Tanners?

They experiment with the hide that belongs to you. We do good work for YOU because we make up thousands of hides of OUR OWN. Your dealer should carry a line of our manufactured fur goods. If he doesn't, get our Catalog and order direct.

We use this Atlas as a subscription premium. For fifty (50) cents paid in advance we will send one copy of **Hammond's Handy Atlas** post free by mail and credit one-year's subscription to The National Farmer and Stock Grower. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

The Face in the Mirror.

It was an ordinary London house, spacious and commonplace. But the magic power of wealth had transformed it for the time being into the semblance of fairyland. Flowers bloomed everywhere; a fountain splashed sparkling golden water in the center of a wondrous courtyard: from the ballroom came the rhythm of dancing feet and the distant strains of the newest waltz, played by the most fashionable band in London. The corridor was cool and quiet. Only two people had strayed there and stood beneath a priceless Venetian mirror in a frame of wonderful silver workmanship, one of the many treasures recently bought by the American man of wealth who on this night was giving a bal masque.

A divan, rich with Eastern coloring, invited rest, and the couple sat down. Only the mirror heard and saw what happened. It was the one silent witness.

"I know your voice," said the man in a puzzled tone, "but I cannot recognize anything else. Yet I feel as if I had known you all my life."

The girl laughed from behind the mask, which hid all but the sparkle of her bright eyes. He, too, was masked, and the disguise suited his seventeenth-century costume. The girl wore a sweeping gown of pearly tints, sparkling here and there with silver and gold. It was the dress of a Juliet or an Eliza Brabant, and the two costumes—the velvet and lace of the courtier and the shimmering pearly dress of the lady—were well matched. Doubtless they thought so, as they had danced half the night together.

"Have we met before?" she asked presently, and her voice was very soft and sweet. "I do not know who you are, yet—"

"Yet?"

"I, too, seem as if I had known you—all my life. Isn't that odd when we are strangers?"

"'There are more things in heaven and earth—'"

"Don't say it, please; it is hackneyed, and we have avoided the common and the everyday so successfully. Besides, it doesn't apply to this case."

"Why not? Have you never heard of reincarnation?"

"Yes; but—"

"Well, why should we not have met in some other state? Perhaps once upon a time we were friends—perhaps even more than that. Why, we may have met in Rome when she was at the height of her pride and glory, or in Athens in the days of the heroes, or—in a dozen other places. And now we meet again, in the prosaic twentieth century, in a modern London ballroom, attired in the dress of another century, and renew our old friendship. Doesn't that account for it all?"

She tapped her little white satin toe on the polished floor. There was a hint of sorrow in her voice when she answered:

"Perhaps it does. But if you think that is really the case, isn't it a pity we never met before?"

"But we have met a thousand times!" he said, with triumph. "I've seen you in my dreams, although I've never been able to find you till to-night. That was where that meddlesome old lady, Fate, came in and interfered. Still, I know you well!"

"Better than anyone else, even in this one single night?"

"Better than anyone else."

A silence fell between them. The band was playing a haunting waltz, and the sound of the dancers' feet came distinctly to them.

"We ought to go back," she said with an effort, but he put his hand on hers appealingly.

"Not yet," he said. "You will have all the rest of your life without me; don't grudge me half an hour out of it."

"I ought to grudge you even that," she said, "because—"

"Because?"

"It belongs to someone else—my life, I mean."

"So does mine. In that, too, we are alike, fair mask. That is why I beg for just another half-hour—then we can go back to realties. Let us imagine ourselves back in that other world—in Rome or Greece or wherever it was where you and I met long ages ago, and were all the world to each other because we understood each other. It is only a game."

"Only a game," she repeated. "Yet life is made up of games—of chance. And when one wins another loses. It is the same in everything."

"But the losses exceed the gains," he said. "Listen! I want to tell you a story. I leave London in the morning. We shall never meet again, and as it is, I don't even know who you are, so it cannot matter. Will you hear it?"

"Yes."

"Once upon a time there was a man who had high ideals and high hopes, and because his hearthstone was cold they flourished the more. I believe someone has said that high hopes faint on a warm hearth. Well, he dreamt that some day he would meet the lady of his dreams, and then they would live happily ever after, like the people in the fairy tales that you and I read about when we were children together in that other world. But the cold hearth had to be warmed for the sake of his people. He belonged, you see, to a good old family, with a proud name, but little to keep it up. So when ruin stared them in the face, this man promised to save the home if the way and means could be found. The means were found in the person of a woman whom he might marry and obtain with her a fortune. I hate to tell you this, but it is part of the story. He was not altogether mercenary, but it was the only way out of the trouble."

"Yes—and the woman?"

"Is good and beautiful and—obedient. The marriage is as distasteful to her as it is to the man. But there are wheels within wheels. Then—for my story is not done yet—since he made his promise he has met the one woman in the world who was made for him and with whom he should have spent the rest of his life. So you see what he has lost."

The girl stirred a little; her fingers tightened on the fan upon her lap with such strength that the fragile ivory sticks snapped.

"And does he not think what it must mean to the woman?" she asked. "Doesn't he guess what it must be to her? Why, I—I know what she must be suffering, for I—"

"I understand—you, too, are a victim!" he said bitterly. "I knew I was not the only one on earth to suffer. So in this, as in other things, we are alike. You— Hark!"

A clock struck twelve with slow, solemn strokes. From the distant ballroom came the sudden cessation of dance-music, followed by a burst of voices and gay laughter.

It was the hour when the dancers were to unmask. The two on the divan stood up. Behind them the silver-faced mirror shone like a sheet of light.

"Am I not to see you?" he whispered as they stood in silence for a moment. "I leave London in the morning. They have all unmasked by now. Is there any harm—dear?"

She turned from him resolutely.

"The game is over" she said. "Will you go down without me, please? I—would rather you did, really."

He bowed. Through the holes in her mask he could see the sparkle of her eyes was softened, and he wondered if that softness was caused by tears.

"Then—good-bye!" he murmured.

She gave him her hand. He held it for a moment, then released it and went towards the stairs. She stood listening to the retreating footsteps, her face turned towards the old mirror. Then her fingers fumbled with the strings of her mask; it dropped from her face, and she looked into the shining mirror at a face flushed like a pink rose, soft, dewy eyes, a wealth of dusky hair under a pearl-besprinkled lace veil.

And someone else saw the vision.

He had hesitated at the head of the stairs, and, like Lot's wife of old, looked back. He had taken off his own mask and glanced back at the sweet white figure of the one woman in the world. In the mirror, that curious old mirror, he saw her face.

The next moment he was at her side; her hands were in his before she could start from his embrace.

"You!" he cried hoarsely.

She looked up at him with bewilderment.

"Dick!"

The two victims who had been forced into a marriage contract against their will—the man who had proposed and the woman who had accepted from a sense of duty—stared at each other in silence more eloquent than words.

"And I never knew you!" he exclaimed. "I never knew that it was you! I can scarcely believe it even now. I thought you were a complete stranger, and it was you—you—all the time, my dearest, my wife!"

"Because you didn't know me or I you," she said, her head against his shoulder under the old silver mirror "I was far too much afraid of you before to talk to you, and—then tonight, from behind a mask, we got to know each other so well! Oh, a mask makes one so brave!"

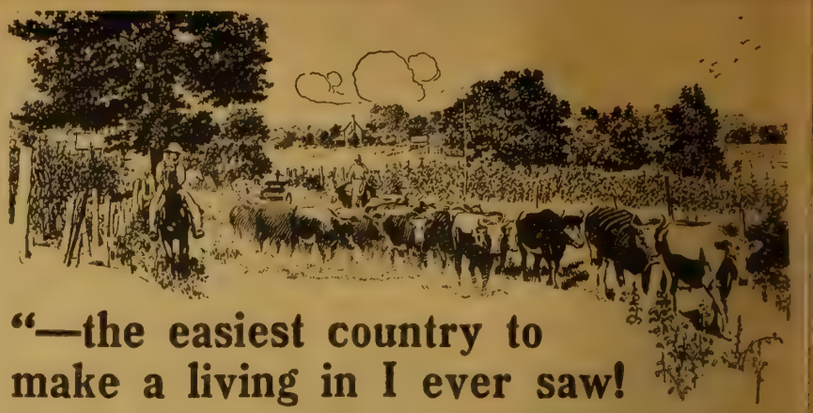
"And I did not guess, and unless I had looked back we might never have known. Think, darling—we might have gone on hiding from each other and being afraid and miserable for the rest of our lives, while now—"

Her pink cheek was pressed against his as she whispered with mirth-filled eyes:

"The distasteful marriage must go on, I suppose? Simply for the sake of—"

"For my sake!" he said tenderly

"Dick—and for mine!"—E. Burrowes, in Family Herald.



"—the easiest country to make a living in I ever saw!

Joe Ward of Paragould, was speaking of *his* part of Arkansas but if he had been telling about Arkansas and East Texas as a *whole*, he couldn't have put it better. If you would transfer *your* efforts to the cheaper, *richer* land there, you would be *surprised* at the difference in your income. The *main* cause of the *big* profits in Arkansas and East Texas is the *low price of land.* It *stands to reason*, that $30 corn from $10 per acre land (such as Mr. Hurd of Lewisville, Ark., speaks of in our book)—that $150 truck and fruit crops from $10 to $25 per acre land (such as Mr. Story of East Texas refers to) is *bound* to get you ahead quicker than the *same* crops from *high priced* land, where you now are. I have known case after case of crop raising in

Arkansas & East Texas

where the first yield *paid* for the land, with a margin to spare. Most anywhere there you can buy raw land at $5 to $10 per acre and some of the best cultivated land at $10 to $30. And Arkansas and East Texas are *normal* sections, like yours, with a normal climate and normal conditions. All the staple crops, as well as fruits and truck, yield as much or *more* there than where you are, on land that cost a fourth or half as much as yours. The *climate* lets cattle graze *all* year. On the Murray Phillips farm, Judge Stacy pointed out 120 cattle grazing, and said: "That bunch will be ready for market in May and they've never eaten a grain of corn, except what they found in fields after crops had been gathered. They'll not cost Phillips more than $19 a head and will bring $55 to $63 each."

The big advantages of this country are being *found out. Get there* before places and prices are *boomed.* Hundreds of farmers are taking advantage of the cheap excursions twice each month via Cotton Belt Route, to look around—why not you? Our booklets are the kind that farmers can *figure* from—chuckful of bedrock facts that are *bound* to interest you, showing *scores* of actual crop growing scenes. Send for *your* free copies while I *have* them. Write me *tonight.*

COTTON BELT ROUTE

MAY MANTON PATTERNS.

Very Elegant Pattern Service, With Full Instructions For Ordering and Making.

This is the very best pattern service, and we are very much pleased to obtain it for our friends and patrons. Each pattern is new and original. In this edition we present for consideration twenty seasonable patterns absolutely up-to-date with directions for ordering and quantity of material required.

No. 6691.—Overblouse, 32 to 40 bust. The quantity of material required for the medium size is 2½ yards 21 or 24, 1½ yards 32, or 1¼ yards 44 inches wide, with ¾ yard 21 inches wide for the trimming portions, ¾ yard of ribbon 2 inches wide for the rosette.

No. 6680.—Norfolk Jacket For Misses and Small Women, fourteen, sixteen and eighteen years. The quantity of material required for the medium size (sixteen years) is 3½ yards 27, 3 yards 44, or 2¾ yards 52 inches wide.

No. 6728.—Long Box Coat For Misses and Small Women, fourteen, sixteen and eighteen years. The quantity of material required for the medium size (sixteen years) is 5½ yards 24 or 27, 3 yards 44 or 52 inches wide for full length; 4¾ yards 24 or 27, 2½ yards 44 or 52 inches wide for the three-quarter length.

No. 6261.—Child's Apron, two, four and six years. The quantity of material required for the medium size (four years) is 2⅛ yards 24, 2 yards 32, or 1¾ yards 44 inches wide.

No. 6228.—Infant's Long or Short One-piece Kimono, one size. For the long Kimono will be required 2½ yards of material 24, 2¼ yards 27, or 1¾ yards either 36 or 44 inches wide, with 3½ yards of banding; to make the short Kimono, ¾ yard, any width. The price of each pattern is 10 cents.

No. 6684.—One-piece Blouse, 34 to 42 bust. The quantity of material required for the medium size is 2¼ yards 21 or 24, 1¾ yards 32, or 1¼ yards 44 inches wide, with ⅛ yard of silk for the band at the neck and cuffs, ⅛ yard of all-over lace for the yoke and collar when these are used.

No. 6719.—Fancy Yoke Blouse, 34 to 42 bust. The quantity of material required for the medium size is 3¼ yards 24 or 27, 2¼ yards 36, or 2⅛ yards 44 inches wide, with 5½ yards of edging, 4 yards of insertion.

No. 6720.—Kimono With Pointed Yoke. Small, 32 or 34; medium, 36 or 38; large, 40 or 42 bust. The quantity of material required for the medium size is 9 yards 24 or 27, 7⅝ yards 36, or 5 yards 44 inches wide, with 1⅞ yards of silk for trimming for the long Kimono, 4¼ yards 24, 3½ yards 32, or 2½ yards 44 inches wide for the short Kimono.

No. 6778.—Girl's Cape With Hood or Rolled-over Collar, one two and four years. For the medium size (two years) will be required 3 yards of material 27, or 1½ yards 44 or 52 inches wide, with ⅝ of a yard of any width for the lining of the hood.

No. 6723.—Four-piece Walking Skirt, 22 to 30 waist. The quantity of material required for the medium size is 5¼ yards 24 or 27, 3⅜ yards 44 or 52 inches wide, to make as illustrated; if narrow material is used, it is well to make a seam at the center front in order to avoid piecing, and when made in this way 5¾ yards 21 or 27 inches wide will be needed; width of skirt at lower edge, 3 yards, ⅛ yard when plaited. The price of each pattern is 10 cents.

No. 6700.—Draped Waist, 32 to 40 bust. The quantity of material required for the medium size is 3½ yards 21 or 24, 2¾ yards 32, or 2¼ yards 44 inches wide, with 1¼ yards of lace, 1⅛ yards of banding, 1½ yards of ribbon, 2 inches wide, for the rosettes, 1½ yards of all-over lace for yoke and long under-sleeves.

FREE TO YOU—MY SISTER

Free to You and Every Sister Suffering from Woman's Ailments.

I am a woman.
I know woman's sufferings.
I have found the cure.

I will mail, free of any charge, my home treatment with full instructions to any sufferer from woman's ailments. I want to tell all women about this cure—you, my reader, for yourself, your daughter, your mother, or your sister. I want to tell you how to cure yourselves at home without the help of a doctor. Men cannot understand women's sufferings. What we women know from experience, we know better than any doctor. I know that my home treatment is safe and sure cure for Leucorrhoea or Whitish discharges, Ulceration, Displacement or Falling of the Womb, Profuse, Scanty or Painful Periods, Uterine or Ovarian Tumors, or Growths; also pains in head, back and bowels, bearing down feelings, nervousness, creeping feeling up the spine, melancholy, desire to cry, hot flashes, weariness, kidney, and bladder troubles where caused by weaknesses peculiar to our sex.

I want to send you a complete ten day's treatment entirely free to prove to you that you can cure yourself at home, easily, quickly and surely. Remember, that, it will cost you nothing to give the treatment a complete trial: and if you wish to continue, it will cost you only about 12 cents a week or less than two cents a day. It will not interfere with your work or occupation. Just send me your name and address, tell me how you suffer if you wish, and I will send you the treatment for your case, entirely free, in plain wrapper, by return mail. I will also send you free of cost, my book—"WOMAN'S OWN MEDICAL ADVISER" with explanatory illustrations showing why women suffer, and how they can easily cure themselves at home. Every woman should have it, and learn to think for herself. Then when the doctor says—"You must have an operation," you can decide for yourself. Thousands of women have cured themselves with my home remedy. It cures all old or young. To Mothers of Daughters, I will explain a simple home treatment which speedily and effectually cures Leucorrhoea, Green Sickness and Painful or Irregular Menstruation in young Ladies, Plumpness and health always results from its use.

Wherever you live, I can refer you to ladies of your own locality who know and will gladly tell any sufferer that this Home Treatment really cures all women's diseases, and makes women well, strong, plump and robust. Just send me your address, and the free ten day's treatment is yours, also the book. Write to-day, as you may not see this offer again. Address

MRS. M. SUMMERS, Box H - - Notre Dame, Ind., U. S. A.

Please be sure to give the size of pattern ordered and write your own name and address plainly that no mistake can be made to cause delay.

Kindly address all pattern orders to **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Oranges as Food.

Oranges are better than drugs for certain ailments. They act on the liver and bowels and nourish the body as well as furinsh organic salts. It is said that one can live on an exclusive diet for months, for the fruit is rich in values. It has 11.57 caloric power to the ounce; 70 organic salts; 11.54 sugar and starch; 20 oil and acid and 82 protein.—Florida Fruit and Produce News.

When we hear of a man who is 70 years old marrying, it is hard to determine just what is the age of discretion.

31 PIECE DINNER SET

GIVEN FOR SELLING POST CARDS

This Full Size 31 piece Dinner Set is handsomely decorated with natural colored violets and bordered with pretty design in gold. Decorations are durable and will last forever. Every piece is perfect and selected from our first grade. We give this beautiful set for selling only 35 packages high grade Art Post Cards at 10c per pkge. Send today for cards and large catalogue in colors, showing guaranteed goods. When sold, send us the $3.50 and dishes will be sent promptly. Positively no more sales to be made for this complete set. Satisfaction guaranteed or money refunded.

ALTON WATCH CO., DEPT. 637 CHICAGO.

To Root Roses Easily.

To root roses easily, dig a trench eighteen inches deep by twelve inches wide. In the bottom fill in with sand four to six inches, then fill up with good garden soil. Cut your cuttings fifteen inches long, preferably twigs that have borne roses, but well-matured wood, and stick down to within one and a half inches of the top end, leaving out one or two eyes or buds, wet the bed well, press the dirt well around each one, turn a fruit jar or tumbler over each and mulch with stable manure to keep from freezing and leave. Do this at any time from the middle of October to the first of February, and the following spring you will have plenty of slips. I leave them in the bed until the following fall and then put them where I want them to stand. The best place for the cutting bed, I find, is along the north side of the garden, where the palings will keep off the cold and reflect the sun. And by the edge of the garden it is not in the way in plowing the garden, a very important item, as you don't want the horse to walk on it. The same bed will do for years. I have one I have used for twenty years by putting more sand in the bottom once in a while, as it will get mixed with the soil in digging it up from time to time. I have been very successful this way. It is also fine for raspberries and grapes. I like to put them out in February to April. They do better then.

When you take up your roses to put out in the yard, they should be cut back one-half to two-thirds.—Mrs. H. M. Prince, Oakland, Miss.

The Country School, and Why We Have No Better Teachers.

I see in a recent unmber of The National Farmer and Stock Grower an article entitled "Our Country School Teachers." It speaks of the teachers being more poorly equipped. If we paid our country teachers better we would get better equipment. It is only the youngest, most inexperienced teachers who will teach in the country, for the salary the country teacher is paid. It is no wonder she does not anticipate staying "a country teacher" longer than she can get the required number of years' experience it takes to get her a position in the city schools. It is true the country children do suffer from the mistakes of our young teachers, but there is no help for it, as long as we don't pay them well enough to induce them to stay with us after their years of mistakes in their learning to teach. Many of them would gladly stay in the country if the salary was commensurate with the work.

Then another thing lost sight of by many people, and especially people who do not study things from the country standpoint, is, our country teacher's hands are tied. They are paid by the County Superintendent according to the average attendance. That looks all right at first sight. But just wait a bit. There are always some unruly patrons, just as there are always some unruly pupils in all schools. Let the teacher try to enforce some rule. See the pupils pull out of school, backed up by their patrons, those same unruly patrons. I have known one-third of the school drop out that way. And then where goes the teacher's salary? We will say it is wrong, but it is a fact just the same. Now, the old experienced teacher won't stand for that sort of thing. She goes to the city, where she is assured living wages, so much a month, as long as she is employed, and not dependent on somebody's whim. No, our country teachers are not well paid, and their salary is not insured. They may take a school, expecting it to pay them $40 a month, if they can keep up a certain average, and the first thing they or anybody else knows, half the pupils have stopped. Then where is her $40 to come from? She must pay out $15 to $20 a month for board and laundry, and if she doesn't get her salary, how is she to live?

No, instead of lengthening out the term, we should double back and pay better salary. And we country people should stand by our teacher better. Don't take the children from school for every little supposed wrong step a young teacher does. And we must be careful to plan so the children will be there; not be indifferent about it. Make it the children's business to go to school. Don't let them stay out to do a job of work on a busy day. Now is all the time the children will ever have to go to school, and we are cheating them if we don't see that they go. We should ever hold the teacher up to them in the highest respect. We should not criticise her in their presence. If we do not like what she does, we should see her personally and call in the trustees and the County Superintendent, too, if necessary; but don't do her reputation and the children's future the great wrong of snatching the children away from school. Then we will have better country schools and our teachers will stay with us, for they can make a living at teaching in the country and will not turn to the city in self-defense. I have watched school conditions in the country for many years, and this is the way I see them.—Mrs. H. M. Prince, Oakland, Miss.

Devote Entire Magazine Issue to the Famous Panama Exposition.

"San Francisco—The Exposition City," written by Rufus Steele, is the feature of Sunset Magazine for December. The December number is devoted to San Francisco as the logical spot for the Panama Exposition City.

Other fascinating articles of importance to the country at large have been written by Governor Gillett, Homer S. King and Robert E. Connolly. Advance proof sheets of Mr. Steele's wonderful article, which is illustrated in four colors, show his work to be one of the most interesting treatises of this nature which has ever been written. No man or woman who takes pride in "keeping up on current events" can afford to miss the December number of Sunset.

From Half an Acre of Ground.

Walter Neu, a Belleville boy, holds the record as a youthful agriculturist, having raised on a half acre of ground, on the outskirts of the city, two crops during the past six months, which netted him $251.80. He has also demonstrated that the soil and climate of Illinois are adaptable to two crops on the one piece of ground in one year.

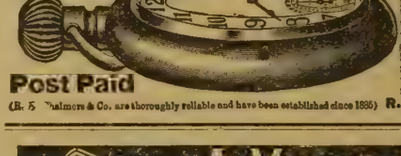
Neu made public an itemized statement of his crops and the sums netted from each, which are as follows:

First crop, March to July—One hundred and sixty bushels of onions, $186.60; 5 dozen bunches of green onions, $9.15; 22 bushels of peas, $13.35.

Second crop, July to November—Thirty bushels of beans, $15; 10 dozen bunches of carrots, $3.00; 22 dozen bunches of beets, $5.50; 26 boxes of carrots, $10.40; 24 boxes of beets, $6.00; 14 dozen bunches of radishes, $2.80.

The only expense Neu had for the two crops, outside of seed and his own labor, was $5 rent.

DAN PATCH—The imported Shire horse, a draft stallion, second time grand champion of the breed at the Chicago International Live Stock Exposition. Exhibited by Trumans' Pioneer Stud Farm, Bushnell, Ill., and sold to Mr. John J. Mitchell, of Lake Geneva, Wis., for ten thousand dollars.



$15.00 for 95 Cents

Cut this out and send it to us with your name and address and 95 cts. to pay for postage, packing and cost of this advertisement, and we will send to you by return mail postpaid this elegant Watch and Muse. Certificates worth $15.00. Certificates can be used at any time in purchase of goods from our catalogue (total value of watch and certificates $15.00), all for 95 cents. The watch is regular gentlemen's size, open face, solid nickel silver plated dust proof case, with genuine American lever movement, stem wind & set & fully guaranteed. This offer is made to introduce our watch & jewelry catalogue, and only one watch & certificate will be sent to each person ordering. Send 95 cents TODAY as this advertisement may not appear again. Satisfaction guaranteed or money refunded. Address

Paper.

Paper has almost an infinite number of uses, either as the best material or as a makeshift for something else, and the housewife has learned almost as well as the manufacturer to turn this cheapest of materials into a variety of uses.

To keep out wind there is nothing better. Even John D., it is said, finds it a most efficient as well as a cheap chest protector, and anyone who has occasion to expose himself in the wind will do well to bear this in mind.

If hard pressed for an individual drinking cup, one may quickly be improvised by folding a square piece of paper eight or nine inches each way in a diagonal line through the middle. Then fold one of the newly-made points back upon the other side, making a right angle toward the base. Fold the other angle in the same manner. Fold the top of the original isosceles down to the level of these folds. Fold the opposite point down on the other side and then open. It makes a very convenient cup.

Kentucky tobacco, advertised on page 20, is offered to Farmers by Farmers. It is grown by the seller. We have investigated and find them to be responsible.

At the Chicago International Live Stock Expostion the hogs exhibited in car-loads averaged from 183 to 267 pounds, although in the heavy weights exhibits could have run up to 350 pounds.

In New York, to-day, on an average, there is a birth every four minutes, a death every seven minutes and a marriage every eleven minutes.

Address—PLAPAO LABORATORIES, Block 57 St. Louis, Mo.

The School Girl's Dress.

A generation ago the plain country folk were shocked at the evening costume of the society belle, wondered that she did not catch her death of cold, and perhaps in some instances thought it no great pity if she did. Yet we see the same tendency toward scant chest and arm protection among the school girls of to-day; and, if remonstrated with, they think themselves martyrs to old-fogy ideas.

The dainty yokes and guimpes are certainly very pretty, and give a finished effect with very little extra washing. But when they are of lace or its equivalent in texture, and there is a remonstrance against marring their beauty by the pressure of real cloth beneath, it seems high time to call a halt.

What if the heavy coat and fur neckpiece do protect when out doors. The temperature of the school room varies. Boys with clothing that is genuine may not care to endure a temperature above normal, and up comes a window, the wind perhaps blowing directly upon fair Angelina. Of course, she is not going to admit that she is cold, or if she does condescend to slip on her sweater, it, too, has the fashionable V-neck, and the point where protection is most needed is thus still exposed.

If there is a pie social at the school house in the evening, the pretty serge or cashmere must be substituted for some light filmy gossamer texture—and so it goes.

The woolen hood is now a back number, and a daity silk scarf, a little warmer than so much cobweb, is substituted. This is all very fine for warm weather, but not compatible with snowdrifts. There are many silk or mercerized goods which will form a handsome as well as a serviceable scarf, yet the very idea of service seems sufficient to brand the goods as unavailable. We quite admire the taste for dainty textures, but object to their being pressed into a service for which they are so illy adapted. The scarf, properly made and worn, has many praiseworthy elements. It is easily adjusted and almost universally becoming to the school girl. If of a color that will stand washing, it may always be kept fresh. Select a firm, heavy piece of goods, silk or mercerized, as the purse can afford, but avoid the gauze effects, which are a protection only in name.

A neat school dress for a girl, little or big, is of good serge. This will stand wear and rough usage and still look well. If one has time for the frills, a yoke of light-colored material, though thick goods or something which will be pretty lined, is always in order. This may be changed frequently and thus give the effect of another dress. Children always like a change. If one can crochet, or embroider, or do tatting, the dress entirely of heavy goods may be brightened with some of this fancy work. But do not let the girl for a moment think that she can slip on a lace yoke and call herself dressed at this season. The chest especially needs protection, and an annoying throat trouble is easily started by such rashness.

For the fancy yoke one may often use old silk which has become too much soiled for a nice dress, and yet when covered with lace or embroidery the defects are partially concealed. Or a piece of pretty mercerized goods may serve to give the touch of brightness desired. But be sure that there is a lining back of this which will assure warmth and protection from cold.

If a child must walk or ride a long distance in the cold, a veil or other protection across the forehead is an essential; or a large scarf may be so arranged as to protect this most sensitive part of the head. And if the morning does seem fair and sunny, do not be tempted to allow an omission of winter clothing to be carried if not worn. For old weather can change his moods in much less than six hours, and a spring coat is not an agreeable garb in which to meet a blizzard.—Bessie L. Putnam.

Chinese Market For Ginseng.

Consul General Geo. E. Anderson, at Hong Kong, China, contributes the following to the Trade Reports of the Department of Commerce and Labor:

The present market for ginseng of good grades in Hong Kong is ruling unusually high. Concerning it a well-known Anglo-American firm says:

Ginseng of all grades is salable here, but root from the Northern States is most in demand and commands the highest price. It is next to impossible to make any accurate quotations, as ginseng not being a staple, its commercial value depends entirely on its merits, which can be determined only after inspection of the goods. To give a rough idea of the prices now obtainable in our market we will give as basis a root produced in Wisconsin or Michigan or Iowa which we classify as "good" cargo. Such a root, if properly dried and in all ways satisfactory, might be sold to-day at about $2,400 Mexican per pical of 133⅓ pounds, which price, at the present rate of exchange and after allowing for all discounts and charegs,' should show a net return to the shipper of about $7.12 per pound. Of course exchange, as you will doubtless understand, plays a very important part in this business, and for the past few years it has been impossible to realize the handsome profits of the old days, owing to the low value of silver.

The ginseng business of China at present seems to be in the control of an organization of Chinese dealers. Several foreign commission firms are ready to handle shipments of American ginseng on commission, and it is probable that under present conditions in the East the American product can best be handled through Hong Kong and through these foreign houses, because better prices are likely to be had outside of the Chinese combination.

Shipments of American ginseng have greatly increased in recent years, an estimate by a reliable authority placing arrivals in Hong Kong from the United States at 86,800 pounds in 1906, 128,133 pounds in 1907, 134,200 pounds in 1908, and 160,800 pounds in 1909. Present indications are that the current year's shipments will be a little larger than those of last year. The present supply of ginseng in China proper, aside from the United States, which is represented almost exclusively by Hong Kong shipments, comes from Japan, including Formosa, which supplies about 40 per cent. Until the past two years Korea supplied a material portion of the imports, its share reaching 26 per cent. of the whole in 1905.

About 40 per cent. of the Chinese imports go to Shanghai, about 9 per cent. to Foochow, about 6 per cent. to Amoy, about 5 per cent. to Chungking, and the rest is scattered all over the empire, shipments from year to year varying greatly for each port. The demand vares greatly according to the prosperity of the country, the nature of the winter season (well-to-do Chinese like to drink a tea made of ginseng during rainy, cold, damp weather), the exchange value of silver and the introduction of modern medicine.

Profitable Presents.

A story is told of a Russian nobleman who on the first evening of a visit to Paris went to a theater, and, with the object of showing politeness, sent a bouquet to the heroine of the play. He had almost forgotten having done so, when, on the eve of his departure, the actress called upon him to express her thanks for his "incessant and delicate attentions." "You are extremely kind," he replied modestly; "but I sent you only one bouquet, and that was a month ago, if I remember rightly." "Why," the lady exclaimed, "your servant has brought me one every evening!" The man was at once summoned, and he admitted the truth of the artiste's statements. "When I took the first bouquet," he explained, "the lady gave me five francs, and, as the flowers only cost me three francs, I kept it up!"

Burbank's Crimson Winter Rhubarb.

A premium worth a fortune. A plant that can be grown in paying quantities on any small piece of ground, also in the house cellar. Returns $1,000 profit per acre. This is a creation by the famous plant specialist Luther Burbank, of California. Rhubarb is a universal plant, and this Burbank's Crimson Winter Rhubarb is the King of the entire species, producing stalks of medium size, twelve to eighteen inches long, and producing them in all the fifty-two weeks of the year, whereas the productive life of common sorts is twelve weeks. A few roots of Crimson Winter Rhubarb will supply a large family and at the same time increase roots to enlarge

Burbank's Crimson Winter Rhubarb.

the crop. We have decided to use a few roots of Burbank's Crimson Winter Rhubarb in connection with the Subscription Department of The National Farmer and Stock Grower. THIS IS A DOLLAR PROPOSITION. Send us One Dollar for two single one-year subscriptions to The National Farmer and Stock Grower, or for your own two-year subscription, and we will send by mail, prepaid, one copy of a booklet entitled "Rhubarb For Profit" and Six Roots of Burbank's Crimson Winter Rhubarb. Send your dollar quickly and the book and plants will be mailed you from Pasadena, California, where they are grown. This premium is in line with the policy of the publishers of The National Farmer and Stock Grower to furnish valuable premiums.

CANNING FACTORIES FOR SALE

Make you $25 to $200 a day. For Farm, Large Communities or Towns. 15 sizes. Prices from $85 to $850. Capacities as high as 9000 cans tomatoes or vegetables, or 20,000 cans fruits in ten hours. TERMS: Cash or on 2 or 3 yearly payments. If you want to buy write for Booklet.

Snake Charmer's Stone.

"One Sunday morning in February, 1892, two Indian snake-charmers came to my small bungalow at Hanwella," says a writer in a Ceylon paper. "They had three snakes with them and proceeded to make them dance as usual. I stopped them and told them that I had seen all that before, and asked them whether they could compel a wild snake to dance, and, if so, whether they could catch one for the purpose. One of them expressed his willingness to do so. Ten days previously I had chased a cobra of the species called by the natives 'Tom-tom beater,' i. e., the black cobra with a red spectacle mark on its hood. The Singalese, I believe, think that they are incarnations of low-caste natives; hence its name. It is certainly fiercer and more active than the common brown cobra.

"I had noticed at the time that it had taken refuge in an ant-hill near the edge of the paddy field which formed one boundary of the new clearing upon which my bungalow stood, and situated about two hundred feet from it. I led the charmer to this ant-hill. When I had assured him that a snake almost certainly occupied the hole, he squatted down opposite to it and started blowing into a reed pipe, which gave a sound similar to that of a bagpipe. After a long time, and when I had alomst given up the idea of the snake being there still, the cobra protruded its head about an inch out of the hole in order presumably to see what was going on; the charmer pounced upon it, and, seizing the head of the snake between his thumb and two fingers so that it could not open its mouth, he pulled it out of the white ants' nest and brought it to the bungalow.

"He then tried to make it dance by holding a small piece of white root above its head. The snake tried to escape several times, but was brought back again and ultimately was induced to dance with its hood extended.

"I then asked the charmer what he would do if he happened to get bitten by a wild snake. He told me that he did not mind it, as he had a certain medicine which would prevent any ill-effects. I then, more as a joke than anything else, promised him five rupees if he would allow himself to be stung by the snake he had just caught, fully believing that he would not attempt it. But before I could stop him he had seized the snake by the neck and had thrust the forefinger of his right hand deep in its mouth, and when he withdrew it there were two punctures on each side of the second joint. Both punctures were bleeding slightly.

"He at once handed over the cobra to his companion, who immediately shut him up in the snake-basket, and the charmer at once took out from his waist-cloth a piece of charred bone, well known as the snake stone, which he applied at once to the two punctures. He then waited for some minutes, and I could see the veins on the back of his hands standing out like knotted strings. After a couple of minutes or so the stone dropped down, and he then told me that he had extracted all the poison; and, calling for a small cocoanut shell full of milk, he put the stone into it; in a moment, after a considerabe amount of bubbling, there came to the surface a certain amount of an oily-looking liquid, pale straw in color."

Improving the Farm Home.

Appliances for the comfort and sanitation of the farm home, as well as for the saving of "steps" and labor in almost every one of that home's varied industries, are now so numerous and so cheap that—whatever the case may have been in years gone by—there is to-day practically no excuse for the primitive conditions which yet prevail in too many households. The coarse jest, that "Woman's time, like hens', ain't worth nothin'," long since lost its point—if it ever had one—in the presence of the patent fact that on the use made of the woman's time depends the question, not merely of her family's advancement in a pecuniary sense, but of its standing in the community. Her time is now recognized by every man gifted with the faculty of thought, as something extremely precious—something that she should never be forced to waste when a small expenditure of money will effect a daily saving. Such a saving is effected whenever, for instance, a kitchen sink, connected with a drain, taks the place of the clumsy "dish-pan on a table;" whenever the pump is brought close to the door, or, better still, inside the kitchen; whenever a bath-room is introduced; whenever an inexpensive engine is made to run the churn, the wringer, the washing machine, or the sewing machine; whenever a meat-chopper, costing only $1.25, takes the place of the old chopping-bowl, and enables a dish to be prepared in half the former time; whenever a steam "canner" enables her to get through in an hour with canning processes that once took a day; and when the purchase of "ready-made" garments relieves her of long hours now unnecessarily spent over the sewing machine or needle—since such garments may often be purchased for little more than the price she pays for the material.

If a study of this question is made, many a farmer will be surprised at the smallness of the outlay necessary to cut his wife's household burdens in half, while increasing the comfort of the home and affording its members opportunities, now seemingly lacking, for social and other enjoyments.—C. R. Barnes, University Farm of Minneapolis.

The high cost of living does not apply to fencing. A strong woven-wire fence can be bought cheaper now than three barbed wires ten years ago. See page 2.

SEED CORN PREMIUMS.

OFFERED BY THE NATIONAL FARMER AND STOCK GROWER, THE BEST MONTHLY FARM PAPER IN THE UNITED STATES.

The National Farmer and Stock Grower, published monthly at St. Louis, Mo., subscription price 50 cents a year, is largely responsible for the great improvement in corn-growing methods, especially in the Middle and Southern States, where the crops have so largely increased. This is done by furnishing subscribers small quantities of selected seed corn grown by champion corn growers as subscription premiums and offering additional prizes when the corn grown from the premium seed receive awards at the State, Interstate and National Fairs and Expositions. This process is still going on, and during the year 1911 the usual and better offers are made.

OUR SEED CORN FOR THE YEAR 1911.

We have again contracted for a special lot of seed corn grown by the grand champion of the world. He is now barred from competition because he has won so many grand prizes. His corn is Johnson County White, and the seed we offer was grown in his breeding blocks and is practically the same as the corn he exhibited. We refer to Mr. L. B. Clore, of Indiana.

We have also contracted with Mr. D. L. Pascal, the famous breeder of Reid's Yellow Dent Corn, whose original seed was purchased from the originator of this famous corn. Mr. Pascal has won many trophies, and corn grown from his seed has won many more. We regard it highly, and some very fine seed will be sent out this year.

WHAT A SCHOOL BOY DID IN GEORGIA.

In the spring of the year 1909, Louie Brown, a school boy at Belmont Farm, Smyrna, Ga., received a pound of L. B. Clore's Johnson County White Corn as a subscription premium with The National Farmer and Stock Grower. With this seed in the same year he raised a good stand of corn and won a $50 first prize at the Georgia State Fair, besides winning a $25 first prize from The National Farmer and Stock Grower.

SECOND PRIZE AT THE TEXAS STATE FAIR.

In the spring of 1910, The National Farmer and Stock Grower furnished to W. L. Norman, of Kingston, Tex., two pounds of Johnson County White Corn, grown by the famous champion corn grower, L. B. Clore, of Indiana. With this seed Mr. Norman raised about twelve bushels of corn, and with ten ears of it he won the second prize at the Texas State Fair.

WON A SECOND PREMIUM AT THE TENNESSEE STATE FAIR.

In the spring of 1909, The National Farmer and Stock Grower furnished Mr. J. M. Gresham, of Rural Route No. 2, Smyrna, Tenn., a half-pound package of Yellow Dent Seed Corn, grown by Mr. D. L. Pascal, the famous corn champion of Iowa. This corn being sown and harvested, he selected a ten-ear lot from the yield, and by exhibiting it at the Tennessee State Fair he won the second prize in class for Yellow Dent Corn.

WON ILLINOIS COUNTY FAIR PRIZES.

Two pounds of Johnson County White Corn, grown by Mr. L. B. Clore, of Franklin, Ind., were furnished by The National Farmer and Stock Grower to J. T. Boyd, of Rardin, Coles county, Ill. This was in the spring of 1910. From this seed corn he grew the ten ears that won first prize at the Coles County Fair and the sweepstakes prize for the best ten ears on exhibit.

WON A FRISCO SCHOLARSHIP.

In the spring of 1910, The National Farmer and Stock Grower furnished James A. Partney, of Chilton, Carter county, Mo., one pound of Johnson County White Corn, grown by Mr. L. B. Clore, of Indiana. From this pound of corn he produced a good yield, from which he selected ten ears that in the Corn Contest of Carter county, Missouri, won a Frisco scholarship, valued at $100, at the Missouri Agricultural College.

CHAMPIONSHIP PRIZE IN LOUISIANA.

Two pounds of Johnson County White Corn, grown by L. B. Clore, of Indiana, were furnished as a subscription premium by The National Farmer and Stock Grower to I. J. Haile, of Linville, La. This was in the spring of 1910. With this seed corn Mr. Hall produced a nice crop and exhibited ten ears selected therefrom and won first prize in class for White Dent Corn and the championship prize for Best Ten Ears exhibited at the show. This was at the Louisiana State Fair. He won $150 in all with ten ears of corn.

SECOND PRIZE AT THE MISSOURI STATE FAIR.

In the spring of 1910, The National Farmer and Stock Grower furnished Clark Reibe of Arbela, Scotland county, Mo., one pound of L. B. Clore's Johnson County White Corn. With this corn he produced ten selected ears that won second prize in class at the Missouri State Fair of 1910.

WON SEVERAL KENTUCKY PRIZES.

In April, 1909, Mr. Hillary Downs, of Hunter's Depot, Ky., received one single pound of Pascal's Yellow Dent Seed Corn from The National Farmer and Stock Grower as a subscription premium. In that year he did not win a prize, but in 1910, from his own seed grown from seed furnished him the year before, he produced ears that won the first prize and sweepstakes at the County Fair. He also won second prize at the State Fair.

OUR PREMIUM OFFERS.

Anyone who will send us 60 Cents will receive The National Farmer and Stock Grower for one year and can select one pound of either corn as a subscription premium. Anyone sending us One Dollar will be credited with two-years' subscription, and can select two pounds of either corn, or one pound of each, as a subscription premium. The corn will be sent by mail, prepaid, safe delivery guaranteed.

THE PREMIUMS WE WILL PAY.

At County Fairs or Corn Contests of 1911.—If any of our patrons grow corn from premium seed furnished by us from this advertisement and exhibit ten ears in regular classes, for every sweepstakes premium won we will pay Five Dollars; for every first premium, Three Dollars; for every second premium won, Two Dollars; and for every third premium, One Dollar. We have not heretofore offered County Fair prizes. These prizes hold good in every county in the United States.

At State, Interstate Fairs and at State Agricultural Corn Shows of 1911.—For every ten-ear championship premium won by our patrons from corn grown from seed sent out by us in response to this advertisement we will pay the exhibitor Fifty Dollars; for every first prize, Twenty-five Dollars; for every second prize, Ten Dollars; and for every third prize, Five Dollars.

At the National Corn Show, For Crop of 1911.—If any of our patrons receiving corn from us exhibit ten or more ears of corn grown therefrom at the National Corn Show, for every championship premium won we will pay One Hundred Dollars; for every first prize, Fifty Dollars; for every second prize, Twenty Dollars; and for every third prize, Ten Dollars.

ORDER BLANK—SIGN AND SUBSCRIBE EARLY AND MAKE SURE.

Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.: Gentlemen:—Herewith please find One Dollar to pay for two-years' subscription to The National Farmer and Stock Grower, for which please give me credit. You will please send me.....pound.. Clore's White Corn and.....pound.. of Pascal's Yellow Corn as a premium.

SELECTED POETRY.

THE CHRISTMAS SHEAF.

Now, good wife, bring your precious hoard,"
"The Norland farmer cried;
And heap the hearth and heap the board,
For the blessed Christmastide.

And bid the children fetch," he said,
"The last ripe sheaf of wheat,
An set it on the roof o'erhead,
That the birds may come and eat.

"And this we do for His dear sake,
The Master kind and good,
Who, of the loaves he blest and brake,
Fed all the multitude."

Then Fredrica, and Franz, and Paul,
When they heard their father's words,
Put up the sheaf, and one and all
Seemed merry as the birds.

Till suddenly the maiden sighed,
The boys were hushed in fear,
As, covering all her face, she cried:
"If Hansel were but here!"

And when at dark about the hearth
They gathered still and slow,
You heard no more the childish mirth
So loud an hour ago.

And on their tender cheeks the tears
Shone in the flickering light;
For they were four in other years
Who are but three to-night.

And tears are in the mother's tone;
As she speaks she trembles, too;
Come children, come, for the supper's done,
And your father calls for you."

Then Fredrica, and Franz, and Paul,
Stood each beside his chair;
The boys were comely lads and tall,
The girl was good and fair.

The father's hand was raised to crave
A grace before the meat.
When the daughter spake; her words were brave,
But her voice was low and sweet:

"Dear father, should we give the wheat
To all the birds of the air?
Shall we let the kite and the raven eat
Such choice and dainty fare?

"For if to-morrow from our store
We drive them not away,
The good little birds will get no more
Than the evil birds of prey."

"Nay, nay, my child, he gravely said,
"You have spoken to your shame,
For the good, good Father overhead
Feeds all the birds the same.

"He hears the ravens when they cry,
He keeps the fowls of the air,
And a single sparrow cannot lie
On the ground without His care."

"Tea, father, yea; and tell me this"—
Her words came fast and wild—
"Are not a thousand sparrows less
To Him than a single child?

"Even though it sinned and strayed from home?"
The father groaned in pain
As she cried: "Oh, let our Hansel come
And live with us again!

"I know he did what was not right"—
Sadly he shook his head;
"If he knew I longed for him to-night,
He would not come," he said.

"We went from me in wrath and pride;
God! shield him tenderly!
For I hear the wild wind cry outside
Like a soul in agony.'

"Nay, it is not a soul!" Oh, eagerly
The maiden answered then;
"And, father, what if it should be he,
Come back to us again?"

She stops—the portal open flies;
Her fear is turned to joy;
"Hansel!" the startled father cries;
And the mother sobs: "My boy!"

'Tis a bowed and humbled man they greet,
With loving lips and eyes,
Who fain would kneel at his father's feet,
But he softly bids him rise.

And he says: "I bless thee, Oh mine own;
Yes, and thou shalt be blest!"
While the happy mother holds her son
Like a baby on her breast.

Their house and love again to share
The prodigal has come!
And now there will be no empty chair,
Nor empty heart in their home.

And they think, as they see their joy and pride,
Safe back in the sheltering fold,
Of the child that was born at Christmastide
In Bethlehem of old.

And all the hours glide away
With loving, hopeful words,
Till the Christmas sheaf at break of day
Is alive with happy birds!
—James Whitcomb Riley.

"WE'VE ALL OUR ANGEL SIDE."

a huge, rough stone out of the mine, un-
sightly and unfair,
s veins of purest metal hid beneath the
surface there;
w rocks so bare but to their heights some
tiny moss-plant clings,
d on the peaks so desolate the seabird
sits and sings.

believe me, too, that rugged souls
beneath the rudeness hide,
ch that is beautiful and good—we've all
our angel side.

In all there is an inner depth, a far-off,
secret way,
Where, through the windows of the soul,
God sends His smiling ray;
In every human heart there is a faithful,
sundry chord,
That may be struck, unknown to us, by
some sweet, loving word.
The wayward will in men, they may try its
softer thoughts to hide—
Some unexpected tone reveals it has an
angel side.

Despised, and lone, and trodden down, dark
with shades of sin,
Deciphering not those hollowed lights which
God has lit within;
Groping about in endless night, poisoned
souls they are;
Who guess not what life's meaning is, nor
dream of heaven afar;
Oh! that some gentle hand of love their
stumbling steps would guide,
And show them that amidst it all life has
its angel side.

Brutal, and mean, and dark enough, God
knows some people are,
But he, compassionate, comes near, and
shall we stand afar?
Our cruse of oil shall not grow less if shared
with hearty hand,
Few words of peace, and looks of love, few
natures can withstand;
Love is the mighty conqueror; love is a
beauteous guide,
And love, with her beaming eyes, can see
we've all our angel side.
—Unknown Author.

A CHRISTMAS CAROL.

Christ used to be like you and me,
When just a lad in Galilee—
So when we pray, on Christmas day,
He favors first the prayers we say;
Then waste no tear, but pray with cheer,
This gladdest day of all the year.

O, Brother mine, of birth divine,
Upon this natal day of thine,
Bear with our stress of happiness,
Nor count on reverence the less,
Because with glee and jubilee
Our hearts go singing up to thee.
—James Whitcomb Riley.

JUS' KEEP ON KEEPIN' ON.

If the day looks kinder gloomy
An' your chances kinder slim—
If the situation's puzzlin'
An' the prospect's awful grim,
An' perplexities keep pressin'
Till all hope is nearly gone,
Jus' bristle up, an' grit your teeth,
An' keep on keepin' on.

Fumin' never wins a fight,
An' frettin' never pays;
There ain't no good in broodin' in
These pessimistic ways.
Smile just' kinder cheerfully
When hope is nearly gone,
An' bristle up, an' grit your teeth,
An' keep on keepin' on.
—New Orleans Democrat.

WINTER REVERIES IN CAMP.

The wind is howling round my shack,
The leaves are falling fast;
The curling smoke from out my pipe
Holds pictures floating past;
My faithful dog here at my feet
Is dreaming of the chase,
And I am thinking, too, of scenes
Far from this lonely place.
I'm back again in crowded streets,
Among the haunts of men;
I live in dreams the fevered life
I ne'er shall know again.
I see the glitter of the gold,
That ignis fatuus gleam
That lures men on o'er rocky ways
To find it all a dream.
I hear the voice of one I love
Far down in Memory's Halls;
I smell the violets that she wore,
And then—the curtain falls!

Ah, yes, the curtain's down to-night
On all my hopes and fears;
I sit alone a thousand miles
Between me and her tears.
A truce to all the world to-night,
Here in my cabin home.
My "Nip" and I are chums, indeed,
Under the heaven's dome.
So let the world roll on, old "Nip,"
For when you nose my hand
I feel I have one friend, indeed,
In all this lonesome land.
I fill my pipe and light a match
And puff in calm delight;
The world is dead for me and Nip,
Good night, old world, good night!
—H. L. P.

THE WHITE MAN.

Wherever the white man's feet have trod,
(Oh, far does the white man stray),
A bold road rifles the virginal sod,
And the forest wakes out of its dream of God,
To yield him the right of way.
For this is the law: By the power of thought
For worse or for better, are miracles wrought.

Wherever the white man's pathway leads,
(Far, far, has that pathway gone),
The earth is littered with broken creeds,
And always the dark man's tent recedes,
And the white man pushes on.
For this is the law: Be it good or ill,
All things must yield to the stronger will.

Wherever the white man's light is shed,
(Oh, far has that light been thrown),
The nature has suffered, and beauty fled,
The goal of the race has been thrust ahead
And the might of the race has grown.
For this is the law: Be it cruel or kind,
The universe sways to the power of mind.
—Ella Wheeler Wilcox, in Cosmopolitan.

The Right Way to Buy Soda Crackers

—and the *simplest* way. Ask for them by name—and the goodness will take care of itself. Buy

Uneeda Biscuit

Then, no more broken, soggy, stale or exposed soda crackers. Uneeda Biscuit come in individual packages that hold just enough for each soda cracker occasion. *Fresh* when you buy them. *Whole* when you open the package. *Crisp* as you eat them.

A number of five cent packages of Uneeda Biscuit is a wiser purchase than a quantity of ordinary soda crackers in wooden box or paper bag. Never sold in bulk.

NATIONAL BISCUIT COMPANY

BILL'S GOOD HEALTH.

He set around in Stokes's store
The blessed, livelong day,
A-talkin' politics an' sech
The same ol' humdrum way.
He never had a new idea,
Nur nothin' much to tell;
But he could rol' a nailkeg down,
An' hol' it mighty well.

'Twuz whispered round thet on his farm
Things wuz a bit run down;
Thet while he set in Stokes's store
An' criticised the town,
His land was goin' all to pot
Becuz it had no care,
An' ef it wuzn't fur his wife,
They'd starve to death fur fair.

Hen Billing's saw him settin' there
One night, short time ago;
An' when it comes to right an' wrong,
Now Hen ain't very slow.

"How be you, Bill?" Hen says to him,
"I'm sorry you ain't well.
Fust time you've ben right down real sick,
I guess, fur quite a spell?"

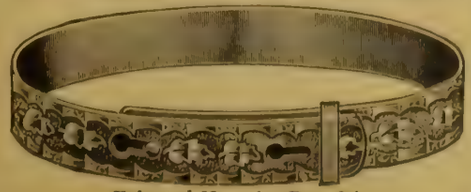
"Sho, I ain't sick," says Bill to Hen.
"What makes you think I be?
Fact is, I hain't felt quite so good
My hull blamed life," said he.
"It's my mistake," says Hen to Bill,
"I'm glad you feel so slick.
Jest seen your wife a-splittin' wood,
An' s'posed thet you wuz sick."
—Joe Cone, in Boston Herald.

GETTING BACK TO EARTH.

The heights by great men reached to-day
May be attained by sudden flight.
The real problem is, they say,
Just how they're going to alight.
—Washington Evening Star.

The Universal Magazine Bracelet.

This is all the rage. And Adjustable Bracelet. The most elegant design and perfectly finished. It is not solid gold, but it is washed and plated and will stand the acid test. Its match cannot be purchased in country jewelry stores for any price. It is a duplicate of the latest Parisian creation made expressly for the purpose of using it as a subscription premium to the **Universal Magazine**. The **Universal Magazine** is a nice, bright, cheerful, illustrated monthly magazine of thirty-two pages, three columns to the page, containing home reading, stories, fashions, patterns and poetry—a splendid publication for the money. To anyone who will send us a money order for 50 cents we will send the **Universal Magazine** for two years, and we will send one elegant **Universal Magazine Bracelet**, postage free, as a subscription premium. Money returned if not satisfied. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**



Universal Magazine Bracelet.

MAGNETISM

Nature's Tonic

Makes the Blood Circulate——Giving Health and Strength

WE PROVE IT TO YOU

We do not ask you to take our word for it. We furnish you with all the evidence you want. We prove it not only in a few cases, but in hundreds of cases where people say Magnetic Shields have cured them of nearly all forms of disease, including **Paralysis, Kidney Disease, Stomach Trouble, Liver and Bowel Trouble, Lung Troubles, Catarrhal Troubles, Heart Disease, Spinal Disease, Rheumatism, Fits, Weak Circulation, Delusions, Melancholia, Nervous Diseases,** and hundreds of other troubles that medicine had failed to cure.

FOR YOUR OWN INTEREST

We ask you to send us a full description of your case, and we will write you and advise you fully what in our opinion, after twenty-five years with the use of Magnetism, can be accomplished in your case, and how it can be accomplished.

Investigate our claims; it means health and strength for those who apply Magnetic Shields in sufficient quantities to profoundly influence the system. It is a duty you owe yourself, and it costs you nothing to make a thorough inquiry and investigation. Our book "A Plain Road to Health," is free to all who send statements of their cases.

THE PROOF IS FREE

We want to advise you free of charge and give you all the proof and evidence, and then let you judge for yourself whether you want Magnetic Shields to strengthen your circulation and assist Nature in curing your disease, or not. We will not urge you to buy Magnetic Shields. We simply want to give you the facts and then let you use your own judgment. If medicine has failed to cure your trouble, give Nature a chance. Put Magnetic force into your system and let Nature build up and repair damage through the circulation, as Nature repairs damage in this way, and in no other way. The blood is the life of the body, and and Magnetism gives life to the blood and nerves.

Read the Truth

More Forcibly Expressed in These Letters Than An Statements We Could Make.

Serious Complication of Lung, Stomach and Kidney Trouble—Marvelous Chicago Recovery.

DR. THACHER.

Dear Sir:—It gives me great pleasure to testify to the perfe cure I have gained by using your wonderful Shields. After su fering fifteen years with stomach troubles, although doctorin the greater part of the time, I kept getting worse until I w the victim of a severe complication of stomach and kidn trouble, which a year and a half ago all seemed to go to n lungs. Had dreadful pains, lost my appetite, could not slee became so very weak I could hardly walk across the floor, a not able to do my work. At times when my pains were not severe I would try to read, but could not for more than fi minutes at a time, as I was very nervous. My family and frien thought I could not live another month. I was getting tired taking medicine. Nothing helped me. I happened to see yo advertisement in the paper, which read, **"Magnetism Cur Without Medicine."** I thought "While there is life there hope." So just one year ago today I put on your wonderf Magnetic Vest, Leggins and Insoles. The result was a mirac for in two days I felt relieved; in a week very much better; three weeks entirely cured.

Words cannot express how thankful I am to you for your ki advice; also for the treatment, to which I owe my life. M you live long for suffering humanity's sake. May your great a sure cure be known a great deal better than it is today.

Yours respectfully, MRS. O. RAY,
2316 Ridgeway St., Chicago, Ill.

A Wonderful Cure of Spinal Disease—Helpless for Many Years—Now Completely Restore

Dear Doctor Thacher: My experience has convinced me that there is no oth healing agent like Magnetic Shields.

I used them for spinal trouble, and the Shields did the work of lifting me from chronic invalid to a well and busy woman, at the same time reducing my weight fr 250 to 180 pounds.

Obey Nature's laws, wear Dr. Thacher's Shields, and you do not need to be si May the light of truth dawn on the intelligent minds and teach them the way to healthy and happy. May God's blessing rest on your good work.

Very truly yours, ADA DICKINSON, Farmdale, Ohio

We Make Shields for Every Part of the Body for Treating Every Form of Disease

The cut above shows how the entire trunk of the body is enveloped in Magnetism from the wonderful Magnetic Vest, the most powerful Magnet garment manufactured. Think of living inside of a garment that is radiating hundreds of streams of Magnetic force into your body, keeping the vit organs and large nerve centers constantly bathed and saturated in a field of Magnetic life that gives tone to the vital organs, blood and nerves, maki the blood circulate and enabling Nature to build up and repair damage in the organism that could not be accomplished without this revitalizing energy.

Positive Proof on Your Own Body

If You Must See With Your Own Eyes, and Must Have Proof on Your Own Body Before You Can Believe

Try Some of Our Smaller Shields——They Will Convince You

WARM FEET

MAGNETIC FOOT BATTERIES warm the feet and keep them warm in nearly every case, even in the coldest weather. They make the blood circulate in the feet and limbs and overcome congestion, soreness and pain. They have cured rheumatism in the feet, sore, tender feet, cramps, chilblains, and hot, sweaty feet in hundreds of cases. They insulate the body against the cold, damp earth and prevent negative conditions in the feet which lay the foundation for colds, catarrh, pneumonia, consumption and other serious forms of disease. Try them. They will convince you. They are $1.00 per pair or three pair for $2.00, postpaid.

DO NOT SUFFER WITH YOUR THROAT

OUR MAGNETIC THROAT SHIELDS have cured mu tudes of the most severe cases of throat and bronch troubles, including glandular swellings, sore thro bronchitis, quinsy, croup, loss of voice, catarrhal con tions and all other forms of throat weaknesses after other methods of treatment had failed. We have direct statements of the people who have used Thr Shields and received these results which is indisputa evidence of the value of this wonderful shield. It guaranteed to hold its power, and offers most compl protection against sudden climatic changes that af throat and lungs. Sent by mail, postpaid, for $3.00

HARDY, EVER-BLOOMING ROSES.

The Most Delightful Subscription Premium Offered by a Farm Paper.

The National Farmer and Stock Grower has again decided to send out a collection of eight choice ever-blooming Rose Plants to our patrons who will send in a special subscription.

The Collection of Roses.

The collection consists of **Rhea Reid,** one that received the gold medal at the National Rose Society; the flowers are rich velvety red. Another one is **The Bride,** one that will thrive under most unfavorable conditions. The flowers are the purest ivory white. **Etoile de Lyon** is the most magnificent pure yellow rose, massive in size and beautiful in every stage of development. **Bridesmaid** starts with the first warm days of spring and requires but little care; the flowers are an exquisite clear pink, beautiful in form and highly fragrant. The **Papa Gontier** rose is a grand variety for outdoor planting, producing double flowers of clear, glowing crimson and blooms from June to late in the year. **Bessie Brown** is a charming, pure snow-white rose; the flowers are very large and it blooms profusely. **Champion of the World** is a rich, ivory pink, and without it no garden selection is complete; it is unequaled for size of flower, fragrance or beauty. **Crimson Rambler,** the last of the collection, is a bright crimson flower that covers the entire bush. It is valuable for decorative hedges, arches and screens. We cannot describe this beautiful collection, but we will guarantee them to please any lover of flowers.

OUR SPECIAL OFFER.

Send Us Sixty Cents. We will send you The National Farmer and Stock Grower for one year. We will send you direct by mail, postpaid, the full set of eight hardy, ever-blooming Roses. We will also send you a 16x20-inch picture entitled **"The American Beauty Rose."** The picture is most beautiful. There is a great bunch of roses resting on the white linen cloth of a table. It is glorious, magnificent. **Send Us Sixty Cents.** The paper can go to one address, the picture to another and the roses to another, or all three to one address.

ANOTHER SPECIAL OFFER.

We publish the Universal Magazine. It is a splendid publication, issued monthly. There are thirty-two pages, three columns to the page, illustrated stories, special articles, poetry, embroidery, patterns, etc. The subscription price is 25 cents a year. Send us Fifty Cents and we will send you the Universal Magazine for two years. We will also send you the full set of eight hardy, ever-blooming roses as a premium. The rose plants will be sent prepaid by mail. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

and Stock GROWER

Our Seed Corn Premiums.

The seed corn premiums offered by The National Farmer and Stock Grower, crop of 1911, are advertised on page 30. We are furnishing subscribers small quantities of seed corn grown by famous corn breeders who have won many prizes. Any farmer may derive pleasure and profit by planting this seed, harvesting the crop and exhibiting selected ears of corn at the shows. There is little to pay, nothing to lose, and much to gain. We have just sent a check for $75.00 to a young man who won first prize in class and sweepstakes prize at the Louisiana State Fair of 1910 because he exhibited ten selected ears that won these prizes with corn he produced from two pounds of seed corn furnished from this office. He paid us one dollar for two-years' subscription and he received two pounds of seed corn. He has his crop of seed corn to the good and in addition he received $15.00 for each ear of corn exhibited. Others have won lesser prizes, and some did not exhibit at all; in every instance they improved their knowledge of corn growing and obtained better crops than heretofore. Our supply of champion-grown seed corn is limited, and we certainly advise our patrons to secure their supply early. We do not furnish anyone over two pounds of seed corn, and later in the season may have to place the limit at one pound. See page 30.

THE GRAND CHAMPION STEER.

Selected, Raised, Fed, Fattened and Exhibited at the Iowa State Agricultural College—A Perfect Example of Baby Beef.

We are under obligation to Prof. W. J. Kennedy, of the Iowa Agricultural College, for the following facts concerning Shamrock, II., the grand champion steer at the Chicago International Live Stock Exposition of 1910. Our readers are familiar with this steer from the picture published in the December edition of this paper. Shamrock, II., was calved on January 10 and was awarded the grand championship on November 29, at the age of 323 days. His official sale weight was 1,120 pounds, and on November 20 he weighed 1,130 pounds. Shamrock was 112 days old when the Iowa Agricultural College received him.

How Shamrock, II., Was Fed.

Shamrock, II., came to the Iowa State College about May 1st, 1910. He was put on a nurse cow. He was kept in the barn during the day and allowed the run of a grass lot at night. He was fed good clover hay, all he would eat, a grain ration of three parts corn, two parts wheat bran and one part oil meal up to September 1st. After September 1st he was given two nurse cows, fed green corn, stalks and ears, clover hay and roots. The grain ration was changed to boiled wheat and oats. During the month of November he was eating from nine to eleven pounds per day of the cooked feed, about twenty-five pounds per day of roots and five pounds of clover hay in addition to the milk of the nurse cows. He never missed a feed from May 1st until sold in Chicago, and never appeared the least bit nervous or restless.

Shamrock, II., Selling Price.

Shamrock, II., was sold on December 1st by Clay, Robinson & Co. at public auction to C. H. Morgan & Co., Chicago butchers, for 60 cents per pound. He weighed 1,120 pounds, thus netted $672. He is the second highest-priced grand champion steer ever sold in America.

Judge Carden's Tribute to Shamrock, II.

In placing the grand champion ribbon on Shamrock, II., Hon. Richard C. Carden, of Tipperary, Ireland, who is considered one of the greatest cattle judges in the world, paid Shamrock, II., a glowing tribute in the following words: "I have never before seen such a ripe beast for its age. I cannot say too much for him. He is the best animal I have ever seen. I did not conceive such a ripe beast at his age existed. He could win at any show in Great Britain."

The Prizes Won.

Shamrock, II., the grade Angus beef steer, was grand champion at the International Live Stock Show, Chicago, 1910. He was fed, owned and exhibited by the Iowa State College, Ames, Iowa. The prizes won by Shamrock, II., at the International Live Stock Show were: First-prize junior grade or cross-bred calf. First-prize grade Angus calf. Champion grade or cross-bred steer, any age. Champion grade Angus steer, any age. First-prize calf, any breed, in college class. Champion steer, any breed or age, college class. Champion calf of any breed of show. Champion calf, pure-bred or grade Angus. Grand champion steer, any age or breed, of show. Grand champion pure-bred or grade Angus steer of show, and the grand championship of the show.

Shamrock, II., was calved January 10, 1910; bred by P. J. Donohoe, of Holbrook, Iowa; selected by Prof. W. J. Kennedy in April, 1910, for the Iowa State College, and was fed by John Brown, college herdsman.

Gains in Feeding Shamrock, II.

May 1st he weighed 346 pounds; age, 111 days. June 1st he weighed 461 pounds; age, 142 days. July 1st he weighed 589 pounds; age, 172 days. August 1st he weighed 700 pounds; age, 203 days. September 1st he weighed 822 pounds; age, 234 days. October 1st he weighed 941 pounds; age, 264 days. November 1st he weighed 1,060 pounds; age 295 days. November 20th he weighed 1,120 pounds; age 315 days.

Shamrock, II., Dresses 67¼ Per Cent.

The Animal Husbandry Department of the Iowa State College has just received the following report from Chicago concerning the slaughter test of Shamrock, II., fed and exhibited by the Iowa State College. "Shamrock, II., King of the Eleventh International, is history and steaks to-day. Fighting gamely to the last, the little grand champion took the count and was placed in the cooling rooms to ripen for the Christmas and New Year roasts of Chicago's Four Hundred.

"Smooth as glass," was Mr. Morgan's butcher's comment. "There is not a lump on the carcass." He dressed 67¼ per cent., a new world's record for an animal under one year and the per cent. of choice, juicy cuts on the loins and ribs is close to 30. There was no waste in Shamrock, II. The experts who dressed him said he was as smooth as they had ever seen. In accordance with the wish of Mr. Morgan, of the firm who bought the grand champion, the head was saved and will be mounted and put over the door of one of his shops. His hide will make a robe for the owner, and after the tastes of the holiday dinners have been washed away Shamrock, II., will remain the memory of a grand achievement, a perfect steer and a magnificent record in the ring and on the block.

One Animal and Three Hogs to an Acre

THIS is a fair estimate of the average feeding ability of the soil. On a farm of 80 acres the highest limit of efficiency is 20-acre fields. Large fields diminish the earning power because two small fields alternated will furnish much more support for stock than the same average in one big field. The fence is the important factor; and with the liberal use of gates, unlimited extension and alternation is simple.

The steel in Ellwood fence is specially made from carefully selected stock. It is hard, elastic, tough and springy. The line wires, composed of two or more wires twisted into cables, give each individual wire the shape of an elongated, coiled spring. The fence is therefore sufficiently elastic to take care of expansion and contraction, and yet so rigid when properly stretched as to prevent sagging. The small and permanent mesh is made by weaving one continuous wire throughout the fabric. The mesh or stay wires are so interwoven that slipping is impossible. The triangular truss is the strongest form of construction known. For this reason, Ellwood fence will stand the hardest usage and still retain its shape.

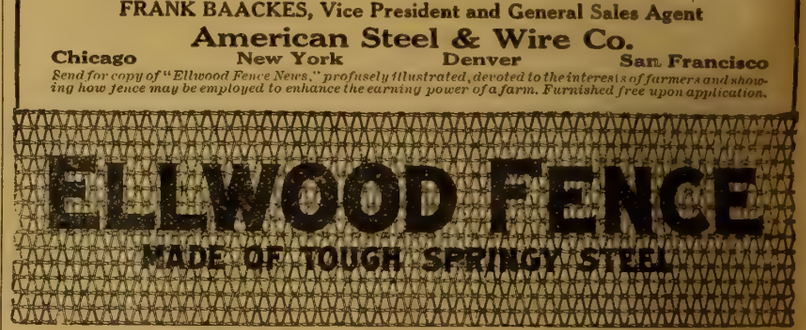
Ellwood Fence is sold in your town. Look for the Ellwood dealer and let him show you his different styles of fence and quote you his low prices. Get his expert advice on your special needs. He is on the spot, buys in large quantities, gets the lowest carload freight rates, demonstrates quality before your eyes and is the man from whom you will get the most for your money.

FRANK BAACKES, Vice President and General Sales Agent

American Steel & Wire Co.

Chicago New York Denver San Francisco

Send for copy of "Ellwood Fence News," profusely illustrated, devoted to the interests of farmers and showing how fence may be employed to enhance the earning power of a farm. Furnished free upon application.



[Please mention National Farmer and Stock Grower.]

A Newspaper Creed.

To print nothing of a man which we would not say to his face; to print nothing of a man in malice; to look well and think twice before consigning a suspect to the ruin of printer's ink; to respect the old and defend the weak; and, lastly, at work and at play, daytime and nighttime, to be good to the girls and square with the boys, for hath it not been written "Of such is the kingdom of heaven!" —Henry Watterson, in Typographical Journal.

Long-staple cotton is being grown in the United States to the satisfaction of the growers and spinners.

BETTER CISTERNS --- WHY?

To protect the health of every member of your family. Medical experts have pronounced the brick and wood cistern to be the cause of many cases of sickness.

A Cistern to be perfectly sanitary must be made so tight that no impurities can possibly get through. This can only be accomplished by using the Steel Cistern.

STEEL ROOFING Of All Kinds,

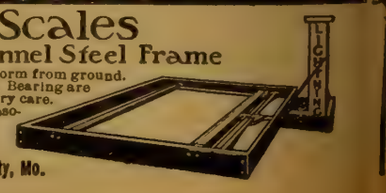
Lightning Pitless Scales

New Pattern. Solid Channel Steel Frame

Channels are seven inches which is the height of platform from ground. Levers are octagon in shape giving greater strength. Bearing are Toolsteel. This scale will last a life time with ordinary care. Equipped with compound Beam Free. Furnished absolutely complete except platform planks. Guaranteed accurate and tested to more than its capacity. Write for our prices and description before buying.



KANSAS CITY HAY PRESS CO., 425 Mill St., Kansas City, Mo.

The National Corn Show.

The Fourth Annual Corn Exposition will open at the Fair Grounds, Columbus, Ohio, on January 30th and continue two weeks. During the second week the National Rural Life Conference will take place. This conference will be broader in every sense than any Rural Life Conference that has ever been held. Ordinarily such conferences have dealt chiefly with the social relation of the individual to the community. This one will bring out not only the need of social and commercial co-operation, but will deal fundamentally with the necessity of co-operation between the producer and the consumer. These subjects will be discussed by men who have given the deepest thought to agricultural questions and their relation to national problems. The many thousands of farmers and others who attend this great agricultural exposition will participate in the discussions.

Among the speakers secured for the programme are men who have become eminent in rural life investigations. February 7, Dr. L. H. Bailey, who is ex-Chairman of the Country Life Commission and Dean and Director of the Agricultural College at Ithaca, N. Y., will preside as Chairman of a great mass-meeting in the forenoon, the subject "Commercial Co-operation in the Rural Community" being discussed. In the afternoon he will deliver an address on the same subject. Dr. Bailey has for years been recognized as the prophet of American agriculture.

February 8, A. E. Roberts, International Secretary of the County Work Department of the Y. M. C. A., will deliver an address on their rural work. Dr. Warren H. Wilson, Superintendent of the Church and Country Life Board of Home Missions of the Presbyterian Church, will deliver an address on the subject "The Country Church and Community." In the afternoon there will be addresses bearing on the problems of the rural school by Willet M. Hays, Assistant Secretary of Agricutlure; Prof. A. B. Graham, of Ohio State University, and Miss Mabel Carney, of Cheney, Wash.

February 9, Kenyon L. Butterfield, President of Amherst Agricultural College, and ex-member of the Country Life Commission, will serve as Chairman of a mass-meeting in the morning, which will discuss the subject "Social Co-operation in the Rural Community."

February 10, the subject "Co-operation Between Producer and Consumer" will be discussed by prominent economists and representatives from the co-operative organizations of all sections of the country.

Mr. Geo. H. Stevenson is Secretary and General Manager of the Fourth Annual National Corn Exposition. He can be addressed at Columbus, Ohio.

Cement Block Machines.

The simple cement block machines first put upon the market were extravagant in cost, far beyond any excuse for the price asked, and this had the effect of turning away the minds of many people who wished to use concrete in simple ways. Others who were ingenious made their own cement block machines, and so the work has progressed.

Builders and contractors do a large majority of their work by first constructing the moulds and filling them in with concrete. But there yet remained the demand for a machine that would manufacture cement blocks of all moderate sizes economically and turn them out rapidly. This want has been supplied by a Swiss machine which, being manufactured in the United States, is recommended by the United States government as being the most complete and satisfactory cement block machine made. Any of our readers having cement construction in view will be placed in communication with the manufacturer by addressing this office.

Apple Trees From Seed.

Anyone may grow seedling apples who will meet the simple requirements.

Take in the seeds fresh from the fruit, either in fall or winter. Stratify in a box with wet sand. Put them out where mice will not find them, and where water will not stand in the box.

Let them freeze and remain frozen until spring. Plant as soon as the soil is workable.

An inch and a half is deep enough and not too much, for they must not dry out.

To get good growth there must be careful culture after plants appear.

The young trees should be a foot in height in the fall, and they will be in rich, deep tilled soil.—Fruitman and Gardener.

Make Up the Deficiency.

Every farmer should have his soil analyzed at his State Agricultural College, and in addition to finding out what his soil contains he will also find out in what particular fertilizer the land is deficient. He should then make up the deficiency. Many a farmer is loading up his land with phosphoric acid, of which it has an abundance, and starving it by not providing the potash, of which it may be badly in need. It may be that the only deficiency is nitrogen—then why should he load up on the other ingredients?

Duties Off Farm Products.

A few years ago political orators were saying that there was no tariff protection to farm products, and now the same political orators are condemning the protection which they said did not exist.

That there is to be a determined effort to increase home taxes by taking off customs duties now assessed on farm products can be taken for granted. Some of the Congressmen cannot wait a minute. They cannot wait until the present House expires.

Representative Sulser, of New York City, is quoted as saying: "What is the use of waiting? We are just as well able to go ahead now and act to relieve the people of the unjust burdens that weigh them down as we shall ever be. I shall introduce tomorrow a bill to put meats, cattle and vegetables on the free list. The President says in his message that what the farmer produces has in the last ten years gone up 72 per cent., and what he buys has advanced but 12 per cent. If that is so, we should have no trouble in reducing the cost of living, so far as meats and vegetables are concerned. Later I shall introduce separate bills to reduce the duties materially on cotton goods and woolens, and then to put coal, lumber and wood pulp on the free list."

Mr. Sulser relies on the new majority in the House of Representatives to pass such bills.

They think they are going to have cheap food, even if they have to put United States farmers out of business. They are going to eat meats produced in Australia and Argentine and grain from Canada and South America, and milk and cream and potatoes from somewhere.

These Two Spring Style Books Are Yours Free

Spring Styles are greatly changed—are radically new and most delightful. Never has style news been so interesting, fashions so pleasing, and never have such fascinating Style Books been published as these two reserved for You.

One Book is now ready—the "NATIONAL'S" Advance Sale of New Spring Styles." This Book we want to send you Free by return mail. The Second Book is the wonder of the Fashion World—the great "NATIONAL" Style Book—224 pages filled with beautiful fashion plates of "NATIONAL" garments offered at money-saving prices. This book, also yours free, will be sent you about January 27th.

Now here is your part. We very much want you to have these Books. We have reserved them for you, but—we need your name and address. So just now send us your request for these Style Books. One will come to you by return mail—the other about January 27th. **Both will be sent *you* free.**

A $2.00 All-Over Embroidery Waist of Fine Quality $1.00

Expressage Prepaid by Us

This is a "NATIONAL" opportunity—an offer of a $2.00 waist for $1.00. And we mean exactly that—without one penny's exaggeration.

C 622—This beautiful, new design is made of imported all-over Swiss Embroidery of fine quality. The waist is entirely made of the embroidery—front, sleeves, back and all. The front is made with the new points of insertion trimmed with a very full edging of fine Val and crochet balls. It has the new Parisian straight cut long sleeves, with French band cuffs trimmed with small, flat pearl buttons. This waist will launder easily and beautifully, will wear well, and is extremely stylish and becoming.

Special friend-making price $1.00
Expressage prepaid by us.

Just put a one dollar bill in an envelope, give us your size, and get this two dollar "NATIONAL" bargain. If you are not delighted with it we will refund your money upon request. Be sure to state the size desired.

And don't forget to write for your Style Books.

[Please mention National Farmer and Stock Grower.]

They are not satisfied with the largest corn and oats crop ever grown, or the wheat at 90 cents a bushel, or the cattle, hogs and sheep that have declined in price, or anything that the farmers sell. They are not satisfied with the present depressed price of wool. Congress is bound to reduce the price of farm products, and the new Congressmen, even those representing farmers' districts, believe that is what the farmers selected them for.

Many times we have said that is what is coming, and it is high time the farmers should realize what their own representatives intend to do in Congress.

Cotton Raising in Africa.

It is announced in private circles that a British syndicate is in the process of formation for acquiring large tracts of land in Gezira, Blue Nile Province of the Sudan, in Africa, for cotton cultivation. Considerable correspondence, it is said, has been exchanged on the subject between a British firm of cotton merchants in Alexandria and a leading firm in the Sudan. The nature of the correspondence leads to the belief that the syndicate will ultimately be formed with a capital of $100,000,000.

United States Report on Rye.

Area sown this fall, 1.2 per cent. less than the revised estimated area sown in the fall of 1909, equivalent to a decrease of 25,000 acres, the indicated total area being 2,138,000 acres. Condition on December 1st was 92.6, against 94.1 and 87.6 on December 1st, 1909 and 1908, respectively, and a ten-year average of 93.5. Last year the rye crop was 32,088,000 bushels.

According to the United States Department of Agriculture the winter wheat acreage is 2½ per cent. greater than last year. The condition, December 7th, was 82.5, against 95.8 in 1909 and a ten-year average of 91.3. The total acreage sown is 34,485,000, an increase of 828,000 acres, compared with last year. Last year's winter wheat harvest was 458,294,000 bushels.

On the retail stands of St. Louis California oranges have sold at two for five cents alongside of apples of the same size five cents each. This is remarkable but true.

USED ON TWO HEMISPHERES

"Whatever's worth doing, is worth doing well," evidently is the policy of our good friends The Johnston Harvester Co. This policy is carried out in the making of their widely-known *quality* farm machinery, which enjoys the implicit confidence of the farmers of both hemispheres, also in building the Johnston catalog for 1911.

The cover-page of catalog is one of the most attractive seen this season—a striking country scene in a tasteful combination of colors; the same good taste and knowledge of the essentials of catalog-making are shown in the inner pages, where tools and parts are reproduced from photographs. The book is replete with interesting facts about farm machine history—a valuable addition to any farm library.

The catalog illustrates and describes Johnston Grain Binders, Reapers, Rakes, Manure Spreaders, Spring and Spike Tooth Harrows, Side-Delivery Rakes, Land Rollers, Corn Binders, Mowers, Tedders, Hay Loaders, Disc Harrows and Orchard Harrows.

Readers of this paper who are interested in strictly first-class farm machinery, should write Johnston Harvester Co., Box 117-, Batavia, N. Y., for this catalog, or for booklets pertaining to the individual machines of interest.—*Adv.*

THE 500 QUESTIONS ANSWERED.

This is all about swine, and is a book by L. H. Cooch. There are 526 questions and 526 answers. They are natural questions and practical answers. The questions relate to breeding, mating, feeding, pasturing, fattening, management, diseases, etc., of swine. It is a complete veterinary authority on all swine diseases. The answers to questions on feeding alone, if properly attended to, will put enough pounds on one pig to pay for many books We are sending The National Farmer and Stock Grower for one year and the 500 hog question book for 60 cents Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Prime deer skins are selling at St. Louis at 30 cents per pound.

Seed-bed For Barley.

A correspondent in Ford county, Illinois, writes: "We have never grown very much barley in this county, but considerable will be sown this spring. Can it be drilled in stalks like oats?"

Barley is much more of a fastidious crop than oats, and it should be sown in a well-prepared seed-bed. That is, the ground upon which barley is sown should be as well prepared, except as to fineness, as if wheat was the crop to be sown. Barley plants make a very rapid growth early, and for this reason the seed-bed should be well-fined and put in fit condition to give up plant food rapidly. Barley thrives best on light, open soils, and it should not be grown on heavy, undrained soils. The heavy, black soil of Ford county is not the best for growing barley, but if it is sown, by all means put the seed-bed in fine, mellow condition.—L. C. Brown.

Corn Matures Unevenly.

A Lake county, Illinois, correspondent writes: "My oats ripen very unevenly, and you will see by the sample sent you to-day that nearly 25 per cent. of the grains are green. Do you think I cut my oats too soon?"

The uneven ripening of the sample of oat seed sent me by this correspondent was due to a mixture of early and late varieties. A small yellow oat was mixed with a later, larger variety—probably Big Four. Inasmuch as there is ten to fifteen days difference in the ripening period of the two sorts, naturally the longer season variety would be only in the dough stage when the early oats were ready to cut. The sample really looks as if the seed stock was taken from two distinct varieties and possibly mixed unintentionally.

Plants are liable to constant variation, and frequently we see different stalks in different hills of corn, in different stages of ripeness, and frequently I have observed that the separate heads, thrown out in the stooling process of a crop of oats, differ as much as two or three days in the stage of maturity. It is for this reason that practical farmers wait until the crop is dead ripe before cutting is commenced, taking the risk of shattering a few of the more advanced heads, rather than cut the crop while any of the heads are still green. So, for seed purposes I strongly recommend that dead-ripe seeds be used. Such seeds will most likely produce plants which will flower at the same time, and then the stage of maturity will be influenced only by the period of fertilization. I do not see that any practical results may be obtained by mixing seed whose ripening habits are from ten to twenty days apart. Better keep the sorts distinct and harvest each when it is in the best stage.—L. C. Brown.

The Market For Oats.

During the past fifty years oats have sold in market as low as 14¾ cents a bushel, in September, 1896, and as high as 90 cents a bushel in August, 1867, but oats are selling low enough when the December option closed at 31⅛ cents a bushel on the Chicago market.

It appears that the people who are regularly buying, selling and contracting oats for present and future delivery have about decided that the oats market is about steady and likely to remain steady on present basis of values. For three months past values have changed but little and quotations for future delivery have not varied a cent a pound in the same period. We refer only to the closing quotations each month.

As we learn from the Department of Agriculture that about 7 per cent. of the oat crop is consumed where it is raised, the farmer can hold that amount and more before he can influence the market, and the only satisfaction for farmers who can feed all their oats to stock is that the oats they are consuming is cheap. We believe that there is only one influence that can be exerted to advance the market and that is for farmers to continue to feed all their cheap oats.

At St. Louis, on December 31st, cash oats No. 2 sold at 31½ cents a bushel, and No. 2 white oats at 33 to 33¼ cents a bushel. At Chicago, oats for May, 1911, delivery were quoted at 34 cents a bushel.

The Threatened Destruction of the Farmers' Protection.

For many years a number of farmers' products have been protected to some moderate extent by customs duties, and for many years those duties have been unimportant because the United States was an exporting instead of an importing nation. Year after year the country has thrived and prospered with a protective tariff applied to all industries, not excepting the growing of wool, grain, cattle, rice, butter, cheese, milk, eggs, meats, poultry, and other farm products.

The people of the United States have been fed by our farmers and fed so cheaply that they have cultivated expensive habits; the farmer might receive only 15 cents for eggs, but the city credit buyer would have to pay 40 to 45 cents for them; the farmer received 8 or 9 cents a pound for hogs and the consumer paid 26 cents a pound for bacon. The farmer received 1½ cents a pound for wheat and the housewife paid 10 cents for a small loaf of bread. The farmer received 14 cents a gallon for milk and it was distributed at 32 cents a gallon. They then charged the farmer with the high cost of living.

Directly there was a slight shortage of eggs and butter the commission men of New York City started up the cry: "Take off all the duties on butter, eggs and poultry and vegetables and we will reduce the price of farmers' products on the market." And the cry has been kept up ever since: "Take the duties off from products and let us feed on anything we can get anywhere so long as it is cheap. Let us bring in hides from South America, butter, milk and eggs and vegetables from Canada, meats and grain from Argentine, wool from Australia, and let the American farmer come down with his prices." The American people spend most of their money for luxuries, but they object to paying for food.

In Congress very few legislators have championed the cause of the farmer. But the farmer has had one champion—Hon. Lafayette Young, of Iowa—a United States Senator of only a few weeks. He lay down the law; he said that a square deal was protection for all interests, and that protection for manufactured goods and protection for farm products ought to stand or fall together.

We have not in this paper the space to print the admirable speech of Senator Young. It would occupy several pages. We could not do justice to it. This publication will be read by one hundred thousand or more farmers. We would like every farmer who reads this paper to write to Hon. Lafayette Young, United States Senate, Washington, D. C., and ask for a copy of his speech entitled "The Threatened Destruction of the Farmers' Protection." It is worth reading, worth studying, and it is worth while to encourage a man who has championed the farmers' interests in the National Legislature.

Its Economy and Power Startle the World!

The Engine Runs on COAL OIL at a Fraction of Cost of Gasoline.

Thousands of these marvelous engines—in actual use today—prove beyond question that kerosene is the engine fuel of the future. The success of the "Detroit" Engine is absolutely unparalleled.

Demand is overwhelming.

Kerosene (common coal oil) runs it with wonderful economy. Kerosene generally costs 6 to 15c less per gallon than gasoline—and gasoline is still going up. Runs on any engine fuel. Only three moving parts. Light and portable. Does work of engines weighing four times as much. Runs everything.

The Amazing "DETROIT"

The Kerosene Wonder—on 15 Days' Trial—Direct From Factory

Any engine you want, from 2 to 20 H. P., sent on 15 days' free trial—tested immediately before shipping and ready to run. If dissatisfied—every dollar you have paid us for the engine cheerfully refunded. Prices lowest ever known for high-grade, guaranteed engines.

The New Book is Ready—WRITE! Tells all about these new wonders that mark a new era in engines. Special introductory price on first "Detroit" engine sold in each community. Quick action gets it. Address
Detroit Engine Works, 383 Bellevue Ave., Detroit, Mich.

St. Louis Grain Prices.

On December 31st, 1910, the following were prices for grain sold under the rules of the Merchants' Exchange by sample and delivered in car-load lots on track:

WHEAT.—No. 2 red, 97 to 99c. (fancy car sold on private terms); No. 3 red, 95½ to 97c.; No. 4 red, 83 to 94c., nominal; No. 2 hard, 94 to 96c. for yellow, 96 to 97c. for dark; 98 to 99c. for Turkey; No. 3 hard, 91 to 98½c., latter bid for choice Turkey; No. 4 hard, 80 to 88c., nominal.

CORN.—No. 2, 44c.; No. 3, 42½c.; No. 4, 41 to 42c.; No. 2 yellow, 44c.; No. 3 yellow, 42¼ to 42½c.; No. 4, yellow, 41½ to 42c.; No. 2 white, 44 to 45c.; No. 3 white, 42½ to 43c.; No. 4 white, 41 to 42c.; cob—mixed, 43c.; white, 46c.

OATS.—No. 2 white, 33 to 33¼c.; standard, 33 to 33¼c.; No. 3 white, 32 to 33c.; No. 4 white, 32c.; No. 2, 31½c.; No. 3, 31c.; No. 4, 30½c.

Sale of Percheron Horses.

At Roberts, Ill., December 15th, the Percheron horses owned by John H. Decker were sold at auction, with the result that fourteen stallions averaged $503, and twenty-five mares averaged $539. The top-price stallion was Bozin, an imported blue-gray horse, a foal of 1905, that sold for $1,600 to H. B. Hill, of Piper City, Ill., and the next price, $1,325, was paid for Santos Dago, a black horse, American foal of 1908, sold to Simon Beller, of Graymont, Ill. The highest price for a mare was $825, paid for the black mare Almeda, foaled in 1902, by H. Randolph, of Green Valley, Ill.

General Farm Notes.

France is very closely cultivated. A surface of 132,387,242 acres has but 9,879,920 acres uncultivated, besides 23,274,400 acres in woods and forests, and 8,007,942 in towns, railways, rivers and lakes.

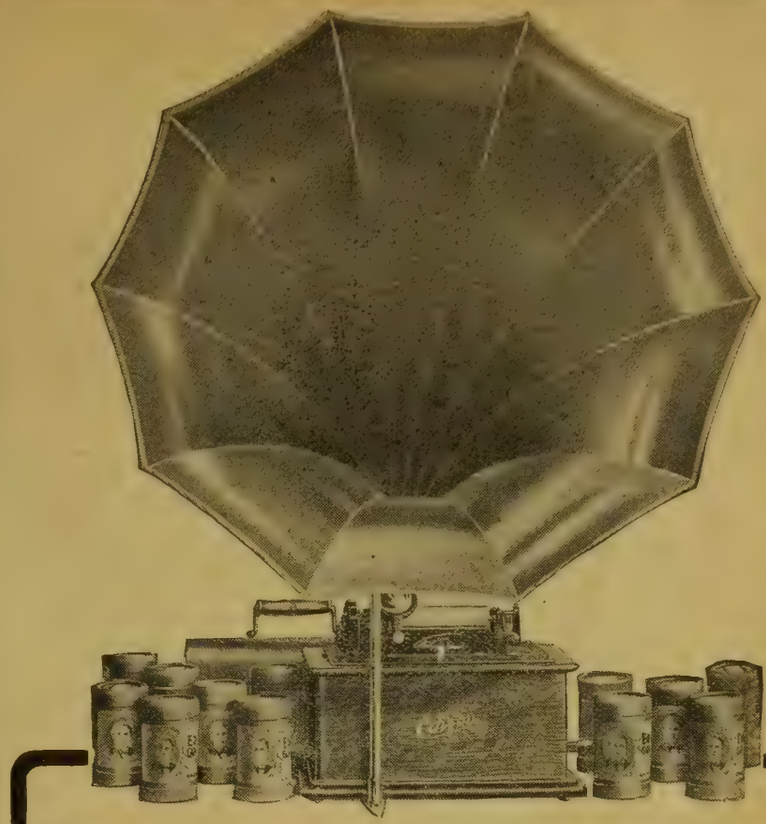
The Commissioner of Weights and Measures in New York City has decided not to attempt to force the sale of eggs by weight. This is a new Commissioner; the one who was going to insist upon it has been appointed to another office.

"It is now said that cocoanut meal is one of the greatest dairy feeds in the world. It is said to be a great milk producer, and many car-loads of it have been used on the Pacific Coast this past year. These Westerners claim that it keeps the cows in good condition, the oil in the meal tending to make them slick and glossy as well as to fatten and keep them in good condition."—Milk Reporter.

The Department of Agriculture estimates that on December 1st, 1910, the average prices of farm products were 8½ per cent. lower than on the corresponding date the previous year. This means that the farmer's profit is 8½ per cent. less, although a larger crop was raised. The people of the United States ought to assemble in mass-meeting and extend a vote of thanks to the farmers for taking care of them so handsomely.

The Horse Market Prices.

Horse quotations are not generally very reliable, because of the wide difference between values of different horses of the same height and weight. The following quotations represent general values on the St. Louis market, January 1, 1911: Heavy draft, good to choice, $165 to $250; Eastern chunks, $115 to $175; Southern horses, good to extra, $125 to $165; Southern horses, fair to good, $75 to $115; Southern horses, common, $50 to $65; drivers, choice, $155 to $225; plugs, $15 to $45.



Genuine Latest Style Edison Phonograph Shipped

Awful Accident.

Willie had tried by various means to interest his father in conversation.

"Can't you see I am trying to read?" said the exasperated father. "Now don't bother me."

Willie was silent for almost a minute, then reflectively: "Awful accident in the subway to-day."

Father looked up with interest. "What's that?" he asked. "An accident in the subway?"

"Yes," replied Willie, edging toward the door. "A woman had her eye on a seat and a man sat on it."—W. Gould, in Post-Dispatch.

"I expect to pass through this world but once. Any good I can do, any kindness I can show, let me do now. Let me not defer or neglect it, for I shall not pass this way again."—Edward Courtney.

The NAYLOR HARROW
Two Row Tongueless Disc and Spike
Saves you work—time—money. It is lighter draft and much more effective than the old style disc. Every trip across the field discs, harrows, and levels a strip 8 feet wide. Thus one mile of travel means an acre of seed bed prepared. Learn all about this remarkable implement. Saves plowing. Ask your dealer. Send for free booklet.
Naylor Mfg. Co., Box 152 Plano, Ill.

Housing the Stock.

We can improve on many of our methods of housing stock.

We have to-day some barns that are too warm, but not many of them. The too warm barn may be made just right by improving the ventilation. Write to your Experiment Station for a circular on the most improved system.

The manure and liquids should not be permitted to collect in a way to render the barns damp and noisome. It takes some reconstruction of standing places to do this, but it can be done.

See that the light in the barn is abundant. Window glass is cheap and there is no reason why the living places of the stock should not have an abundance of that health-giving element—light.

Give the hogs all the room you can spare; usually their quarters are so cramped that they cannot exercise or even keep clean. The less space the less exercise; the less exercise, the less food they will consume; the less food consumed, the less growth; the smaller the growth, the smaller the profit.

House the horses so they will not be subject to drafts. A draft on a cool horse will do no harm, but a draft on a sweaty horse may prove his ruin.

Don't house the poultry in the barn with the horses, as the chicken lice sometimes prove troublesome to the horses.

Every barn should be so arranged that the animals may be gotten out quickly in case of fire. There should be doors opening out from the parts of the barn where each kind of stock is kept, so that in case of fire the work of releasing the animals will take but a few moments. Every year a good many barns are burned and a good many farm animals meet a terrible death from fire.

Beef cattle can stand a good deal of free air, even in midwinter, and do not need as warm conditions as do the other stock. Therefore beef cattle should not be housed with other stock. Only in the bitterest weather will they need other protection than open sheds, except in the coldest parts of the United States.

No system of ventilation works well in still weather. Therefore at such times doors and windows need to be opened frequently to let in fresh air.

The idea of heating barns is no longer approved by the students of housing stock. The heat coming from the animals' bodies is sufficient to give warmth enough for comfort, if the housing conditions are right.

Rearrangement of barns will pay where the housing of the stock is such that much feed has to be carried far. Useless labor is spent year after year in some barns. A little study will bring the animals and feed closer together or make a feed box on wheels possible for the distribution of food. One of the great wastes of labor in many barns is in the distribution of water to the stock or the methods of watering stock, which may be improved on in many ways easily thought out in each individual case.

Exhibit of Barley and Hops.

Farmers will be greatly interested in the Second International Barley and Hop Prize Exhibit to be held at the Coliseum, Chicago, October 12th to 22d, 1911. The time to become interested is right now. This competition will be held in connection with the American Exposition of Brewing Machinery and Products. The importance of a representative international exhibit of barley and hops, as an educational factor, and its influence towards greater endeavor for highest quality of product in the field and manufactory, cannot be overestimated. The difference in properties and characteristics between American and foreign varieties of barley and hops, especially of barley, botanically, physically, chemically and physiologically, are pronounced, and opportunity will here be given to study the many varieties cultivated for brewing purposes. The barleys of the United States will be of particular interest, since they include such greatly differing types as the two-rowed Chevalier, the Eastern four-rowed Manchuria or Scotch, the Western four-rowed Bay Brewing and Blue Barley, the six-rowed White Club, while characteristic differences in hops from the Eastern and Western Coast will be made apparent.

For the Barley and Hop Prize Exhibit application can be made only by growers of barley and hops, of which specimens of 60 pounds and 10 pounds, respectively, compose exhibits. Specimens of hops, 1910 crop, should be kept in cold storage.

Prizes will be awarded for the finest qualities of barleys and hops, for each variety or section.

The Rules and Regulations for the great contest are already available. Anyone who will write to Mr. H. E. O. Reinemann, Secretary, 1508 Republic Building, Chicago, Ill., will receive full information as to all requirements. We earnestly advise all farmers to get in touch with this proposition.

The Storage of Sweet Potatoes.

(By J. E. Mundell, of the New Mexico Agricultural Experiment Station.)

The keeping of sweet potatoes in storage is one of the most important problems the grower has to deal with. All the growers know that if the crop can be successfully kept until the holiday season or a little later, a much more remunerative price can be secured for the potatoes. It is the purpose of this bulletin to give some of the methods of storage in use to-day on the farm. There are a few things that should be kept in mind when handling the crop and when storing.

1st. Dig the potatoes carefully and dry thoroughly in the sun.

2d. Sort out the sound ones and handle them carefully, for a bruised potato does not keep well.

3d. Keep the potatoes from getting chilled.

4th. Place the potatoes where they will be dry and warm. A temperature of from 50 to 65 degrees has been found to be about right for keeping sweet potatoes.

Storing in banks. Make a circular bed about six feet in diameter, in some sheltered location, by throwing up the dirt from the sides. Put on top of this a few inches of straw or hay. Place on end in the center of this ventilator flue about six inches square and four to five feet long. The flue should be bored full of holes up and down the side, to afford abundant ventilation. The potatoes are then piled around the flue in a conical heap. The amount of potatoes to put in each bank is from 1,000 to 2,000 pounds. The tubers are then covered with hay or straw or other material to a depth of three or four inches. On top of this is put two or three inches of dirt, and this amount should be increased as the weather grows colder. The heap should not be covered too deep with dirt at first, as the potatoes must always go through a sweat and loss is likely to occur if covering too deeply. The heap ought to be examined in a week or ten days after putting up, and if too much moisture is present, uncover the pile and let dry as they stand for a few hours, and then cover again.

Storing in sand. The tubers may be taken to a dry warm room and there stored in sand. A tight room in an adobe building will answer the purpose well, if some ventilation is provided for. The method of procedure is as follows: Put on the floor a layer of sand two or three inches deep, and on this place the potatoes side by side until the sand is covered. Then pour dry sand over them until covered, and then place on more potatoes and cover as before. A good many layers may thus be put on top of each other, until several feet in height has been reached. When doing this it may be necessary to place some boards on the sides and in front to keep the sand in place. This method of storage has been used at the Station with very satisfactory results. A number of the Mexican farmers use this method every year to keep their potatoes. From information obtained it has been a very successful method with them.

Storing in straw. Storing sweet potatoes in straw or hay offers a very easy means to the consumer and grower of keeping a small amount for home use. In a warm room or stable, place the potatoes in thick layers of straw, where they will not be disturbed or tramped upon by those entering the room or barn. As the weather grows colder the thickness of the straw should be increased.

When storing sweet potatoes it will be found profitable to pay close attention to details. The potatoes should be kept dry and warm, and be properly ventilated.

Texas Live Stock Assessment.

Texas is rendering for assessment 5,513,413 cattle, 1,053,417 hogs, 1,432,482 sheep, 828,070 goats, and 1,766,476 horses and mules.

Investigate Before You Buy—

"MORE AND BETTER CORN," is a 40-page booklet, full of profit-bringing information. Every paragraph is practical.

We publish this book and send it FREE because we are interested in improved methods of corn growing. Every vital thing about corn and corn planting is in this book.

We manufacture the largest and most complete line of corn-planting machinery, all of the highest quality.

Tell us your requirements and we will furnish full and complete information.

ALFALFA

Its Seeding, Culture and Curing, by one of the highest authorities in Kansas, the greatest Alfalfa State, is full of practical information about this new and important crop. Get posted on this interesting subject.

DISC HARROWS

The Disc Harrow is the most necessary tool on the farm today. The advantages of thorough discing are just beginning to be understood.

The DEERE MODEL B. Disc Harrows control the gangs and force them into the ground by a spring pressure, thereby securing the most even and thorough penetration and cultivation.

Whether you buy a disc harrow or not this year, it will pay you to read up all the new features of the DEERE line of Harrows and the MODEL B. in particular.

REMEMBER, it is the only spring-pressure harrow made and spring-pressure control insures more perfect work.

For every use the DEERE UNIVERSAL DISC HARROW is a most satisfactory tool. Made in 3, 4, 5 or 6-foot sizes. The gangs are reversible and adjustable for in-throw or out-throw, wide or narrow cut. The frame is very high so that the machine makes a first-class cultivator for small crops.

A machine of this kind comes in mighty handy on any farm.

BUY A STRONG, POWERFUL STALK CUTTER, one that will cut up sea island stalks as high as the horse's head. That's the DEERE. Made in one or two rows with 5, 6, 7 or 9-knife heads. The only stalk cutter with spring hitch, spring drag hooks, spring pressure and a comfortable double-leaf spring seat. All the latest improvements, all explained in the book.

FARMERS' POCKET LEDGER

The Farmers' Pocket Ledger is a new, durable and handsome memorandum book which contains lots of practical information and has plenty of room for recording important transactions. The most popular little book of its kind.

Please ask for books by number.

Prevent Lands Being Worn Out.

We are constantly lectured upon what to do to restore worn-out lands to a state of fertility, but in about all cases the restoration is a matter of time, labor and expense. It is far more logical to prevent lands becoming worn out.

We have been hearing agricultural sermons on this for a quarter of a century, and by this time the preaching should be having its effect. It is possible to so farm that the land will retain all its fertility and its ability to produce maximum crops.

The first element in doing this is that of fertility. It is now easy enough for every man to know about how much fertility is taken off each acre of land per year. There are numerous tables of analysis of farm crops, so that a land owner can soon determine approximately how many pounds of potassium, nitrogen and phosphorus have been taken from his land in any particular crop. When reduced to cost of chemical fertilizers the amount of expenditure required to supply what has been taken off will be seen to be very small.

It is now stated that nitrogen as a purchasable element can generally be eliminated. This, however, needs qualification; the ground that is deficient in nitrogen does not even grow large crops of legumes, but it is safe to assert that upon good land a reasonable system of rotation will bring the nitrogen back as fast as it is taken off. It takes time, however, to rotate the crops, and the result is in the end and not in the beginning. Leguminous crops are now very popular, as they produce good feed and their roots help increase the nitrogen of the soil. Therefore it remains to apply every year as much phosphorus and potassium as is taken off, and both of these elements are reasonably cheap.

Probably the most important action on the part of the farmer is to have a sample of his land analyzed in order to ascertain the chemical fertilizer contents of the soil. He may be surprised at the result. Lands vary greatly, and although the chemist cannot specify how much of the nitrogen, phosphoric acid and potash therein contained is available, he can certainly prevent a farmer from feeding the soil with whatever may be found in abundance.

There is, however, another factor that needs to be kept in mind in the keeping of land up to a proper state of productivity. That is the retaining of the soil in a sweet condition. It has been learned that certain soils tend to become rapidly sour, and often the increase of acid in the soil will prevent the growing of all leguminous crops, and this in turn cuts off the means of renewing constantly the supply of nitrogen taken from the air through the medium of bacteria on the roots of the leguminous plants.

The one element used for sweetening the soil is lime. Fortunately this can be applied to almost any soil without injury, if it is not applied in its caustic form. Ground lime rock is the most desirable form in which to apply lime, as it has no caustic properties. It will cost about $2.00 per ton, and a ton to the acre is a big application and will last for several years.

The next best form is lime that has been allowed to slake in the air. It takes in from the air both moisture and carbon and becomes about the same as ground lime rock. The advantage of this is that it can be obtained more generally than ground lime rock, which generally has to be purchased by the car-load. However, the air-slaked lime will cost more. If lime is used in large quantities, the ground rock will be the most profitable to use on account of its less cost. Splendid results have been obtained by liming land that had become sour.

Compare These Prices With What You Now Pay

$2.98 — 1-2 bbl. 98 lbs. net Best Quality Hard Wheat Flour

Buy Better Groceries For Less Money

Better Groceries Because we buy at first hand from the producer, keeping our stocks fresh and up-to-date; because our purchases are so large that we have the pick of the finest of goods; because we pay cash for everything and get the producer's good will. He favors us when he has a shipment of extra quality. Lastly, because we know qualities and will accept only the best. We buy rice in Louisiana, coffee in Java, Brazil and other coffee producing countries, maple sugar in Ohio and Canada, raisins in California, dates in Persia, sugar from the refiners and flour at the mills. We search the whole world to give you groceries of the finest quality.

At Less Money to You because we cut out all unnecessary and wasteful profits. We buy from the producer under special contract, add our single small profit and deliver the goods to you direct at the low price thus made. A very small profit on several thousand orders a day satisfies us. Selling for cash only we have no bad accounts to increase our cost of doing business. Our prices, therefore, average fully a third lower than average dealer's price.

These are the Reasons plainly and squarely stated, why it is good business for you to buy your groceries here. Prove what we say. When you receive your shipment of groceries from us compare the quality and price of any item in the lot sent you, with goods you have been buying elsewhere. Thousands of buyers who have done that are now our satisfied, steady customers, sending us regular orders, which run into millions of dollars a year.

Send For This Grocery List

Our Grocery List is revised every two months, new bargains shown, seasonable goods listed. It contains a complete list of every kind and variety of groceries that can be shipped to you from our warehouses. The prices quoted you are in many cases less than a small dealer can buy the same goods for in his limited quantities. Judge the qualities for yourself.

You need this book first, to compare the prices quoted with what you are now paying. That will tell you how much money you can save by sending us your order. Second, to enable you to make out your order for just the things you need. While you think of it, mail a postal card for the Grocery List. Just say: "Send me a copy of your Grocery List" and sign your name and address plainly. You'll be glad you did it. Address the house nearest you, Chicago or Kansas City.

Butchering Hogs on the Farm.

A new bulletin just issued by the Missouri State Board of Agriculture is entitled "Butchering Hogs on the Farm." This bulletin, in addition to dealing with butchering as ordinarily understood, tells how to make sugar-cured meat, mince meat, etc. It may be had free by addressing Secretary T. C. Wilson, Columbia, Missouri.

Comparative Feeding Value of Clover and Timothy Hay.

Prof. Ralph Hoagland, of the Division of Agricultural Chemistry, Minnesota University Farm, has recently tabulated the results of numerous analyses of red clover and timothy hay, made to determine their comparative feeding value in the fattening of live stock. The figures below show the number of pounds of digestible nutrients in one ton each of clover and timothy, respectively:

Nutrients.	Clover.	Tmothy.
Ash	89.9	72.9
Fat	38.0	24.5
Protein	150.2	65.9
Crude fiber	290.7	418.6
Carbohydrates	552.6	462.5

The results here presented show conclusively the superiority of clover in feeding value. Clover contains over twice as much digestible protein and considerably more digestible fat and carbohydrates than timothy hay.

Clover is especially suited for young stock and milch cows, while timothy is more used as a feed for horses. Its market value for this last purpose is so high as to forbid its profitable use for general stock feeding, since the same amount of nutrients can be purchased in other feeds for less money.

Potash Direct to Farmers.

The potash situation, as we understand it to-day, is easily summed up. The miners of potash are selling direct to the farmers at reasonable prices, and for that reason the mixers or middlemen are raising a disturbance.

At the State College Show of Pennsylvania, held in December, there was a dressed-poultry and market-egg exhibit which was very interesting and practical.

Our Factory Price and Book Prove This the Biggest 1911 Value in a Harrow

HERE'S the one harrow bargain of the year—the *first* and *only genuine tongueless* Disc—at a price that you can't resist. You can't get higher quality or bigger value no matter what you pay. We'll let you have this Detroit-American on the only *Real* 30 day free trial offer—no money in advance, no deposit and we pay the freight. Then if you decide to keep the harrow, send money or pay on time—and our unlimited time guarantee protects you *forever*. Don't use an old fashioned tongue disc with its whipping and pounding of horses and neck-weight which injures the team just when you need it most. A tongueless disc solves the problem, saves the horses, saves time and work, lets you work closer to fences because no pole to catch.

Get our book and freight paid price *first*. Note that the

Detroit-American The Only Genuine Tongueless Disc

is all steel, which means no breakage, no repairs or costly delays in busy season. Light in *draft*—strong as a harrow can be made. Entire frame and front trucks are steel. Wide tired steel wheels do not cut into soil. Arched axle gives good clearance. Trucks are attached to frame by flexible pivots so wheels pass over uneven places without disturbing the perfect balance of frame. Steel discs cut to uniform depth. Disc sections do not strike together in center. All end thrust taken up by *Hard Maple Ring* Bearings. Pipe oilers. Steel Separators between blades. Long blade scrapers. These and many other Detroit-American advantages are shown in our big book. Choice of 16 sizes, cutting from 4 feet to 10 feet in width. Regular round disc blades 16, 18 and 20 inches. Cutaway discs furnished if desired. Get *your* harrow at a price that makes it the biggest bargain ever offered. Send coupon now. Get the guide to the right harrow at the right price. Also see new Detroit-American Manure Spreaders and Cultivators. All in the Big Book. Write *now*. Address

Control of Farmers' Products.

The manufacturers of special lines of goods have recently established methods whereby they are enabled to control the retail selling price of their goods. This is a comparatively new process. The idea is not new, but the success is quite recent.

Formerly the manufacturers were content to sell their goods at wholesale prices and let the retailer decide upon the retail selling price according to circumstances. Not so at the present time. Nearly all manufactured articles which the large companies now control, especially such as are protected by trade marks and patents, are sold under agreement, which specifies the retail selling price. The retailers are required to agree to maintain the price or they cannot buy the goods in the first place, and, therefore, if not receiving them, they cannot sell them. Some of these articles under control are made up from farm products.

Individual manufacturers issue licenses, giving retailers authority to buy and sell their line of goods under certain conditions, the principal condition being the maintenance of the retail price. If the agreement is violated, the retailer receives no more goods and the license is canceled.

Herein comes the opening for the farmer. It would be a good idea for farmers to control the methods of sale of farm products through the licensing system. Farmers' products as a general proposition are best sold on commission. No commission man should receive a consignment of farm produce unless authorized to do so by the Farmers' Association representing that class of farmers' products. The American National Live Stock Association could issue licenses to all firms selling cattle, hogs or sheep; the Mohair Growers' Association could issue licenses to commission firms selling mohair; the Sheep Raisers' Association could issue licenses for the sale of wool; the Grain Growers' Association could issue licenses to commission firms selling grain on commission, and so on through the list.

The licenses could be issued upon certain conditions, first in regard to rates of commissions, second in regard to method of making returns, of keeping books open for inspection, and any other conditions that may be right, proper and beneficial to all concerned.

It does not appear reasonable at the present time to say that a consignment must be sold at a special price, and it may never come to that; but the commission firms selling farmers' products in cities ought to be under far better control than they are now, and should be recognized in some manner as being worthy to represent the farmer in the sale of his products. The live stock trade is pretty well organized, and commission firms receive their memberships, which are equal to licenses, from the Exchanges; they are under certain restrictions and regulations, and irresponsible parties cannot do business, neither can they obtain memberships; but the produce commission firms selling farmers' poultry, eggs, fruits and vegetables are not nearly so well organized and none of them are accountable to the producer for their methods or their charges; furthermore, there is a sprinkling of "fly-by-night firms" that are professional tricksters, and they would be easily barred out.

The first step towards insuring the proper handling of farmers' products in the interest of the producer is for the producers themselves to prescribe such rules under which their products may be sold. Of course this requires reasonable, conservative action by men who understand business principles and to conform in a great measure to methods at present in use. This is not a proposition to destroy or upset existing conditions, but to improve them by the general adoption of plans which the commercial world has adopted to protect proprietary interests.

Nurse Cows For Champions.

Ten years ago the editor remarked that Advance, the grand champion steer at the First International Live Stock Exposition, must have had a good mother, and someone said: "Yes; maybe two mothers." It appears to be customary to provide the calves which are being fed for championship honors with a liberal milk ration. When Shamrock, II., weighed 822 pounds at the age of 234 days he was provided with two nurse cows. He was a good, lusty "bawler," and no doubt he had a great, big bass voice, but we doubt the propriety of the custom of feeding such an expensive ration. True, a calf that is to sell for six or seven hundred dollars and win a thousand dollars in premiums ought not to be stinted; but this double nurse cow business does not look like a beef-making demonstration on an economy of production basis. The feeders of the grand champion steer are open and above board in their statements, probably with a view of inviting criticism on this particular line of feeding.

We are of the opinion that the nurse-cow business ought to be limited. The cow should raise her calf, or a substitute be provided up to a certain age, say six months, and at no time should a steer for exhibition be allowed the double milk ration. The exhibits are educational in character, and it is surely not the purpose to produce champion steers that would surely lose money if sold on their merits as beef cattle in the open market.

Farmers and Farm Laborers.

"Race Suicide on the Farm" is the title of an article which is issued by the University Farm Press of Minnesota. We publish it because it is worth thinking about, yet it is only one side of the story. Many farms in the United States have not yet advanced far enough to be able to support the family of the owner and the family of the hired men; neither are all the farms far enough advanced to furnish all the year round work for farm laborers; neither is there any steady, reliable crop of farm laborers; nor will there be for many years to come. Nearly all the farm laborers are working to suit their own convenience and looking for opportunities to buy, rent or manage. There is yet room for a farm laborer to acquire a home and farm providing he means business and has some self-reliance. There are more farmers who will fix up in a reasonable way for farm laborers with families than there are reliable farm laborers with families seeking permanent positions. This country is settling down; it will require some time to settle, and the Agricultural Colleges are not turning out farm laborers very fast.

Great efforts are being made to establish steamship lines between South America and the United States. This is a meritorious business enterprise and we have not a word against it, yet it will bring meat and grain from South America to our ports in competition with our own. Our objection will arise when the proposition is made to bring in South American products without requiring them to pay a cent towards the support of the United States government.

Hercules Stump Puller.

There is no better illustration of stump pulling than the one to be seen on page 11. Reliable people can have thirty-days' free trial. One of our patrons who bought one last year said: "Whatever it gets tied to is sure to come." There is a special proposition to the first one who buys in new sections. Read the advertisement and write to Hercules Manufacturing Company, 140 Seventeenth street, Centerville, Iowa, and ask for circular about the All-steel Triple Power Stump Puller.

New Home-Builders' Plan Book Keeps Cost Within Estimates!

NOT "Theoretical" Figures, but Actual Cost to Build!

Here, at last, is a practical Plan Book that keeps the cost of new homes within the original estimates. Doubtless you have consulted architects or have sent for some of the many Plan Books that are advertised for sale. Have you ever tried to put up a house at the price stated in these books? If so, you have learned how disastrous it is to depend on the theoretical figures given by most architects. The Gordon-Van Tine Plan Book wins out because it safeguards the home builder. It shows real **Photographs and Floor Plans of Newest Designs in Houses & Bungalows Costing $600 to $6,000**

Lumber and Millwork for this 5-Room Bungalow, $868

Lumber and Millwork for this 7-Room House, $1,057

Every house illustrated in it has been actually built at the figures stated. We have seen these houses go up and we have furnished all the material used. We want this book to be in the hands of every prospective home builder, and for a limited time will send it FREE on receipt of 10 cents to cover handling and postage. Don't fail to write!

GRAND FREE MILLWORK CATALOG Saves 50 Per Cent on Building Material!

Over half a million home builders are buying Building Material at Bargain Prices, direct from our great Millwork and Lumber Plant. We carry a tremendous stock of Building Material—everything needed to build and complete beautiful homes of the most modern types, even to mantels and hardware. We guarantee quick shipment, no matter how large the order.

Quality, Safe Delivery and Satisfaction Guaranteed or Money Refunded. Three big banks vouch for our responsibility.

Get the big Free Catalogs, the Home Builders' Plan Book and build with utmost economy and the positive assurance of cost not exceeding estimates. Write today.

FRAZIER'S DISTEMPER CURE

HEAVES Is Not a Fatal Disease.

In the early stages it can invariably be cured, and occasionally those in chronic form, by using

FRAZIER'S DISTEMPER CURE,

a liquid given on the tongue or placed in feed. Cures and prevents Distemper, Catarrhal Fever, Coughs and Colds in three to six days. $1.00 bottle holds three 50c. bottles. Special agents wanted. Send for free 32-page horse book. Sold by druggists or prepaid from BINKLEY MEDICAL CO., Dept. H, Nappanee, Ind.

VIRGINIA FARMS

You can buy fertile farms with timber, fruit and water for $10.00 per acre and up. **Annual Rainfall 45 inches. Splendid country for fruit growing, dairying, stock raising and general farming.** Fine climate, abundant water, convenient Eastern markets, excellent schools, good neighbors. Write for our illustrated Quarterly, maps, Homeseeker's Excursion rates and other information. They tell WHY Virginia land is so low in price.

F. H. LaBaume, Agr. & Ind. Agt., Norfolk & Western Ry. Box, 2044, Roanoke, Va

$10 AND UP PER ACRE NOW BUT PRICE RAPIDLY ADVANCING

BUY THE LOWEST COST ENGINE MADE. Lowest fuel cost; lowest up-keep cost; easiest on the machine it operates, delivering steadier power than any other gasoline engine, adapting it especially for operating farm machinery, with better results and least waste of grain. Lowest fuel cost for it runs on Gasoline, Kerosene, Distillate, Gas or Alcohol and has perfect lubrication. Lowest cost because it delivers greatest available power per horse. A slow speed, high duty engine. Starts easier and quicker than any other engine, occupies less space, is less cumbersome, with less vibration, therefore adapting it for either stationary, portable or traction use. **IT IS THE POWER CONTRACTOR'S FAVORITE ENGINE.** No engine made has so wide a range of use. **YOU WILL MAKE A MISTAKE IF YOU DO NOT WRITE US FOR INFORMATION.** 1½ H. P. to 5½ H. P. single cylinder. 6 to 20 H. P. two cylinder. 30 to 50 H. P. four cylinder. State your requirements and get our advise. **THE TEMPLE PUMP CO., Manufacturers, 420 West 15th St., Chicago, U. S. A.** This is our 58th year.

"Take Down the Bars."

The cartoon which we publish from the New York World will give an idea what kind of an agitation is going on. The New York World idea as expressed in the cartoon is, that if the people of the cities can send their money to Argentine, Australia and Canada for beef, then all will be happiness.

The happy idea, as we have stated before, is to conduct the United States government in the interest of the foreigner and admit their products without those products paying a cent towards the support of the government, leaving the American farmer the taxes to pay. Of course, they do not say that in so many words, but that is exactly what the picture says—"Reduce the price of American beef by swamping the market with foreign beef."

Under the present law, Australian beef and all other foreign beef pays a duty of 1½ cents a pound. This money goes to the support of the government whenever any is collected. It barely places the American farmer, taxes considered, on an equality with the Argentine cattle raiser who has free grazing and whose labor costs him a few dollars per month. What the cartoon means is to remove this duty and let the meat come in without paying anything.

The American farmer has fed the United States population very well. For many years there was a very large surplus of all kinds of farm products. Farmers burned their corn because it was cheaper than wood; choice beef steers were sold at less than cost because there was too great an abundance and the export trade could only take the surplus at low prices. The sheep industry declined because wool was too cheap and mutton did not pay the freight to market, and yet the farmers plugged along until there appeared to be a scarcity and farmers had a good year or so. Even now so great is the production that prices have come down on nearly everything the farmer produces, and yet the howl is set up: "Let down the bars; buy anywhere but not at home, unless at ruinous prices to the producer."

The National Farmer and Stock Grower is the only farm paper we know of that has advocated the policy of protection by a reasonable customs tariff, the revenues to support the government; a reasonable tariff for all interests and all people; not prohibitive, but such as will place us in our own markets in a better position than our outside competitors.

We would not allow any reduction in existing duties; we would not touch one single item of the present law unless it be to restore the duties on farm products that have been reduced. Farmers had better look to the records of the Senators and Representatives in Congress. If they do not, the farmers' interests will be discriminated against. There will always be protective duties, but if the farmer does not look out for himself and declare himself he will find protection for manufactures and the bars down and meat and grain coming in duty free, swamping his market, from Argentina. Our thanks are due to the New York World for giving us the cartoon which shows better than words how much use the city people have for the farmers of the nation.

Lands "Good Enough" For Grass.

Too frequently thin ground, undrained ground, and patches located here and there, where it is not feasible to work in crops, are given over to grass lands, and good grass crops are confidently looked for. Grasses cannot be grown on undrained, thin ground, for the soil soon becomes unmanageable and the grasses do not thrive. We would not expect to get a bumper crop of corn from a poor piece of ground, yet we do expect grass to give a good account. Whenever we consider it essential to give grass lands the same care and attention as grain lands, then, and not until then, may we hope to improve our grass crops and pasture lands. Proper drainage, manure and fresh seed are three essentials which are absolutely necessary.—L. C. Brown.

For Keepers of Bees.

Keepers of honey bees are requested to write to Hon. Secretary of Agriculture, Washington, D. C., and ask for a copy of the publication relating to bee diseases and their treatment. There are two diseases which are infesting the apiaries which are difficult to locate and control, and it can only be done by keeping posted. Bee keepers will find it to their advantage to do as we suggest.

Horticultural Notes.

Trees may be protected from injury by rabbits and mice, says the North Dakota Experiment Station, by keeping litter away from them and painting the trunk with a white-wash to which Paris green has been added. They may also be protected by wire screens.

The Land Show held recently at St. Louis had several fine fruit exhibits, and none were more attractive than the display of Delicious apples by the Stark Bros. Nursery Company of Louisiana, Mo. They had other varieties in splendid array, but "Delicious" topped the show. Mr. J. D. Meriwether, Western Sales Manager, was doing the honors.

Beef From Brazil.

It is now reported that the first South American beef will come to the United States from Rio Janeiro, there being a large United States corporation organized for the purpose. It has been given the monopoly of meat transit from Brazil. In fact, it is a monopoly organization, licensed by the government of that country.

TAKE DOWN THE BARS—CARTOON FROM THE NEW YORK WORLD, showing anxiety to buy beef from Argentine, Australia, Canada—anywhere to put down the prices on the farmers' products of the United States. PUT DOWN THE BARS. The bars represent the duty of 1½ cents a pound, which the foreign meats have to pay for the support of the United States government on entry at the ports of this country.

Get this Genuine Alectride Tool Grinder on Free Trial

Sharpen your tools at my expense. I want to show you that the ancient grindstone is a back number and that the emery wheel is a menace. I want you to try positively free this genuine Alectride Farm Tool Grinder. Alectride is the only true abrasive. **It will not draw the temper from steel;** it will sharpen the dullest tool in from 3 to 5 minutes, when the grindstone would take half an hour. Alectride **never** wears out. It does not glaze over. I want to send a few of these machines out on **Free Trial** in every part of the United States. I want to put one in every locality. I want you to clip off and send the coupon at the upper right hand corner of this announcement and I will mail at once circulars explaining every detail of the offer I am making here.

I Don't Want You to Send Me a Cent of Your Money. I Don't Want Any Promise

I merely want to place this Genuine Alectride Grinder on your farm for a few days. Sharpen your dull axe, your dull scythe, your dull corn knives, your dull cold chisels, or hatchet, or any dull tool you have. See how quickly and how easily it is done. See how Alectride (made of the substance of precious stones) sharpens your tools in from one-fourth to one-twenty-fifth of the time required by a grindstone and does not heat nor draw the temper. Do all this—give this machine the most severe tests—then unless you think that you positively cannot get along without this Alectride Tool Grinder, send it back at our expense. We'll ask no questions. We'll take it back without a word, and we'll pay the transportation charges. Now send the coupon. Let us tell you all about this wonderful abrasive and our free trial offer.

Remember—Alectride is really manufactured precious stones. It is even *harder* than the hardest diamond. Alectride will scratch a diamond and cut glass like a knife cuts an apple. Send the coupon today and get full explanation of our **Great 10 Day Free Trial Offer.** Do this now. Do not delay.

These Steel Shingles Are Guaranteed

Against Lightning!

We stand ready to make good this claim with a $10,000 guarantee bond.

Edwards Interlocking "REO" Steel Shingles

are stamped in best Bessemer steel and come in sheets 5 to 12 feet long and 24 inches wide. Patent interlocking device gives absolutely moisture-proof seams, which will not bulge or pull apart.

Easy for Anyone to Lay

You can lay Edwards Interlocking "Reo" Steel Shingles yourself on any sort of roof. Hammer only tool needed. Can be laid on rafter boards or old shingles. Look well on building.

Write for FREE Catalog No. 157

We are the largest manufacturers of all kinds of iron and steel roofing and sell to you at lowest prices. Our free catalog contains valuable information. Send dimensions of your building and we will quote you exact cost of a "Reo" Steel Shingle roof delivered to your station.

We want one representative in every community to take orders for Edwards Interlocking "Reo" Steel Shingles. Write today.

The Edwards Manufacturing Co.
107 157 **Lock St. Cincinnati, Ohio**
The World's Largest Manufacturers of Steel Shingles, Metal Roofing, Metal Ceiling, etc.

How to Raise Fine Dairy Calves.

In one of his recent record summaries of the performances of Holstein cattle Mr. Malcolm H. Gardner, Superintendent of Advanced Registry, says:

"A New York young man just starting as a breeder, who will have his first full-blood Holstein-Friesian calves born this winter, writes that he is much interested in advanced registration work, and asks for suggestion as to the best way of caring for the young calves, wishing to so handle them that they will become a credit to him and to the breed. An article on calf-rearing would take many pages, and the subject can only be touched upon here in the briefest manner. During the gestation period, if strong, healthy calves are expected, the cows must be well fed and cared for, for if a cow be so scantily fed, either at pasture or in the stable, that in her generosity to you she has to turn her own needed fat and flesh into milk, growing so thin that her hips and ribs are the most prominent features in her make-up, how can you expect her to give you a strong calf? Remember that the calf well born is half reared. Try to be always with your cows during parturition, ready if necessary to assist at the proper time, as you will find this extra care the cheapest sort of insurance against loss. Give the cow a well-bedded stall, and see that all is dry and clean.

"Some breeders remove the calf to its pen as soon as born, but I consider it better for both cow and calf to leave the calf with the cow for thirty-six to forty-eight hours, as the cow will be contented at the time when she needs to be quiet, and the calf will suck little and often and so get its digestive organs properly working. These organs of the newborn calf are very delicate, and very subject to disorders if the milk fed be not right in quality, quantity and temperature, or if harmful germs are introduced into the stomach and intestines by feeding from unclean pails. The calf pens should be well lighted and ventilated, be reasonably warm, and be kept clean and dry. For the first two or three weeks the calf should receive only its dam's milk, and it should be fed not less than three times per day, with milk warm from the cow. A good Holstein-Friesian cow or heifer will need milking at 5:00 a. m., 1:00 p. m., and 8:30 p. m.; and if the baby calf be fed two quarts at each milking, it is likely to be enough.

By the time the calf is three weeks old it will be able to dispose of five pints at each of the three feeds; and after it reaches four weeks it may be fed but twice a day, the new milk gradually being replaced with skim milk, till at six weeks the calf is taking four to five quarts of skim milk twice per day. From the time one begins to use skim milk till the calf is two months old the thermometer should be used, so as to be sure the milk is above 90 degrees; but after that age the hand is a sufficient guide. At about four weeks, the calf will begin to chew bits of hay; and if a little wheat middlings is placed in its mouth after feeding, it will quickly learn to eat ground feed. Up to about twelve weeks old the calf should have ground oats or wheat middlings, as well as bright clover hay, before it at all times, all being kept sweet and fresh; and after three months it should have its grain feed as regularly as the cows. While it is better to feed skim milk if one can till a calf is twenty weeks old, warmed water should be offered every day after about the tenth week, but one should be careful that at first the calf does not take it for a new kind of milk, and load up too heavily with it. If any strong, healthy calf gets out of condition, nine times out of ten it is the fault of the person in charge, and he has only himself to blame."

Pedigreed Dairy Cows.
